中国版出版说明

我们很高兴地宣布，现在可以在中国买到全球公认的英文版世界权威音乐工具书《新格罗夫音乐与音乐家辞典》了。自乔治·格罗夫爵士编撰了四卷本的《音乐与音乐家辞典》并于 1878—1889 年间陆续出版以来，该辞典一直广受重视。在斯坦利·萨迪重新构思后于 1980 年推出二十卷的《新格罗夫音乐与音乐家辞典》之前，它就已经先后修订过五次。萨迪在 2001 年与约翰·泰瑞尔合编了第二版，该辞典的规模也扩大到了二十九卷。编辑们新增并更新了词条，目的就是提供全世界内容最全和最新的古典、流行、爵士以及各国音乐的研究成果。值得一提的是，新版本也收录了大量论及中国音乐传统的资料。

Publishing Statement for the Chinese Edition

We are pleased to announce that the second edition of *The New Grove Dictionary of Music and Musicians*, internationally recognized as the definitive English-language reference work on music, is now available in China. The dictionary has enjoyed a rich history since Sir George Grove originally compiled *A Dictionary of Music and Musicians* in four volumes published between 1878 and 1889. The dictionary went through five editions before Stanley Sadie re-conceived the dictionary with the twenty-volume *New Grove Dictionary of Music and Musicians*, published in 1980. Sadie co-edited the second edition, which has expanded to twenty-nine volumes, with John Tyrrell in 2001. The editors have added and updated entries in order to provide the world's most extensive collection of modern scholarship on classical, popular, jazz, and world music. Notably, the expanded version also includes extensive material on the Chinese music tradition.

—Oxford University Press

中国版序

盼望已久的音乐辞书巨制——《新格罗夫音乐与音乐家辞典》(The New Grove Dictionary of Music and Musicians) 最新原文版终于在中国问世了。这是中国音乐出版业的一件大事，也是中国音乐界乃至中国文化艺术界的一件大事，可喜可贺。

《新格罗夫音乐与音乐家辞典》与另一部德国音乐辞书《历史与现代中的音乐》（MGG）是国际上公认的学术性最强、篇幅最大、最具权威性的两部大型音乐辞书。该书于 1878 年由英国乔治·格罗夫（George Grove）爵士规划并主编出版，当时书名为《音乐与音乐家辞典》，至今已一百三十余年，其间经过多次修订增补再版，至 1980 年由斯坦利·萨迪（Stanley Sadie）主编的第六版，书名改为《新格罗夫音乐与音乐家辞典》第一版，也即原书的第六版，已经由最早的四卷扩展为二十卷。

这部辞书经多次再版，其内容得到不断增补和扩展，在此过程中有许多国家的著名音乐学者参与撰写。这次呈献给中国读者的已经是于 2001 年推出的最新的《新格罗夫音乐与音乐家辞典》第二版，实际为原书的第七版，主编仍为斯坦利·萨迪，执行主编为约翰·泰瑞尔（John Tyrrell）。经过近三十年世界音乐在各个领域的发展，特别是国际音乐学学科的发展和深化，辞书的内容，特别是有关 20 世纪作曲家的内容更加丰富，许多条目已由新的专家学者重新撰写，在一定程度上反映了国际音乐学术界新的研究成果和新的水平。辞书的规模已由原来的二十卷扩展为二十九卷，与上面提到的那部二十七卷的德国音乐辞书在规模上持平。

对于渴望了解世界的特别是西方音乐文化的中国音乐工作者和音乐爱好者来说，我认为这是一部极好的工具书，它涵盖了世界各个国家、地区特别是西方音乐文化的方方面面，提供了极其广阔丰富的知识和学术信息。这对中国了解世界音乐文化，对中国音乐文化的自身发展，以及在为中国音乐学术研究提供丰富资料来源和珍贵参考价值等方面，其重要意义是不言而喻的。

作为一名中国的音乐学家，多年来我从这部辞书中受益匪浅，如今这部辞书终于能在中国得以正式出版，我感到异常欣慰。与此同时，我对湖南文艺出版社出版此书所体现出来的深远的学术眼光和工作魄力深为感佩。

在此书付梓出版之际，谨表欣慰和祝贺之情。是为序。

Preface to Chinese Edition

The long-expected latest edition of the monumental music dictionary – *The New Grove Dictionary of Music and Musicians* – has finally come out in its original language in China. This is a great event for China's music publication as well as for China's music circle and even for the whole field of culture and art in China. Congratulations!

The New Grove Dictionary of Music and Musicians, together with another monumental German music dictionary – *Die Musik in Geschichte und Gegenwart,* is one of the two internationally-recognized most academic and authoritative music dictionaries in the world. It was first masterminded and compiled by Sir George Grove in 1878 and was originally titled *A Dictionary of Music and Musicians.* With a history of over 130 years, it underwent revisions and additions for many times until 1980 when the sixth edition was published under the compilation of Stanley Sadie. The dictionary was renamed *The New Grove Dictionary of Music and Musicians* (First Edition), namely the sixth edition of the original version. The size of the dictionary has also expanded from the original four volumes to twenty volumes.

In the preparation of the many editions of this dictionary, its contents were constantly supplemented and expanded, and musicologists from many countries also took part in this endeavour or contributed to it. This new version that is presented to the Chinese reader is the second edition of *The New Grove Dictionary of Music and Musicians* published in 2001, which is in fact the seventh edition of the original version, with Stanley Sadie as the chief editor and John Tyrrell as the executive editor. With the development in every music field over the past thirty years, especially with the development and furtherance of musicology in the world, the contents of the dictionary, particularly those about the 20th century composers, have been greatly enriched. With many entries rewritten by a new generation of experts and scholars, the dictionary to a certain extent reflects the latest research results of the international music circle and the new level they have reached. The size of the dictionary has also expanded from the original 20 volumes to 29 volumes, matching that of the 27-volume German dictionary mentioned above.

For Chinese musicians and music-lovers who are eager to learn about the world and particularly the western music culture, I believe this dictionary is an outstanding reference book, as it covers every music aspect of every country and region in the world, and provides extremely extensive knowledge and academic information. From the aspect of China understanding world music culture and its own music culture development, and of the Chinese music academic research acquiring rich materials and valuable references, its great significance is self-evident.

As a Chinese musicologist, I have personally benefited greatly from this dictionary over the years. I am gratified that this dictionary is formally published in China at last. I am also greatly touched by the far-reaching academic vision and courage of Hunan Literature and Art Publishing House in publishing this dictionary.

On the occasion of the publication of this dictionary, I want to express my gratification and congratulations and have written this preface.

Professor, Central Conservatory of Music of China

Beijing, Early Spring of 2011

(Translated by Lu Danjun)

Preface
to the revised edition

The present edition of this dictionary is the second of *The New Grove Dictionary of Music and Musicians*, of which the original edition appeared in 1980 and was reprinted many times over the ensuing 18 years. It may, accordingly, also be understood as the seventh edition of Sir George Grove's *Dictionary of Music and Musicians*, the publication history of which is summarized on the title-page obverse of the present edition (and is also considered within the entry Dictionaries). The general principles of the compilation and editing of this dictionary are thus identical, or virtually identical, with those of the 1980 edition, the Preface to which is reprinted below. That Preface is followed by a version of the Introduction printed in 1980, modified to accommodate the changes in editorial procedure adopted for the revised edition, and a new Acknowledgments section, which notes some of the numerous scholars who have helped in the preparation of this edition; much of the work of those acknowledged in the equivalent section of the 1980 edition survives, of course, but those already listed in 1980 will, I hope, forgive me for not fully acknowledging their contribution this time.

The existence of the 1980 edition, many articles from which could at least serve as a basis, and where untouched by research in the interim could often serve unaltered, made the preparation of the present edition a rather different (if in the event scarcely less problematical) task from the preparation *ab initio* of the 1980 edition. Our initial procedure was to divide the content of the existing dictionary into subject areas and to invite a team of specialist scholars to consider which entries should be reprinted with little change, which should be more substantially altered, which should be replaced in whole or in part by new entries, which might be omitted altogether and, further, which topics falling within their area and not hitherto included in the dictionary might now be considered to qualify for inclusion. These scholars were further invited to make recommendations as to who should be asked to revise or rewrite entries or to write new ones. Where an entry was to be revised, our normal procedure was first to ask its original author to undertake the revision; but in the many cases where the original author was no longer living, was no longer working on the topic in hand or was for some reason impossible to contact – or where the research that necessitated the revision was the work of someone other than the author and who accordingly merited the opportunity to revise the article him or herself – we turned elsewhere for a new author. In such cases we have always endeavoured to obtain the consent of the original writer; where we have failed to do so, we sincerely apologize for any discourtesy. In the event, there are a substantial number of articles in the dictionary of shared authorship; it would not have been possible, without the use of tortuous and (to editor, typesetter and reader) troublesome typographical devices, to distinguish the contribution of each writer; it will usually, in any case, be inferable from a comparison with the 1980 edition.

We have, of course, welcomed the opportunity afforded by this revision to improve the dictionary. At the commissioning stage, we used a much larger and more intensely specialized team of advisers: not, for example, a single adviser to suggest contributors on 17th-century composers, as for the 1980 edition, but five, each deputed to cover a particular geographical area. This, we believe, has led us closer to the cutting edge of recent research. We have tried to improve the level of consistency in presentation, particularly as regards bibliographies (where modern

electronic technology offers many new facilities) and in the preparation of lists of composers' works, where we have now aimed to apply comparable, and comparably consistent, principles of organization to music of all periods including the 20th century. Other areas of improvement, we believe, include transliteration and the increased rationalization of certain types of bibliographical reference (as well as the inclusion of terminal page numbers in citations of articles and chapters).

Such issues, however, pale in importance alongside the larger changes in the dictionary, those chiefly responsible for its expansion by approximately 50 per cent. First, there is the absorption of the huge bulk of scholarly work on music of the past that has been produced over the 20 years between the two editions, a period during which musicology has multiplied exceedingly, with a flourishing of congresses (and congress reports), Festschrifts and new and specialized periodicals. Bibliographies, accordingly, have increased in length, sometimes to an alarming extent; so too has the enthusiasm among our authors for their comprehensiveness. *Grove*, however, cannot and should not incorporate a comprehensive bibliography of music, and we have had to place some restriction on increase in this area – and this we have done not merely to save space but, more significantly, because we believe that a *Grove* bibliography, to be duly helpful to the large majority of the dictionary's users, should be discriminating: and the best person to discriminate is the contributor. Naturally, there have been other changes in our treatment of music of the past, occasioned by the new perspectives of recent years. Some areas, in particular the early Renaissance and the 19th century, have undergone extensive revision; but all areas have changed in detail, and in all of them many entries on major composers have been written afresh and some minor entries have been omitted or newly included, as the present state of knowledge and research dictates.

The *Grove* dictionaries have never been, and should never be, cumulative. Each edition is designed to meet the needs of its own generation. Material relevant to scholars and inquirers in 1890 or 1927 or 1954, or indeed 1980, may be of very much less interest in 2000, and if so it may no longer be included: earlier editions are still available in numerous libraries and can be consulted by the researcher. This particularly affects entries on performers, of which we have included a much larger number but have been ready to exclude those on performers who have left only a modest mark on musical history. It applies too, though to a lesser extent, to composers whose reputations have faded. I apologize to those users of the dictionary who are unable to find an entry they need, and would refer them to an earlier edition (or to one of the specialist *Grove* dictionaries) where appropriate.

The biggest single expansion in the present edition has been in the coverage of 20th-century composers, some 5000 of whom are now entered as compared with 3000 in the previous edition. This increase is accounted for not only by the passage of time – the additional 20 years that have expired – but also by our express intention to spread the net more widely and to trawl more deeply. More composers from every country are entered, more countries are represented, and countries whose representation was in 1980 hampered by political factors are now considered on the same basis (at least as far as communications permit) as the main Western democracies. Further, a much larger number of composers and composer-performers of more popular types of music, from all parts of the 20th century, are now included.

A third area of expansion has been within subject areas that are new or have not hitherto been regarded as appropriate for inclusion in an academic dictionary of this kind. These included a number of entries that fall within the postmodern penumbra, including for example Deconstruction and Post-structuralism, Postmodernism (obviously), several entries on gender-associated topics (Feminism; Gay and Lesbian Music; Gender; Sex, Sexuality; Women in Music) and entries on Genre and Canon; postmodern thinking has of course greatly influenced many other entries, among them those on such topics as the Sociology of Music, the Philosophy of Music and the Psychology of Music and many of those on aspects of popular music. Modernism is now the topic of an entry, as too are Marxism and Nazism. Our 1980 edition was once charged

with shirking the issues surrounding the Nazi era and the musicians affected by it, which at the time of its preparation had been little aired: the same will not be said of the present edition. Other topics not previously entered in a *Grove* dictionary are Animal Music (a topic that might, in a Darwinian sense, concern us for its potential relationship to the origins of human music), Archaeomusicology, Borrowing (with shorter satellite entries on related topics), Early Music (considered as a movement), Music (for the absence of which the 1980 edition was once taken to task) and Nationalism. There is an entry under the heading Spoof Articles, once a painful topic. There are now entries on a number of recording companies and record labels, those that may be seen as comparable in their importance in the dissemination of music with the publishing firms traditionally included in *Grove*. The large, collective bibliographies on particular aspects of early music included in the 1980 edition are not reproduced here, partly because they have not been found to be as useful as we had expected, partly because the vast increase in bibliographical resources now available electronically makes them less useful, and partly because their sheer size, were they to be brought up to date, would be likely to render them even less useful than before. Our large-scale bibliographical reference articles, such as those on Editions, Libraries and Periodicals, have however been retained and brought up to date.

The coverage of non-Western music has expanded considerably and the objective of the 1980 edition – an entry on the traditional music of every country – has been more nearly achieved. At the same time, we have tried to take fuller account of current issues in these articles, giving in particular a place to local popular music traditions.

Our specialist dictionaries have proved a valuable resource. These are *The New Grove Dictionary of Musical Instruments* (three vols., ed. Stanley Sadie, 1984), *The New Grove Dictionary of American Music* (four vols., ed. H. Wiley Hitchcock and Stanley Sadie, 1986), *The New Grove Dictionary of Jazz* (two vols., ed. Barry Kernfeld, 1988), *The New Grove Dictionary of Opera* (four vols., ed. Stanley Sadie, 1992) and *The New Grove Dictionary of Women Composers* (ed. Julie Anne Sadie and Rhian Samuel, 1994), to which should be added *The New Grove Handbook: Music Printing and Publishing* (ed. D.W. Krummel and Stanley Sadie, 1990). All these works included, as well as new material, articles revised from those first published in the 1980 *New Grove*, and thus represented a more up-to-date source. Although many of the articles in these dictionaries are more extensive and more specialized in content than would be suitable for *The New Grove* itself, our contributors and editors have been able to avail themselves of this material where appropriate.

In the 1980 edition, I ended my preface with a request to readers to notify us of any errors or omissions that they might discover. This time – because of the publication of an electronic version, susceptible of regular correction – such a request might be more speedily addressed. I hope, therefore, that readers will send such communications to editor@grovemusic.com.

STANLEY SADIE
London, 2000

Preface
to the 1980 edition

THE 'NEW' GROVE. When, in 1969, my colleagues and I began to lay our plans, we thought of the work we were preparing as the sixth edition of the dictionary first prepared by Sir George Grove in the 1870s and 1880s. As time and work went on, however, it became clear that we were producing not a new edition but a new dictionary. In his Preface to the fifth edition, my eminent predecessor Eric Blom wrote of his hopes that it would 'continue showing the personality of its founder', and added that 'Much of the old "Grove" ... remains'. I would echo his hopes. But little of the old dictionary can now stand. The world – certainly the world of musicology – has changed more, and more fundamentally, in the 25 years that separate *Grove 5* from the new dictionary than it did in the 75 years from 1879 (when the first complete volume of the first edition appeared) to 1954. A very much smaller proportion of material – under three per cent – has been retained from earlier editions than was retained in any preceding edition; any such material has been reedited and, where appropriate, equipped with new bibliographies and work-lists.

We have tried to ensure that something of the fine humane traditions of the earlier editions of *Grove* are to be seen in our pages. Intelligent critical and evaluative writing still have a place in musical lexicography, especially in a work designed to serve a wide range of users. But in many ways this dictionary is different in kind from earlier editions. It belongs to an era in which musicological studies have greatly developed, not only in Europe but particularly in the United States and other countries where European traditions have taken root, as well as in numerous 'third world' countries, eager to preserve and study their own musical heritage. It belongs to an era that sets wider boundaries to music as a human activity, and even within the traditional boundaries has seen the development of new attitudes, increasingly scientific and objective in character, to its study – as is reflected in the existence and the nature of such reference works as *MGG* (*Die Musik in Geschichte und Gegenwart*) and *RISM* (*Répertoire international des sources musicales*; *International Inventory of Musical Sources*). The effects of this will be seen not only in the dictionary's extent, and the space it devotes to substantial bibliographies and informative work-lists, but also in its approach to such topics as the sources of early music and their evaluation, the bibliography of music, the significance of social forces and their bearing on tradition and its nature, and in general in the wider spread of cultures it attempts to embrace in its discussion of many aspects of the art and the materials of music. The net of contributors has been cast much more widely in the pursuit of breadth, authority and excellence: whereas in the fifth edition British contributors outnumbered others by more than five to two, here they make up about one fifth of the total number.

All this, and much more, was bound to affect the shape, the character and the philosophy of the dictionary. To call it the sixth edition of *Grove's Dictionary* would have been misleading, and – although it may cause problems for future editors – 'The New Grove' seemed to be the most accurate title it could bear.

CONTENTS, SCOPE. To quote Eric Blom again: '*Grove* aims at being encyclopedic and universal'. *The New Grove*, one might say, is even more universal than its predecessors, for the

musical universe has expanded. It seeks to discuss everything that can be reckoned to bear on music in history and on present-day musical life.

Although its changes are principally in other areas, the dictionary's first task, traditionally, is to treat of the people who have written music; more than half the entries are on composers, from ancient and even mythological times to the present. The criteria for the inclusion of a composer vary from period to period. For example, virtually every known medieval composer is entered; and a composer of the Renaissance will have an entry if a set of his works was published, if five or more of his works survive in printed anthologies or a substantial number in manuscript, or if he is known by a smaller number of works but in addition useful biographical information is available about him. Grove cannot include every known composer of the past; it is a critically organized repository of historically significant information, not a directory (that role is served by other kinds of reference work). In more recent times, the criteria have necessarily to be more closely linked with critical judgment. Previous editions of *Grove* have tended to emphasize the 19th century, or, to put it more exactly, have tended to retain the bias towards the 19th century that is implicit in the updating of a dictionary dating from that era. Now, in the late 20th century, the 19th must take its place as part of musical history, with consequently different emphases, rather than appear as part of the recent past on which the dust has still to settle. A dictionary that runs to many successive editions, even of increasing size, cannot be cumulative; each generation must reassess it according to its own particular requirements. Specialists working on 19th-century music can always consult earlier editions, which anyway are closer to their sources.

Other persons entered in the dictionary fall into five broad categories. First, performers: from the past, those who sang or played in the first (or important early) performances of major works, those who had particular influence on composers or styles of composition, and those whose names appear frequently in contemporary source material; from the present, those of outstanding attainment – again I should stress that *Grove* is not a directory and that entries are accorded only to those of international reputation or of specially important national achievement. This category includes leading and influential figures in the worlds of jazz and popular music. A second category consists of scholars, writers on music, theorists and administrators; these are included according to the depth and the influence of their work. A third category comprises people eminent in other arts whose work was in some way important to music and musicians. Clearly librettists merit entry in a substantial musical dictionary; so, too, do authors who did not write directly for musical setting but whose works often inspired musicians and affected the nature of their works. Entries will also be found on certain dancers, designers, theatre producers (directors), men of letters, philosophers, scientists and others whose contributions entitle them to a place in a work dealing with musical history. Fourth, patrons (sometimes families of patrons) are entered where they exercised a significant influence on musical composition or performance. Fifth, people concerned in the business of music – in its printing and its publishing, and in the making of musical instruments – are entered, according to their importance; such entries are often on firms rather than families or individuals.

In line with the traditions of the dictionary, the terminology of music is fully treated. Foreign-language words in occasional use and carrying only their literal dictionary meaning are not generally included. There are comprehensive historical entries on musical genres and forms. Early liturgies, Eastern and Western, are discussed. The instruments of music are extensively treated. Entries will be found on many non-Western instruments, especially those of considerable historical or organological importance, or of wide cultural distribution; those specific to particular cultures may be discussed primarily in the entry on the culture itself. There are entries on many cities and towns with significant musical traditions, in Europe, America and other parts of the world. Numerous institutions – orchestras, choirs, societies, colleges etc. – have individual entries, but those within cities and towns that are entered in the dictionary in their own right are normally discussed within the appropriate city entry (indicated by a cross-reference if necessary) since they represent a part of that city's musical life.

There are substantial articles on many topics new to *Grove*, ranging widely – for example, Aesthetics, Analysis, Computers, Electronic music, Ethnomusicology, Historiography, Iconography, Performing practice, Popular music, Psychology, Sociology and Theory; while others on more traditional topics (like Counterpoint, Expression, Harmony, Melody, Mode and Musicology) are treated much more broadly, or 'conceptually', than hitherto, with a wider cultural perspective. There are extensive articles on acoustical topics. The entries on bibliographical and reference material – for example Dictionaries and encyclopedias, Editions, Libraries and Periodicals – are much more comprehensive than in earlier editions and are supported by extensive lists.

The treatment of bibliographies is discussed in the Introduction, §8, but one particular departure should be mentioned here: the inclusion of a series of extended bibliographies on early music. Some of these are arranged by country (England, France, Germany, Italy, and the Netherlands), others by medium or genre (Organum, Keyboard music etc.). These are additional to the bibliographies attached to individual articles on such topics. Another major departure in the coverage of early music is represented by the group of articles on sources, of which that on Sources, MS is particularly extensive in its descriptive coverage of Western manuscript source material before 1600.

The biggest departure, however, lies in the dictionary's treatment of non-Western and folk music, far more extensive and more methodical than anything of the kind attempted before. There are entries on the music of virtually every country in the world. So that this material be readily accessible, it is organized for the most part within entries under the names of individual countries. Modern political boundaries do not, of course, always correspond to cultural ones; articles thus often have to be linked by cross-reference, and in some significant cases individual cultural groups are separately treated (again, such entries are indicated by cross-references in the entries on the countries concerned). The treatment of individual national folk music traditions under the collective rubric 'Folk music', preferred in *Grove 5*, has been abandoned. Many entries on countries are however divided between 'art music' and 'folk music'. In some cases such division is admittedly simplistic, and occasionally the content of these sections may overlap; nonetheless, this treatment is the most practicable one, both from the user's point of view, to facilitate reference, and from an editorial or organizational one. Besides the entries on countries' folk music traditions, there is a series of 'overview' entries designed to give a broader picture of the musical traditions of entire continental areas under such headings as Africa, East Asia, Europe and Latin America.

Grove, by long tradition, is the standard multi-volume musical reference work for the English-speaking world. It is a fully international dictionary. But it is proper if in some respects it reflects the tastes and the preferences of the English-speaking countries, for example by admitting marginal figures from those countries who might have been excluded had they come from elsewhere. The dictionary must serve the needs of the public by which it will primarily be used. Particular efforts have however been made to do justice to the composers and other musicians of certain areas often neglected in *Grove* and in other large-scale reference works of the past, notably the smaller countries of eastern Europe, Spain and Portugal, and Latin America.

The dictionary is written by almost 2500 people, and it no doubt embodies many contradictions. Contradictions on matters of interpretation are not of course unwelcome; it is part of a dictionary's role to represent a variety of standpoints. Contradictions of fact, however, are anathema. Every effort has been made to compare articles and, where discrepancies have been found, to establish which statements are true and which false. This has involved much checking by our editorial staff of primary sources, and prolific correspondence between the editorial office and contributors. The results have not always been conclusive. (For example, the contributors concerned are not in full agreement that the year in which Veracini first played in front of Tartini is the same as the year in which Tartini first heard Veracini; in both entries attention is drawn to the discrepancy of opinion.) Users of the dictionary are asked to write to the editorial office, c/o

Macmillan, Little Essex Street, London WC2R 3LF, to notify us of errors or omissions so that they may be recorded and set right in the future.

The ensuing introduction is designed to explicate the editorial procedures of the dictionary for the benefit of the reader.

STANLEY SADIE
London, 1979

Introduction

1. Alphabetization. 2. Usages. 3. Authors. 4. Article headings. 5. Article structure. 6. Cross-references. 7. Transliteration. 8. Bibliographies and audio/visual resources. 9. Work-lists etc. 10. Appendixes.

1. ALPHABETIZATION. In entry headings – fully explained in §4 below – of more than one word, the words are alphabetized as if continuous, ignoring spaces, hyphens, apostrophes, accents, modifications and diacritical marks (German *ä*, *ö* and *ü* are read as *a*, *o* and u, not as *ae*, *oe* and *ue*). These rules apply up to the first mark of punctuation, then again thereafter if that mark is a comma; where the entire headings are identical but for an accent or the like, unaccented words take precedence over accented ones, counting letters from the beginning, and capital letters over lower-case ones. If the headings remain identical, the first will be labelled (i), the second (ii) etc. Roman numerals are alphabetized as if they were letters; arabic numerals are alphabetized as if spelt out. Parenthesized and bracketed matter is ignored. Some of these points are illustrated by the following (partly hypothetical) sequence of headings:

Alpaerts, Flor
Alpaerts [Allpaerts], **Jef**
Alp Horn
Alphorn
Al-Rāzi, Abu
Al-Rāzi, Fakhr al-Du
Al rovescio
Alsbach
Al segno
Al-Shīrazī
Al′shvang, Arnol′d Aleksandrovich
Alsina, Carlos Roqué
Alsiña, Carlos Roqué
Alsiná, Carlos Roqué
Alsted, Johann Heinrich
Alsted, (Carl) Wilhelm
Alt, in
Alta (i)
Alta (ii)
Alta Curia
Altacuria
Altacuria(-Benedictus), Carolus
Altacuria, Johannes
Altargesang
Ältenburg, Johann Ernst
Altenburg, Karl
Altenburg, Michael
Ältenburg, Michael

All list material arranged alphabetically in the dictionary follows these principles. Where the article (definite or indefinite) is part of the term of title, it is normally included in the alphabetization.

As a general principle, we have tried to place each entry where the majority of users of the dictionary will expect to find it. Common sense and established usage are important factors.

Medieval names of the form 'A de B' are normally entered under the given name (A) rather than the name of the locality (B). 'St' is alphabetized as 'Saint' and 'Ste' as 'Sainte', 'S' as 'San', 'Santa' or 'São' as appropriate. 'Mac', 'Mc' and 'M'' are treated as 'Mac'. Unless there are reasons that dictate otherwise, names incorporating prefixes in the Romance languages are

alphabetized under the prefix when it includes the definite article, although established usage requires many exceptions. Cross-references are supplied as necessary.

2. USAGES. Orthography in general follows British practices, except that wherever possible original sources are followed, for example for titles and quoted matter. Obsolete and foreign letter-forms (such as æ and ß) are normally replaced by their modern equivalents, and usage is standardized for such terms as Kapellmeister (Capell Meister etc.), Kantor (Cantor), *cappella* (*capella*) and the like. Capital letters are used in the traditional way in English-language titles, and also for words applied in a specialized sense (e.g. 'Classical' for Viennese music of the Haydn-Mozart-Beethoven era); their use is kept to a minimum in languages other than English. The first objective, here and elsewhere, is clarity.

Abbreviations are confined to those listed on pp. xli–liv (pp.vii–xx in subsequent volumes) . An oblique stroke (/) normally signifies an alternative; an asterisk (*), in a list of works, signifies an autograph.

Some of the particular editorial usages in the dictionary are explained below:

Anglo-American vocabulary. The traditions of this dictionary are primarily British, and accordingly it preserves British terminological usage. This affects note names, where semibreves, minims, crotchets and quavers are preferred to whole-, half-, quarter- and eighth-notes etc.; note is preferred to tone (except in certain acoustical and non-Western contexts); auxiliary note to neighbour (or neighbor) tone; conjunct to stepwise; bar to measure; part-writing to voice-leading (except in analytical contexts) etc. (Cross-references will be found directing the reader to the British equivalent of any American term that might be expected to have its own entry.) Similarly, the principal violinist in an orchestra is referred to as the leader rather than the concertmaster, and to 'lead' an orchestra means to sit at the first violin desk, not to conduct or direct it. In accordance with British usage, universal American usage and increasing practice in British opera houses, 'director' is preferred to 'producer'. Readers should note that the terms 'professor' and 'faculty' have different meanings in British usage and American.

The Bible. The numbering of psalms follows the Revised Standard Version unless otherwise indicated.

Dates. Dates are normally given according to the Gregorian calendar. Exceptions are made for Greater Russia (where both old- and new-style dates are given, separated by an oblique stroke, up to the calendar change on 1/14 February 1918) and Britain (where dates are given according to the Julian calendar up to the change in 1752). For publications bearing an old-style date, the new-style one is included in the form '(Venice, 1601/2)'. Absolute consistency cannot be guaranteed for certain German and Italian 17th-century dates; usage varied from place to place and it is sometimes impossible to tell which calendar is applicable.

Opera house carnival seasons, running from 26 December to the following Lent, are identified by the later year; thus 26 December 1672 – Lent 1673 is called 'Carnival 1673'. We have however aimed to show precise dates, where known, according to the modern calendar.

Methods of citing dates that are approximate or conjectural are outlined in §4 below. Here it should be mentioned that when a period is expressed in the form '*c*1630–48' both dates are approximate, whereas the form '*c*1630–1648' means that only the first is.

A date given with a title of a work in running text is normally that of composition, except in the case of operas, where it signifies performance; date and place of performance are given in the form '(1993, London)', to distinguish performance information from publication information.

Pitch notation. The system used is a modified version of Helmholtz's: middle C is *c*′, with octaves above as *c*″, *c*‴ etc. and octaves below as *c*, C, C′, C″ etc. Octaves are reckoned from C upwards.

Italic type is used for specific pitches; pitch classes are given in roman capital letters. (A different method is followed in a small number of specialized, technical articles; in such cases the exceptional usage is explained.)

Place names. These represent a particularly intractable, and sensitive, issue. For present-day cities, the usage of *The Times Atlas of the World* is followed, except for those cities where there is a traditional and universally applied English name that differs from the local one (e.g. Vienna, Rome, Munich). Where a city's name has changed in the course of history, an attempt has been made to call it by the name current at the time under discussion, identifying it by its modern name on its initial appearance in an entry if that seems to be necessary or helpful (e.g. 'Temesvár [now Timişoara]') – while of course it is recognized that different groups in such cities as Bratislava/Pressburg/Poszony have always used different names. Common sense demands flexibility in the application of this rule. See also §7 below.

Weights and measures. To conform with international practice, and with the declared policy of the British and United States governments, metric units are used in this dictionary (except of course where imperial weights and measures appear in quoted matter). Metricization has in the event proceeded more slowly than was planned, more slowly even than the preparation of both the previous and the present editions of the dictionary; and we ask the indulgence of readers who are disconcerted to read that (say) Cambridge is 90 km from London.

3. AUTHORS. The names of authors appear, in the form chosen by authors themselves, beneath the article to which they apply. In the case of joint or multiple authorship, this is indicated where possible by reference to the numbered sections of articles. Where authorship is joint, or the authors' work is interwoven or fused to a degree that it would be impractical to distinguish one author's work from another's, the authors' names are separated by a comma. This method is also used where one author has revised and supplemented the work of another to an extent that the article can most properly be regarded as a joint contribution.

In many cases, however, where one author has revised an article by another (usually when the original author is no longer actively engaged in work on the topic concerned), the signature will take the form

JOHN SMITH/MARY BROWN

to indicate that Mary Brown has revised John Smith's work. Where a revision is slight, and not of a kind to call for attribution, the form

JOHN SMITH/R

is used; this is also used for most revisions undertaken by editorial staff. A signature of the form

JOHN SMITH (with MARY BROWN)

indicates that John Smith is the principal author but that Mary Brown contributed material the author or editors felt required specific acknowledgment.

4. ARTICLE HEADINGS. Articles on persons begin with their name and place and date of birth and death, followed by a statement of nationality and description, thus:

Smith, John (*b* London, 1 Jan 1800; *d* London, 31 Dec 1870). English composer.

Where dates of baptism (but not birth) or burial (but not death) are known, they are given and specified as such:

(*b* London, bap. 1 Jan 1800; *d* London, bur. 31 Dec 1870).

If the year but not the month or day of birth is known, the parenthesis would appear:

(*b* London, 1800; *d* London, 31 Dec 1870).

According to the state of knowledge, the date of birth could be given with less precision, for example, '1800–05', '*c*1800' (around that year), or '?1800' (to imply conjecture). The question mark is placed close to the element it qualifies; where it is spaced, it qualifies the series of elements that follows:

(*b* ?London, 1 Jan 1800 ...) – born conjecturally in London
(*b* London, ? 1 Jan 1800 ...) – born London, conjecturally on 1 January 1800
(*b* London, ?Jan 1800 ...) – born London in 1800, conjecturally January
(*b* London, ? Jan 1800 ...) – born London, conjecturally in January 1800
(*b* London, ?1800 ...) – born London, conjecturally in 1800
(*b* ?London, 1800 ...) – born 1800, conjecturally in London
(*b* ?London, ?1800 ...) – born conjecturally in London, conjecturally in 1800
(*b* London, 1 Jan ?1800 ...) – born London, on 1 January, conjecturally 1800
(*b* London, 1 ?Jan 1800 ...) – born London, on the first day of a month, conjecturally January, in 1800.

Where a birthdate cannot be conjectured, *fl* (floruit – 'he/she flourished') dates may be given, e.g. '*fl* 1825', '*fl* 1820–35', '*fl* early 19th century' etc. Where nothing is known, nothing is stated. For example,

(*d* London, 31 Dec 1870)

means that nothing is known of the subject's birth. Any other forms used in such contexts are self-explanatory.

The opening statement gives the subject's nationality as it might be most generally and fairly understood. It may not take account of naturalization, or birth, or ancestry. One cannot very well say 'American conductor of German birth and Hungarian descent': if the subject is normally reckoned as American he will be so described; his American domicile or naturalization and his Hungarian descent will be referred to in the text, and his German birth will be clear from the initial parenthesis. Sometimes, where a double affiliation seems of especial importance, it will be noted: 'American conductor of German birth', or 'German conductor, naturalized American'. Nationals of the former USSR, Yugoslavia etc. are defined according to their own preference, as far as that has been ascertainable. The word or words of description outline the subject's musical significance – essentially the reason for his or her being entered in the dictionary. A composer who engages in other activities will not normally be described as (for example) 'composer, conductor, writer on music, teacher and pianist'.

Parentheses and brackets in name headings have specific meanings:

Smith, John (Robert) – full name 'John Robert Smith'; 'Robert' not normally used
Smith, John R(obert) – full name 'John Robert Smith', normally used in the form 'John R. Smith'
Smith [Smythe]**, John** – the name 'Smith' sometimes takes the form 'Smythe'
Smith, John [Johannes] – the name 'John' sometimes takes the form 'Johannes' (certain obvious alternatives, such as the German Carl/Karl, may not be noted)
Smith, John [Schmidt, Johann] – the entire name sometimes takes the form 'Johann Schmidt'
Smith, John [Brown, Thomas] – 'John Smith' is the pseudonym under which Thomas Brown is generally known; or John Smith used the pseudonym Thomas Brown (this will be made clear in the text)
Smith, Buster [John] – 'Buster Smith' is the name under which John Smith is generally known
Smith, 'Buster' John – John Smith is generally known by a form that incorporates the sobriquet in addition to his own name

Smith [née Brown], **Mary** – Smith is Mary Brown's married name, under which she is generally known

Smith [Brown], **Mary** – Mary Smith has the married name or pseudonym Brown; or Mary Brown is generally known under the name Smith (this will be made clear in the text).

Names of titled persons are normally shown thus:

Smith, Sir **John**

Smith, John, 5th Earl of Sussex;

but

Sussex, 5th Earl of [Smith, John]

would imply that John Smith, 5th Earl of Sussex, was normally referred to by his title, as Earl of Sussex or Lord Sussex.

5. ARTICLE STRUCTURE. The longer article texts in the dictionary are divided into sections for easier reference. The most usual division is into sections numbered with arabic numerals and with headings in large and small capitals (e.g. 1. LIFE 2. WORKS); this method is used in many entries on composers. Sections of this kind may be subdivided into smaller ones, headed by parenthesized small roman numerals and with headings in italic. Occasionally other forms of subdivision are needed. Where a long entry consists of two or more substantial sections (for example 'Art music' and 'Traditional music' in an entry on a country), these sections are numbered with capital roman numerals and the headings are printed in bold italic type. The following illustrates all three levels of the hierarchy, as well as the lists of 'contents' which are designed to guide the reader to the material he is seeking:

Ruritania. Country in southern Europe.

I. Art music. II. Traditional music.

I. Art music

1. Up to 1600: (i) The Middle Ages (ii) 1450–1600. 2. 1600–1848. 3. Since 1848.

1. UP TO 1600.

(i) The Middle Ages. The earliest reports ...

'Family' articles, indexed under the family surname, are used when three or more members of a family merit entries. Each entered member is numbered, thus:

Smith. English family of composers.

(1) **John Smith** (*b* ... [etc.]

(2) **Robert Smith** (*b* ... [etc.]

(3) **Mary Smith** (*b* ... [etc.].

The relationships between them are defined, where they are known. Entries on family firms, of publishers or instrument makers, are not necessarily numbered. If two people – whether or not members of the same family, and irrespective of whether or not they have individual entries – bear the same name (which for this purpose means the same name as far as the bold-type title is concerned), that name will always be followed by a parenthesized small roman numeral, chronologically determined (e.g. John Smith (ii); he will normally be referred to in this form throughout the dictionary). It will be understood that, for example, John Smith (i) and (ii) could be members of Smith (i) family, John Smith (iii) and (v) members of Smith (ii) family, and John Smith (iv) not a member of a family at all as far as this dictionary is concerned.

In a very few cases – notably that perennial thorn in the lexicographer's side, the Costas – we have for simplicity's sake allowed ourselves to use a family entry format for a group (Costa (i))

of whose mutual relationships, if any, no-one has the slightest idea. So that each one can readily be found, we have also placed a cross-reference under each individual name: a departure from normal procedure, as people entered within a family entry do not also have separate bold-type entries of their own unless the spelling of the surname differs.

6. Cross-references. Cross-references in the dictionary are distinguished by the use of small capitals, with a large capital for the initial letter of the entry referred to, for example:

see La rue, pierre de.

If the reference is in running prose it will take the form

he was a pupil of pierre de La rue.

All cross-references give the title of the article referred to in exactly the wording in which it appears, in bold type (but excluding parenthesized matter), at the head of the entry. The word 'see' is always italicized in a cross-reference to another entry in the dictionary; where it is printed in roman type the reference is to a different part of the same entry or to another publication.

Cross-references are of two basic kinds. First, there are those 'cross-reference' entries that direct the reader to the entry he or she is seeking, thus:

De la Rue, Pierre. *See* La rue, pierre de.
Voice. *See* Singing and Acoustics, §VI.

A cross-reference may include, for the benefit of the reader who does not require fuller information (or to distinguish usages of a term), a brief definition, thus:

Academy of Music. New York theatre opened in 1854. *See* New york, §4.

Many cross-references of these kinds lead to two or more other entries. Simple cross-references have been included in abundance to help the reader who first looks under a different orthography or formulation.

The other type of cross-reference is that within an article. Some will be found at the ends of short articles, or at the ends of sections, directing the reader to another entry where further information relevant to the subject may be found; these may, as appropriate, embody such formulae as '*see also*' or 'for a fuller discussion *see*'. Many further cross-references will be found in running text; but none is provided to titles (names, places, genres etc.) that would be understood to have Grove entries unless there is particular material to which attention needs to be drawn. The intention has been to direct the reader to places where he or she can, but might not have expected to, find further information on the topic looked up. Thus the article 'Opera' does not contain cross-references to the entries on Verdi or Wagner, although those of course contain material relevant to the history of opera; it does however carry cross-references to entries on other related forms (for example 'Azione teatrale' and 'Zeitoper') which are separately considered.

Where an illustration, table or music example is relevant to more than one entry, that will be indicated by cross-reference.

7. Transliteration. The text of the dictionary is printed in roman script, transliterated by systems chosen according to the requirements appropriate to different languages; in some cases an academic transliteration has been followed, permitting re-transliteration into the original, in others a phonetic one. The transliteration system for Cyrillic scripts (including Bulgarian [Bulg.], Serbian [Serb.] and Ukrainian [Ukr.]) is as follows:

Cyrillic	*Roman*	*Cyrillic*	*Roman*	*Cyrillic*	*Roman*
а	a	й	y	х	kh; Serb. h
б	b	к	k	ц	ts; Serb. c
в	v	л	l	ч	ch; Serb. č
г	g; Ukr. h/g	м	m	ш	sh; Serb. š
д	d	н	n	щ	shch; Bulg. sht
е	e/ye[1]	о	o	ъ	″; Bulg. a
ё	yo	п	p	ы	ï
Є	ye	р	r	ь	′; Bulg. a
ж	zh; Serb. ž	с	s	э	e̊
з	z	т	t	ю	yu
і	i	у	u	я	ya
и	i; Ukr. y	ф	f	ї	Ukr. ï

[1]ye, after ъ, ь and vowels and as initial letter

Terminations -iy or -ïy are given as -y in personal names.

Bulgarian: Ѫ – a; ѣ – ee/ay; ай (final) – y.

Serbian: ђ – dj; љ – lj; њ – nj; ћ – ć; џ – dž; j – j.

Common usage, and common sense, demand that certain exceptions be made. Place names such as Moscow and Kiev are given in their standard forms. Prokofiev, Rachmaninoff and Tchaikovsky are spelt in their accepted English ways; so are Tcherepnin (the spelling still followed by the family), Koussevitzky (the spelling used by the Foundation) and Cui, a name of Western origins. Several popular transliterations that do not originate in English and are apt for pronunciation only in other languages (usually German or French) have been avoided: thus Glier, not Glière. Strict transliteration is used in bibliographical contexts, and (for example when a Russian-language item is cited for a non-Russian composer – this applies commonly to music in the other republics of the former Soviet Union) orthography in a bibliography may often differ from that in the text of the article to which it belongs.

Chinese names, for people active in the People's Republic of China, are romanized according to the Pinyin system. Names of those based outside mainland China and best known by other spellings appear in their customary romanization.

Modified letter forms in roman script (ł, đ etc.) are of course used as needed. The special phonetic letter forms sometimes used in representing African languages are replaced by their roman equivalents.

In the romanization of ancient Greek, familiar English forms (sometimes latinized ones for proper names) are used where they exist. Different systems are used for ancient and modern Greek and for ancient and modern Hebrew.

8. Bibliographies and audio/visual resources. Bibliographies normally include studies on which authors have drawn as well as suggested further reading. In this revised edition they will be seen generally to have expanded to reflect the proliferation of studies focussed on ever more specific aspects of a subject. Nevertheless they are not, except in a small number of special cases, intended to represent comprehensive lists of the literature on the topic. Writings that are trivial or ephemeral, or that have been superseded, are (unless of particular historiographical interest) normally excluded. General histories (or of specific periods or regions) may be cited where they contain material of particular importance on the topic in question.

Bibliographies are chronologically arranged (within categories for a bibliography that is categorized); items are listed in order of first (or cited) publication. Items published in the same

year are listed alphabetically by author, or, for the same author, by title. Items for which no author or editor is given are placed before attributed items. At the head, however, are listed certain standard works of reference for which abbreviations are used, in alphabetical order of abbreviation; where these contain signed articles, authors' names are given in parentheses, with the title of the entry if significantly different. In some longer articles (usually those structured by self-contained topics rather than as historical surveys), bibliographies may be situated at the end of each section, according to convenience of use. Categories in exceptionally long bibliographies are given alphabetical designations; these are used to identify references in the text of an article in the form '(see Smith, D1992)'.

The procedures of citation are broadly self-evident, but it may be helpful to outline here the main principles (the reader is also referred to the list of bibliographical abbreviations, pp. xlvii—lii in this volume, pp. xiii–xviii in subsequent volumes, and especially its prefatory note). For books that have appeared in several editions, only the first and the most recent are cited, unless there is particular reason to omit early ones, where the relevant material is not included, or to note intermediate editions – for example because one was revised or translated, or one has been photographically reprinted (denoted by *R*). Thus while '1950, 4/1957' would be a common form of citation, '1950, 2/1951/*R*, rev. 3/1955 by J. Smith, 4/1958' would also be possible, to signify that the second edition was reprinted and the third substantially revised. English translations are normally noted and their titles given if not direct translations of the original ones; for items in less familiar languages, translations into other western European languages may also be listed. Title-page breaks or punctuation are represented by a colon. Publication places are normally given only for first (or cited) publication. In certain specialized bibliographical contexts publishers are named, in the form 'London: Smith, 1950'. Multi-volume books are not noted as such, but (unless they are through-paginated) page references will include the volume number, in lower-case roman numerals. Lower-case roman numerals, throughout the dictionary, denote volume numbers, as for periodicals: 'xiv (1950), 123–8' indicates that the cited article spans pages 123–8 of volume xiv, published in 1950. Periodicals reckoned by issue rather than volume are expressed in arabic numerals. For periodicals that are not through-paginated by volume, the issue number (or month or season) within the volume is indicated after an oblique stroke (e.g. xiv/3). Every effort has been made to find terminal page numbers where these were previously missing or unknown. Where an article is known not to be longer than a single page, this is indicated in the form '123 only'; reference to a single page number without such qualification normally indicates the initial page. Full dates are given for publications appearing daily or weekly; page numbers are not given for these.

Doctoral dissertations are noted as 'diss.', master's or other types as 'thesis', and the institution and acceptance date are named. If the dissertation is published, the citation normally refers only to the published volume; in a full citation (in an entry on the writer of the dissertation), the place and date of publication follow, thus: '(diss., U. of Vienna, 1927; Leipzig, 1930)'.

For articles in congress reports a short title is given for the congress, followed by the English name of the city where it took place and the year (e.g. *Venezia e il melodramma nel Seicento: Venice 1972*); congress reports are listed according to the date of the congress. Full publication details, including editors' names, will be found in the list of Congress Reports in vol.28. Items not qualifying for inclusion in that list will show such information in the bibliographic citation itself, which will be listed by date of publication.

Electronic resources are cited where applicable. On-line databases and websites devoted to individual subjects are placed at the end of a chronologically ordered bibliography. For each database the full title is given, followed by any abbreviated form needed to access it, the name of the organization that houses it (with the names of any individuals responsible for its management) and any useful supplementary information. This last will include the designation 'on-line database', indicating that the URL may be found through the web browser. Websites

(whose URL will be shown within angle brackets) maintained by their subject are shown in the form

> John Smith home page <www.jsmith.com> [incl. work-list, writings]

and those managed by other individuals or by an organization in the form

> John Smith website (Smith-Brown Foundation) <www.smith.org> [incl. work-list, discography]

Items published exclusively in electronic format are listed chronologically; authors, titles, dates etc. are given as for printed books and journals, except that publication details are replaced by the URL of the on-line journal or other website. Where an item first issued in printed format has been republished in electronic format, the URL follows the full publication details of the original.

Tape and video recordings are cited in such a form as to make clear whether they are available commercially (in which case catalogue numbers will be given) or only for consultation in archives, which will be named; where included, the annotation '[oral archive]' in a citation of an interview denotes an archive devoted to the spoken word, whereas a 'sound archive' is understood to consist wholly or in part of musical items.

Discographies are included in many articles on traditional and non-Western music. Citations will normally give the title of the recording, company label, catalogue number and issue date; they may also included names of performers and (in the case of ethnographic field recordings) collectors, the recording date (if significantly different from the issue date) and details of any accompanying notes. Lists of recordings may also be given in entries on performers of traditional and non-Western music and jazz. It should be noted that any hyphen (-) or dash (–) in the catalogue number of a recording is a part of that number and does not represent a span of numbers; in the interests of clarity, a series of catalogue numbers will be given in one of the following forms:

> OCL 13, OCL 14
> OCL 13 and 14
> 13001 SJ to 13006 SJ
> HP 10-110 to 10-112.

Lists of writings, found in entries on scholars, critics etc., are organized according to the same principles as bibliographies. Such lists are as a rule selective, the selection being designed to be representative and to show the range and importance of the subject's work. Unpublished writings, apart from dissertations, are included only if of special significance (where they are, a location is named); the same applies to non-musical writings. Items listed as 'ed.:' are edited by the subject (where they include articles by him or her, these may be noted as '[incl. ...]'); items listed as 'ed. J. Smith:' represent works by the subject edited, usually after his or her death, by J. Smith. The 'Editions' section in articles of this kind normally includes only scholarly or historically important editions of music. Fuller lists of the subject's writings, as well as autobiographical works and Festschriften devoted to him or her, may be noted in the bibliography.

Contributors were encouraged to continue sending material to supplement bibliographies and lists of other resources, for filing towards future editions and on-line updates if it could not be used in the present one. Some updating has been done by the editorial staff, who continued during the late stages of the dictionary's preparation to add citations of important new items. In some cases this may have resulted in an article text's apparently taking no account of facts or opinions cited in the attached list(s) of resources; but it was nevertheless felt that it would be useful to draw readers' attention to significant recent literature.

9. WORK-LISTS. Work-lists are designed not only to show a composer's output (or, for a lesser composer, to outline it) but also to serve as a starting-point for its study. While it would be beyond the scope of a general musical dictionary to be a comprehensive directory of sources – a function served by *RISM* for a large part of the repertory – an attempt has been made to include basic publication information and, in the case of manuscript material, a location. This publication information consists, for earlier music, of place and date of first publication (later printings are referred to only if of particular significance), or, for more recent music, the name of a composer's principal publishers. Any parenthesized date in a work-list is a date of publication. Locations of manuscript material are normally given by means of a *RISM* library sigillum, printed in italics (those used in the dictionary are listed on pp.li–lxvii in this volume, pp.xxi–xxxvii in subsequent volumes); shelf and even folio numbers may be given in cases of special difficulty. National sigla stand until contradicted: thus in a list '*F-Pn*, *V*; *I-Bc*' the *V* stands for *F-V*. This applies from item to item; a reader seeing an isolated library sigillum should look back to discover the national sigillum that applies. Anthologies listed in *RISM* B/I/1 (*Recueils imprimés*) are referred to by the numbering system used there (e.g. 1615^{17}; square brackets in *RISM* are not included). Manuscript locations are not generally supplied when material is published, nor when such information is given in a good library edition (which will be cited; see below) or in an established catalogue. Sometimes only sources supplementary to those given elsewhere are named. Manuscript sources are listed in alphabetical order of national sigla, and within them of library sigla; citations are not evaluative unless stated.

Work-lists are normally categorized, by genre, function or medium, and items are listed chronologically within categories. Where dates are not known, items are listed alphabetically by title. Numbers from established listings are given. Original title-page wording is normally used, with capitalization following the general rules of the dictionary; roman numerals may be used to reproduce original wording, but otherwise arabic numerals are preferred, except where their contiguity to opus numbers might cause confusion. (Thus '6 Sonatas', '6 sonates', 'VI sonate', 'op.2. Six Sonatas' etc. represent publications under those titles; '6 sonatas' represents a collective listing.) Short titles only are given, with sufficient information for unambiguous identification. For a vocal work, a parenthesized name denotes the text author (his or her initial is given only on first appearance in each list, unless its omission introduces an ambiguity); for dramatic works, a parenthesized arabic numeral following the title denotes the number of acts or other main divisions. Where a key is named, it precedes the details of instrumentation; capital letters denote major keys, lower-case minor. Alternative instrumentation is denoted by an oblique stroke (/) or, in complex cases, by an oblique stroke and parentheses: 'Qt, A (pf, fl/ob, cl, bn)/(pf, str trio)'. For voices, symbols separated by commas denote soloists and those printed continuously represent a choral group; thus 'S, A, Bar, SATB' stands for solo soprano, alto and baritone with a chorus of soprano, alto, tenor and bass. Information may be given in less specific form: '3 solo vv, 4vv' means that the work is for three soloists and fourpart chorus; for English verse anthems this is notated '3/4vv'. Unless parenthesized (when it is the date of publication), a date following details of a work is the date of composition; details of first performance (where known) are given routinely for dramatic works, and are included also for other works by major composers. Where quotation marks are included in the title of a mass (e.g. Missa 'Da pacem'), the quoted matter identifies the cantus firmus or parody model.

Editions that include a substantial number of works are cited at the heads of work-lists (or sections of them); often they are assigned a sigillum, appended in square brackets, which is noted, with volume and sometimes page numbers if appropriate, against each item included in them. In such citations, we have aimed to indicate composers' names in the form used in the edition (e.g. Ludwig van Beethovens Werke). Smaller editions, and editions of individual works or groups of works in modern anthologies or collections, are cited alongside the particular entry (such citations may refer to a work listed in the bibliography of the article, e.g. 'ed. in Smith

(1950)'). Individual items in a work-list may be referred, by a sigillum derived from an original publication date, or from *RISM* B/I/1, to a list of publications above.

Where lost works are listed, the source of information about them is normally cited. 'Inc.', following a title, means that the work is incomplete; following a source citation, it means that the source is.

Any abbreviation found in a work-list and not in the abbreviation list at the beginning of each volume is explained at the head of the list (or of the section of the list) concerned.

10. APPENDIXES. Attention is drawn to the appendixes to the dictionary, in vols.28 and 29. In vol.28 will be found lists of items that supplement the entries Collections, private; Congress reports; Dictionaries and encyclopedias; Editions, historical; Libraries; Periodicals; and Sound archives. These are followed by acknowledgements for the illustration sources both by article and by source and a list of contributors. Vol.29 contains a comprehensive index to names, terms and institutions found in the dictionary.

S.S.

Acknowledgements

The writing and editing of this dictionary represents a large corporate effort on the part of a great number of people, including several thousand contributors and more than a hundred editors, consultants, proofreaders and administrative staff. Here I can name and thank only a selection, and apologize to those who cannot be individually mentioned. These include the numerous contributors who have provided help beyond the normal obligations of scholarly collaboration, for example by drawing our attention to facts, publications and potential authors we might otherwise have overlooked, by alerting us to errors in the 1980 edition or our companion dictionaries that needed to be corrected, by warning us of possible sources of error, and in countless other ways. Many besides contributors – scholars, students, librarians, people working in other disciplines, music lovers, lay readers of the 1980 edition, and the many entrants in the dictionary who took the trouble to complete our questionnaire forms – have provided generous help towards the greater accuracy of the dictionary.

*

I must first acknowledge, and express my gratitude for, the work of my senior colleagues. First among them is the Executive Editor, John Tyrrell, who joined the editorial staff in 1996, played a major role in the training of editorial staff, and assumed responsibility for the editorial process in 1998, at a critical point in the dictionary's preparation. Ian Bent, who played a central role in the planning of the 1980 edition, was crucially involved in the planning of many aspects of the revision. David Fallows, who was also involved in the preparation of the 1980 edition, played a substantial role in the planning and the execution of many of the most critical areas.

On p.vi three groups of editors and editorial advisers are listed. Those named as 'External Advisory Editors' were in the main responsible for the initial stages of planning the revision – advising as to what should be retained, what should be revised, what should be written afresh, what should be deleted, what should be added, and who should be the contributors. Those who advised on the early planning of specific areas, chiefly concerned with composer entries, are: medieval music, David Fallows; Renaissance music, David Fallows, Iain Fenlon and John Kmetz; Baroque and Classical periods, Tim Carter, Malcolm Boyd and Marita McClymonds (Italy), George Buelow and Thomas Bauman (Germany and central Europe), Julie Anne Sadie and David Charlton (France), Peter Holman (Britain) and Louise Stein (Iberia), with later help from Rudolf Rasch and Philippe Vendrix (the Low Countries); the Romantic period, Roger Parker (Italy), Walter Frisch (Germany and Austria), Leanne Langley (Britain), David Charlton and Richard Langham Smith (France), Jim Samson (central Eastern Europe), David Fanning (Russia and Scandinavia), Frances Barulich (Iberia) and George Leotsakos (Greece); on the 20th century, the five last mentioned also played a role in the early planning, along with Arnold Whittall (Germany, Austria and the United Kingdom), the late John C.G. Waterhouse (Italy), Carol Oja,

Mark Tucker and the late K. Robert Schwarz (USA), Gordon E. Smith (Canada) and Roger Covell (Australia).

Early advisers on entries in the non-composer areas include: ancient and early Christian music, the late James McKinnon and Thomas J. Mathiesen; instruments, their structure and their use, Peter Walls (bowed strings), Tim Crawford (plucked strings), William Waterhouse (woodwind), Edward H. Tarr (brass), Laurence Libin (keyboard), Barbara Owen (organ) and James Holland (percussion); non-Western and traditional music, Helen Myers (with a team of consultants, named below); conceptual, generic and theoretical topics, Ian Bent, Jim Samson, David Fallows and Tim Carter, working with the Editor; acoustics, Murray Campbell and Clive Greated; jazz, Alyn Shipton and Barry Kernfeld; popular music and musicians, Richard Middleton; 20th-century scholars and critics, Jeffrey Dean; and bibliographical reference articles, Julie Woodward. Among the 'national advisers' listed on p.vi and not already mentioned above, I should particularly acknowledge the help of Gerard Béhague, on all matters to do with Latin America; Carolyn Gianturco, for her help on Italian issues, and Jean Gribenski, on French; Jehoash Hirshberg, on matters to do with Israel and Jewish music; Masakata Kanazawa, on Japanese questions; Lyudmila Kovnatskaya, who provided much valuable advice on Russian and ex-USSR music and musicians; and Harry White, whose help ensured a proper coverage of Irish music.

Plans, however carefully laid, do not always fall neatly into place, and a very great deal of further planning proved to be necessary during the editorial stages. Some of this was carried out by those already acknowledged above, but in many important subject areas we depended primarily on the knowledge and the energies of our senior internal editors. Among these I would first mention Jennifer Doctor, who built up an extensive network of local advisers on the coverage of 20th-century composers; her work was assisted by Peter Owens and pursued, extended and carried to completion under the direction of Charles Wilson. Help and advice from Paul Griffiths, who had supervised this area in the 1980 edition, was gratefully received. Entries on 19th-century composers were at first overseen by Geoffrey Norris and later by John Tyrrell and Richard Wigmore. Dorothea Link and then Elizabeth Gibson had charge of entries on the Classical era. The Baroque area was supervised by Marija Đurićand Angela Lloyd with Malcolm Boyd. Jeffrey Dean oversaw the final planning and editing of medieval and Renaissance entries. Michael Wood supervised entries on ancient and early Christian music. Our coverage of non-Western and traditional music, planned by Helen Myers, was developed under Peggy Duesenberry and brought to fruition under the direction of Carole Pegg. Janet Page and later Richard Partridge coordinated our coverage of musical instruments and their use. Judith Nagley was the senior editor supervising all entries on concepts, genres and theoretical topics. Michael Wood and later Richard Wigmore were in charge of articles on 20th-century performers. Entries on bibliographical, publishing and reference topics were in the hands of Liesel Stanbridge and, for the extended ones, Julie Woodward, who built up an extensive international network of correspondents to supply material towards the large reference articles. John Snelson played a central role in our coverage of all aspects of popular and light music. Our resident bibliographer, Robert Balchin, oversaw the coordination of bibliographies. Polly Fallows played a vital role throughout in establishing and securing editorial and bibliographical consistency.

It is appropriate for me to name here those further members of our cohorts of text-editors who contributed substantially to the dictionary. Those who worked on medieval and Renaissance composers include Jane Alden, Jane Bellingham, Alison Bullock, Jonathan King, Emma Kempson and Laura Macy; among those dealing with composers of later periods I would mention in particular Irena Cholij, Sarah Hibberd, Fiona Little, Elizabeth McKim, Tim Parry, Audrey Twine and Richard Wigmore, and Nigel Fortune was generous with help on Baroque composers. The large team of editors working on 20th-century composers included Philip Croydon, Michael Zev Gordon, Celia Hurwitz and Ian Stephens, and James Chater, Nigel

Simeone and Ingalo Thomson also played significant roles; their support team included Amanda Hadingue, Sofi Mogenson, Robin Newton and David Lewiston Sharpe. The editors working on ethnomusicological material included Gregory Barz (Africa), Elizabeth Brewer (instruments), Veronica Doubleday (Middle East), Jan Fairley (Latin America, Oceania), Stephen Jones (East Asia), Maria Lord (South Asia), Maria Mendonca (South-east Asia) and Lilija Zobens (parts of Europe). Emma Wakelin was the principal text editor for generic articles. For articles pertaining to instruments, David Allinson and Lalage Cochrane were the main assistant editors. Entries on present-day writers on music were dealt with by Berta Joncus, David Threasher and Jill Tucker. In the preparation of entries on 20th-century performers Edmund Forey played a large role. Jennifer Wilson did much to secure a consistent handling of institutional names and to control articles on national and local musical history, where Richard Wigmore, Lucy Temperley and Harry Haskell were among the editors. Simon Lancaster, working with Eleanor Stephens, and later Rose Dawson, managed our team of bibliographical bloodhounds. David Rose's eagle eye helped us to avoid many errors. Special thanks are also due to the translators, especially those who were most often called upon: Mary Whittall (German), Anthea Bell (French), Kenneth Chalmers (Italian), Marianne Stevens (Hungarian and Spanish), Diana Turner and Philip Taylor (Russian).

*

Advice received from our consultants and indeed from individual contributors has ranged widely, from the letter recommending a particular scholar for a particular entry to long and carefully considered lists of recommendations. The list that follows cannot hope to be comprehensive and I hope that those who are not individually named will accept this portmanteau acknowledgment of their generous help towards making this a better dictionary – and I may perhaps supplement this with an apology to those whose suggestions it was not possible, for one reason or another, for us to act upon.

The area in which our consultants were especially numerous are 20th-century composers. (Names of advisers and internal editors already noted above are not repeated here, and some countries will thus not be represented.) We are grateful to the following for help and advice regarding composers in the specified countries: George Leotsakos (Albania), Svetlana Sarkisian (Armenia), David Tunley (Australia), Bernhard Günther (Austria), Taisiya Shcherbakova (Belarus), Hermann Sabbe, Diana von Volborth-Danys and Eric de Visscher (Belgium), Agustín Fernandez (Bolivia), Ivan Pavlović (Bosnia-Hercegovina), Gregory Myers, Anna Levy and Anda Palieva (Bulgaria), Luis Merino (Chile), Jonathan Stock and Frank Kouwenhoven (China), Susana Friedmann (Colombia), Jorge Luis Acevedo Vargas (Costa Rica), Zdravko Blažeković (Croatia), Victoria Eli Rodríguez (Cuba), Karel Steinmetz and Jiří Macek (Czech Republic), Anders Beyer (Denmark), Samha el Kholy (Egypt), Urve Lippius (Estonia), Ilkka Oramo (Finland), Jeremy Drake (France), Leah Dolidze (Georgia), Jürg Stenzl, Erik Levi and Gisela Nauck (Germany), Harrison Ryker (Hong Kong), László Vikárius and Melinda Berlász (Hungary), Thorkell Sigurbjørnsson and Arni Heimir Ingólfsson (Iceland), Franki Raden (Indonesia), Keith Howard (Korea), Arnolds Klotiņs (Latvia), Ricardo Miranda-Perez (Mexico), Irina Sukhomlin (Moldova), Leo Samama (Netherlands), Adrienne Simpson and the late John M. Thomson (New Zealand), Arvid Vollsnes (Norway), Juan Carlos Estenssoro (Peru), Donald Thompson (Puerto Rico), Lucrecia Kasilag and José Maceda (Philippines), Adrian Thomas, Stanisław Czopowicz and Isabela Zymer (Poland), Christopher Bochmann and Sérgio Azevedo (Portugal), Octavian Cosma (Romania), Vladimir Godár (Slovakia), Ivan Klemenčić (Slovenia), James May (South Africa), Christiane Heine (Spain), Hans Åstrand (Sweden), Jean-Pierre Amann and Christopher Walton (Switzerland), Münir

Nurettin Beken (Turkey), Virko Baley (Ukraine), Susana Salgado (Uruguay), Carmen Tellez (Venezuela), Roksanda Pejović (Yugoslavia), T.M. Scruggs (Central America) and Razia Sultanova (Central Asian Republics). In our coverage of traditional music, we are particularly grateful for the help we have received from Gerhard Kubik (Africa south of the Sahara), Stephen Blum (Central Asia), James Porter (Europe), Gerard Béhague (Latin America), Philip V. Bohlman and Ruth Davis (Middle East), Mervyn McLean (Oceania), Richard Widdess (South Asia) and R. Anderson Sutton (South-east Asia). We have received much general help from Peter Cooke and Bruno Nettl and, particularly on popular traditions, Richard Middleton and Peter Manuel. Articles on conceptual and generic topics profited from advice and help from David Hiley (particularly on chant), Richard Rastall (medieval drama and notation), John Caldwell (keyboard and Anglican subjects), Franz Wiering (mode issues), Brian Hyer (theoretical topics) and Eleanor Selfridge-Field (computers); Julian Rushton provided advice on many terminological and theoretical questions and Geoffrey Chew has given assistance in several areas. Particularly valuable help was received from Lydia Goehr in the planning and execution of our coverage of philosophy of music and from John Sloboda in our coverage of psychology of music. Advice from Jeffrey Dean was an invaluable resource to all of us working in this crucial group of areas. In the area of musical instruments, help was received from Arthur W.J.G. Ord-Hume on mechanical instruments and Simon Emerson and Hugh Davies on electronic instruments. Advice on organological issues came from Frances Palmer and Albert C. Rice, on the coverage of bowed strings from Carlo Chiesa, Robert A. Green, Philip Kass and Jack Liivoja-Lorius and plucked from James Tyler. Stephen Bicknell, Felix Friedrich, Alfred Reichling and Nicholas Thistlethwaite gave us the benefit of their advice on organs and their builders as did John Barnes, Martha Clinkscale, John Koster, Charles Mould, G. Grant O'Brien, Howard Schott and Denzil Wraight on other keyboard instruments. Help towards the coverage of wind instruments came from Geoffrey Burgess, Bruce Haynes, Trevor Herbert, David Lasocki, Renato Meucci, Jeremy Montagu and Arnold Myers (who assisted generously in other spheres too). In the coverage of 20th-century performers, we benefited from the advice of Alan Blyth on singers, Charles Hopkins and Bryce Morrison on pianists, Margaret Campbell and Tully Potter on string players, Edward H. Tarr on brass players, Paul Hale on organists, Graham Wade on guitarists and José Bowen on conductors. David Cummings kindly helped with the checking of material in many of these entries. Several scholars have assisted us towards the coverage of recent or present-day scholarship in their own countries or countries on whose history they have worked, or for advice on particular aspects of their country's musical history. Some of these are already acknowledged above, as national advisers or for their help in other spheres; to their names should be added those of Christian Berger and Pamela Potter (Germany and Austria), John Bergsagel (Scandinavia), Juan José Carreras (Spain), Kurt von Fischer (Switzerland), Rudolf Rasch (Netherlands) and Henri Vanhulst (Belgium). Throughout the editing operation, we have maintained a cordial and cooperative relationship with our friends and colleagues at *Die Musik in Geschichte und Gegenwart*, Professor Ludwig Finscher and Dr Andreas Jaschinski, sometimes involving the interchange of material in cases of emergency.

*

The illustrations for the dictionary, based initially on those used in the 1980 edition under the direction of Elisabeth Agate, have been assembled by Ms Agate with Martyn Evans and Lucy Davies, who managed the illustrations department in the later stages. Madeleine Ladell was in editorial charge of the music examples, which were prepared by Halstan. Copyright holders of illustrations and those of music examples are acknowledged at the end of vol.28. Everyone who

worked in the *Grove* offices in the course of the project will want to thank Michael Card for his sterling work and his generous readiness to apply his skill to help all of us solve our electronic and typographical problems.

*

On a more personal note, I should like to express my gratitude to my wife, Julie Anne Sadie, for her patience over many years when *Grove* occupied so large a proportion of my time and my energies. I should also like to thank my secretary during most of the project, Sarah Dunlop, and her successor, Emily Thwaite, for their ready help. I am deeply grateful to the senior members of the *Grove* editorial staff who maintained their personal loyalty as well as their loyalty to the project and their determination to carry it through to the highest standards in spite of the many pressures to which they were subject. I am very grateful to my friend and longstanding colleague, John Tyrrell, for his work in the later stages of the preparation of the dictionary. Dr Tyrrell joined the editorial staff in 1996 and the next year became Executive Editor, taking responsibility for overseeing the final stages of editing when my own work for the dictionary moved on to a part-time basis. I am grateful too to Laura Macy who, when in late 1999 I ceased to work in the *Grove* offices, assumed primary responsibility for the proofing, and Jane Turner, for her management of the final correction and pre-publication stages; and also to Margot Levy for her work in the earlier stages of the planning of the editing operation and her notable achievement in providing something that has not been included in *Grove* since the first edition, an index, of a special kind that she designed herself, adapted to the scale of the work (details will be found with the index itself in vol.29).

S.S.

Publishers' Note

The preparation of a major work such as *The New Grove* is a substantial undertaking for any publisher. Stanley Sadie's acknowledgements fully describe the work undertaken by a vast team of advisers, editors and contributors, and John Tyrrell's indispensable contribution as Executive Editor. I thought it would also be of interest to record how the present edition was produced, both technically and from a management point of view, together with acknowledgement of those aside from the editorial team who made its completion possible.

The foundations for publication were laid in 1993, when those planning the new edition had the forethought to provide for electronic publication as well as printed books – though at the time 'electronic publication' meant CD-ROM rather than online. The key decision to prepare the text in SGML (Standard Generalized Markup Language) was taken by the Production Director, John Peacock, at a time when few publishers realized that this was the only guarantee that text could be reliably published electronically as well as through conventional typesetting.

Despite its manifold advantages, SGML is a cumbersome tool, and it was necessary to develop a blueprint that would reflect the complexity of *The New Grove* in terms of structure, scope and orthography. The underlying structure was designed by Richard Padley, whose ability to grasp both the vagaries of SGML and the complex content of *Grove* never failed to astonish. He worked closely with the Publishing Director, Margot Levy, in analysing the text and identifying its basic components, and set up the many systems that integrated the text update, the management systems and the final output.

The implementation of SGML, a monumental task in a work of 29,000 articles and 21 million words, was the responsibility of the Text Manager, Michael Card, whose patience and attention to detail was unwavering. His team included Martin Bolchover, Kate May, David Rose and Gill Norfolk, who in the later stages of production trained and supervised a team of in-house keyboard operators. Among those who keyed and coded articles, special mention should be made of Jean Mighail, who was undaunted by the most complex of work-lists, and of the proof-readers, notably Shirley Card, Deirdre Clark, Jacquie Meredith and Sheilagh Wilson.

The backbone of the production of *Grove* was the Management Information System, a formidable relational database. Building on the foundations laid by Diana Turner, Caroline Jackson ran this system with calm and efficiency along with a team of loyal assistants.

During the long development cycle of *Grove*, editorial and production staff came and went, many of them joining us for short periods in the course of their academic or professional careers. Maintaining staff morale and setting up systems that would accommodate such unusual arrangements was a high priority, and everyone who worked on Grove has cause to be grateful to Jennie Pittam, without whom it would have been hard for anyone to work effectively.

It may be interesting and pleasurable to design a blueprint for *Grove*. It is far from easy to manage its implementation and effectively translate the ideas into print. Stephen Benaim managed the production throughout, coordinating in-house teams and external suppliers; he proved that it is possible to be at once calm, resolute and patient, and maintained a sense of humour that sustained many in the arduous task of completing the project.

This final phase was indeed an enormous challenge, since all articles had to be completed and processed in less than a year. Management of this process was the responsibility of the Managing Editor Laura Macy – who proved to be not only an expert musicologist but a gifted manager with a vision of the future – and Jane Turner, who applied to the task all her experience as Editor of *The Grove Dictionary of Art*, planning every detail with almost military precision and freely contributing her organizational skills to the last editorial stages.

Over twenty people were involved in the final corrections. Special mention should be made of Russell Torrance, Jonathan Shipley and Paul Lloyd, who administered the process and provided a fund of ready wit to spur on the troops.

Thanks also go to Andrew Davenport, Laura Gilbert, Tim Johnson, Natasha Martin, Liz Rutherford, Dave Sheringham, Michael Summers and Briar Towers, who helped ensure that even the latest corrections were implemented with the same care. In addition a small army of filers, many on night shift, was required to make sense of the tonnes of paper generated – since even with the best electronic resources, editing still needs a paper trail, after all.

This edition also includes a thematic index, the first index to *Grove* since 1889. The almost Herculean feat of researching and compiling this was undertaken with enormous dedication by Margot Levy, with valuable input from Gillian Northcott and Emma Allen.

Typesetting was undertaken by Alden Bookset, who keyed all the new material. Alexia Georgiou controlled the flow of articles to and from the typesetters, and Lucy Davies managed the illustrations department. Oxford Designers and Illustrators prepared much of the new line artwork, and Allan Adams and Robert Haines at Surrey Scanning originated the half tones. As with the previous edition, the music examples were typeset by Halstan. The pages were produced to a demanding schedule by Clowes Information.

The process of converting the SGML for typesetting, creating an online editorial system and developing the Web version of *Grove*, has been the responsibility of Semantico, a company headed by Richard Padley and Adrian Driscoll. Thanks go to Executive Producer Sara Lloyd, Producer Sophie Durlacher and Web Development Director Jeremy Macdonald for their energetic pursuit of the highest standards as they directed this process, translating the vision and concepts that inform Grove to the World Wide Web.

Finally, mention must be made of the marketing teams led by Janice Kuta, Lisa Nachtigall and Alex Lankester, whose enthusiasm for the project is unbounded and who have consistently spurred on the editorial and production efforts.

Much time and attention on the parts of many people has gone to make the second edition of *Grove* what it is and the publishers hope that the creative energy that has been harnessed to bring it about will make the present edition an even more valuable resource than its distinguished predecessors.

Ian Jacobs

Preface to the First Edition

BY SIR GEORGE GROVE

THIS work is intended to supply a great and long acknowledged want. A growing demand has arisen in this country and the United States for information on all matters directly and indirectly connected with Music, owing to the great spread of concerts, musical publications, private practice, and interest in the subject, and to the immense improvement in the general position of music which has taken place since the commencement of the present century. Music is now performed, studied, and listened to by a much larger number of persons, and in a more serious spirit, than was the case at any previous period of our history. It is rapidly becoming an essential branch of education; the newest works of continental musicians are eagerly welcomed here very soon after their appearance abroad, and a strong desire is felt by a large, important, and increasing section of the public to know something of the structure and peculiarities of the music which they hear and play, of the nature and history of the instruments on which it is performed, of the biographies and characteristics of its composers – in a word, of all such particulars as may throw light on the rise, progress, and present condition of an art which is at once so prominent and so eminently progressive.

This desire it is the object of the Dictionary of Music and Musicians to meet. It is designed for the use of Professional musicians and Amateurs alike. It contains definitions of Musical Terms; explanations of the forms in which Musical Works are constructed and of the methods by which they are elaborated, as well as of the origin, structure, and successive modifications of Instruments; histories and descriptions of Societies and Institutions; notices of the composition, production, and contents of important works; lists of the principal published collections; biographies of representative composers, singers, players, and patrons of music – all the points, in short, immediate and remote, on which those interested in the Art, and alive to its many and far-reaching associations, can desire to be informed.

The limit of the history has been fixed at A.D. 1450, as the most remote date to which the rise of modern music can be carried back. Thus mere archaeology has been avoided, while the connection between the mediaeval systems and the wonderful modern art to which they gave rise has been insisted on and brought out wherever possible. While the subjects have been treated thoroughly and in a manner not unworthy of the attention of the professional musician, the style has been anxiously divested of technicality, and the musical illustrations have been taken, in most cases, from classical works likely to be familiar to the amateur, or within his reach.

The articles are based as far as possible on independent sources, and on the actual research of the writers, and it is hoped that in many cases fresh subjects have been treated, new and interesting information given, and some ancient mistakes corrected. As instances of the kind of subjects embraced and the general mode of treatment adopted, reference may be made to the larger biographies – especially that of Haydn, which is crowded with new facts; to the articles on Auber, Berlioz, Bodenschatz, Bull, Cristofori, David, Farinelli, Finck, Froberger, Galitzin, Gibbons, Hasse; on Additional Accompaniments, Agrémens, Arpeggio, Arrangement, Fingering, Form, and Harmony; on Académie de Musique, Bachgesellschaft, Breitkopf and Härtel, Bassoon, Carmagnole, Choral Symphony, Conservatoire, Concerts, Concert Spirituel, Copyright, Drum, English Opera, Fidelio, Grand Prix de Rome, Handel and Haydn Society,

Handel Festivals and Commemorations, Harpsichord, Harmonica, Hexachord, and many others. The engraved illustrations have been specially prepared for the work and will speak for themselves.

In an English dictionary it has been thought right to treat English music and musicians with special care, and to give their biographies and achievements with some minuteness of detail. On this point thanks are due to Colonel Joseph Lemuel Chester for much accurate information which it would have been almost impossible to obtain elsewhere, and which he has afforded in every case with the greatest kindness and promptitude.

Every means has been taken to procure an adequate treatment of the various topics and to bring the information down as near as possible to the day of publication. Notwithstanding the Editor's desire, however, omissions and errors have occurred. These will be rectified in an Appendix on the publication of the final volume.

The limits of the work have necessarily excluded disquisitions on Acoustics, Anatomy, Mechanics, and other branches of science connected with the main subject, which though highly important are not absolutely requisite in a book concerned with practical music. In the case of Acoustics, sufficient references are given to the best works to enable the student to pursue the enquiry for himself, outside the Dictionary. Similarly all investigations into the music of barbarous nations have been avoided, unless they have some direct bearing on European music.

The Editor gladly takes this early opportunity to express his deep obligations to the writers of the various articles. Their names are in themselves a guarantee for the value of their contributions; but the lively interest which they have shown in the work and the care they have taken in the preparation of their articles, often involving much time, and laborious, disinterested research, demand his warm acknowledgment.

Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

A	Admont, Benediktinerstift, Archiv und Bibliothek
DO	Dorfbeuren, Pfarramt

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. 1, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.xli–xlv; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp. xlvii–lii and discographical abbrevations on pp. liii–liv.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp. lv–lxxi; each national sigillum stands until contradicted.

Contents

A (i) (It.). A preposition found particularly in 16th- and 17th-century editions of polyphonic music where works are described as being *a due* (*a* 2), *a tre* (*a* 3), *a dieci* (*a* 10), etc., meaning in two, three or ten voices respectively. Many prints had it with an accent (*à* 2, etc.), but in modern Italian *à* is a variant form of *ha* ('he has') so is perhaps better avoided in this context wherever possible. It is the current French form, however, and is found particularly in French orchestral scores, *à* 2 (*à deux*) meaning the same as the Italian A DUE. As one of the commonest words in the Italian language, *a* occurs in many compound tempo and expression marks and has different meanings that may be found in any Italian dictionary. It appears before a vowel as *ad* and contracts with the definite article as *al*, *allo*, *ai*, *agli*, *alla* and *alle*.

DAVID FALLOWS

A (ii). *See* PITCH NOMENCLATURE.

A (iii). Abbreviation for *accelerando*, used particularly by Elgar. *See* LARGAMENTE.

Aachen (Fr. Aix-la-Chapelle). City in Germany. The cathedral and its music were the creation of Charlemagne (742–814), who made the town the northern capital of the Holy Roman Empire; the Holy Roman emperors were crowned there from 813 to 1531. The city was occupied by France in 1794 and formally annexed in 1801; after the Congress of Vienna (1814–15) it became part of Prussia. It was severely damaged in World War II.

Aachen was the political, religious and cultural centre of Charlemagne's empire, and the Hofkirche was constructed according to his own plans. The Aachen Cathedral choir dates from his founding of the Schola Palatina, whose teachers (including Alcuin from 782) were among the most distinguished scholars of the age. Alcuin described the school in a poem, mentioning a singing teacher named Sulpicius. For Charlemagne the idea of a politically united empire was closely linked with the establishment of a uniform liturgy, set to uniform music; his reforms in this direction led to the burning of all books connected with the Ambrosian rite in order to ensure adherence to the Gregorian style. As early as 774 he sent monks to Rome to study the teaching of such chant, and in 790 Pope Hadrian I responded to repeated requests from Charlemagne and sent two trained singers to the north with copies of the antiphonary. Organ music was also cultivated; in the early 9th century an Arab organ was sent to Charlemagne by Caliph Harun-al-Rashid and installed in the Hofkirche, while on the emperor's instructions a second organ was built for the cathedral.

The history of bellfounding in the city began with the early 9th-century founder Tancho (mentioned in the *Gesta Karoli*) and reached its peak in the 16th century in the work of the von Trier family. The growth of the cult of Charlemagne (still commemorated in an annual feast) gave rise to a characteristic Aachen chant repertory, including the rhymed office *Regali natus* and the sequence *Urbs aquensis*. The city came to rival Rome and Santiago de Compostela as a place of pilgrimage in the Middle Ages; the shrine was visited every seven years from about 1238, which further enriched the city's liturgy and music. Popular music and pilgrims' songs were stimulated, and wind music was played from tower galleries, with the participation of the town musicians from 1344. The coronation liturgy set a precedent for the organization of church music, and the 30 coronations that took place there between 936 and 1531 were attended by a fine choir.

In the 16th century Aachen Cathedral was an important centre of polyphony, especially of the style then developing in the Low Countries. Johannes Mangon, working at Aachen in the 1570s, transcribed a comprehensive collection of the music performed there in three choirbooks (1570–75; in *D-AAm*); apart from Mangon's own works, they include those of Chastelain, Claux, Clemens non Papa, Cleve, Crecquillon, Episcopius, Lassus, Maillard, Simon Moreau, Ponta and Rivulo. In 1632 the chronicler Johannes Noppius recorded that there were more musicians around the cathedral 'than there was standing room; and in case anyone should marvel at the beautiful music and splendid ceremonies of this church then let him know that it is just as fitting here as it is in *sede regia*'. In 1707 J.L. Blanche founded a choir school.

During the 18th century the city's cultural life benefited from the presence of visitors attracted by the sulphur springs, the most notable being Handel, who came to recover from his nervous collapse in 1737 and is reputed to have expressed his gratitude by playing the organ in the Abbey Church. The cathedral orchestra, documented from the 17th century, occasionally gave performances in collaboration with the traditional city Harmoniemusik. The Städtisches Orchester was founded in 1852, the first in the Rhineland. As early as 1835 Anton Schindler directed performances in the city and, on feast days, in the cathedral. The city participated in the Niederrheinisches Musikfest from May 1825, when it gave the second performance of Beethoven's Ninth Symphony (after its Vienna première). In the same month Spohr's opera *Jessonda* was performed to mark the opening of the Neues Schauspielhaus (renamed the Stadttheater in 1920). Lortzing, Burgmüller and Franck all had early successes

in the expanding musical life of 19th-century Aachen, and since Lortzing's time the Aachen opera stage has been a springboard for young talent.

The puritanical Cecilian Movement was fostered in the city, particularly by the Stiftskapellmeister Franz Nekes (1844–1914). The Gregoriushaus, a church music school, was founded by the cathedral Kapellmeister Heinrich Böckeler (*d* 1894); it trains organists to be sent to Ireland and the USA. The cathedral choir built up an international reputation under the Kapellmeister T.B. Rehmann (*d* 1963) and made many tours in France, Spain, Italy and Austria. After a long period of inactivity the cathedral choir school was re-established in 1972 as a private institution of the cathedral chapter. The musical reputation of the city in the 20th century is indicated by the distinguished succession of general music directors and conductors including Frite Busch (1912–18), Peter Raabe (1920–33), Herbert von Karajan (1934–42), Wolfgang Sawallisch (1953–8), Wolfgang Trommer (1962–74), Gabriel Chmura (1974–83), Yoram David (1984–90) and Bruce Ferden (from 1990).

RUDOLF POHL

Aagesen, Truid [Sistinus, Theodoricus; Malmogiensis, Trudo Haggaei] (*fl* 1593–1625). Danish composer and organist. He was appointed organist of Vor Frue Kirke (now the cathedral), Copenhagen, on 23 June 1593 after having 'pursued and learnt his art during a long period both in Germany and Italy'. He received a number of preferments, such as the free residence formerly set aside for the palace preacher, awarded to him in 1603. He was also on at least two occasions sent on commissions for the king, once to Prague (1600). He published under his latinized name Theodoricus Sistinus a set of secular *Cantiones* for three voices (Hamburg, 1608; ed. in Dania sonans, ii, 1966), his only known published music. The publication is dedicated to King Christian IV of Denmark, and it may be assumed that it won his approval, for during the period 1609–11 he received payments from the royal treasury in addition to his salary as organist, perhaps for teaching at the court. As early as 1604 he was suspected of being 'in the pope's pay' and he seems to have made no attempt to disguise his Catholicism, for a few years later association with him was used as evidence in a complaint of 'Jesuitism' against a student named Udby. In 1611 he lost his royal subsidy and in 1613, after the publication of the king's letter stating that men of the popish religion should be driven out of Denmark, his position became untenable. On 15 September 1613, the question was raised in the governing body of Copenhagen University, by whom Vor Frue Kirke was administered, whether 'Truid, organist, who let it be publicly known that he was popishly inclined', should be allowed to continue as organist. The decision was against him and he was immediately informed of his dismissal. He appears, however, to have received his salary until Michaelmas 1615, when his successor Johan Meincke (or Meineken) took office, and two weeks later (14 October) he received a positive testimonial from the university. His whereabouts immediately thereafter are not known, but in 1625 he was living in Danzig (now Gdańsk) with his wife and children. A *Missa Baci amorosi* for five voices by him survives (*PL-GD*, inc.); otherwise his only known music is a canon (*S-Sk*).

JOHN BERGSAGEL/OLE KONGSTED

A&M. American record company. It was founded in Los Angeles in 1962 by the former US army trumpeter Herb Alpert and the promoter-producer Jerry Moss. For first few years, A&M depended largely on revenues from Alpert's own recordings. His easy-listening instrumental music recorded with the Tijuana brass had sold over 20 million copies by 1968, when the company's turnover was $50 million. In 1966 A&M also scored a big success with Sergio Mendes and the Sandpipers' single, *Guantanamera*. Moss, however, was keen to broaden the appeal of A&M, and began recording such West Coast artists as Captain Beefheart and Dr John. In 1969 the label opened its first British office and by the early 1970s A&M also signed American recording deals with such artists as Procol Harum, The Move, Joe Cocker, Jimmy Cliff and Cat Stevens.

By the 1970s A&M were established as the most successful independent record label in the USA. In March 1977 it signed the British punk group the Sex Pistols, but dropped it after six days after complaints from other A&M artists. However, A&M showed a commitment of sorts to the new wave by signing the rather more radio-friendly act The Police. By 1989, when the company was sold to Polygram, annual turnover was over $200 million. In the late 1990s the A&M roster included the international recording stars Sting, Sheryl Crow, Bryan Adams and Del Amitri. Mowax, a dance label popular with teenagers, was also part of A&M.

DAVID BUCKLEY

Aarhus. *See* Århus.

Aaron [Aron], **Pietro** [Piero] (*b* Florence, *c*1480; *d* after 1545). Italian theorist and composer. Nothing is known of Aaron's early training, his teacher, or his career before 1516. He claims to have had 'the greatest friendship and familiarity' with Josquin, Obrecht, Isaac and Agricola in Florence (most likely between 1487 and 1495, and not necessarily at the same time). By 1516 he was a priest in Imola, where he wrote his first book, *Libri tres de institutione harmonica*, translated into Latin by the humanist Giovanni Antonio Flaminio. A contemporary poem by Achille Bocchi praises Aaron for rescuing music 'from squalor and dismal neglect'. By March 1520 he was a singer in Imola Cathedral; he was also paid by the city to teach music to those who wished to learn. He resigned in June 1522, and by February 1523 he was in Venice in the household of Sebastiano Michiel, Grand Prior of the Knights of St John of Jerusalem, to whom he dedicated

his *Toscanello*. When his patron died in 1536, Aaron became a Crutched Friar in a monastery near Bergamo. He lived to see his *Lucidario* published in 1545, but perhaps not his undated *Compendiolo*, in which the *Lucidario* is mentioned.

Apart from his brief stay at Imola, Aaron held no formal position as singer or choirmaster, an unusual situation that might be due to his Jewish origin (a hypothesis explored in Blackburn, Lowinsky and Miller). Born in tenuous circumstances (*Toscanello*, preface), he seems to have been largely self-taught; this may be the reason for his less systematic approach and questionable statements (especially in his first treatise), but also for his valuable insights into contemporary practice: from his first treatise onwards he promises to divulge 'many of the secret chambers of this art, never heretofore revealed'. He is especially informative on counterpoint and compositional process (distinguishing older and newer procedures), the modal system in polyphonic music and the application of *musica ficta*. He is one of the first theorists to discuss mean-tone temperament. His *Toscanello*, among the earliest vernacular music treatises, was highly successful and ran to four editions.

Aaron spans the generation between Franchinus Gaffurius and Gioseffo Zarlino. His roots lie in the teachings of John Hothby, Johannes Tinctoris, and above all in Gaffurius's *Practica musice*. Despite the humanistic trappings of his first treatise (perhaps owing to his translator), his orientation is largely practical. No theoretical innovator, he sought to apply the standard teachings on mode, counterpoint and *musica ficta* to contemporary music when doing so was becoming ever harder. His observations on the problems involved are particularly illuminating.

Aaron owes much to his friend and fellow theorist GIOVANNI SPATARO. Mostly by letter (only Spataro's survive), they discussed notation, composition and arcane uses of accidentals. Their early exchanges on notation, prompted by the errors in the *Libri tres*, led to an improved treatment in the *Toscanello*, which Spataro reviewed in nine letters (six survive). Aaron took Spataro's comments into account (without acknowledgement) in the 1529 edition. Spataro also wrote a lengthy critique of the *Trattato* (now lost), which he called 'without order and truth'; in the *Lucidario* Aaron quoted Spataro frequently, this time by name.

In his most original treatise, the *Trattato* of 1525, Aaron tried to apply Marchetto of Padua's modal theory to the existing polyphonic repertory, citing numerous compositions in Petrucci's publications. For him, as for Tinctoris, the mode was borne by the tenor and determined by final, range and species of 5ths and 4ths. He explained endings on *a*, *b* and *c′* not due to transposition (which did not fit Marchetto's system) by confinals and psalm tone differences, with preference given to the latter – seemingly a measure of desperation, for want of the new modes later proposed by Glareanus. He then showed how every syllable of the hexachord could be found on each note of the Guidonian hand. Severely criticized by Spataro for using only the flat *coniuncta* (e.g. *ut* on D is D♭, not D), in 1531 he published a revised treatment – an untitled pamphlet bound with some copies of the *Trattato* and the *Toscanello* – in which all the syllables are derived from *mi* or *fa*. The theory had been covered by Hothby, but Aaron's explanations are much clearer. In the *Lucidario* Aaron considered the possibility of F♭, C♭, B♯ and E♯ (a subject discussed with Spataro), but as a confirmed Pythagorean did not equate them with E, B, C and F. The manuscript *Delli principii* compares Aaron's, Stefanus Vanneus's and Gaffurius's initial notes for each mode (given its Greek name).

Despite similar content, the *Toscanello* is not a translation of the *Libri tres*: some sections are omitted (on chant, solmization, mutation), some duplicated (fundamentals), some improved (notation), some expanded (notably on counterpoint and composition) and some added (division of the monochord, tuning of keyboard instruments). The 'aggiunta' of 1529 counsels composers to sign accidentals, citing with approval numerous examples of flats written to mitigate melodic tritones (normally less tolerable than diminished 5ths) or avoid diminished perfect intervals: accidentals are like signposts, necessary even for the learned.

The *Lucidario* is an interesting and unusual treatise on a wide range of theoretical disputes: plainchant, notation and counterpoint, and further thoughts on topics from his earlier treatises, with replies to some of Gaffurius's criticisms of the *Libri tres*. Book 4 incorporates the 1531 pamphlet, a few more questions of notation and accidentals, a disquisition on the Greek mode-names and the famous list of singers 'a libro' and 'al liuto'. The *Compendiolo*, an elementary manual largely derived from his first two treatises, is of less interest.

Aaron's influence extended throughout the 16th century, most notably in his pupil Illuminato Aiguino's treatises on modes in plainchant (1562) and polyphony (1581).

BONNIE J. BLACKBURN

Aaron Scotus (*b* ?Scotland, late 10th century; *d* Cologne, 18 Nov 1052). ?Scottish Benedictine abbot and music theorist. The date of his death (the 14th day before the calends of December 1052) is known from Hartzheim, who had access to local documents now lost. He was Abbot of St Martin in Cologne (Cologne like Laon and Liège attracted many Irish and Scots from the 9th century onwards) and at the same time (1042–52) abbot of St Pantaleon: double tenure was not uncommon.

Aaron decreed, presumably after a visit to Rome, that instead of the Common of Confessors his monks should sing the new Office of St Gregory the Great recently composed by Pope Leo IX (1049–54). It is difficult, however, to identify this Office among surviving Offices of St Gregory (AH, v, 1889/*R*, 184; H. Latil, *Rassegna gregoriana*, ii, 1903, pp.115–24, according to *I-MC* 542; H.M. Bannister, ibid., pp.181–90, according to *I-Rvat* lat.4749). According to Hartzheim, Aaron wrote a chronicle and a music treatise, *De utilitate cantus vocalis*, both of which are lost. A second music treatise, *De modo cantandi et psallendi*, is also lost, although Hartzheim claimed that a manuscript survived at St Martin in Cologne in the early 18th century. This treatise must have been very similar to *Instituta patrum de modo psallendi sive cantandi* (*GerbertS*, i, 5–8, edited from *CH-SGs* 556, pp.365–8), which deals with singing, both generally and in relation to asceticism. Trithemius attempted to identify this treatise with Aaron's third musical treatise, *De regulis tonorum et symphoniarum*, but it is likely that the latter dealt in a more technical manner with the Gregorian psalm tones and with consonances (*symphoniae*).

Abatessa [Abadessa, Abbatessa, Badessa], **Giovanni Battista** (*b* Bitonto, nr Bari; *d* after 1651). Italian composer and guitarist. He is known by four books of pieces for five-course Baroque guitar. They consist mainly of simple *battute* accompaniments to popular songs and dances of the early 17th century such as the passacaglia, *ciaccona*, folia, Ruggiero and aria di Fiorenza. The accompaniments are set down in the alphabet system of chord notation (*alfabeto*) devised by Girolamo Montesardo, in which letters of the alphabet designate fingering positions for various major and minor chords. Each of Abatessa's books contains instructions concerning the interpretation of the alphabet tablature, the fingering of the chords and the tuning of the guitar; the 1652 book also explains how to tune the guitar with the harp, presumably for the simultaneous playing of continuo parts. The 1627 collection gives instructions regarding the execution of certain kinds of strum such as the *trillo* and *repicco*, while the 1635 book and the undated *Ghirlanda di varii fiori* contain a table of correspondences between *alfabeto* chords in different positions. The 1635 collection contains five villanellas; others are found in the 1652 book, with, however, only the words and the accompanimental chords for guitar notated.

ROBERT STRIZICH/GARY R. BOYE

ABBA. Swedish pop group. Its members were Benny Andersson (*b* Stockholm, 16 Dec 1946), Agnetha Fältskog (*b* Jönköping, 5 April 1950), Anni-Frid Lyngstad (*b* Ballangen, Norway, 15 Nov 1945) and Björn Ulvaeus (*b* Göteborg, 25 April 1945). Having established separate careers within Swedish pop they started working together in 1970, from 1972 under the name Björn, Benny, Agnetha och Anni-Frid. The acronym ABBA was adopted in 1973. Their victory in the Eurovision Song Contest in 1974, with *Waterloo*, launched the most successful international career to emerge from that context. During the period 1974–82 the group attained global popularity with songs such as *Mama Mia* (1975), *Fernando* (1976), *Dancing Queen* (1976), *The Name of the Game* (1977), *Take a chance on me* (1978) and *Super Trouper* (1980), all of which were number one hits in the UK, and albums such as *Waterloo* (1974), *ABBA* (1975), *Arrival* (1976), *The Album* (1977), *Voulez-Vous* (1979) and *The Visitors* (1981). In terms of chart performance, Abba was the world's most successful pop group in the 1970s; by 1983 their cumulative record sales were estimated at 180 million units.

Abba's music, most of which was written by Andersson and Ulvaeus with some lyrics by their manager Stig

Anderson, features carefully designed, eclectic syntheses of 1970s pop and dance music with European and Latin American popular styles, most notably in stylistic pastiches such as the 'Italian' *Andante andante*, the 'Greek' *I have a dream* or the 'Andean' *Fernando*. Its prominent characteristics are sensuous combinations of diatonic melody and tonal harmony, often involving harmonic motion alternating between two or three chords. A further important factor contributing to Abba's sound is the meticulously crafted production. The engineer Michael B. Tretow created dense but transparent combinations of multi-tracked vocals with skilfully balanced backings setting new production standards for mainstream pop. In addition to the music, the group's success was also facilitated by their pioneering use of visual media for promotion, as exemplified by several video clips for single songs and the concert film *ABBA: the Movie* (1977).

The group disbanded in 1982, after which the members have pursued separate careers with varying degrees of success. Andersson and Ulvaeus wrote the musical *Chess* (with lyricist Tim Rice, 1984), *Kristina från Duvemåla* (1995), based on Vilhelm Moberg's tetralogy of novels about 19th-century Swedish emigrants to the USA, and *Mamma Mia* (2000).

ALF BJÖRNBERG

Abbà Cornaglia, Pietro (*b* Alessandria, 20 March 1851; *d* Alessandria, 2 May 1894). Italian organist and composer. He began his musical studies with his stepfather, Pietro Cornaglia. He attended the Milan Conservatory (1868–71), studying the piano with Antonio Angeleri and composition with Lauro Rossi and Mazzucato. His graduation exercise, the cantata *Caino e Abele*, won the first prize and a medal of honour. He toured abroad as a concert pianist, but from 1880 until his death was organist at the cathedral in Alessandria, where he also founded a school of composition, singing and piano, and conducted concerts for the Associazione filarmonica alessandrina. He composed three operas, *Isabella Spinola* (1877, Milan), *Maria di Warden* (1884, Venice) and *Una partita a scacchi* (1892, Pavia), the latter based on Giuseppe Giacosa's popular comedy. In these works, which did not have much success, Abbà Cornaglia remained uninfluenced by the innovatory tendencies of the 'Scapigliatura' and of Catalani and by the new *verismo* school; instead he gave evidence, especially in *Una partita a scacchi* (vocal score: Milan, 1892), of a tasteful eclecticism and excellent craftsmanship in a traditional vein. He also composed sacred works, piano pieces, chamber music, songs and works for organ and wrote two books, *Sulla introduzione del canto popolare in tutte le masse di comunità, e specialmente nella scuola* (1880) and *Impressioni d'un viaggio in Germania* (1881). In 1881 he organized a conference on the history and philosophy of music in Alessandria.

GIOVANNI CARLI BALLOLA/ROBERTA MONTEMORRA MARVIN

Abbado, Claudio (*b* Milan, 26 June 1933). Italian conductor. Son of the violinist and teacher Michelangelo Abbado, he heard Debussy's *Nocturnes* as a small boy and immediately had the ambition to become a conductor. Soon after the war he attended rehearsals by Furtwängler and Toscanini in Milan; his quiet, undemonstrative manner on the podium derives in part from his aversion to the dictatorial approach he witnessed in Toscanini. He first learnt the piano with his father, and studied at the Milan Conservatory until 1955, before going to the Vienna Music Academy to study conducting with Hans Swarowsky. In 1958 he won the Koussevitzky Competition, and a series of concert and operatic engagements in Italy followed. His career was further boosted when he won the Mitropoulos Prize in 1963 and worked for five months with the New York PO. His international success was rapid, and led to his first appearances at the Salzburg Festival in 1965, where he conducted Giacomo Manzoni's *Atomtod*, and to his first recordings. Although Abbado's speciality was initially 20th-century music, he was quickly welcomed as a clear-headed interpreter of the central Classical and Romantic repertory, with symphonies by Beethoven and Mendelssohn among his first recordings.

Abbado's début as an operatic conductor took place in Trieste in 1958, with Prokofiev's *The Love for Three Oranges*, and throughout his career he has sought to include 20th-century operas alongside the regular repertory. His 1960 début at La Scala was in a concert celebrating the 300th anniversary of the birth of Alessandro Scarlatti; the following year he began to conduct opera there, and in 1968 he directed the opening performance of the Scala season, Bellini's *I Capuleti e i Montecchi*. The same year he made his Covent Garden début with *Don Carlos*, the first time he had conducted Verdi. Notable among his later successes at Covent Garden was *Boris Godunov* in 1983. He became resident conductor of La Scala in 1969, music director two years

Claudio Abbado, 1984

later, and chief conductor from 1980 to 1986. During his years there he was always adventurous in developing the repertory, reviving rare Italian operas, introducing new ones and giving special attention to Berg, Musorgsky, Debussy and Rossini. He took the La Scala company on tour in Europe (including memorable performances of *Simon Boccanegra* at Covent Garden in 1976), the USA and Japan. Abbado made his début at the Vienna Staatsoper (with *Simon Boccanegra*) in 1984, and two years later he became the company's music director. His successes in Vienna have included new productions of *Wozzeck*, *Khovanshchina*, *Un ballo in maschera* and *Don Carlos*, as well as Rossini's *L'italiana in Algeri* and *Il viaggio a Reims*, the opera he had rescued from total neglect in performances at the 1984 Pesaro Festival with the Chamber Orchestra of Europe; the recording he made then was among his most successful ever. With the same orchestra he also conducted Schubert's *Fierrabras*, both in the opera house (1988) and on disc.

Abbado became principal conductor of the LSO in 1979 and was music director from 1983 to 1986, making many recordings with the orchestra. From 1982 to 1985 he was principal guest conductor of the Chicago SO, and in 1990 he became chief conductor of the Berlin PO in succession to Karajan. During his years in that post he has effectively sustained the orchestra's high standards while introducing considerably more 20th-century music into its programmes. In 1999 he announced that he would be leaving his Berlin post in 2002.

Abbado has always devoted special attention to the work of young musicians. He founded the European Community Youth Orchestra in 1978 and has remained music director, touring with it on many occasions. He is also founder and music director of the Gustav Mahler Youth Orchestra, involving musicians from outside the European Community, and artistic director of the Chamber Orchestra of Europe, founded by former members of the European Community Youth Orchestra. Abbado's recording career spans a wide repertory, embracing the complete symphonies of Beethoven, Brahms, Mahler, Mendelssohn and Schubert, the complete orchestral works of Ravel, many contemporary works (including Nono's *Como una ola de fuerza y luz*, written for him and Maurizio Pollini) and over a dozen complete opera recordings, among them outstanding readings of *L'italiana in Algeri*, *Simon Boccanegra*, *Boris Godunov*, *Wozzeck* and *Pelléas et Mélisande*. Quiet and unflamboyant, he rarely fails to draw exceptionally taut, fresh and refined playing from orchestras, although his interpretations of the standard classics tend to be reliably direct rather than distinctive. His direction of opera is generally compelling in its clarity, rhythmic vitality and command of structure. Like most of his younger Italian colleagues, he consistently avoids the vulgarities of the old Italian tradition and insists on a scholarly approach to texts.

EDWARD GREENFIELD

Abbado, Roberto (*b* Milan, 30 Dec 1954). Italian conductor. He studied at the conservatories in Pesaro and Milan, and with Franco Ferrara in Rome. He made his conducting début with the orchestra of the Accademia di S Cecilia in 1977, and his operatic début, with *Simon Boccanegra*, in Macerata the following year. His career developed with guest appearances in leading Italian opera houses and with orchestras in Italy, France, Germany and the USA. He also conducted at the Edinburgh Festival (1982) and at festivals in Israel, Lille and Munich. In 1991 Abbado was appointed chief conductor of the Munich RO. Meanwhile, he has consolidated his operatic career with guest engagements at La Scala, the Vienna Staatsoper, the Staatsoper in Munich (making his début with a new production of *La traviata* in 1993), the Metropolitan Opera (début, with *Adriana Lecouvreur*, 1994), the Opéra Bastille (début, with *Lucia di Lammermoor*, 1995) and other major houses. His recordings include an award-winning version of Rossini's *Tancredi*, Bellini's *I Capuleti e i Montecchi* and an infectious reading of *Don Pasquale*.

RICHARD WIGMORE

Abbate, Carlo (*b* Genoa, *c*1600; *d* after 1640). Italian theorist. A Franciscan, he was chaplain and musician to Cardinal Franz von Dietrichstein, Prince-Bishop of Olomouc and governor of Moravia. Before 1629 he probably taught music at the seminary at St Oslowan and from 1629 at the newly established Loretan seminary at Nikolsburg (now Mikulov), the cardinal's principal residence. He returned to Italy in 1632. His treatise *Regulae contrapuncti excerptae ex operibus Zerlini et aliorum ad breviorem tyronum instructionem accommodate* (St Oslowan, 1629/*R*), which in spite of its Latin title and dedicatory letter is written in Italian, was conceived as a textbook of counterpoint for his seminarians. It is an entirely unoriginal and conservative compendium of the most elementary rules concerning the use of consonances and dissonances, derived, according to the title, 'from the works of Zarlino and others'.

KAROL BERGER

Abbate, Carolyn (*b* New York, 20 Nov 1955). American musicologist. She studied at Yale University (BA 1977), and subsequently at Munich and Princeton, where she took the doctorate in 1984 with a dissertation on Wagner's Parisian *Tannhäuser*. She joined the faculty at Princeton in 1984, and was appointed professor there in 1991. She has also held visiting positions at the University of California, Berkeley, the Free University of Berlin and Harvard University. She was awarded the Dent medal in 1993. Abbate's primary interests are the history of opera, particularly Wagner, music and language and the metaphysics of musical performance. Her work centres on systematic criticism of methods in operatic interpretation, musical semiotics and narrative, the concept of voice in

music, and music and gender. Her later research involves operatic performance and vocal power as a motif in music, philosophy and literature from the Enlightenment to the 20th century.

PAULA MORGAN

Abbatessa, Giovanni Battista. *See* ABATESSA, GIOVANNI BATTISTA.

Abbatini, Antonio Maria (*b* Città di Castello, 26 Jan 1595; *d* Città di Castello, ? after 15 March 1679). Italian composer and teacher. He travelled to Rome with his brother Guidobaldo, an artist, in 1623 and 1625 (Andrae, 17–19), and was employed at S Giovanni in Laterano from January 1627 to May 1629. According to his verse autobiography (in *I-Rvat*) he served there 'seven years and some months', or from 1622, but neither this nor his statement that he held earlier positions in Città di Castello and at the Gesù in Rome have been confirmed. He subsequently served as *maestro di cappella* at the cathedrals of Città di Castello (June 1629 to May 1632, December 1635 to November 1640 and May 1677 to March 1679) and Orvieto (December 1632 to 1635). In Rome his principal tenures were at S Maria Maggiore, where he trained boy sopranos (November 1640 to January 1646, September 1649 to January 1657 and March 1672 to June 1677), and at S Luigi dei Francesi (November 1657 to March 1667). He directed music briefly at S Lorenzo in Damaso (May to October 1649) and at S Maria di Loreto (February to November 1657). He was employed briefly from March to October 1667 at the Santa Casa in Loreto before being recalled to Rome to serve as *bussolante extra muros* to Pope Clement IX (Giulio Rospigliosi), who had earlier been his prefect of music at S Maria Maggiore. He appears to have retained this office until July 1676, when Clement X died (Andrae, 63).

Apart from his dramatic cantata *Il pianto di Rodomonte*, published in 1633 by Pietro Antonio Ubaldoni (a tenor at Orvieto who had sung under him as a boy in S Giovanni in Laterano), Abbatini's printed music was exclusively sacred. Of the ten published volumes he reports in his autobiography (*c*1667), three volumes of *sacre canzoni* (apparently identified as motets by his contemporaries) are lost, as also is his revision of Palestrina's settings of the hymns of the Roman breviary, whose Latin had been newly revised by Urban VIII. (Abbatini's revisions were rejected by the Cappella Sistina, and it is unclear who was responsible for the edition of the hymns published in Antwerp in 1644.) Eight motets appeared in various anthologies between 1643 and 1656, but Abbatini's fame as a composer of sacred music was secured when Athanasius Kircher's monumental *Musurgia universalis* (Rome, 1650) cited his works as a model of the 'stylus ecclesiasticus & motecticus', illustrated by his five-part *Jesu dulcis memoria* from the fourth book of *Sacre canzoni*. Clear textures, firm diatonic harmonies, and melodic lines more declamatory than melismatic conform to Tridentine standards. With their lively sense of phrasing, their division into sections by frequent metrical changes and their suave passages in 3rds and 6ths, however, the few-voice compositions, especially, can be heard as precursors of Corelli's generation.

Abbatini probably considered his second most important contribution to be that as a teacher and scholar. Contracts for the musical instruction and boarding of *putti* exist from the 1640s in conjunction with his first employment at S Maria Maggiore. He counted 'some five score followers and more, principally castratos'. Domenico dal Pane became the most notable among them, as an operatic singer, member of the Sistine and Viennese Imperial chapels, and later as a *maestro di cappella* in his own right. From 1658 to 1676 Abbatini was a stalwart of the Roman Congregazione di S Cecilia, serving as one of its 'guardians' in 1662–3, 1666 and 1669. He held public academies at his own house in the 1660s at which Italian music of the late 16th century, including unaccompanied madrigals by Marenzio and Monteverdi, were performed. 15 of his own academic discourses (dated 1663–8) survive, dealing in the main with music theory and contrapuntal technique. His autobiographical sketch clearly resents the reduced status of the composer as *musico* in comparison with the esteem accorded the best singers of the day.

Abbatini had no private patrons and he wrote little chamber music, but in Rome he moved within the spheres of the Barberini and their protégé Giulio Rospigliosi. *Il pianto di Rodomonte* was composed for the Accademia degli Assorditi, originally of Urbino, to a text by a member of the academy. Berardi reports that madrigals by him were sung at his academy in the 1660s. The few cantatas attributed to him have not been dated, but appear in sources from after about 1650 and may also have served the same purpose.

It was probably Abbatini's connection with Giulio Rospigliosi at S Maria Maggiore that engendered his collaboration with Marco Marazzoli on the opera *Dal male il bene*, given for the young Prince Maffeo Barberini and his new wife during Carnival 1654. Abbatini alone composed the music for Rospigliosi's *La comica del cielo*, an opera about the penitential conversion of a Spanish actress and based, like *Dal male il bene*, on a Spanish play. It was staged in Rome in 1668 under Rospigliosi's papacy, though it may have been written and partly composed earlier. Both operas portray contemporary secular characters including humorous subordinates who

have lively dialogue and arias. The ensembles of soloists that conclude Acts 1 and 3 of *Dal male il bene* (Marazzoli wrote Act 2 and the beginning of Act 3) are among the earliest known examples of the ensemble finale. Both operas also offered a variety of duets and presented arias in the new longer refrain forms or in cantata-like scenes. Despite the origins of both librettos, little of their music attempts to sound Spanish. The musical challenge, rather, was to set the long stretches of recitative dialogue demanded by the involved plots. Abbatini's recitative broadened the rate of harmonic change and provided forward momentum with a firm sense of chord progression.

Somewhat different was Abbatini's score for *Ione*, intended for the celebrations of the marriage of Emperor Leopold I to Margareta Theresia of Spain. Based on the Greek story of Io, seduced by Jupiter, and a vengeful Juno, its 12 solo roles call for more arias, with more florid passages, and greater use of treble instruments to accompany them. Its choral finales represent a return to the style of earlier spectacles. The librettist is unknown, and no performance has been documented. Abbatini did not mention any of his theatrical scores in recounting his career, yet it is for his operas that he has been known in modern times.

WORKS

printed works published in Rome unless otherwise stated

SACRED

Missa, 16vv (1627)

Il terzo libro di sacre canzoni, 2–6vv, op.5 (Orvieto, 1634)

Il quinto libro di sacre canzoni, 2–5vv, op.9 (1638); 2 ed. in Ciliberti, 4 ed. in Andrae

Il sesto libro di sacre canzoni, 2–5vv, op.10 (1653); 2 ed. in Ciliberti, 3 ed. in Andrae

[2] Antifone a 12 bassi e 12 tenori … cantate in S Maria sopra Minerva … l'anno 1661 (1677)

Motets in 1643[1], 1643[2], 1645[2], 1649[2], 1650[1], *I-Bc*, *Rc*, *Rsc*; 1 ed. in Ciliberti

Jesu dulcis memoria, motet, 5vv, ed. in Kircher [from lost 4th book of sacre canzoni]

Lost: Requiem, 1672, cited in Giazotto; Ky, Gl, 16vv, cited in Andrae; ants, 12 S, 12 A, cited in Baini

SECULAR

Il pianto di Rodomonte (dramatic cantata), 4vv, bc (Orvieto, 1633/*R*)

Dal male il bene (dramma musicale, 3, Giacomo and Giulio Rospigliosi, after A. Sigler de Huerta: *No ay bien sin ageno daño*), Rome, Palazzo Barberini alle Quattro Fontane, 12 Feb 1654, *D-MÜs* (Act 1), *IBborromeo*, *I-Bc*, *Rsc* (Acts 2 and 3), *Rvat* (2 copies, 1 partly autograph); collab. M. Marazzoli

Ione (dramma musicale, 3), unperf., *A-Wn* [dated Rome, 1666]

La comica del cielo (dramma musicale, 3, Giulio Rospigliosi, after L. Vélez de Guevara, A. Coelho and F. de Roxas: *La Baltasara*), Rome, Palazzo Rospigliosi a S Lorenzo in Lucina, 1 Feb 1668, *I-Rvat* (partly autograph)

Cantatas (all with bc): Ahi, di man de la ragione, 1v, *MOe*; Amante dubbioso, 1v, *MOe*; Passati contenti, 1v, *F-Pn*; Vieni amante, 2vv, *I-Fc*; Vo cercando la fortuna, 1v, *MOe*; Voli augello al vento, 1v, *Nc*, ed. in Andrae

Madrigals, lost, cited in Berardi

MARGARET MURATA

Abbellimenti (It.: 'embellishments'). A term applied both to improvised and to notated embellishments, and both to free ornamentation and to specific ORNAMENTS.

ROBERT DONINGTON

Abbey, John (*b* Whilton, Northants., 22 Dec 1785; *d* Versailles, 19 Feb 1859). English organ builder. The son of a local joiner, he first learnt his father's trade. Against family opinion he was apprenticed while still in his youth to the organ builder James Davis and later joined in partnership with Hugh Russell. Abbey became acquainted with Sébastian Erard in London and went to France to build an organ for the 1827 Industrial Exhibition at the Louvre, which was later moved to the Paris Conservatoire (before 1864). Settling first in Paris, and later in Versailles, he received a royal commission to build an organ for the chapel of the Légion d'Honneur at St Denis and another for the chapel of the Palais des Tuileries (1827), which was badly damaged during the 1830 Revolution. In 1831 with Meyerbeer's protection Abbey was employed to build the organ of the Paris Opéra (destroyed by fire, 1873). These instruments were the first in France to be fitted with free reeds, a Venetian swell, inverted-rib bellows (invented by the clock maker Cumming) and composition pedals.

Another innovation was Abbey's small organ built in the chancel of St Etienne-du-Mont, Paris (1829), which initiated the French tradition of the 'orgues du choeur' for accompaniment purposes, as opposed to the larger instruments to be found in west-end galleries. Such innovations, together with Abbey's reputation for fine craftsmanship and voicing, quickly established a fame

overshadowed only by Cavaillé-Coll, with whom he competed unsuccessfully for the building of the new organ at St Denis (1833).

Abbey built large new gallery organs for the cathedrals at Amiens (1833), Tulle (the 1839 Exhibition organ for which he won first prize), Bayeux (1843), La Rochelle, Rennes, Viviers and Châlons-sur-Marne (the last two survive in their original form), and restored those of the cathedrals at Mende (1835–9), Reims (*c*1845), Evreux (destroyed 1944), Moulins and Nevers (later superseded). Other restorations include those at St Etienne-du-Mont, St Philippe-du-Roule (1834) and Notre Dame de l'Assomption in Paris and the parish church of Sedan. He established smaller, one- or two-manual gallery or chancel organs in churches, chapels and convents throughout France, notably at Versailles Cathedral (1837, chancel organ), Versailles Hospital chapel, Houdan (chancel organ), Neauphle-le-Château (1845), Jouyen-Josas and in Paris at St Nicolas-des-Champs, Ste Elisabeth, St Thomas d'Aquin and St Médard (chancel organs). He also developed a trade in chamber-organs and exported small-scale instruments as far as Chile. He was competent as a teacher and many builders were trained by him and followed his principles.

After Abbey's death, the business was successfully continued by his two sons, Edwin (1840–95) and John-Albert (1843–1930) and his grandson John-Marie (1886–1931), after whose death after the firm closed down in 1935.

W.H. HUSK/MARC LEROY/STEPHEN BICKNELL

Abbiati, Franco (*b* Verdello, 14 Sept 1898; *d* Bergamo, 22 Jan 1981). Italian music critic. He took a diploma in composition at the Turin Conservatory (1929) and studied musicology with Cesari. His career as a critic was centred in Milan; after working on *Secolo sera* (1928–34), he succeeded Cesari at *Corriere della sera*, remaining there until his retirement (1973). In 1949 he founded the monthly journal *La scala*, which he edited until its closure in 1963; he was particularly interested in opera, especially its authentic performance. Abbiati also published a history of music in five volumes (1939–46), which he later updated and revised in four volumes (1967–8). This was well received, although (being the work of a single author) it was inevitably incomplete; the comments in the second edition on 20th-century composers, notably Italian composers of Abbiati's own generation, are especially valuable as a contemporary response. His four-volume work on Verdi (1959) contains many letters and documents not previously published.

CAROLYN GIANTURCO

Abbott, Emma (*b* Chicago, 9 Dec 1850; *d* Salt Lake City, 5 Jan 1891). American soprano and impresario. She studied first with her father and by the age of nine was performing professionally. She joined an itinerant concert troup in 1866 and after it disbanded went to New York to study with Achille Errani; her concert début there was in December 1871. In 1872 she went abroad to study with Sangiovanni in Milan and Marchesi, Wartel and Delle Sedie in Paris. Her operatic début at Covent Garden was as Marie in *La fille du régiment* (2 May 1876), but her contract was cancelled when she refused to sing Violetta on moral grounds.

Abbott secretly married Eugene Wetherell (*d* 1889); in 1876 they returned to the USA, where she gave concerts. Her American operatic début was in New York on 23 February 1877, again as Marie. In 1878 she formed an opera company that successfully toured the USA until her sudden death, of pneumonia, in 1891. Abbott retained artistic control over her troupe, which sometimes numbered 60; repertory included French, Italian and English operas and operettas, all sung in English. Many of the works were abridged; interpolated songs were commonplace.

Abbott's voice was a pure, clear soprano of great flexibility and volume. She was not popular among critics but her company was very influential; Americans called her 'the people's prima donna'.

H. WILEY HITCHCOCK/KATHERINE K. PRESTON

Abbrederis, Matthäus (*b* Rankweil, Vorarlberg, bap. 17 April 1652; *d* after 1725). Austrian organ builder. He was the outstanding master in the upper Rhine valley south of Lake Constance before and after 1700. Stylistically his roots were still firmly in the Baroque of the 17th century, and he remained uninfluenced by the south German late Baroque of the 18th century. His organ for the monastery church of Pfäfers, Switzerland (1693–4), survives unaltered. He also built instruments at other places in Switzerland: Thal (1690), Fischingen (1690), St Luzi, Chur (1712), Sargans (1717), and Maienfeld (1725). An account of the Pfäfers organ is given in F. Jakob: 'Die Abbrederisorgel im Psallierchor der ehemaligen Stiftskirche Pfäfers', *Terra plana*, viii (1973), 35–7.

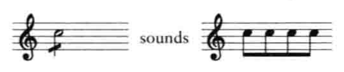
FRIEDRICH JAKOB

Abbreviations. As used in the notation of music, abbreviations fall into two main categories: modifications of normal note shapes, signs etc.; and verbal instructions that replace fully written-out music. Abbreviations are far more common in manuscript than in printed music.

Modified note shapes and other non-verbal signs usually represent repetitions of passages of music, varying in length from a single note to a large part of a movement. Other abbreviations of this type avoid such clumsy features of notation as leger lines. See ex.1, ex.2, ex.3, ex.4, ex.5, ex.6, ex.6, ex.7, ex.8, ex.9, ex.10, ex.11.

Abbreviated verbal instructions are sometimes used in a score when instruments play in unison in orchestral music: the lines belonging to one instrument may be left blank in the score, the notes being replaced by an instruction such as *col violini* ('with the violins') or *col basso* ('with the bass'). This often occurs when, for

Ex.1 Dots over a note denote its repetition



Ex.2 Bar joining notes indicates rate of oscillation, note head indicates duration of oscillation (Ger. *Brillenbässe*)

Ex.3 Slash indicates repetition, number of slashes indicates rate of repetition, note head indicates duration of repetion

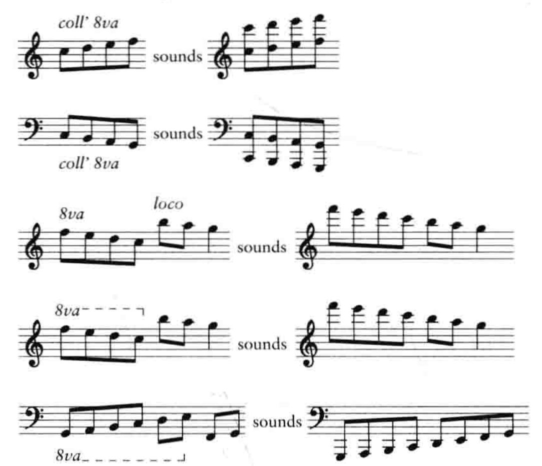
Ex.4 As exx.2 and 3, but slashes are independent of note stems

Ex.5 Some archaic ways of denoting oscillation are often confused with types shown in ex.3

Ex.6 Other archaic forms

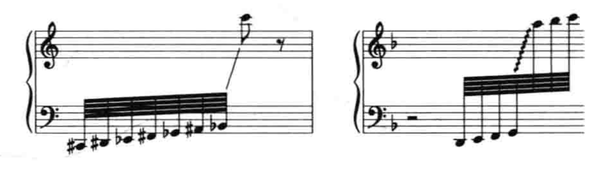
Ex.7 Slash, usually with a dot on either side, or two slashes, to denote repetition of part of a bar, a whole bar or two bars

Ex.8



(a) Repetition from the beginning of a movement

(b) Repetition from a later point necessitates another double bar



Ex.9 Avoidance of leger lines

Ex.10 In clarinet music, *chalumeau* has occasionally been used to avoid leger lines

Ex.11 Harp glissandos are usually notated in abbreviated form, thus

instance, first and second violins play in unison, the seconds having *unisono* or *col primo* in the score. Where two parts are written on one staff in the score (e.g. first and second flutes), the sign *a 2* denotes that they play in unison; *1*, *a 1* or *solo* denotes that only the first plays. In a string part, however, *a 2*, *a 3* (etc.) may occasionally be used to denote a section divided into two, three (etc.) groups; the word *divisi* is a more common way of indicating this. *Come sopra* ('as above') is used in manuscript scores when a considerable part of a composition is repeated without alteration, a corresponding number of bars being left vacant. *Bis* is used to indicate a passage to be performed twice over. Dots indicating a repeat are also a form of abbreviation.

For the commonest abbreviated instructions for expression, dynamics etc., see individual entries; *see also* TEMPO AND EXPRESSION MARKS. Verbal abbreviations used in this dictionary are listed in the front of each volume.

RICHARD RASTALL

'Abd al-Qādir [ibn Ghaybī al-Marāghī] (*b* Maragh; *d* Herat, 1435). Timurid composer, performer and theorist. He first rose to prominence in the service of the Jalā'irid rulers of Iraq and Azerbaijan, al-Ḥusayn (1374–82) and Aḥmad (1382–1410). After the conquest of Baghdad by Tīmūr (1393), most of his career was spent in Samarkand and, especially, Herat, at the courts of Tīmūr and of his successors al-Khalīl (1404–9) and Shāh Rukh (1409–47).

'Abd al-Qādir was one of the most important and influential theorists of the Systematist school. His most substantial surviving works are the *Jāmi' al-alḥān* ('Compendium of melodies'), largely completed in 1405 and revised in 1413, and the slighter *Maqāṣid al-alḥān* ('Purports of melodies'), which covers essentially the same ground and probably dates from 1418. Written in Persian, which was by then the language of culture, these works proved particularly influential among later 15th-century theorists; but although both thoughtful and highly competent, on the theoretical side they may be regarded as, essentially, restatements and amplifications of the theory elaborated by ṢAFĪ AL-DĪN, the first Systematist theorist, and further developed by QUṬB AL-DĪN. 'Abd al-Qādir also wrote a commentary on the *Kitāb al-adwār* ('Book of cycles'), by Ṣafi al-Dīn.

The information 'Abd al-Qādir provides about certain aspects of musical practice is both ample and in some respects novel. He follows the example of Quṭb al-Dīn in giving an extensive list of the rhythmic cycles and melodic modes used in his day, indicating a new group of 24 modes in addition to the traditional 12 *shudūd* and six *āwāzāt* listed by Ṣafi al-Dīn. He also adds material on *'ūd* tunings and playing techniques, and his coverage of forms and instruments is particularly illuminating, especially in view of the sketchy treatment of them in most earlier works. He lists and partly describes a wide variety of chordophones and aerophones, includes regional forms and exotica, and provides an extensive catalogue of song-types. The latter begins with an analysis of internal structure, accompanied by brief outline specimen notations for the various subsections; it includes an account of the prestigious *nawba*, a cyclical form of four songs to which he attempted, unsuccessfully, to add a fifth, intended to incorporate features from the preceding four.

'Abd al-Qādir also became well known as a performer and, especially, composer. He created a number of new rhythmic cycles, and as a young man he made his mark by achieving, for a wager, the unprecedented feat of composing a complete *nawba* for each day of the month of Ramadan. It is also claimed that, having been sentenced to death by Tīmūr, he owed his life to the impact of his cantillation of the Qur'an. The latter story may be apocryphal, but it is clear that he soon became a figure of legend to whom later compositions were attributed. He is the most prominent of the composers cited in 15th- and 16th-century Middle Eastern song text collections, and he has traditionally been considered the founding father of the Ottoman art music tradition, a number of pieces ascribed to (but certainly not by) him still forming part of the 20th-century Turkish repertory. He is also well known in Uzbekistan and in Central Asia and the Caucasus generally.

OWEN WRIGHT

'Abd al-Wahhāb, Muḥammad (*b* Cairo, 1910; *d* Cairo, 3 May 1991). Egyptian composer and singer. As a child he had a remarkable musical memory, and at the age of seven he joined a drama troupe to sing during intervals. In 1920 he began studies of traditional Arab music at the Arabic Music Club (now the Institute of Arabic Music), and he also studied Western music for a time at the Bergrün School in Cairo. He then embarked on a dual career as a singer-composer; possessing a fine baritone voice, he achieved great popularity, and he also won fame for his improvisations on the *'ud* (lute). His acquaintance with the poet Aḥmad Shawqī helped him socially, and his settings of Shawqī are classics of the genre. Chosen by Sayyid Darwīsh to perform in his operetta *Al-barouka* (or *La mascotte*), 'Abd al-Wahhāb some years later completed Darwīsh's posthumous *Cleopatra*, though he composed no original music for the theatre. However, he played in many musical films, performing his own songs. Among the awards he received are the Order of Merit and the State Prize for the Arts.

'Abd al-Wahhāb's work had far-reaching influence on later generations of song composers. Throughout his creative career, while seeking to enrich traditional music he was more concerned with modernization on Western lines than with the preservation or development of traditional characteristics. His achievement in that sphere is controversial: conservatives considered his music eclectic, but many people acclaimed him as the star of Egyptian music ('The musician of the generations'). He is the foremost representative of the generation of transition, which first came into contact with Western music. He

superimposed a heterogeneous mixture of Western features on a foundation of oriental monody. The process of adaptation was long, involving the introduction of Western instruments including the cello, the double bass and jazz instruments into the oriental ensemble and the adoption of Western and Latin American dance rhythms. This eventually led to the neglect of complex rhythmic patterns, an ascendancy of the major–minor system over Arab modes and the use of textual quotations in some songs of melodies from Western classics. He also introduced simple harmonizations to his songs, several of which were arranged by André Ryder (*d* 1969). His hybridization moved Egyptian music away from the spirit of its traditional sources, but it was very popular.

'Abd al-Wahhāb received the highest awards and honours from Egypt, most notably the State Prize for Cultural Achievement in 1969, and from most other Arab countries. His popularity began to decline after his death.

SAMHA EL KHOLY

Abdel-Rahim, Gamal (*b* Cairo, 25 Nov 1924; *d* Königstein, 23 Nov 1988). Egyptian composer. His father performed classical Arab music with his own ensemble. After learning the piano and developing an interest in Western music, Gamal studied history at Cairo University (BA 1945), at the same time continuing his musical studies with Hans Hickmann and others. A government bursary enabled him to study musicology in Heidelberg with Georgiadis (1950–52) and composition at the Freiburg Hochschule with Harald Genzmer (1952–7). After graduation he returned to Egypt, where he taught at the newly founded Cairo Conservatory. In 1971 he was appointed professor of composition there, and he proceeded to establish the first composition department in the Arab world, teaching several Egyptian and Arab composers (including Daoud, Ghoneim, Salama and Al-Saedi) until his retirement in 1986. In 1987 he left for the University of South Florida, in Tampa, Florida, where he lived and taught until his death during a visit to Germany.

Abdel-Rahim's music fuses Arab melodic and rhythmic features with Western techniques. He resisted the major-minor system, which was then becoming widespread in Egypt, preferring melodies based on traditional modes, especially those of the *higaz* (augmented 2nd) and *ṣabā* (diminished 4th) genres. (However, folk melodies do not feature in his works, except in variations or choral settings.) In the 1980s he developed a polyphonic system of composing in the microtonal Arab modes, using the $\frac{3}{4}$ tone. He also developed a way of working freely with tetrachords rather than with the ancient modal scales, sometimes building synthetic modes, as in the second movement of the Flute Concerto (also known as *The Lotus Pond*). Both his harmonies and his linear contrapuntal writing are affected by these intervals, leading to a certain degree of dissonance, particularly in his early works. Rhythmically, he uses traditional irregular patterns (e.g. groups of five and seven, as in the Violin Sonata) or variable metres (as in the cantata *Al-Ṣaḥwa*). In his sonata-form movements he introduced Eastern improvisation as a means of contrast in the second subject. In his settings of classical Arabic poetry he preserved the correct pronunciation by means of variable metres, thereby avoiding the much criticized failing of certain settings by previous composers. He used Arab folk instruments alongside modern Western percussion instruments, for example in the ballets *Osiris* and *Ḥassan and Na'iīma.* His music reflects Egypt in all its aspects: the Pharaonic era (*Osiris*), urban life (*Sahba, Introduction and Rondo 'Baladi'*) and peasant life (*Hassan* and *Na'iīma*). He received many awards and honours, including the state prize for composition (1973).

WORKS
(*selective list*)

Stage: Osiris (ballet, 3 scenes, choreog, G. Eplinius), 1974, expanded to 5 scenes (choreog. A. and E. Kamel), 1984; Ḥassan and Na'iīma (ballet, 3 scenes), 1980; El Tayyeb wal Sherreer [The Good and the Evil] (musical, K. Ayoub), S, T, Bar/B, nar, children's chorus, dancers, 1981

Incid music: Al Hayal'al yawmiyya li qudamāa'al Miṣriyyeen [The Daily Life of Ancient Egyptians] (documentary film), 1960; Mawwāl min Masr [Mawwal from Egypt], 1973; Wogouh min Al-Quds [Figures from Jerusalem] (radio), 1974; Osiris (TV film), 1974, revised as ballet, 1974; La ilāha illa' Allah [There is no God but Allah] (Akhenaten) (TV serial), 1986; Choephoroe [The Libation Bearers] (Aeschylus)

Orch: Introduction and Rondo 'Baladi', 1969 [orch version of 2nd and 3rd movts of Vn Sonata]; Fl Conc., 1977 [1st movt: Asdaā [Echoes], 1972; 2nd movt: Buhayrat al-Lotus [The Lotus Pond], fl, ob/vn, orch, 1973]; Little Suite, str, 1979 [orch version of the 5 Little Pieces, pf]; Sahba (Jubilant Dance), orch/chbr orch, 1983

Choral, unacc.: 11 Children's Songs, 2–3vv; 6 Egyptian Folksongs, mixed choir; 5 Folksongs, 2–4 children's vv

Choral with orch: Al-Ṣaḥwah [Awakening] (cant., S. 'Abdel-Sabour), Bar, mixed chorus, orch, 1966; Ibtihāl [Invocation] (Islamic chant, Z. El-Abideen), T, male chorus, nāy/fl, 1968; Malhamat Seenā [The Sinai Epic] (cant., S. 'Abdel-Sabour), children's chorus, mixed chorus, orch, 1974–5; Kān ya ma kān [Once upon a Time] (The Ringdove) (S. Jaheen), nar, children's chorus, orch, 1980–81; Kadni'l Hawa [Love has tormented me] (cant., M. Usman), chorus, orch, 1978 [version of cant. by M. Usman]

Chbr: Vn Sonata, 1959, 2nd and 3rd movts orch 1969 as Introduction and Rondo 'Baladi'; Rhapsody, vc, pf, 1975; Duo, vn, vc, 1982; Monāgāh (Soliloquy), cl, 1984; Pf Trio, 1986; Improvisations on a Pedlar's Tune, vc; Nonet, wind insts, hp; 2 Songs (A.W. El-Bayyātī), 1v, chbr orch/pf

Pf: 5 Little Pieces, 1956; Ila'l Shuhadaā'al 'Arab [To the Arab Martyrs], 1974, based on incid music for Figures from Jerusalem, 1974; Variations on an Egyptian Folktune

Principal publisher: Doblinger, International Opus and Verlag Neue Musik

SAMHA EL KHOLY

Abdon, Bonifacio (*b* Santa Cruz, Manila, 14 May 1876; *d* Manila, 23 April 1944). Filipino composer, conductor and violin teacher. At an early age he studied solfège, composition, conducting and the violin with Ladislao Bonus. He played the violin in the Rizal Orchestra in his youth, and in 1910 he founded the Oriental Orchestra; in the early 1920s he conducted many zarzuelas and operas. He was the moving spirit behind the Manila Chamber Music Society, of which he became director in 1921. A well-known violin teacher, he also excelled as a nationalist composer. Among his works are the zarzuelas *Ang sampaguita* ('The Sampaguita Flower'), *Anak ng dagat* ('Son of the Sea'), *Luha't dugo* ('Tears and Blood'), *Ang masamang kaugalian* ('The Bad Traits'), *Delinquente* and *Declaracion de amor*. Other compositions include a cantata, *O! dios sa kalangitan* ('O God in Heaven'), *Ibong adarna* ('The Adarna Bird'), a coloratura song, and *Kundiman* (1920), a set of popular love songs, in which he brought dignity and vitality to the genre.

LUCRECIA R. KASILAG

Abe, Keiko (Kimura) (*b* Tokyo, 18 April 1937). Japanese marimba player and composer. After xylophone study with Eiichi Asabuki (1950–59), she earned two degrees from Tokyo Gakugei University, studying composition with Shosuke Ariga and Toshio Kashiwagi as well as percussion with Masao Imamura and Yusuke Oyake. An active professional performer since 1960, she has toured extensively in Europe, North America and Asia with annual recital tours since 1981. Through development of new technical skills and by expanding the repertory with over 70 commissions, she has contributed significantly to the status of marimba music, for which she was honoured by induction into the Percussive Arts Society Hall of Fame in 1993. After a decade of studio work and orchestral playing, she studied the performances of jazz artists such as Milt Jackson and Lionel Hampton in order to develop her own personal style of improvisation as a creative source for composition. Technically challenging yet idiomatic for the marimba, her works generally begin with improvisation and are later notated. Her compositions include wide dynamic ranges, techniques borrowed from folk music traditions and careful voicing of chords. Using four- and sometimes six-mallet technique, she often combines a melodic line with an impressionistic background of rhythmic patterns. Her performances of her compositions and those of other Japanese composers have been very influential on developments in the USA, especially since 1969 when Columbia Records released *Keiko Abe: Art of Marimba*, a three-record album of works by Japanese composers. Her compositions, all including the marimba as soloist or featured instrument, are widely performed and have become standard repertory for marimba. She advanced from lecturer (1969) to professor (1988) at Tōhō Gakuen College of Music in Tokyo. Her principal publishers are Xebec Music Publishing (which also houses her manuscripts) and Schott, Japan.

J. MICHELE EDWARDS

Abeille, (Johann Christian) Ludwig (*b* Bayreuth, 20 Feb 1761; *d* Stuttgart, 2 March 1838). German composer, pianist and organist. In 1771 he became a pupil of A. Boroni at the Hohe Karlsschule in Stuttgart, where in 1782 he joined the private band of the Duke of Württemberg as a harpsichordist. On Zumsteeg's death in 1802 he succeeded him as Konzertmeister, and took over the direction of the ensemble until the appointment of J.F. Kranz. By 1815 he held the position of organist at court and director of the official music. In 1832, having completed 50 years' service with the court, he was given a gold medal and a pension.

Most of Abeille's compositions date from the first 30 years of his service at Stuttgart. Besides two sonatas for keyboard with accompanying violin (1783), his published instrumental works include sonatas and other pieces for both piano solo and piano duet, a piano trio, a piano concerto and a concerto for piano duet, which was favourably mentioned by Gerber (*Neues Lexikon*). But Abeille was best known for his vocal music. With Zumsteeg, Dieter, Eibenbenz and Christmann, who had all been students at the Karlsschule, he was a member of the 'Swabian Liederschule', where the primary concerns were ease of singing, simplicity and communication of the text, as well as displaying some affinity with opera. Several collections of his songs were published, including the *Vermischte Gedichte von Hübner* (1788, 1791), *Zwei Hirten-Lieder aus Florians Estelle von Schwan* (1795) and *Acht Lieder mit Begleitung des Pianoforte* (1805). He also contributed songs to volumes of the *Musikalischer Potpourri* which appeared in Stuttgart in 1790–91. His setting of Jacobi's *Aschermittwoch Lied* for four voices and piano (1798) was popular in its day, as were his two Singspiels, *Amor und Psyche* (four acts, Stuttgart, 1800) and *Peter und Aennchen* (one act, Stuttgart, 1809), which continued the Singspiel tradition of Stuttgart. In its use of a huntsmen's chorus and of horns, *Amor und Psyche* anticipates *Der Freischütz*. Both Singspiels were published in vocal score.

C.F. POHL/JOHN D. DRAKE/STEPHAN HÖRNER

Abeille, Pierre-César (*b* Salon-de-Provence, bap. 24 Feb 1674; *d* after 1733). French composer. He was the son of Jean Abeille, a royal notary, and may have been a

choirboy at the collegiate church of St Laurent in Salon-de-Provence. From 1699 to 1700 he was *maître de chapelle* of the primate's church of St Trophime, Arles; from 31 March 1713 until 17 October 1713, when he was succeeded by François Pétouille, he was *vicaire de choeur* and *maître de musique* at the royal parish church of St Germain-l'Auxerrois in Paris. No further details of his life are known.

His most important compositions were two volumes of the Psalms of David translated into French by Antoine Godeau, Bishop of Vence, dedicated to Mme de Maintenon and intended for the use of the young ladies at Saint-Cyr. The 150 psalms are set with considerable skill and variety: the earlier ones are short and simple, but the later ones, in three parts alternating with *airs*, duets and ritornellos, become progressively more elaborate and require instrumental accompaniment (violin, flute, oboe or viol), often treated in concertante style with the voice parts. The second volume in particular shows balance and imagination, harmonic subtlety, descriptive episodes and expressive declamation of the words. Several verses are written as passacaglias; there are two chaconnes in Psalm lxxxviii. Abeille's settings are much superior to similar ones by Lemaire, Gobert and Oudot.

GUY BOURLIGUEUX

Abejo, Rosalina (*b* Tagoloan, Oriental Misamis, 13 July 1922; *d* Fresno, CA, 5 June 1991). Filipina composer and conductor. She studied music at Lourdes College, the piano at St Scholastica's College and composition at the Philippine Women's University (MM 1957). Later she attended the Labunski School of Composition in Ohio, the Eastman School and the Catholic University of America, Washington DC. A nun of the Order of the Virgin Mary, she taught music theory and composition, conducted fund-raising concerts, and travelled widely to take part in international music conferences. In 1977 she moved to the USA, teaching at Kansas University and St Pius Seminary in Kentucky before moving to Fremont, California; in 1980 she was elected president of the Philippine Foundation of Performing Arts in America. Among the honours she received were the Republic Culture Heritage Award (1967) and the Philippines' Independence Day Award (1973). She produced over 300 compositions and some published music textbooks. Her style is marked by neo-classical and Impressionist features, with quartal harmonies, added-note chords, pentatonic and modal scales.

LUCRECIA R. KASILAG

Abel. German family of musicians. They originated from middle and north Germany and were noted chiefly as bass viol players, violinists and composers; some members of the family were painters and landscape gardeners. The spelling 'Abell' is often found, especially among the earlier members of the family, but there is no known relationship to the English composer John Abell (1650–1724). Nor has any relationship been established between them and a musical family of the same name originating in Löwenberg (Mark) and active in Grosswoltersdorf and Berlin, of whom the first musician was Georg Friedrich Abel (1755–1835); see Zachau: 'Die Abel aus Löwenberg (Mark) und ihr musikalisches Erbgut', *Familie und Volk*, v (1952), p.154.

The earliest known musician of the family was Heinrich Othmar Abel (*b c*1580; *d* after 1630), who is said to have served as town musician in Magdeburg and Brunswick about 1600; for religious reasons he went to Bremen, where he received the freedom of the city in 1615, and from about 1630 he was a musician at Schloss Hünnefeld near Osnabrück. His son Ernst Abel (*b* Bremen, *c*1610; *d* Bremen, 1680), a keyboard player, was a member of the chapel at Hanover from 1636 and a musician at the Celle court, 1650–56; from 1662 to his death he was a Bremen town musician.

(1) **Clamor Heinrich Abel** (*b* Hünnefeld, 1634; *d* Bremen, 25 July 1696). Composer, organist and bass viol player, son of Ernst Abel. He served at Celle (1662–4) and then at Hanover, where he was court organist and viol player until 1685; possibly he then returned to Celle. His final appointment, in 1694, was as a town musician in Bremen. As a composer he is known for his collection of suites, *Erstlinge musikalischer Blumen*, consisting of 59 pieces: allemandes, courantes, sarabandes, sonatinas and preludes, as well as a 'Sonata battaglia', for four instruments and continuo (three parts, Frankfurt, 1674, 1675, 1677).

(2) **Christian Ferdinand Abel** (*b* Hanover, *c*1683; *d* Cöthen, 1737). Bass viol player and violinist, youngest son of (1) Clamor Heinrich Abel. As a young man he served with the troops of Charles XII of Sweden, then occupying north Germany and Bremen. He may have served at the Celle court before moving with his elder brother, the landscape gardener Johann Christoph, to join the establishment of Prince Leopold I of Anhalt-Cöthen about 1715. Christian Ferdinand was listed as chamber violinist and viol player when J.S. Bach was appointed Kapellmeister there in 1717; the two were soon good friends, and Bach stood as godfather to Abel's first daughter (*b* 6 Jan 1720). Spitta supposed that Bach had written the six cello suites for Abel, but there is no

indication that Abel played the cello, and the Cöthen chapel had a competent and highly paid cellist in Christian Bernhard Linike. Prince Leopold had a particular affection for the viol, and it is likely that Bach provided the three sonatas for bass viol and harpsichord for Abel to teach to the prince. Although Abel's fortunes rose on Bach's departure in 1723, Leopold's death in 1728 brought on the decline of the chapel; Abel was eventually dismissed, and he is said to have died in poverty. Of his six children, the eldest son (3) Leopold August and (4) Carl Friedrich continued the family's musical inheritance.

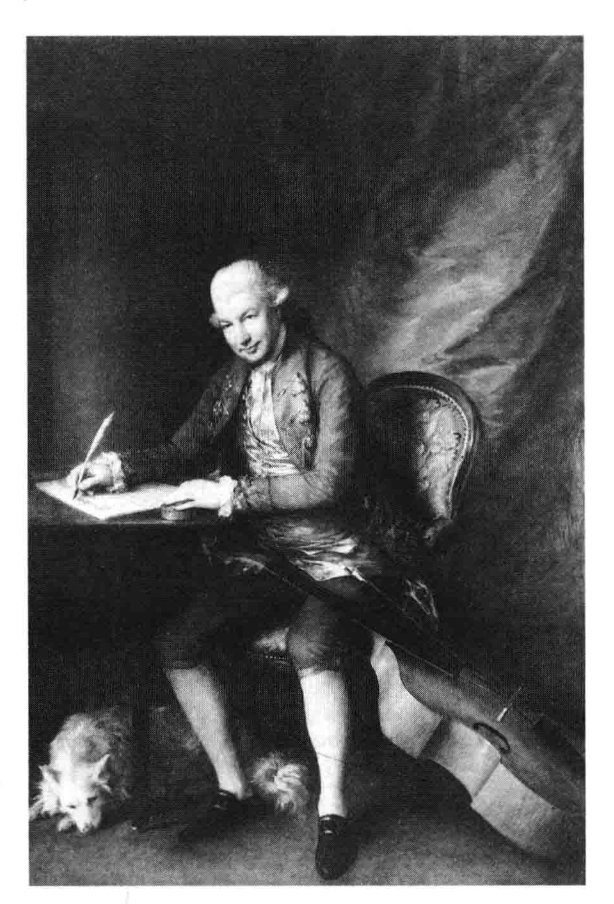
(3) Leopold August Abel (*b* Cöthen, 24 March 1718; *d* Ludwigslust, 25 Aug 1794). Composer and violinist, eldest son of (2) Christian Ferdinand Abel. He was a pupil of Franz Benda in Dresden (1735) and worked as a violinist in the court orchestras at Brunswick (1745) and Sonderhausen (1757–65). He was next appointed Konzertmeister in the orchestra at Brandenburg-Schwedt (1766), then with Benda in Berlin, and he was finally a first violinist in the chapel of the Prince of Mecklenburg-Schwerin in Ludwigslust from 1770. His compositions include a Symphony in D (1776; *D-SWl*, under 'Leba') and violin 'arpeggien' (*A-Wgm*). His two sons, August Christian Andreas (1751–1834) and Friedrich Ludwig Aemilius (*b* 1770), were both violinists at Ludwigslust; the latter's grandson Ludwig (1835–95) was a violinist in Basle from 1865, and from 1867 at Munich, where he taught at the conservatory, composed for the violin and published a violin method (1875).

(4) Carl [Karl] **Friedrich Abel** (*b* Cöthen, 22 Dec 1723; *d* London, 20 June 1787). Composer and bass viol player, son of (2) Christian Ferdinand Abel. He was no doubt a pupil of his father's, especially for the bass viol; but on his father's death in 1737 Carl Friedrich may have turned to the former relationship with the Bach family and gone to Leipzig to study, as Burney, who knew Abel, stated. By 1743 Abel was a player in the court orchestra under Hasse in Dresden; the connection with the Bachs was maintained – W.F. Bach was an organist there until 1746, and J.S. Bach had held an appointment as court composer from 1736. Abel left Dresden in 1757–8 during the destruction of the city by Frederick the Great. He then travelled, visiting the house of Goethe's family in Frankfurt and probably the musical centres of Mannheim and Paris. He had already begun to compose in Dresden; the Breitkopf catalogue of 1761 advertises solo and trio sonatas and concertos, all with the flute, and describes Abel as a chamber musician to the King of Poland.

During the 1758–9 season Abel went to London, the city where he was to spend most of his remaining years. His first public concert there was on 5 April 1759 (a few days before Handel's death). Abel demonstrated his versatility by performing on the bass viol, the harpsichord, and Sir Edward Walpole's newly invented pentachord, as well as being the composer of most of the music. Over the next five years Abel increased his reputation in London through his own annual concerts and through his direction of the concerts of other artists. In 1760 he was granted a royal privilege for the publication of his music in London; while publishing his early works there on his own account, he ensured his continental reputation by selling his op.1 to Hummel and his opp.2 and 3 to Breitkopf. The association with J.C. Bach began late in 1763, and the first sign of their joint efforts was a concert on 29 February 1764; thus the relationship of the Bach and Abel families continued. Both men were appointed chamber musicians to Queen Charlotte in about 1764, posts they held to their deaths; both were also friends to the Mozarts during their visit to London (1764–5) and served as mentors to the young Wolfgang. Abel's Symphony in E♭ op.7 no.6 was copied by Mozart and was long regarded as Mozart's work (formerly K18).

The association between Abel and Bach led to the establishment of the Bach-Abel concert series. This annual series of 10–15 concerts began on 23 January 1765 and continued up to 9 May 1781. They began as part of Mrs Cornelys's entertainments at Carlisle House, Soho Square, and moved in 1768 to Almack's Great Room, King Street, St James's. Their success encouraged Bach and Abel to enter into partnership with G.A. Gallini, a retired dancer and brother-in-law of Lord Abingdon, to build their own concert room in Hanover Square. 1775, when that hall opened, marks the zenith of the Bach-Abel concerts, for in addition to the series there they offered 11 oratorio evenings at the King's Theatre, with new works in the sinfonia concertante form proving a popular attraction.

The opening of the Pantheon concerts in 1774 gave rise to an element of competition that doomed the complacent Bach-Abel series. The decline was no doubt hastened by Gallini's rival series at the Hanover Square rooms on another night. Bach's death at the beginning of 1782 might have ended the faltering enterprise, but Abel managed to continue the concerts under his own name for the rest of the season. Strangely, Bach's widow declined Abel's public offer of assistance. Possibly the relationship between Bach and Abel had by then become no more than a business matter; after sharing a home for many years, they had found separate residences in 1771, and unlike his flamboyant partner, Abel seems to have led a quiet and well-ordered life.



Abel's contribution to the Bach-Abel concerts included the direction on alternate evenings. The concerts introduced to London many musicians from the Continent, and while Bach's influence can be seen in the choice of singers, many of the instrumentalists had known Abel at Dresden or his brother at Ludwigslust. Abel seems to have visited Paris with some regularity in the 1770s and 1780s; he was said to be teaching the viol to a *fermier-général* there, and it was probably he who introduced the several performers from Paris featured at the concerts. The directors also supplied most of the music that was given; much of it must appear among Abel's published symphonies, concertos, quartets and trios. Those and his keyboard sonatas designed for the amateur were published from 1765 by Robert Bremner, who thereafter issued the first editions of almost all Abel's works and reissued those that had been printed before that date. At this time Abel was highly regarded as a performer on the bass viol, and at most concerts he displayed his talents in a solo or concerto. The concerts Bach and Abel gave at court (for example one for the Prince of Wales's fifth birthday on 12 August 1767) were in a sense an offshoot of their series; their influence is also seen in the number of individual benefit concerts that they were asked to direct both in London and in nearby cities during the summer. The programmes of these events serve as a good guide to the music played at the Bach-Abel series, the programmes of which are not extant.

At the end of the 1782 season Abel left London to visit his homeland. He saw his brother in Ludwigslust and probably his younger brother Ernst Heinrich (who was to claim Abel's possessions after his death) in Hamburg. He also spent some time at the court of Friedrich Wilhelm, Crown Prince of Prussia, at Potsdam; Abel had dedicated his op.15 quartets to the prince in 1780, and now he so impressed with his viol playing that he received 100 louis d'ors and a gold snuff-box. The manuscripts of five of his symphonies were (until 1943) in the Berlin Stadtsschloss-bibliothek, which suggests that he composed them for the prince, possibly on this visit. An advertisement in Cramer's *Magazin der Musik* (25 February 1783) shows that manuscript copies of his sonatas and quartets for the gamba were in circulation.

From the beginning of 1785 until his death Abel was again active at the Hanover Square rooms. He was billed as principal composer and viol player to the Grand Professional Concert, successor to the Abel concerts of 1782 that maintained much the same personnel as the Bach-Abel series; but the new symphonies performed there (perhaps the Berlin set) remained unpublished. His last concert appearance was as a bass viol virtuoso in a benefit for Mrs Billington, the daughter of Bach's pupil Mrs Weichsell, on 21 May 1787.

That final concert represents an act of generosity typical of the warm-hearted Abel, who often gave concerts for the needy and helped to introduce young performers. The most famous among those whose careers he furthered are the cellists John Crosdill and James Cervetto, for whom Abel provided a showy duet in 1778. With the violinist Wilhelm Cramer and the oboist J.C. Fischer, they formed the core of the Bach-Abel troupe for many years. Cramer's son, the pianist Johann Baptist, later publicly acknowledged Abel as one of his composition teachers, but it seems that Abel had no other famous pupils for either composition or the viol. His generosity was equalled by the strength of his attachment to his friends, among whom was the painter Thomas Gainsborough; the friendship resulted in an exchange of music and paintings – Gainsborough's magnificent portrait of Abel with his gamba (see illustration) was exhibited at the Royal Academy in 1777 and is now at the Huntington Library, San Marino, California (other portraits of Abel include one by Robineau in the royal collection and an anonymous painting in the Music School at Oxford). Abel appears to have had a particular fondness for art and artists, for in addition to his collection of Gainsboroughs he cultivated the friendship of the designers and engravers Bartolozzi and Cipriani. He was also good friends with the Mannheim violinist Wilhelm Cramer, and the two shared an apartment before Cramer's second marriage, from 1776 to about 1779. It was at this time that Abel first showed signs of the illness that was to kill him; it was apparently brought on by rich living and in particular by an over-indulgence in drink, but it seems impossible to link this with any tragedy in his life (as has been suggested). Up to the time of his death Abel maintained a highly respected position in London society, at court, in the homes of the nobility, in fashionable circles, and among his fellow musicians; the several obituaries were unanimously laudatory.

Abel's reputation as a performer is closely connected with the bass viol. He also played the harpsichord well, but references to his performance on the french horn are

Carl Friedrich Abel: portrait by Thomas Gainsborough, before 1777 (Henry E. Huntington Library and Art Gallery, San Marino, CA)

the result of his admiration for a keyboard sonata by Ferdinand Horn which he must have played either on the harpsichord or in an arrangement for solo bass viol. That instrument was by this time approaching the end of its history; Abel's obituary in the *Morning Post* of 22 June 1787 remarked that 'his favourite instrument was not in general use, and would probably die with him'. It still had players in amateur circles; and in his last ten years Abel experienced in London the professional competition of Andreas Lidl. His playing may have been slightly influenced by the possibilities of the cello; the only direct evidence of his style comes from the obbligato to an aria from *Sifari*, performed with Guarducci on 5 March 1767, which consists of an expressive cantabile in the upper register with few chords. The several pieces for solo bass viol now in the New York Public Library exploit the instrument's resources more fully and in virtuoso fashion, especially in the rich adagios and in one fugue; these works may have been written for a pupil rather than for Abel's own performance. Most of the rest of the surviving literature was obviously intended for amateurs, which perhaps implies that Abel's own performances were usually improvised; Burney wrote: 'I have heard him modulate in private on his six-stringed base with such practical readiness and depth of science, as astonished the late Lord Kelly and Bach, as much as myself'. Abel was especially praised for his refinement of taste and his depth of feeling in adagios. He did not emphasize technical display in his performances; Burney commented that the

'most pleasing, yet learned modulation; the richest harmony; and the most elegant and polished melody were all expressed with ... feeling, taste and science', and that his manner of playing an adagio soon became a model for string players.

Abel was primarily a composer of instrumental music; his few vocal pieces are relatively unimportant. The symphonies, sonatas and bass viol pieces form the largest groups among his output. Abel's style underwent little change; although he eventually came to write bass lines free of the plodding continuo style, the texture of two parallel melodic voices with a supporting bass, derived from the trio sonata, can be found in most of his trios and in many of his quartets and symphonies. Most of his works are in three movements, the remainder in two.

Abel's music is generally genial, energetic and light-hearted. He rarely used minor keys, and there is little trace of deeper emotion or *Sturm und Drang*, although his harmonic style is exceptionally rich and expressive. His melodies are often markedly instrumental in character, with broken chords, syncopation and appoggiaturas as common features; but he had a penchant for phrases of unusual lengths, and some of his music is refreshingly free from the two- and four-bar unit so common in the pre-Classical period. The slow movements usually have elegant, lyrical, highly ornamented melodies of considerable breadth; his finales are commonly in dance rhythm, often minuets (sometimes with variations but rarely with trios) or rondos. The result is a refined, urbane version of the Mannheim style with perhaps an Italian influence evident in the more vocal melodies and lighter moods. Burney remarked that his 'invention was not unbounded, and his exquisite taste and deep science prevented the admission of whatever was not highly polished'; he commented on a certain languor, and praised his harmony and 'selection of sounds' as models of perfection.

WORKS

unless otherwise stated all printed works published in London

numbering in left-hand column is that of Knape (1971)

Edition: *K.F. Abel: Kompositionen*, ed. W. Knape (Cuxhaven, 1958–74); vols. i-iv, ix-x (2/1960–75) [K]

(5) **Johann Leopold Abel** (*b* Ludwigslust, 24 July 1795; *d* London, 1871). Pianist and composer, grandson of (3) Leopold August Abel. He was brought up by his father, August Christian Andreas Abel, to emulate his great-uncle (4) Carl Friedrich Abel. An attempted tour as a child prodigy, during which he played the piano and violin and later the cello, was a failure. After some success teaching music in German courts, his health failed and he left his homeland in 1819 to travel and regain his strength. He first visited his elder brother, a musician in Savannah, Georgia, and then sailed for England, arriving in London in 1820, in time to meet J.B. Cramer as he was publishing his tribute to Carl Friedrich Abel. Johann Leopold stayed in London, married Luise Hopkins, and published several songs and piano pieces.

WALTER KNAPE, MURRAY R. CHARTERS/SIMON McVEIGH

Abelard [Abaelard, Abailard], **Peter** [Petrus Abailardus] (*b* Le Pallet, nr Nantes, 1079; *d* Saint-Marcel, nr Chalon-sur-Saône, 21 April 1142). French philosopher, poet and musician of Breton origin. After studying philosophy in Paris, he taught dialectic at the cathedral school. His love affair with Heloise, the young niece of Canon Fulbert, brought him fame as a musician. However, after they had secretly married in 1118 Fulbert had Abelard castrated. Heloise became a nun and he became a monk at St Denis. His highly original scholastic method and his restless and blunt nature aroused opposition to his teaching; principal among his opponents was Bernard of Clairvaux. After condemnation by the Council of Sens in 1140, Abelard found support from Peter the Venerable, Benedictine Abbot of Cluny.

Abelard's songs are few beside his numerous theological and philosophical writings. Heloise's testimony suggests that his love songs must have been important from both a literary and a musical point of view. In a later letter (probably revised by Abelard) she declared that he had 'the gift of poetry and the gift of song'; he 'composed quite a number of metrical and rhythmic love songs. The great charm and sweetness in language and music, and a soft attractiveness of the melody obliged even the unlettered'. These songs, presumably in Latin, have all been lost: they have not been identified among the anonymous repertory.

Some time after 1130 Abelard composed a hymnbook for Heloise, who was by that time Abbess of the convent of the Paraclete. While Bernard of Clairvaux was having a hymnal composed for the Cistercians from the traditional material, Abelard was creating one which was totally new and homogeneous in style. He grouped the hymns by metre, and thus managed with only a few melodies. The hymnbook was not widely used and only one of the melodies has survived: that of the splendid hymn of Saturday, *O quanta qualia*. It is in the Dorian mode and in *AAB* form, yet it is shaped in wide-ranging melodic arches. The verse is iambic, but the placing of melismas is as irregular as is usual in hymns of the period.

The six planctus, written after 1130, mark the climax of Abelard's poetic and musical work. All are based on biblical themes. They are conservative in use of rhyme, often employing only assonance, and yet in rhythm and musical structure they show a highly original style. Formally these songs are linked with the intermediate sequence form (*see* SEQUENCE (i)) by their rhymed lines and parallel strophes. Abelard extended this parallelism by three- and fourfold repetition. Internal rhyme and musical repetition are used to make smaller phrase-units within a line. (*See also* PLANCTUS.) The form was imitated in the French LAI, partly by means of direct contrafactum: thus the *Lai des pucelles*, a French love song from the end of the 13th century, adopted the verse structure and melody of Abelard's *Planctus virginum*.

All six planctus survive with imprecisely diastematic staffless neumes (in *I-Rvat* Reg.lat.288, ff.63*v*–64*v*). Planctus VI is the only one found also in square notation (in *GB-Ob* Bodley 79, ff.53*v*–56, and *F-Pn* n.a.lat.3126, ff.88*v*–90*v*); it is in the Mixolydian mode, and yet the first and last strophes are Hypomixolydian. Because of this the song has the unusual range of *d* to *g′*. Contemplative passages are extended by melismas, while narrative sections are set syllabically and feature dramatic climaxes. The musical form was imitated in Godefroy de Breteuil's Marian lament *Planctus ante nescia* (included in the *Carmina burana*).

Stäblein's theory that Abelard was only a poet and that the melodies were 'written by an anonymous musician' has not been taken up in the literature. The written evidence is too convincing, as is the matching of words and music in Planctus VI. The planctus are found only in sources from the late 12th century and the 13th, and show the influence of later musical taste. Their notation gives no suggestion of modal rhythm, and nothing is otherwise known about how or under what circumstances they were performed.

LORENZ WEINRICH

Abelardo, Nicanor (*b* San Miguel, Bulacan, 7 Feb 1893; *d* Manila, 21 March 1934). Filipino composer, conductor and teacher. As a child he had violin lessons from his father, and in 1901 he wrote his first composition, *Ang unang buko* ('The First Fruit'), a waltz. He was sent to study at the Liceo de Manila and he learnt to play the piano, but at the same time he had to take various jobs to support himself and his family. In 1916 he entered the Conservatory of the University of the Philippines, and in the next year he composed a march, *U. P. Beloved*, which won first prize in an open competition. He studied with Victoriano Carreon (singing), José Silos (bandurria), Bonifacio Abdon (violin) and José Estella (piano); he received a teacher's certificate at the conservatory in 1921, and in 1923 he pursued postgraduate studies there.

The piano concerto, which he wrote for these later courses, was the first concerto written by a Filipino. From the same period are *Nasaan ka irog* ('Where are you, Beloved?') and *Mutya ng Pasig* ('Muse of Pasig River'), examples of his work in developing the *kundiman* (love-song) into an art song form. Even before graduating he had begun to teach at the University of the Philippines, encouraged by his teachers Guy Harrison and Robert Schofield. But in 1925 he came into controversy with the conservatory director, Alexander Lippay, when he took charge of the Santa Ana cabaret orchestra. Among the awards he received in the following years were two first prizes at the Philippine Carnival Contest of 1931. In that year he went to the USA under a fellowship from the University of the Philippines, and in 1932 he took the MM at the Chicago Musical College. These were his most productive years, which saw the composition of several important works, among them the polytonal suite *Panoramas* and the concert overture *Cinderella*, with which he won the La Violette Scholarship. He returned to the Philippines in 1932 and rejoined the university staff. At his sudden death he left incomplete a symphony and an opera, *Florante at Laura*. His contribution to Philippine music lies not only in his abundant and profound output (he wrote over 150 works), but also in his work as a brilliant teacher of theory and composition. He published a number of treatises and scholarly essays.

LUCRECIA R. KASILAG

Abeliyovich, Lew Mayseyevich (*b* Vilnius, 6 Jan 1912; *d* Minsk, 8 Dec 1985). Belarusian composer. He studied at the Warsaw Conservatory (1935–9), with Kazimierz Sikorski for composition and Drzewiecki for piano, and then at the National Conservatory in Minsk, where he graduated from Zolotaryov's composition class in 1941. He received the title Honoured Artist of the Belarusian SSR in 1963. The works he produced in the late 1940s and 1950s are conservative, but his First Symphony (1962) reflected a renewal in Belarusian music, under the influence of Shostakovich. In the later symphonies there is an increase in confrontation to the point of expressionism, and tragi-grotesque themes come to play a major role, though the Fourth Symphony has elements of neoclassicism that became characteristic of Abeliyovich's music in the 1970s. His two books of *Freski* ('Frescoes') for piano, in an impressionist manner, are Belarusian classics, while his songs range from dramatic wartime ballads to Tyutchev settings remarkable for their emotional poise and psychological depth.

RADOSLAVA ALADOVA

Abell, John (i) (*b* Aberdeenshire, 1653; *d* ?Cambridge, after 1716). Scottish countertenor, composer and lutenist. The first occurrence of his name in official records is on 1 May 1679, when he was admitted 'extraordinary' then 'in ordinary' to the Chapel Royal. From the same time he is listed among the musicians of the King's Private Musick as one of the lutes and voices and also as a violinist,

though the latter post was probably a sinecure. Between 1679 and 1688 he received considerable sums of 'bounty money' for undisclosed services to the king while travelling abroad. Evelyn recorded (27 January 1682):

After supper came in the famous Trebble, Mr Abel, newly returnd from *Italy*, & indeed I never heard a more excellent voice, one would have sworne it had been a Womans it was so high, & so well & skillfully manag'd.

He graduated MusB at Cambridge in 1684. His marriage to Lady Frances Knollys on 29 December 1685 caused something of a scandal, and he left the country after the revolution in 1688, his sympathies being strongly Catholic. He had been a singer in James II's Catholic Chapel, and a Groom of the Queen's Privy Chamber. For the next ten years or so he was with the exiled court at Saint-Germain as Page of the Queen's Bedchamber (1689–97), but was allowed to travel widely on the Continent, visiting France, Germany, Italy, the Low Countries and Poland. There are many anecdotes referring to this period of his life. Hawkins quoted the following:

Upon his arrival at Warsaw, the king having notice of it, sent for him to his court. Abell made some slight excuse to evade going, but upon being told that he had everything to fear from the king's resentment, he made an apology, and received a command to attend the king next day. Upon his arrival at the palace, he was seated in a chair in the middle of a spacious hall, and immediately drawn up to a great height; presently the king with his attendants appeared in a gallery opposite to him, and at the same instant a number of wild bears were turned in; the king bade him then choose whether he would sing or be let down among the bears: Abell chose the former, and declared afterwards that he never sang so well in his life.

Towards the end of the century he hankered after a return to England (his wife had apparently already returned), but heavy debts there delayed him until he could be sure of his financial situation. After some bargaining with the Drury Lane Theatre, in the course of which he lowered his terms from £500 to £400 a year, he was back in London by January 1699. Congreve wrote on 10 December 1700:

Abell is here: has a cold at present, and is always whimsicall, so that when he will sing or not upon the stage are things very disputable, but he certainly sings beyond all creatures upon earth, and I have heard him very often both abroad and since he came over.

He immediately set about restoring his fortune by giving concerts. He took the title role in Daniel Purcell's *The Judgment of Paris* (1701) and performed in numerous musical entertainments in London and the provinces. He also set himself up as a teacher. His 'coronation song' for Queen Anne (*Aloud proclaim the cheerful sound*) was performed and published in 1702; his masque-like entertainment *Hark, Britain, hark* was given the following year (6 February) at St James's in honour of the queen's birthday (the score (*GB-Ob*) is attributed erroneously to John Eccles). Later that year he went to Ireland in the household of the Duke of Ormonde, but returned to London in 1704. Newspaper advertisements report concert tours in Britain as far afield as Scotland in 1705; later there are suggestions that he spent further periods on the Continent, though he was back in London by 1715. Mattheson stated that Abell possessed some secret that preserved the purity of his voice into old age. He published in London *A Collection of Songs in English* (1701), dedicated 'to the English Nobility and Gentry', and in the same year *A Collection of Songs in Several Languages* dedicated to the king, who had been 'so Gracious as to hear 'em both in Holland, and on my return Home'. The pieces in *A Choice Collection of Italian Ayres* (1703) were 'sung to the Nobility and Gentry in the North of England; and at both Theatres in London'. Roger of Amsterdam published a small collection of *Airs pour le concert de mecredy, le 12 decembre, au Doule, composes par Jean Abell Anglois* (n.d.), presumably a memento of a concert Abell gave in Doullens on one of his continental tours (12 December was a Wednesday in 1694, 1705 and 1711).

Abell is remembered principally as a singer, and is usually regarded as a countertenor; however, Evelyn called him a treble, and Jakob Greber in 1704 referred to him as a tenor (H. Samuel: 'A German Musician Comes to London in 1704', *MT*, cxxii, 1981, p.592). His range appears to have been from (written) *g* to *d''*, but at flat pitch this may have been as much as a tone lower by modern standards. His songs were influenced by the Italian style but are short-winded and hardly rise above the trivial.

IAN SPINK

Abell, John (ii). English music publisher. With WILLIAM RANDALL (ii), he succeeded to the firm of Walsh.

Abello de Torices, Benito. *See* BELLO DE TORICES, BENITO.

Abendmusik (Ger.). The name given to a particular type of concert held in the Marienkirche, Lübeck, during the 17th and 18th centuries. The exact origins of the Abendmusiken were already obscure in the mid-18th century, but they began as organ recitals, probably during Franz Tunder's tenure as organist (1641–67), perhaps even earlier. The original purpose may have been to entertain businessmen who assembled in the Marienkirche to await the opening of the stock exchange at noon on Thursdays. However, Tunder already referred to them as 'Abendspiele' in 1646. It is also possible that the Lübeck businessmen who financed them were imitating the municipally sponsored organ recitals in the Netherlands, where Reformed Church doctrine prohibited the use of the organ during church services.

Tunder's musical offerings later included vocal and instrumental soloists, but Buxtehude, who succeeded him, added orchestra and chorus, necessitating the building of four extra balconies in 1669 to accommodate 40 performers. He also changed the time from a weekday to 4 p.m. on the last two Sundays of Trinity and the second, third and fourth Sundays of Advent, a schedule that was maintained throughout the 18th century. Although as late as 1700 Buxtehude presented programmes of assorted choral and solo vocal music, he had much earlier

introduced oratorios at these concerts. A libretto for his 1678 oratorio *Die Hochzeit des Lamms* survives (published in Pirro); it is in two parts, presumably performed on two successive Sundays. Two Buxtehude oratorios advertised for publication in 1684, *Himmlische Seelenlust auf Erden* and *Das Allerschröcklichste und Allererfreulichste* were each in five parts. Under Buxtehude's successors, Johann Christian Schiefferdecker (1679–1732), Johann Paul Kunzen (1696–1757), his son Adolf Carl Kunzen (1720–81) and Johann Wilhelm Cornelius von Königslöw (1745–1833), it became standard practice for the organist to compose and present each year a new oratorio in five parts, extending over all five Sundays. The subjects were mainly taken from the Old Testament (*see* ORATORIO, §7).

There are only two surviving oratorios that are known to have been performed at the Lübeck Abendmusiken: Adolf Kunzen's *Moses in seinem Eifer gegen die Abgötterey in den Wüsten* (in *D-Bsb*) and *Absalon* (in *D-LÜh*). *Wacht! Euch zum Streit*, published by Willi Maxton, under the title *Das jüngste Gericht*, as a work of Buxtehude (Kassel, 1939), is anonymous in the manuscript source, and its authenticity as a work of Buxtehude has been the subject of controversy (see Ruhle; *see also* BUXTEHUDE, DIETERICH, §2(viii)). Before World War II manuscripts of numerous other oratorios by Adolf Kunzen and von Königslöw were still extant at Lübeck; they are discussed by Stahl but were lost during the war. They contained chorale settings in addition to the more usual components: recitative, arias and choruses, both dramatic and contemplative.

The Abendmusik concerts were financed mainly by the business community; individual donors were rewarded with a printed libretto and a good seat, but admission to the church was free, and disorderly conduct during the performances was often a problem. In 1752 Johann Kunzen instituted the practice of charging admission to the dress rehearsals that were held on Fridays in the spacious stock-exchange hall, and in time these performances became the more important ones. The free Sunday performances in the Marienkirche were abolished in 1800, and ten years later the Lübeck Abendmusiken ceased entirely as a result of the Napoleonic Wars. The term has since come into general use for concerts in churches anywhere.

KERALA J. SNYDER

Abendroth, Hermann (*b* Frankfurt, 19 Jan 1883; *d* Jena, 29 May 1956). German conductor. He studied at Munich with Ludwig Thuille, Felix Mottl and Anna Langenhan-Hirzel (a pupil of Leschetizky). His first post was as conductor of the amateur Orchestral Society of Munich (1903–4), after which he moved to Lübeck, first as conductor of the Verein der Musikfreunde, and later also as chief conductor at the Städtische Oper (1907–11). He then became music director at Essen (1911–14), after which he went to Cologne as director of the conservatory in succession to Fritz Steinbach, becoming Generalmusikdirektor there in 1918. His tours abroad included frequent concerts with the LSO (from their 1926–7 season to 1937). After 20 years in Cologne he was appointed to succeed Bruno Walter as conductor of the Leipzig Gewandhaus Orchestra, where he remained until 1945. He conducted at the Bayreuth Festival (1943–4), and after World War II became conductor of the Weimar SO; he was the first German conductor to be invited to the USSR after the war. Abendroth's recordings, the earliest of which date from the 1920s, include Brahms's first and fourth symphonies, Beethoven's Fifth Symphony and tone poems by Richard Strauss, as well as a complete *Meistersinger* (Bayreuth, 1943). His reputation was based on the German and Viennese orchestral repertory, especially Mozart, Beethoven, Brahms and Bruckner, in which he was respected for his faithfulness to the composer's score and for his warmth of expression, as well as for his ability to encourage high orchestral standards.

ROBERT PHILIP/R

Aberdeen. City in Scotland. Bishop Elphinstone founded the University of Aberdeen in 1495 with stringently chosen prebendary priests to sing the daily Divine Office. From 1662 to 1720 John Forbes, printer to the town council, was Scotland's only notable music publisher, and during the 1760s and 1770s John Gregory, James Beattie and Alexander Gerard, all professors at King's or Marischal universities, were the leading British writers on musical aesthetics. From about 1890 to 1930 Aberdeen was the centre of Scots fiddle playing and folksong collecting, and the university library houses the Greig

Duncan collection of north-east songs. Aberdeen's most distinguished native musicians are the operatic soprano Mary Garden, the tenor Neil Mackie, the percussionist Evelyn Glennie, the folksinger Jeannie Robertson and composers Martin Dalby, John McLeod and Judith Weir.

Aberdeen's earliest-known musical institutions are the St Nicholas, St Machar and King's College song schools, which were in existence at the beginning of the 16th century. During the course of the century the composers John Fethy, John Black and Andrew Kemp were employed as 'maisters' at the St Nicholas song school. As church schools the first two of these establishments survived the Reformation and continued to teach singing, theory and instrumental playing until about 1750, when they were eclipsed by the Enlightenment and by new standards of international professionalism. In 1748 the Aberdeen Musical Society was formed to give weekly aristocratic concerts, initially of Italian Baroque music, but later also featuring music by Handel, Arne, Haydn and works by the Scottish composers Lord Kelly, Robert Barber and John Ross. The society was disbanded in 1809 due to changes in popular taste. St Paul's Episcopal Chapel, opened in 1722, held services with Anglican cathedral choral music and organ music, both new phenomena for post-Reformation Scotland. St Paul's organists included Andrew Tait (to 1774), Barber (1774–83) and Ross (1783–1836).

Charles Sanford Terry, lecturer at the university from 1898 and professor of history from 1903, revived music there, and under his direction the choral society (instituted 1875) and orchestra gave several first Scottish performances. Terry founded an annual choral festival in 1909 to which many distinguished musicians, including Elgar, were invited. Since 1945 musical performance has rapidly increased with the formation of Haddo House Choral and Operatic Society (1945), Aberdeen Choral Society (1946), Aberdeen Bach Choir (originally 1912, re-established in 1956), the International Youth Festival (1973), Aberdeen Sinfonietta (1986) and other societies promoting classical repertory and newly commissioned works. The Alternative Festival (founded 1982) and The Lemon Tree (founded 1992) promote non-classical music, while the Doric Festival (founded 1994) and the university's Elphinstone Institute (established 1995) preserve and promote the distinctive cultural heritage of north-east Scotland. In 1995 the Yggdrasil Quartet of Aberdeen, funded by the city, the university and the Scottish Arts Council, was appointed as the first resident professional music group. Both city and university promote regular series of concerts, for which Weir, Dalby, McLeod, Cresswell and Peter Maxwell Davies have all written specially commissioned works. The North-East of Scotland Music School (established 1975) hosts visiting international tutors. The Royal Scottish National Orchestra, BBC Scottish SO, Scottish Chamber Orchestra, BT Scottish Ensemble, Scottish Opera and Cappella Nova are all regular visitors to Aberdeen.

DAVID JOHNSON/ROGER B. WILLIAMS, CHARLES FOSTER

Aberle, Juan (*fl* 1890–95). Guatemalan musical educator and band director. He was the first director of the Guatemalan *banda marcial* and was appointed director of the National Conservatory of Music in 1890. His initial task in this post was the upgrading of the conservatory's facilities. He acquired a variety of musical instruments and enlarged the institution's library with music primarily from Germany. His tenure as director was marked by particular emphasis on the teaching of stringed instruments, especially the violin. Aberle also worked to establish a new plan of studies, which was accredited by the secretary of public education. If a student failed a course, he or she was given only one opportunity to repeat it successfully, while advanced students were excused courses where appropriate. Scholarships were awarded to exceptional students between the ages of nine and 15, and from 1893 select students were eligible for government scholarships for further studies in Europe.

ALFRED E. LEMMON

Abert, Anna Amalie (*b* Halle an der Saale, 19 Sept 1906; *d* Kiel, 4 Jan 1996). German musicologist, daughter of HERMANN ABERT. She studied musicology with her father, Blume and Sachs as well as history with Friedrich Meinecke and philosophy with Eduard Spranger at the University of Berlin and took the doctorate there with a dissertation on Schütz's *Cantiones sacrae* in 1934. She then became an assistant lecturer at the musicology institute at the University of Kiel, where she completed the *Habilitation* in 1943 with a work on Monteverdi and music drama. In 1950 she became supernumerary professor at the University of Kiel and in 1962 research fellow and professor. From 1949 to 1958 she was an editor of the first edition of *Die Musik in Geschichte und Gegenwart* and from 1964 she was a member of the Zentralinstitut für Mozartforschung. She retired in 1971. Her main field of research was opera from Monteverdi to Richard Strauss, with special emphasis on Mozart, and her writings laid particular emphasis on sources, librettos, aesthetics and the relationship between speech and music. Although her approach to music scholarship was essentially conservative, her conclusions about Mozart's Lambach symphonies were later criticized for being based on stylistic analysis rather than source studies. At the age of 88 she published a short history of opera summarizing a lifetime of thought devoted to the subject.

HANS HEINRICH EGGEBRECHT

Abert, Hermann (*b* Stuttgart, 25 March 1871; *d* Stuttgart, 13 Aug 1927). German musicologist. His father was court Kapellmeister at Stuttgart and composed operas, seven symphonies and other works. From 1890 to 1895 Abert studied classics and then music in Berlin under Bellermann, Fleischer and Friedlaender. He took the doctorate at Berlin in 1897 with a dissertation on Greek music, and in 1902 he completed his *Habilitation* at the University of Halle with a work on the basis of the aesthetics of medieval melody. He was appointed honorary professor in 1909 and reader in 1911. In 1920 he was appointed professor at the University of Leipzig (succeeding Riemann) and in 1923 he became professor at Berlin University (succeeding Kretzschmar). In 1925 he was elected an ordinary member of the Prussian Academy of Sciences at Berlin, the first musicologist to have earned this distinction.

Abert was one of the leading German musicologists of his generation, and he did much to increase regard for his subject among followers of more traditional university disciplines. His numerous distinguished pupils include his daughter ANNA AMALIE, Blume, Fellerer, Gerber and Vetter. Much of his work was influenced by the humanism of classical antiquity and concerned itself with the effect of music on man and of the way in which social patterns and cultural ideals were expressed in the music of various epochs. He later turned towards dramatic music, particularly research into the history of opera. He was not interested in the purely archival and theoretical aspects of musicology. He frequently returned to the music of Greek antiquity with studies that eventually led him to specific problems of musical aesthetics in ancient times, the Middle Ages and his own time. His interest in 19th-century and contemporary music, shown in studies of Beethoven, Schumann, the Romantic era and Meyerbeer, led him to confront specific problems of opera. Exemplary editions of important operatic works, his editorship of the *Gluck-Jahrbuch* (1913–18), the *Mozart-Jahrbuch* (1923–9) and many monographs (from 1905, and including *Niccolò Jommelli als Opernkomponist*, 1908) preceded his great Mozart biography (1919–21), which, although it made use of new research methods, was still in the tradition of the great 19th-century musical biographies of Jahn, Chrysander and Spitta. Abert modestly called his work the fifth edition of Jahn's biography, but it is in almost every respect an entirely independent work. He presented Mozart in his full stature and in lively, human terms, at the same time revealing in imposing breadth the sources of the various aspects of Mozart's art. Although Mozart scholarship since Abert's time has advanced in the field of source study and in terms of detailed insight and general understanding, this monumental biography is still one of the great standard works of music literature.

Abeti [Masikini, Abeti] (*b* Stanleyville [Kisangani], Belgian Congo [Democratic Republic of the Congo], 9 Nov 1951; *d* Paris, 29 Sept 1994). Congolese singer and songwriter. Abeti first reached prominence in West Africa in the early 1970s under the tutelage of Togolese impresario Gérard Akueson who later became her husband. On the strength of her West African following, Abeti performed at the Paris Olympia concert hall in 1973 and made her first recording shortly thereafter, an album called *Abeti* for the record label of Pierre Cardin. Abeti returned home to Congo to widespread acclaim. Her enormous popularity opened the door for other women to enter the region's male-dominated music business.

Abeti helped to pioneer *le spectacle*, the 'show style' of performance. Her stage presentations included an array of musicians (*Les Redoutables*) and dancers (*Tigresses*), lavishly costumed and precisely choreographed. She played Carnegie Hall in 1974 and the Olympia again in 1975. Moving to Paris in the 1980s, when Zaire's economy declined, Abeti helped popularize an up-tempo version of the Congolese rumba known as *soukous*. Her 1986 *soukous* album *Je Suis Fâché* earned a gold record. Abeti went on to play Paris' Le Zénith concert hall in 1988 and to tour China in 1989. She recorded her final album, *La Reine du Soukous* in 1991 before her life was cut short by cancer.

GARY STEWART

Abgestossen (Ger.). *See* ABSTOSSEN.

Abhinavagupta (*fl c*1000). Indian philosopher, mystic and scholar. He was born to a Brahman family probably of Srinagar, Kashmir, and continued in their Śaiva Hindu religious tradition, being trained in grammar and philosophy by his father; but he also studied more widely with Hindu, Buddhist and Jain teachers. He lived a life of renunciation as a scholar and religious devotee and never married. His hugely prolific scholarly and literary output in Sanskrit included approximately 50 works which may be crudely grouped into the areas of religious exegesis, philosophical analysis and commentary, and aesthetics. For the historian of music his most important contribution is the monumental commentary *Abhinavabhāratī*; this became the most celebrated of all commentaries on the *Nāṭyaśāstra* of Bharata and attests a flowering of interest in aesthetics and the arts in medieval Kashmir. Manuscript evidence has hitherto been insufficient for a full critical edition and reliable translation of the work, and there remain many obscurities in the existing text. Abhinavagupta showed considerable knowledge of the practice of his own time, and it is not always easy to assess the validity of his judgments of earlier music. He argued a distinction between the religious *gāndharva* music of the preliminaries of the Sanskrit drama and the *gāna* music of the main part of the production. He developed a powerful interpretation of the theory of *rasa*, providing a famous model for understanding the aesthetic experience as an enlightened level of cognition.

Abing [Hua Yanjun] (*b* Wuxi, Jiangsu province, 20 Aug 1893 or 3 Nov 1898; *d* 4 Dec 1950). Chinese folk musician. The illegitimate or adopted son of Daoist priest and musician Hua Qinghe in the city of Wuxi, Hua Yanjun also became a Daoist musician, performing in ritual instrumental ensembles and mastering several instruments, including *pipa* four-string lute and *erhu* two-string fiddle.

With Hua Qinghe's death in the mid-1920s, Hua Yanjun inherited a small amount of property. However, visits to local brothels resulted in his contraction of gonorrhoea, leading eventually to blindness. At about this time, Hua appears to have become an opium smoker.

Unable now to take part in Daoist ensembles, Hua, under the name Abing, became a street musician, specializing in extemporized songs based on local news. He also performed *pipa*, *erhu* and the three-string lute *sanxian*. Abing has typically been described as the archetypal Chinese folk musician; following political and social trends in China, he has been portrayed at various times in articles, books, film and an eight-part TV series as working-class revolutionary, romantically inspired composer and Daoist musical craftsman.

Chinese scholars recorded six of Abing's solos in 1950, three each for *erhu* and *pipa*. It seems that, rather than being fixed compositions, these were improvisatory performances wherein Abing demonstrated his exceptional powers of melodic and rhythmic creativity. The six solos were issued on record and in transcription with descriptive titles probably selected at the recording session. Adopted as part of the standard teaching material for students of *erhu* and *pipa*, they became very widely disseminated. One of the three *erhu* solos, *Erquan yingyue* ('The Moon Reflected on the Second Springs', named after a fountain in Wuxi), has subsequently been arranged for many different instrumental combinations, including piano solo, string quartet and string orchestra.

JONATHAN P.J. STOCK

Abingdon, 4th Earl of [Bertie, Willoughby] (*b* Gainsborough, 16 Jan 1740; *d* Rycote, 26 Sept 1799). English music patron, composer and political writer. He was educated at Westminster and Oxford (MA 1761) and spent several years in Europe. In Rome he met Grétry, who wrote a flute concerto for him based on the improvisations he had played to Grétry to demonstrate his prowess. He spent time in Geneva with the exiled politician John Wilkes and met Voltaire in nearby Ferney. From the mid 1770s he was much involved in the musical and political life of Britain. He was brought into close contact with J.C. Bach and C.F. Abel through his brother-in-law Giovanni Gallini, who was concerned in the organization of the Bach-Abel concerts, which he is said to have subsidized. At his request, Abel composed *Four Trios: Two for Two Flutes and a Bass* op.16 and J.C. Bach is the author of one or two trios composed for the earl, 'selected' and published by Monzani in about 1800. After the death of Bach in 1782 Abingdon continued the concert series for two seasons in 1783-4: his withdrawal paved the way for the Professional Concert. He also initiated the move to bring Haydn to London.

Abingdon's incentive to compose may well have been strengthened by his friendship with Haydn, with whom he was often together during the latter's visits to London, as can be seen from the many references to him in Haydn's notebooks. Haydn wrote the piano or harp accompaniments to Abingdon's *Twelve Sentimental Catches and Glees, for Three Voices* and composed a trio (HXXXIc:17) comprising variations on a song by the earl. Abingdon urged Haydn to set the poem *Neptune to the Commonwealth of England* (prefaced to Nedham's translation of Selden's *Mare Clausum*, and later published separately with the title *The Invocation of Neptune*), but only two numbers were completed. Abingdon's most extensive composition is *A Representation of the Execution of Mary Queen of Scot's* (rev. version, 1791). Dedicated 'To those female Philosophers, Members of the Blue Stocking Club', it attempts to unite the sister arts of music, poetry and painting in a single work which would be 'thus to the *Outward* Senses as well as to the *Inward* Sense Conveyed'. The music is well written but lacking somewhat in emotional intensity.

A second work of a similarly descriptive nature, to which is attached, as an *impresa*, an engraved picture of the revelation of St John by J.F. Rigaud, is *A Selection of Twelve Psalms and Hymns* scored for chorus, oboes, clarinets, horns, bassoons and timpani. As a songwriter he juxtaposed conventional pastoral texts with ones of a highly political or aphoristic, humorous nature. In many instances the words are of greater merit than their musical settings. His purely instrumental music comprises generally very short pieces, many with programmatic titles, such as *The Magdalen* and *A Cure for the Spleen*. In addition to varous political pamphlets his writings also include the autobiographical poem *An Adieu to the Turf* (London, 1788).

SIMON TOWNELEY (with DEREK McCULLOCH)

Abingdon, Henry. *See* ABYNDON, HENRY.

Ablinger, Peter (*b* Schwanenstadt, Upper Austria, 15 March 1959). Austrian composer. After studying jazz piano at the Graz Hochschule für Musik (1977–9), he studied composition privately with Gösta Neuwirth (1979). He continued his studies at the Vienna Music Academy (1979–82), where his teachers included Haubenstock-Ramati. From 1982 until 1990 he taught at the Kreuzberg Musikschule. His other activities have included founding the ensemble Zwischentöne (1988), and directing the zeit geben I–III, Klangwerkstatt (Berlin, 1990–92) and Insel Musik 24 (Berlin, 1997) festivals. He has served as guest conductor for various ensembles in Vienna and Berlin, and as guest composer at the Graz Institut für Elektronische Musik (1996).

Ablinger has remarked, 'It is not what is different that counts but what is the same; that is where the One can occur'. This aesthetic posture has led him to compose several series of works in which many of the same elements carry over from one piece to the next. The first piece in his series *Weiss/Weisslich* (1980) is a plea for perception beyond the linear; the series as a whole is to be understood in terms of non-linear 'actualizations of a sound, a place, a presence'. *Ohne Titel/14 Instrumentalisten* (1992) aims to show that 'all is in one' by directing attention to timbre, articulation and intonation rather than to a musical narrative. A combination of monotone and rushing sound in *Der Regen, das Glas, das Lachen* both undertaxes and overtaxes the listener. Linear time is finally annulled and space for 'presence' is created. In *Instrumente und ElektroAkustisch Ortsbezogene Verdichtung* (1995) a traditional concert situation is electro-acoustically condensed into a simultaneity, the temporal sequence occurs all at once, 'raised up in a moment'.

Abondante [Abundante, dal Pestrino], **Giulio** [Julio] (*fl* 1546–87). Italian lutenist and composer. 'Pestrin' is Venetian dialect for 'mill' or 'dairy', and may indicate his family's occupation and Venetian origins. He published at least seven volumes of solo lute music, of which only three are extant. A book of lute music by 'Pestrin', now lost, is listed in Vincenti's catalogue of 1591; that this is by Abondante is confirmed by Giunta's catalogue of 1604. Because of the different forms of Abondante's name and the 41 years that elapsed between the publication of the first and fifth books, Eitner mistakenly concluded that 'Julio Abondante', composer of the first two books, and 'Giulio Abundante, detto dal Pestrino' or 'Giulio dal Pestrino', composer of the fifth book, were different musicians. In the dedications of his *I nomi antichi e moderni delle provincie* (Venice, 1567) Orazio Toscanella mentioned a Giulio del Pietrino, 'lutenist without equal', who was one of several musicians active in Antonio Zantini's house at Venice; the group included Girolamo Parabosco, Annibale Padovano, Claudio Merulo and Donato.

The three lutebooks are representative of the various kinds of instrumental music prevalent at the time. The first is devoted to dance music and includes 21 galliards, four passamezzos, two pavans and five miscellaneous pieces. The second contains five fantasias and 21 intabulations of vocal pieces, including motets, madrigals, *napolitane* and chansons by Willaert, Rore, Arcadelt, Janequin, Nicola Vicentino, Leonardo Barré, Nollet and Payen. The fifth book comprises 13 fantasias, 12 paduanas, three passamezzos and a *bergamasca*. The intabulations of vocal music are fairly literal transcriptions, sparingly embellished with stereotyped figures. In some of the dances the chordal structure is enlivened by continuous passage-work.

WORKS

for lute; published in Venice

Intabolatura ... sopra el lauto de ogni sorte de balli ... libro primo (1546; repr. 1563 as Intabolatura di liuto ... libro primo); 1546 edn ed. D. Benkö (Budapest, 1981); 1563 reprint ed. in Lefkoff; 7 pieces ed. in Moe

Intabolatura di lautto, libro secondo madrigali ... canzoni franzese. mottetti, recercari di fantasia, napolitane, intabulati & accomodati per sonar di lautto (1548[12]); 4 ed. in Chilesotti, 1901–2 and 1902

Il quinto libro de tabolatura da liuto ... nella qual si contiene fantasie diverse, pass'e mezi & padoane (1587); paduana ed. E.E. Lowinsky, *Tonality and Atonality in Sixteenth Century Music* (Berkeley and Los Angeles, 1961)

Intavolatura di liuto, lib. 7 (n.d.), lost

Abos [Geronimo], **Girolamo (Matteo)** (*b* Valetta, 16 Nov 1715; *d* Naples, Oct 1760). Maltese composer and teacher. His grandfather, who was French, settled in Malta in 1661. Abos's cousin Carol Farrugia paid for him to go to Naples as a child and receive his musical training at the Conservatorio dei Poveri di Gesù. An entry in the 1729 account book of the institution lists a payment to a 'Maltese maggiore' for copying a 'new work by Sig Francesco Durante, Dixit'. Abos's principal teachers at the conservatory would have been first Gaetano Greco, then Durante and Gerolimo Ferrara (not Leonardo Leo). His first opera for Naples was *Le due zingare simili*, an *opera buffa* staged at the Teatro Nuovo in 1742. In the same year he took teaching posts at two Neapolitan conservatories: the Poveri di Gesù Cristi, where he succeeded Alfonso Caggi as *secondo maestro* and assisted Francesco Feo until the institution was dissolved in 1743, and the S Onofrio a Capuana, where he remained until his death, serving first with Ignazio Prota and Leonardo Leo, then with Francesco Durante, and finally with Carlo Cotumacci and Joseph Doll. In 1754 he also became *secondo maestro* at the conservatory Pietà dei Turchini, but retired from the post on 11 July 1759 and was succeeded by Pasquale Cafaro. He also served as *maestro di cappella* at several important Neapolitan churches. On 29 May 1752 he had married Angela Maria Gauttier, by whom he had two children.

Abos was a respected composer whose *opera buffe* and *serie* were performed in Italy and beyond, although with varying degrees of success. In 1756 his *opera seria Tito Manlio* (Naples, 1751) was presented in London. According to Burney, however, it was 'performed but once; the parts being probably ill cast, and the songs unfit for any but the singers for whom they were originally composed'. It seems unlikely that Abos was the *maestro al cembalo* for the London revival as has been claimed. Walsh printed some 'favourite airs' from the opera, but Burney commented that 'none were favoured by the public'. Nevertheless, arias from his operas continued to be included in pasticcios staged in London (*Love in a Village*, 1763, and *The Maid of the Mill*, 1765). In his church music Abos followed the example of Durante, striving for a synthesis of the modern style and the traditions of sacred vocal polyphony. In older literature (Villarosa, 1840), biographical information about Girolamo Abos was confused with that on the composer Giuseppe Avossa, and mistaken attributions exist among manuscript copies. Abos's name was also attached to a number of sacred works by Francesco Corbisieri (in *I-Nc*).

WORKS

music lost unless otherwise stated

OPERAS

Le due zingare simili (ob, A. Palomba), Naples, Nuovo, spr. 1742; as pasticcio, Palermo, 1745, lib *I-Rli*
Il geloso (commedia, Palomba), Naples, Fiorentini, spr. 1743
Le furberie di Spilletto (commedia), Florence, Cocomero, carn. 1744
La serva padrona (ob, A. Federico), Naples, 1744
La moglie gelosa (commedia, ?Palomba), Naples, Fiorentini, carn. 1745, lib *Rsc*, *GB-Lbl*; as pasticcio (incl. music by E. Gasparrini), Foggia, spr. 1746, lib *I-Mb*
Adriano in Siria (dramma per musica, Metastasio), Florence, Pergola, carn. 1746
Artaserse (dramma per musica, P. Metastasio), Venice, S Giovanni Grisostomo, carn. 1746
Pelopida (dramma per musica, G. Roccaforte), Rome, Argentina, carn. 1747, *F-Pc*; arias, *GB-Lbl*
Alessandro nelle Indie (dramma per musica, Metastasio), Ancona, Fenice, July 1747, arias, *F-Pc*, *GB-Lbl*, *I-MAC*, *Nc*
Arianna e Teseo (dramma per musica, P. Pariati), Rome, Dame, 26 Dec 1748, arias, *F-Pc*, *I-Nc*
Tito Manlio (dramma per musica, ?Roccaforte), Naples, S Carlo, 30 May 1751, *I-Mc*; arias *F-Pc*, *GB-Lbl*, *I-Mc*, *Nc*
Erifile (dramma per musica, G.B. Neri), Rome, Dame, carn. 1752, arias, *GB-Lbl*
Lucio Vero o sia Il Vologeso (os, A. Zeno), Naples, S Carlo, 18 Dec 1752, *A-Wn*; arias *I-Rsc*
Il Medo (dramma per musica, C.I. Frugoni), Turin, Regio, carn. 1753, *A-Wn*; arias *I-Rsc*
Doubtful: Andromeda (os), *A-Wn*
Arias in: Armida placata, Vienna, 1750, *Wn*; Nerone, 1753; Creso, London, 1758; Love in a Village, London, 1763; The Maid of the Mill, London, 1765

SACRED

all with instruments

La morte d'Abel (orat, P. Metastasio), Palermo, 1754; La sposa vincitrice de' sacri cantici ovvero Il mondo debellato (melodramma)
Mass, 4vv, *F-Pc*, *I-Nc*; mass, 2 choirs, *Nc*; Ky, Gl, *F-Pc*, *I-Nc*; Magnificat, 4vv, *A-Wn*, *I-Bc*; Litaniae de BVM, 2vv, *A-Wn*, *D-MÜs*, *F-Pc*; Lezione terza del Giovedì Santo, 1v, *I-PAc*
Adeste, ah non tardate, S, hns, vns, va, bc, *Tf*; Dixit Dominus, 4vv, 1750, *Gl*; Dixit Dominus, 1758, 5vv, *A-Wn*, *F-Pc* (?autograph), *I-Nc*; Juravit Dominus, 5vv, *Nc*, Stabat mater, 3vv, 1750, *A-Wn*, *D-MÜs*, *F-Pc*, *GB-Lbc*, *I-Nc*; 2 Tantum ergo, 1v, 2vv, *Nc*; Veni Creator Spiritus, *Nf*, (?autograph)

Doubtful: Veni sponsa Christi, 4vv, *Nc*

OTHER WORKS

Arias, *F-Pn*, *GB-Lbl*, *Lgc*, *D-MÜs*, *I-Gl*, *Nc*
Cantatas: Abbastanza finora le tue pompe, 4vv, insts, *I-Tf*, L'arca del testamento atterra l'idolo Dagone, 1747, S, choir, insts, *Tf*
Sinfonia, 2vn, bc, *Nc*

HANNS-BERTOLD DIETZ (with JOSEPH VELLA BONDIN)

Abrabanel, Isaac ben Judah (*b* Lisbon, 1437; *d* Venice, 1508). Philosopher and biblical exegete. His writing on music forms the introduction to his commentary on *Exodus* xv (the 'Song of the Sea', 1505; *I-Rvat* Rossiano 925, also printed in Venice in 1579). Relying on earlier sources including Ibn Rushd's commentary on Aristotle's *Poetics* and Moses ibn Tibbon's commentary on the *Song of Solomon*, Abrabanel describes three kinds of verse set to music: with metre and rhyme, as in Hebrew hymns (*piyyutim*); without metre or rhyme, yet arranged in a succession of short and long lines (as in the 'Song of the Sea'); and metaphorical texts, by which he appears to refer to *Psalms*. Whereas, for him, the first and third kinds

do not require music to qualify as poetry (prosodic considerations prevail in the first, conceptual ones in the third), the second kind does (its construction depends on its musical usage). Yet all three kinds rely on music for their usual mode of presentation. The author recognizes different functions for music in conjunction with poetry: to serve as a mnemonic device for retaining the texts, to improve the understanding of their content, and to elevate the spirit.

DON HARRÁN

Abraham, Gerald (Ernest Heal) (*b* Newport, Isle of Wight, 9 March 1904; *d* Midhurst, 18 March 1988). English musicologist. Apart from having piano lessons as a boy, musically he was entirely self-taught. His formal education was completed in Portsmouth in preparation for a career in the navy, but he was obliged to abandon this plan owing to ill-health. During a period of recuperation he was able to put some of his self-acquired musical knowledge into practice by making orchestrations, arrangements and some attempts at original composition for the garrison band on the Isle of Wight. A year spent in Cologne resulted in his first major contribution to musical literature, a study of Borodin, which was begun in 1924 and published in 1927; this book (which he later disowned) immediately established him as an expert in the field of Russian music. He spent the next eight years as a freelance writer, contributing to a wide variety of publications, notably *Music & Letters*, the *Musical Times*, the *Radio Times* and the *Musical Standard*; he also edited the last-named for the publisher William Reeves. Many of his articles of this period were devoted to detailed analysis of different aspects of Russian music – especially opera – for which purpose he learnt the language. Two important collections of these essays were published by Reeves under the titles *Studies in Russian Music* and *On Russian Music*. Abraham's work in the Russian field also brought him into close contact with his colleague M.D. Calvocoressi, with whom he collaborated on *Masters of Russian Music*; after Calvocoressi's death in 1944, he completed and edited his unfinished study of Musorgsky for the Master Musicians series. The pre-war book which best illustrates the unusually wide-ranging and penetrating quality of his musical analysis is *A Hundred Years of Music*, which covers the century from 1830.

In 1935 Abraham began a long association with the BBC when he became an assistant editor of the *Radio Times*. This led to a period as deputy editor of *The Listener* from 1939 to 1942, when he was appointed director of the gramophone department, an appointment made doubly important during the war by the BBC's severely reduced facilities for broadcasting live music. After a short period during which he helped to launch the Third Programme he left the BBC in 1947 to become the first professor of music at Liverpool University. He edited the *Monthly Musical Record* from 1945 to 1960 and continued to be music editor of *The Listener* until 1962, the year in which he took up his final appointment with the BBC as assistant controller of music. On leaving this post in 1967, he spent a year as a deputy music critic on the *Daily Telegraph* before becoming visiting professor for a year at the University of California, Berkeley, where he delivered the Ernest Bloch lectures (published under the title of *The Tradition of Western Music*). After 1969 he devoted himself to writing and editing. In the latter capacity he was active as secretary of the editorial board of the *New Oxford History of Music* (he was editor of its supplement, *The History of Music in Sound*) and as a member of the editorial committee of Musica Britannica. He was also chairman of the editorial board of *Grove6* and was president of the Royal Musical Association from 1969 to 1974. He was an honorary DMus of the universities of Durham (1961), Liverpool (1978) and Southampton (1979), honorary Doctor of Fine Arts of the University of California (1969), a corresponding member of the American Musicological Society and a Fellow of the British Academy (1972); he was made a CBE in 1974.

Because of his early championing of Russian music Abraham is usually associated particularly with this field. Thanks, however, to a combination of deep musical learning, an inquiring mind and an unusual facility for mastering languages, Abraham acquired wide-ranging sympathies with which few British musicologists could compete. Although he was primarily a specialist in the 19th century, his writings and editorial work showed him to be equally at home with such diverse subjects as medieval music, Handel, Polish music, Sibelius and Bartók. His reconstructions of the postulated string quartet movement original of Wagner's *Siegfried Idyll* (1947) and the last two movements of Schubert's 'Unfinished' Symphony (1971) further display a characteristic, closely reasoned ingenuity. No one volume demonstrates the range of his sympathies and his complete and intimate knowledge of a chosen area better than *Slavonic and Romantic Music*, while his encylopedic knowledge and command of musical perspective were magisterially displayed in his modestly titled *The Concise Oxford History of Music*. Yet always he retained his ability to select the right kind of characteristic detail to draw a more generalized conclusion and his detective-like delight in uncovering new facts or exposing past errors, all presented with an engaging freshness and enthusiasm that were well served by an unpretentious, lucid command of language. The Festschrift *Slavonic and Western Music: Essays for Gerald Abraham*, ed. M.H. Brown and R.J. Wiley (Ann Arbor and Oxford, 1985), was published to mark his 80th birthday.

DAVID LLOYD-JONES/DAVID BROWN

Abraham, Otto (*b* Berlin, 30 May 1872; *d* Berlin, 24 Jan 1926). German physician and psychologist. He graduated in medicine at Berlin University in 1894, and thereafter dedicated himself primarily to psychoacoustics and the physiology of music. From 1896 to 1905 he was assistant professor under Carl Stumpf at the Psychological Institute of Berlin University (which in 1905 became the Berlin Phonogramm-Archiv). In 1900, when Hornbostel joined the staff, Abraham and Stumpf recorded on wax cylinders a visiting Siamese court orchestra – the first German attempt to record non-Western music. Abraham also recorded music from South Africa in the same year. In 1901 he published an article on absolute pitch which later (1906) resulted in a polemic between him and Auerbach. Adopting Stumpf's methods, Abraham and Hornbostel entered into a collaboration which laid the foundation for comparative musicology; he also collaborated with the physiologist and otologist K.L. Schaefer (1888–1904). Between 1903 and 1906, Abraham and Hornbostel contributed important studies largely based on their tonometric measurements and transcriptions of recorded examples of Japanese music, Armenian and Muslim songs, Indian and Amerindian music. They also suggested methods for transcribing non-Western music which provided guidelines for this essential phase of the nascent field of ethnomusicology.

ISRAEL J. KATZ

Abraham, Paul [Ábrahám, Pál] (*b* Apatin, Hungary, 2 Nov 1892; *d* Hamburg, 6 May 1960). Hungarian composer. He studied at the Budapest Academy of Music (1910–16) and began as a composer of serious orchestral and chamber music, a cello concerto being performed by the Budapest PO and a string quartet at the 1922 Salzburg Festival. In 1927, however, he was appointed conductor at the Budapest Operetta Theatre, where he was called upon to write numbers for various operettas. *Viktória* (1930), a work making use of the dance styles of the time, enjoyed huge popularity and led to a move to Germany, where his success continued with his score for the film *Die Privatsekretärin* (1931) and the operettas *Die Blume von Hawaii* (1931) and *Ball im Savoy* (1932). However, the rise of Hitler forced him to leave Germany, at first for Vienna where the operettas *Märchen im Grand-Hotel* (1934), *Dschainah* (1935) and *Roxy und ihr Wunderteam* (1937) failed to establish themselves.

On the outbreak of war he fled to Cuba, where he earned a modest living as a pianist, and later moved to New York. In February 1946 he was committed to hospital after a mental breakdown, but in May 1956 he returned to Europe to live in Hamburg. Abraham's operettas pandered openly to the popular musical idiom of the time, but contained strikingly effective numbers which have remained justly popular.

OPERETTAS

Zenebona (L. Lakatos and I. Bródy), Budapest, Capital Operetta Theatre, 2 Mar 1928; Az utolsó Verebély lány [The Last Verebély Girl] (G. Drégely and I. Harmath), Budapest, Capital Operetta Theatre, 13 Oct 1928; Szeretem a feleségem [I Love my Wife] (A. Stella, after A. Birabeau and G. Dolley), Budapest, State Opera House, 15 June 1929; Viktória (I. Földes, Harmath), Budapest, Király, 21 Feb 1930; Die Blume von Hawaii (3, A. Grünwald, F. Löhner-Beda and E. Földes), Leipzig, Neues, 24 July 1931; Ball im Savoy (3, Grünwald and Löhner-Beda), Berlin, Grosses Schauspielhaus, 23 Dec 1932; Märchen im Grand-Hotel (Grünwald and Löhner-Beda, after A. Savoir: *La Grande-Duchesse et le garçon d'étage*), Vienna, an der Wien, 29 March 1934
Viki (Harmath and A. Bónyi), Budapest, State Opera House, 26 Jan 1935; Történnek még csodák [Miracles Still Happen] (I. Halász and I. Békeffry), Budapest, State Opera House, 20 April 1935; Dschainah, das Mädchen aus dem Tanzhaus (Grünewald and Löhner-Beda), Vienna, an der Wien, 20 Dec 1935; 3:1 a szerelem javára [3:1 to Love] (Harmath, L. Szilágyi and D. Kellér), Budapest, Royal, 18 Dec 1936; Roxy und ihr Wunderteam (Grünwald and H. Weigel), Vienna, an der Wien, 25 March 1937; Júlia (Harmath and Földes), Budapest, City Theatre, 23 Dec 1937; Fehér hattyú (Földes), Budapest, City Theatre, 23 Dec 1938

ANDREW LAMB

Abrahamsen, Erik (Schack Olufsen) (*b* Brande, Jutland, 9 April 1893; *d* Copenhagen, 17 Feb 1949). Danish musicologist. After studying at the Royal Danish Conservatory of Music (1910–13), where he graduated as an organist, he was organist and choirmaster at the Luther Church (1914–24) and head of the music division of the Copenhagen Royal Library (1916–21). As a student he attended Hammerich's lectures in music history at Copenhagen University (there was no degree course in music history until 1915) and in 1917 he became the first MA in musicology in Denmark, graduating with a dissertation on the transition from Catholic to Protestant liturgy in Denmark in the 16th and 17th centuries. During his years at the Royal Library he began to study its large collection of Latin liturgical fragments on the basis of which he tried to reconstruct the Danish medieval liturgy and to provide a demonstration of Peter Wagner's theory of the two traditions, Roman and Germanic, of Gregorian chant. He submitted this as a doctoral dissertation to the university in 1921, but when Hammerich retired (1922) and no successor was appointed, Abrahamsen submitted it instead to Wagner at the University of Fribourg, where he was awarded the doctorate in 1923. In 1924 he was appointed senior lecturer in music at the University of Copenhagen and subsequently became the first Danish professor of musicology (1926), with responsibility for organizing and directing the study of music in the university and for establishing the musicology institute, which led him to take an active interest in music education at the broadest level. He gained first-hand experience of its problems by teaching music in St Jørgens Gymnasium (1928–43); he was also a frequent and popular broadcaster on music on Danish radio, and music critic of the *Nationaltidende* (1934–9) and the *Berlingske tidende* (1939–49). His later books all represent varied attempts to convey elementary musical information and an explanation of music's place in society to the general reader, while also discussing important problems for the professional music teacher. He maintained his earlier scholarly interests by collaborating in the preparation of the valuable editions *En klosterbog fra middelalderens slutning* (1933) and *Niels Jespersøns Gradual 1573* (1935) and of the melodies to *Danmarks gamle folkeviser* (1935–76).

JOHN BERGSAGEL

Abrahamsen, Hans (*b* Copenhagen, 23 Dec 1952). Danish composer. He first studied the horn and was later trained in music theory at the Royal Danish Academy of Music. He also undertook private studies in composition from Nørgård and Gudmundsen-Holmgreen, among others. Abrahamsen was active for a period in the Gruppen for Alternativ Musik, a forum for musicians who wished to perform new music in alternative forms; the group also aimed to develop socially and politically committed music, and Abrahamsen was thus able to cultivate his interest in political issues expressed through music. (His first symphony was originally entitled *Anti-EEC-Sats* ('Anti-EEC Movement'); it became Symphony in C after the composer came to the realization that 'music cannot be against'.) In 1982 Abrahamsen became a teacher of instrumentation at the Royal Danish Academy of Music. He has also been artistic director of the Esbjerg Ensemble since 1988.

The composer's first works adhered to the style of the Danish 'new simplicity' movement of the mid-1960s. For Abrahamsen and other composers such as Gudmundsen-Holmgren, Christiansen and Ole Buck, this stylistic attitude, which marked a break with serial music, was a Danish response to the complexity emanating from central Europe, particularly the circle around the Darmstadt School. In Abrahamsen this aesthetic anchorage came to mean an almost naive simplicity in musical expression, as exemplified in his orchestral piece *Skum* ('Foam', 1970). During the 1970s and 80s he developed an entirely personal style, in which a modernist stringency and economy are incorporated into an individual musical universe. The mature Abrahamsen emerged as early as in the first string quartet, 'Ten Preludes' (1973), which combines an assured sense of structure with clarity of expression. With later works such as the orchestral *Stratifications* (1973–5) and *Nacht und Trompeten* (1981), the ensemble works *Winternacht* (1976–8), *Märchenbilder* (1984), *Lied in Fall* (1987) and the wind quintet *Walden* (1978), the composer developed a multi-layered texture, both stylistically and emotionally.

Abrahamsen's music possesses a particular epic quality. He likes to tell stories, to create musical images for the listener. But these are not in the shape of clear forms and figures: his works never reveal their innermost secrets, and the composer rarely presents the listener with unambiguous solutions. It is as if works talk to each other, new works borrowing material and structure from old. The epic element in Abrahamsen's music is countered by its strict structure. Some of his music is arranged according to serial principles, using numerical systems and closely calculated structures (*Lied in Fall*, *Märchenbilder*, *Winternacht*, the 22 Piano Studies and the pieces for horn trio). As Abrahamsen has written: 'My imagination works well within a fixed structure. ... The more stringent it is, the more freedom I have to go down into detail. Form and freedom: perhaps much of my music has been an attempt to bring the two worlds together'. His compositions are relatively small in number, and mainly instrumental. Often of short duration, his pieces are nevertheless highly concentrated in expression, balancing dramatic gestures and structural finesse.

ANDERS BEYER

Abrahamyan, Medeya (*b* Yerevan, 8 March 1932). Armenian cellist and teacher. She studied first at the Yerevan Central Music School (where her teachers were K. Khizanov and L. Grigoryan) and then with Grigoryan at the Komitas Conservatory in Yerevan (1950–53). She continued her studies with Rostropovich at the Moscow Conservatory (1953–6) and became a laureate of the H. Wihan International Cello Competition (1955). In 1956 she made her début as a soloist with the Armenian PO, and has performed regularly with the orchestra since then. In 1960 she became professor of cello at the Yerevan Conservatory. She has performed widely in Russia, the USA, Canada and Western Europe, as a soloist and during numerous festivals, specializing in 20th-century works, notably those by Armenian composers. She has given premières of some 100 works, a number of which are dedicated to her. Her playing is distinguished by refinement of intonation, a broad range of colour and a strong dramatic impetus.

SVETLANA SARKISYAN

Abrahan. *See* EBRAN.

Abramino [Abramo] **dall'Arpa** (*fl* Mantua, *c*1577–93). Italian harpist. He was one of a small number of Jewish musicians active in Mantua in the late 16th century. He appears to have been the grandson of Abramo dall'Arpa (not his nephew, as sometimes claimed) and, as his name implies, to have excelled as a harpist. His service for the Mantuan court may be dated from about 1577 to 1593. His name appears on payrolls from 1577 and 1580,

though as Abramo. In 1587 he participated in a 'water music' entertainment to mark the baptism of a newborn member of the ducal family. In the same year, he accompanied the ill-disposed Duke Guglielmo Gonzaga to Goito, where he comforted him with his playing. In his *Trattato dell'arte* (1584), the poet and painter Giovanni Paolo Lomazzo referred to Abramino, his grandfather Abramo and Giovanni Leonardo dall'Arpa (from Naples, *d* 1602) as the three most prominent harp players of their time.

DON HARRÁN

Abramo dall'Arpa (*d* 1566). Italian musician. From his name it can be assumed that he excelled as a harpist. He is probably identifiable with the moneylender Abraham Levi, a prominent member of the Mantuan Jewish community. In 1542 he participated in a dramatic production at the Mantuan court, playing the part of Pan. He appears to have served the court under Duke Guglielmo in the 1550s and 60s. About 1560 he was called to Vienna, where, at the imperial court, he instructed Emperor Ferdinand I's children in music. His grandson ABRAMINO DALL'ARPA continued in his footsteps, serving the court under Guglielmo and his son Vincenzo I and, along with him, winning the praise of the painter Lomazzo.

DON HARRÁN

Abrams, Harriett (*b c*1758; *d* Torquay, 8 March 1821). English soprano and composer. She made her début in October 1775 as the little gypsy in *May Day*, a piece designed for her by Garrick with music by her teacher Thomas Arne. However, she had limited success as a stage personality and in 1780 she left Drury Lane to become a principal singer at fashionable London concerts and provincial festivals. She appeared in the Handel Commemoration concerts in 1784, when Burney praised the sweetness and taste of her singing, in the next three Handel festivals, the Concerts of Ancient Music, and concert series organized by Rauzzini, Ashley and Salomon. Her sister Theodosia (*d* Torquay, 4 Nov 1849), whose voice Mount-Edgcumbe described as the most beautiful contralto he ever heard, often sang with her. In 1783, the *Public Advertiser*, while admiring Harriett's solo singing, commented that the '*Forte* of the Sisters ... lives manifestly in Duettos'. After 1790 they appeared mainly in private concerts and in Harriett's annual benefits, where in 1792, 1794 and 1795 Haydn presided at the piano.

Her published works were all vocal. M.G. [Monk] Lewis wrote of how 'the celebrated Miss Abrams' made the first and most successful setting of his *Crazy Jane* and sang it herself at fashionable parties. She published two sets of Italian and English canzonets, a collection of Scottish songs harmonized for two and three voices, and more than a dozen songs, mainly sentimental ballads. In 1803 she dedicated a collection of her songs to Queen Charlotte.

Harriett was the dominant personality of a large musical family. A third sister, Eliza (*d* Torquay, 21 Aug 1831), often sang with her and Theodosia; Mount-Edgcumbe remembered how their 'united voices formed the very perfection of harmony'. Eliza was also a solo pianist. Miss G. Abrams sang at Drury Lane during Harriett's last two seasons there and may have been the 'Miss Abrams jun.' in concerts in the early 1780s. Miss Jane Abrams first sang in public at Harriett's benefit in 1782. William Abrams (*fl* 1792–5) played the violin and Charles (*fl* 1794) the cello. The violinist Miss Flora Abrams (*fl* 1776–82) may have a relative, but does not appear to have performed with the others.

Of Jewish descent, they were baptized at St George's, Hanover Square, in 1791, on which occasion Harriett was said to be 29, Jane 24, Theodosia 21 and Eliza 14. However, these ages are likely to be underestimates: Harriett was described as 'about 17' by the prompter Hopkins at her début in October 1775 and Theodosia was a soloist in the Concerts of Ancient Music in 1783. At her death Theodosia's age was given as 75.

OLIVE BALDWIN, THELMA WILSON

Abran. *See* EBRAN.

Abranovics, August. *See* ADELBURG, AUGUST.

Ábrányi, Emil (*b* Budapest, 22 Sept 1882; *d* Budapest, 11 Feb 1970). Hungarian composer and conductor, grandson of Kornél Ábrányi. He studied composition, the organ and piano at the Budapest Academy of Music, and spent a year with Nikisch in Leipzig. From 1904 he was a theatre conductor in Cologne, and from 1907 in Hanover. In 1911 he returned to Budapest to become conductor at the Royal Hungarian Opera House; he was director there (1919–20) and then at the Budapest Theatre (1921–6). He taught conducting at the Lizst Academy of Music.

Ábrányi was the most prolific Hungarian opera composer of his generation; between 1903 and 1923 five of his operas and a Singspiel were produced at the Budapest Opera House and the City Theatre. Rather than subscribing to the established Hungarian romantic opera style or folklore, Ábrányi composed in a cosmopolitan style. The operas *Monna Vanna* and *Paolo és Francesca*, for example, display a modern approach and indulge in artificially sensuous melody typical of both Italian and German *Jugendstil*, while *Don Quijote*, on the other hand, draws on the declamatory style of French opera. His choice of colourful and erotic subjects corresponded, in some cases literally, to that of leading opera composers of the time. A similar eclecticism characterizes his works in other genres, whose broadly Romantic style, employing extended tonality, is informed by a variety of folk idioms.

Though Ábrányi was frequently employed by the Budapest Opera House as a composer and conductor (partly, perhaps out of reverence towards his father, an eminent poet, and his grandfather), his operas never gained lasting popularity.

WORKS
(*selective list*)

STAGE
for fuller list see GroveO

A ködkirály [The King of Mist] (op, 1, Á. Pásztor), Royal Hung. Op, 17 May 1903
Monna Vanna (op, 3, E. Ábrányi sr, after M. Maeterlinck), Royal Hung. Op, 2 March 1907
Paolo és Francesca (op, 3, Ábrányi sr, after Dante: *Commedia*), Royal Hung. Op, 13 Jan 1912
Don Quijote (op, 3, Ábrányi sr, after M. de Cervantes), Royal Hung. Op, 30 Nov 1917
Ave Maria: Májusi intermezzo [A May Intermezzo] (op, 1), Budapest, Municipal, 25 Feb 1922
A vak katona [The Blind Soldier] (Spl, 1, E. Sas), Budapest, Municipal, 11 June 1923

OTHER WORKS

TIBOR TALLIÁN/ANNA DALOS

Ábrányi, Kornél (*b* Szent-György-Ábrány, 15 Oct 1822; *d* Budapest, 20 Dec 1903). Hungarian writer on music, composer and pianist. He came from the wealthy Eördögh family: the name means 'devil' and his father changed it to Ábrányi, the name of their estate. He studied the piano under János Kirch (1810–63) and Vilmos Dolegni. His first composition, *Magyar ábránd* ('Hungarian Fantasy'), was published in 1841. In the early 1840s he gave concerts in Hungarian towns, and in 1846 left for Vienna to take piano lessons with Joseph Fischhof. There is no reliable evidence that he was ever a student of Chopin in Paris. From 1847 he lived in Pest, in the 1850s as a piano teacher, and studied composition with Mosonyi, together with whom he became a devoted follower of Liszt and Wagner. He was one of the founders of the first Hungarian music periodical, the *Zenészeti lapok*, in 1860, and as its editor until 1876 he led an important campaign for an original Hungarian musical idiom and for the improvement of musical life and education. To promote these aims he founded and directed (1867–88) the National Association of Choral Societies, played an important part in the establishment of the National Hungarian Royal Academy of Music (1875) under Liszt's and Erkel's direction, and did much to increase and strengthen Liszt's connections with Hungary. As assistant professor at the academy (until 1888), he was the first to teach harmony, the aesthetics of music and, with Robert Volkmann, composition, and to publish textbooks of harmony (1874, enlarged 2/1881), aesthetics (1877) and the general history of music (1885).

Ábrányi won great fame for his books on 19th-century Hungarian music which, in spite of their occasional errors of fact, are among the richest sources for the study of this particular subject. They are the first biographies of Mosonyi (1872) and of Erkel (1895), the history of 25 years of the National Hungarian Choral Association (1892; continued, 1898), *Életemből és emlékeimből* ('From my life and memories', 1897), *Képek a múltból és jelenből* ('Pictures from past and present', 1899), and *A magyar zene a 19. században* ('Hungarian music in the 19th century', 1900). He was very active as a music critic, and as a composer was prolific but less important (he wrote piano works, songs and choruses). Liszt transcribed his five Hungarian folksongs for piano (1873), and composed the 19th Hungarian Rhapsody (1885) on Ábrányi's *Csárdás nobles*. Of Liszt's letters to him, 11 were published by La Mara (*Franz Liszts Briefe*, ii) and 31 by M. Prahács (Franz Liszt: *Briefe aus ungarischen Sammlungen, 1835–1886*, Budapest, 1966).

DEZSŐ LEGÁNY

Abravanel, Maurice (de) (*b* Thessaloniki, 6 Jan 1903; *d* Salt Lake City, 22 Sept 1993). American conductor of Spanish-Portuguese descent. He was taken to Switzerland at the age of six and studied medicine at the University of Lausanne before, on Busoni's recommendation, he moved to Berlin in 1922 to study with Weill. He conducted in provincial German theatres and finally in Berlin until 1933, when he moved to Paris to conduct the Balanchine ballet company and the première of Weill's ballet *Die sieben Todsünden*. The following year he toured Australia with the British National Opera Company. On the recommendation of Walter and Furtwängler, he was hired by the Metropolitan Opera, making his début with *Samson et Dalila* in 1936. In an era of specialization, the mainly negative reviews for his mixed repertory of French opera and Wagner forced him out in 1938. He turned to Broadway, where he renewed his association with Weill, conducting the premières in New York of *Knickerbocker Holiday* (1938), *Lady in the Dark* (1941), *One Touch of Venus* (1943), *The Firebrand of Florence* (1945) and *Street Scene* (1947). He also spent a season with the Chicago Opera Company (1940–41) and conducted the première of Blitzstein's *Regina* in 1949, for which he won a Tony Award.

In 1947 Abravanel was appointed music director of the newly reorganized Utah SO, and by his retirement in 1979 had transformed this unknown community orchestra into a leading US ensemble. He made more than 100 recordings in Utah, including major works by Gould, Rorem and Schuman, and the first Mahler symphony cycle recorded by a single orchestra. He led the campaign for construction of a 2812-seat symphony hall in Salt Lake City, renamed Abravanel Hall in 1993, but was never to conduct there. He also created touring, educational and outreach programmes which were a model in their time. From 1954 to 1980 he served as music director of the Music Academy of the West in Santa Barbara, from 1981 taught conducting at Tanglewood, and in the same year was awarded the Golden Baton by the American Symphony Orchestra League.

CHARLES BARBER, JOSÉ BOWEN

Abreu, Antonio [el Portugués] (*b* c1750; *fl* Salamanca; *d* c1820). Portuguese guitarist or of Portuguese descent. He provided the rules and music to his guitar method, *Escuela para tocar con perfección la guitarra de cinco y seis órdenes con reglas generales de mano izquierda y derecha*. P.F. Victor Prieto discovered Abreu's manuscript and published it under the original title in Salamanca in 1799 with supplementary material concerning the origins of the guitar and a historical view of the aesthetics of music. Abreu's method offers a systematic approach to pedagogy, and is one of the first to treat the guitar having six double courses, the precursor to the 19th-century guitar with six single strings. It also discusses guitar accompaniment in the orchestra and, of special note, describes in detail the preparation of right-hand fingernails.

RONALD C. PURCELL

Abreu, José Antonio (*b* Valera, 7 May 1939). Venezuelan cultural administrator. He founded the Venezuelan youth orchestra system. He earned degrees in economics from the Central University of Venezuela (1961) and composition and organ from the José Angel Lamas School of Music, Caracas (1964, 1966). From 1966 to 1974 he occupied various political and administrative positions, was a member of the Venezuelan parliament and worked for the Instituto Nacional de Cultura y Bellas Artes.

In the mid-1970s Abreu proposed a new system of youth orchestras coupling the needs of music education with the aim of national affirmation and social assistance for underprivileged young people. This network of orchestras, comprising students of all ages in all regions of the country, revolutionized the training of orchestra musicians but caused controversy among conservatory teachers and established professionals, some of whom questioned the project's empirical emphasis and criticized an arguably insufficient academic support. In spite of controversy and changing political and economic circumstances, the Simón Bolívar Orchestra in Caracas, the flagship ensemble of the movement, gradually attained professional status, outranking the traditional orchestras in Venezuela and earning a reputation as the best in Latin America during the 1990s.

Abreu has earned important honours, including the Gabriela Mistral Prize of the Organization of American States (1995). He was the Venezuelan Minister of Culture of (1988–94) and has worked with UNESCO towards the establishment of a worldwide system of youth orchestras. His papers are in the Latin American Music Center, Indiana University, Bloomington.

CARMEN HELENA TÉLLEZ

Absatz (Ger.). A term, first used by H.C. Koch, denoting an opening phrase. *See* ANALYSIS, §II, 2.

Absetzen (Ger.). As a musical term, *absetzen* has two meanings: (1) to separate one note from another, as is usual in staccato performance and (2) to transcribe vocal music into tablature for some solo instrument, for example lute or organ. In the 18th century Quantz described staccato playing in general as *abgesetzet*, and his use of the term implied lifted, off-string bow strokes on the violin; but not all staccato notes (e.g. quavers in Allegro passages and semiquavers in Allegretto) were to be *abgesetzt* in this sense (*see* BOW, §II, 2(vii) and AUFHEBEN). For a discussion of this usage, see *BoydenH*, pp.412f. In its second meaning the term was in general use from the 16th to the 18th centuries. For example, the title-page of Elias Nicolaus Ammerbach's *Ein new künstlich Tabulaturbuch* (Nuremberg, 1575) states that the collection includes motets and German lieder 'auff die Orgel unnd Instrument abgesetzt'.

See also ABSTOSSEN.

CLIVE BROWN

Absil, Jean (Nicolas Joseph) (*b* Bonsecours, Hainaut, 23 Oct 1893; *d* Uccle, Brussels, 2 Feb 1974). Belgian composer. He studied the organ, the piano and harmony with Alphonse Oeyen, organist of Bonsecours. He continued his studies at the Ecole St Grégoire, Tournai, where he gave his first organ recital in 1912. In 1913 he entered the Brussels Conservatory to study with Desmet (organ), Edouard Samuel (practical harmony) and (from 1915) Lunssens (written harmony). He took a first prize for organ and harmony in 1916 and, after a year's further work with Paulin Marchand (counterpoint) and Léon Du Bois (fugue), another for counterpoint and fugue. Abandoning the idea of a career as an organist, he went to Gilson for composition lessons (1920–22). In 1921 his First Symphony won the Agniez Prize; in 1921 he took the second Belgian Prix de Rome with the cantata *La guerre* and was appointed director of the Etterbeek Music School. From 1930 he taught practical harmony at the Brussels Conservatory, where he was made professor in 1936. In 1934 he won the Rubens Prize and stayed for a time in Paris. Then with Dotremont and Leirens he founded the *Revue internationale de musique* (1938); in the same year the Piano Concerto, composed for the Ysaÿe Competition, brought him to international notice. For some time he was president of the Belgian section of the ISCM. He was appointed professor of fugue at the Brussels Conservatory and at the Chapelle Musicale Reine Elisabeth in 1939, retiring in 1959. In 1955 he was elected to the Belgian Royal Academy, and in 1964 he received the Prix Quinquennial of the Belgian government.

Absil's conservatory training introduced him to no music later than Franck, and with Gilson he studied only the orchestration of Wagner, Strauss and the Russian nationalists. It was at the concerts given in Brussels by the Pro Arte Quartet that he came to know the work of Milhaud, Hindemith and Schoenberg, and he attended rehearsals in order to penetrate their scores more deeply. He dedicated his op.9 choruses (1932) to Berg, who sent a warm letter of thanks, and during his Paris stay he met Milhaud, Honegger, Ibert and Schmitt, with whom he struck up a friendship. In imitation of the Parisian Concerts Triton, he collaborated with Chevreuille, Poot, Souris and other young Belgian composers in founding

the La Sirène series for performing new music in Brussels and abroad. Faced with public incomprehension Absil published his *Postulats de la musique contemporaine* (Huy, 1937), a brief essay with a preface by Milhaud. In it Absil claimed that the distinction between consonance and dissonance is meaningless and that polytonality has existed since the Middle Ages, *The Rite of Spring* being its first full expression. He considered atonality to be less readily acceptable in Latin or Nordic countries than in central Europe.

In his earliest works Absil was clearly under the influence of his teachers: the *Rhapsodie flamande*, for example, is in the Gilson tradition. With *La mort de Tintagiles*, however, he sought a more individual manner, but his style was formed in the chamber music that he wrote after 1934. This style is essentially polyphonic and polymodal, with different modes used in each work, although there is a predilection for intervals of an augmented 4th and a diminished octave. Changes in metre and irrational divisions are frequent; sometimes there are superimpositions of triple and binary metres, or of differently divided gruppettos, so producing characteristically vigorous effects. Often cast in variation or other conventional forms, Absil's music has great structural clarity. An evolution took place after 1938 when he attempted to make his work more accessible, but without removing its distinctiveness. From drama and ruggedness his music turned to settled charm. He followed Bartók, whose work he much admired, in studying, from 1943, the peasant music of Romania and other countries, and several of his works use folk or folk-like themes. But in 1963 Absil appeared to stop making concessions to public taste and devoted his efforts almost exclusively to instrumental music.

WORKS

DRAMATIC

Op: Peau d'âne, op.26 (H. Ghéon), 1937; Le chapeau chinois, op.64 (M. Franc-Nohain), 1944; Les voix de la mer, op.75 (R. Lyr), 1951

Ballets: Le miracle de Pan, op.71 (Lyr), 1949; Epouvantail, op.74 (E. de Sadeleer), 1950; Les météores, op.77 (Lyr), 1951

Radio op: Ulysse et les sirènes, op.41 (J. Bruyr), 1939; Pierre Breughel l'Ancien, op.73 (Lyr), 1950

ORCHESTRAL

Sym. no.1, d, op.1, 1920; La mort de Tintagiles, op.3, 1923–6; Rhapsodie flamande, op.4, 1928; Berceuse, vc, orch, 1932; Vn Conc. no.1, op.11, 1933; Petite suite, op.20, 1935; Sym. no.2, op.25, 1936; Pf Conc. no.1, op.30, 1937; Rhapsody no.2, op.34, 1938; Andante symphonique, op.35 bis, 1939; Vc Concertino, op.42, 1940; Serenade, op.44, 1940; Variations symphoniques, op.50, 1942; Va Conc., op.54, 1942; Rhapsodie roumaine, op.56, vn, orch, 1943; Sym. no.3, op.57, 1943

Conc. grosso, op.60, wind qnt, str, 1944; Jeanne d'Arc, op.65, 1945; Rites, op.79, band, 1952; Rhapsodie brésilienne, op.81, 1953; Mythologie, op.84, 1954; Croquis sportifs, op.85, band, 1954; Divertimento, op.86, sax qt, orch, 1955; Introduction et valses, op.89, 1955; Légendes d'après Dvořák, op.91, band, 1956; Suite d'après le folklore roumain, op.92, 1956; Suite bucolique, op.95, str, 1957; Fantaisie concertante, op.99, vn, orch, 1958; Rhapsodie bulgare, op.104, 1960; 2 danses rituelles, op.105, 1960

Triptyque, op.106, 1960; Fantaisie-humoresque, op.113, cl, str, 1962; 3 Fanfares, op.118, brass band, 1963; Rhapsody no.6, op.120, hn, orch, 1963; Concertino, op.122, va, str, 1964; Vn Conc. no.2, op.124, 1964; Nymphes et faunes, op.130, band, 1966; Pf Conc. no.2, op.131, 1967; Allegro brillante, op.133, pf, orch, 1967; Sym. no.4, op.142, 1969; Sym. no.5, op.148, 1970; Fantaisie-caprice, op.152, a sax, str, 1971; Gui Conc., op.155, 1971; Ballade, op.156, a sax, pf, orch, 1971; Déités, op.160, 1972; Pf Conc. no.3, op.162, 1973

CHAMBER

Str Qt no.1, op.5, 1929; Pf Trio, op.7, 1931; Str Qt no.2, op.13, 1934; Wind Qnt, op.16, 1934; Str Trio no.1, op.17, 1935; Str Qt no.3, op.19, 1935; Fantaisie rhapsodique, op.21, 4 vc, 1936; Qt no.2, op.28, 4 vc, 1937; Sax Qt, op.31, 1937; Pf Qt, op.33, 1938; Pièces en quatuor, op.35, sax qt, 1938; Concert à 5, op.38, fl, str trio, hp, 1939; Str Trio no.2, op.39, 1939; Fantaisie, op.40, pf qt, 1939; Str Qt no.4, op.47, 1941; Suite, op.51, vc, pf, 1942; Sicilienne, fl/ob/cl/sax, pf, 1950; Contes, op.76, tpt, pf, 1951

Suite, op.78, trbn, pf, 1952; Suite sur des thèmes populaires roumains, op.90, sax qt, 1956; Silhouettes, op.97, fl, pf, 1958; Burlesque, op.100, ob, pf, 1958; Sonatine en duo, op.112, vn, va, 1962; Sonata, op.115, a sax, pf, 1963; Qt, op.132, 4 cl, 1967; Croquis pour un carnaval, op.137, 4 cl, hp, 1968; 5 pièces faciles, op.138, cl/a sax, pf, 1968; Suite no.2, op.141, vc, pf, 1968; Suite mystique, op.145, 4 fl, 1969; Sonata, op.146, vn, pf, 1970; Suite, op.149, tpt, pf, 1970; 4 esquisses, op.154, ww qt, 1971; Pf Trio no.2, op.158, 1972; Images stellaires, op.161, vn, vc, 1972

INSTRUMENTAL

Pf: 3 impromptus, op.10, 1932; Sonatina, op.27, 1937; 3 pièces, op.32, right hand, 1938; Marines, op.36, 1939; Sonatina no.2 (Suite pastorale), op.37, 1939; Bagatelles, op.61, 1944; Grande suite, op.62, 1944; Hommage à Schumann, op.67, 1946; Esquisses sur les 7 péchés capitaux, op.83, 1954; Variations, op.93, 1956; Echecs, op.96, 1957; Danse rustique, 1958; Passacaglia in memoriam Alban Berg, op.101, 1959; Rhapsody no.5, op.102, 2 pf, 1959; Danses bulgares, op.103, 1959; 30 études préparatoires à la polyphonie, op.107, 1961; Du rythme à l'expression, op.108, 1961; Grande suite no.2 'Hommage à Chopin', op.110, 1962; Sonatina no.3, op.125, 1965; Humoresques, op.126, 1965; Ballade, op.129, left hand, 1966; Asymétries, op.136, 2 pf, 1968; Alternances, op.140, 1968; Féeries, op.153, 1971; Poésie et vélocité, op.157, 1972

Gui: 10 pièces, op.111, 1962; Suite, op.114, 1963; 3 pièces, op.119, 2 gui, 1963; Pièces caractéristiques, op.123, 1964; Suite, op.135, 2 gui, 1967; Contrastes, op.143, 2 gui, 1969; Sur un paravent chinois, op.147, 1970; 4 pièces, op.150, 1970; Petit bestiaire, op.151, 1970; 12 pièces, op.159, 1972

Other: Chaconne, op.69, vn, 1949; 3 pièces, op.121, bandoneon, 1964; Etude, drum, 1964; 3 pièces, op.127, org, 1965; Sonata, op.134, vn, 1967; Entrée solennelle pour un Te Deum, org, 1968

CHORAL

La guerre, op.2 (cant., V. Gilles), 1922; 3 choeurs, op.6 (H. Malteste, I. Gilkin, E. Verhaeren), female 3vv, pf, 1930; 3 poèmes, op.9 (A. Cantillon), 4vv, 1932; 3 choeurs, op.14 (P. Reboux, Cantillon, Verhaeren), 4vv, 1934; 3 choeurs, op.15 (P. Fort), children 2vv, orch, 1934; 3 choeurs, op.18 (Fort), children, orch, 1935; 3 choeurs, op.24 (F. Bataille, P. Brohée, anon.), female 3vv, pf, 1936; Alcools, op.43 (G. Apollinaire), 4vv, 1940; Philatélie, op.46 (cant., T. Braun), 1940

Les bénédictions, op.48 (cant., Braun), 1941, Chansons de bonne humeur, op.49 (T. Klingsor), female 2vv, orch, 1942; Les chants du mort, op.55 (cant., Rom. trad.), 1943; Bestiaire, op.58 (Apollinaire), chorus 4vv, 1944; Printemps, op.59 (M. Carême), children, orch, 1944; Zoo, op.63 (J. Sasse), chorus 4vv, 1944; Thrène pour le vendredi-saint, op.66 (cant., E. de Sadeleer), 1945; L'album à colorier, op.68 (cant., Sadeleer), 1948; Le zodiaque, op.70 (cant., Braun), 1949

Le cirque volant, op.82 (cant., Sadeleer), children 2vv, pf, orch, 1953; Colindas, op.87 (Rom. trad.), female 3vv, 1955; Chansons plaisantes, op.88 (Rom. trad.), children 2vv, orch, 1955; Chansons plaisantes, op.94 (Fr., etc. trad.), children 2vv, orch, 1956; 6 poèmes, op.109 (Carême), children 3vv, 1961; Petites polyphonies, op.128, chorus 2vv, orch, 1966; A cloche-pied, op.139 (Carême), children, orch, 1968; Le chant à l'école, op.144, children, 1969

VOCAL

Cimetière (Moréas), Mez/Bar, pf, 1927; 3 mélodies, op.8 (Brohée, Cantillon), v, pf, 1927 [expanded into 5 mélodies (Gilkin, Brohée, V. Hugo, J. Moréas, Klingsor), 1927–37]; 5 mélodies, op.12 (M. Maeterlinck, Valéry, Hugo), Mez, str qt, 1933; 4 poèmes (Maeterlinck), op.12, 3 for Mez/Bar, pf, 1 for S/T, pf, 1933; Nostalgie d'Arabella, op.22 (M. Beerblock), A, a sax, pf, perc, 1936; Batterie, op.29 (J. Cocteau), S/T, pf, 1937; Berceuse (C. Morgenstern), 1v, pf, 1938; 3 poèmes, op.45 (Klingsor), Mez/Bar, orch, 1938–40; Enfantines, op.52 (M. Ley), Mez/Bar, pf, 1942; 2 poèmes, op.53 (F. Jammes), S/T, pf, 1942

Chanson de 4 sous (Fort), Mez/Bar, pf, 1942; Phantasmes, op.72 (H. Michaux, L. Hughe, Beerblock [incl. op.22]), A, a sax, pf, perc, 1950; Rêves, op.80 (R. Lyr), 1v, pf, 1952; Heure de grâce, op.98 (Carême), S/T, pf, 1958; 3 vocalises, op.116, Mez/Bar, pf, 1963; Cache-cache, op.117 (Carême, E. Vollène), Mez/Bar, pf, 1963

MSS in *B-Bcdm*

Principal publishers: Berben, Bosworth, CeBeDeM, Chester, Eschig, Lemoine, Schott (Brussels), Universal

HENRI VANHULST

Absolute music. The term 'absolute music' denotes not so much an agreed idea as an aesthetic problem. The expression is of German origin, first appearing in the writings of Romantic philosophers and critics such as J.L. Tieck, J.G. Herder, W.H. Wackenroder, Jean Paul Richter and E.T.A. Hoffmann. It features in the controversies of the 19th century – for example, in Hanslick's spirited defence of *absolute Tonkunst* against the *Gesamtkunstwerk* of Wagner – and also in the abstractions of 20th-century musical aesthetics. It names an ideal of musical purity, an ideal from which music has been held to depart in a variety of ways; for example, by being subordinated to words (as in song), to drama (as in opera), to some representational meaning (as in programme music), or even to the vague requirements of emotional expression. Indeed, it has been more usual to give a negative than a positive definition of the absolute in music. The best way to speak of a thing that claims to be 'absolute' is to say what it is not.

It is not word-setting. Songs, liturgical music and opera are all denied the status of absolute music. For in word-setting music is thought to depart from the ideal of purity by lending itself to independent methods of expression. The music has to be understood at least partly in terms of its contribution to the verbal sense. It follows that absolute music must at least be instrumental music (and the human voice may sometimes act as an instrument, as in certain works of Debussy, Delius and Holst). Liszt and Wagner insisted that the absence of words from music did not entail the absence of meaning. Liszt's *Programm-Musik* and Wagner's *Gesamtkunstwerk* both arose from the view that all music was essentially meaningful and no music could be considered more absolute than any other. This view gives rise to a further negative definition of the 'absolute' in music: it is music that has no external reference. So the imitation of nature in music is a departure from an absolute ideal: Vivaldi's concertos the 'Four Seasons' are less absolute than the *Art of Fugue*. The symphonic poem is also tainted with impurity, as is every other form of PROGRAMME MUSIC.

The yearning for the absolute is not yet satisfied. Having removed representation from the ideal of music, critics have sought to remove expression as well. No music can be absolute if it seeks to be understood in terms of an extra-musical meaning, whether the meaning lies in a reference to external objects or in expression of the human mind. Absolute music is now made wholly autonomous. Its raison d'être lies entirely within itself; it must be understood as an abstract structure bearing only accidental relations to the movement of the human soul. Liszt and Wagner claimed that there could be no absolute music in that sense; it is possible that even Hanslick might have agreed with them.

It is at this point that the concept of absolute music becomes unclear. Certainly it no longer corresponds to what Richter and Hoffmann had in mind. Both writers considered the purity of music – its quality as an 'absolute' art – to reside in the nature of its expressive powers and not in their total absence. For Richter music was absolute in that it expressed a presentiment of the divine in nature; for Hoffmann it became absolute through the attempt to express the infinite in the only form that renders the infinite intelligible to human feeling. To borrow the terminology of Hegel: music is absolute because it expresses the Absolute. (On that view, liturgical music is the most absolute of all.)

The notion of the 'absolute' in music has thus become inseparably entangled with the problem of musical expression. Is all music expressive, only some or none at all? The answer to that question will determine the usage of the term 'absolute' in criticism. To define the term negatively leads at once to an intractable philosophical problem. A positive definition has therefore been sought.

An analogy may be drawn with mathematics. Pure mathematics can be defined negatively: it is mathematics which is not applied. But that is shallow; for what is applied mathematics if not the application of an independent and autonomous structure of thought? One should therefore define pure mathematics in terms of the methods and structures by which it is understood. Similarly, it might be argued that music is absolute when it is not applied, or when it is not subjected to any purpose independent of its own autonomous movement. Absolute music must be understood as pure form, according to canons that are internal to itself. Unfortunately, such a positive definition of the term raises another philosophical problem: what is meant by 'understanding music'? And can there be a form of art which is understood in terms that are wholly internal to itself?

Attempts by the advocates of absolute music to answer those questions have centred on two ideas: objectivity and structure. Their arguments have been presented in this century most forcefully by the Austrian theorist Heinrich Schenker and by Stravinsky. Music becomes absolute by being an 'objective' art, and it acquires objectivity through its structure. To say of music that it is objective is to say that it is understood as an object in itself, without recourse to any semantic meaning, external purpose or subjective idea. It becomes objective through producing appropriate patterns and forms. These forms satisfy us because we have an understanding of the structural relations which they exemplify. The relations are grasped by the ear in an intuitive act of apprehension, but the satisfaction that springs therefrom is akin to the satisfaction derived from the pursuit of mathematics. It is not a satisfaction that is open to everyone. Like mathematics it depends on understanding, and understanding can be induced only by the establishment of a proper musical culture. For Schenker, this means learning to hear a piece of music 'structurally', as an elaboration of an underlying harmonic and melodic structure, 'composed out' into a musical foreground. But this technical explanation of musical form need not be accepted in order to believe that music

should be understood as pure form, without reference to any content.

It is such a conception of the absolute in music that has figured most largely in modern discussions. It is in the minds of those who deny that music can be absolute, as of those who insist that it must be. It has inspired the reaction against Romanticism, and sought exemplification in the works of Hindemith, Stravinsky and the followers of Schoenberg. Indeed, the invention of 12-note composition seemed to many to reveal that music was essentially a structural art, and that all the traditional effects of music could be renewed just so long as the new 'language' imitated the complexity of the classical forms. (Schoenberg did not share the enthusiasm of his disciples for such a theory; for him music had been, and remained, an essentially expressive medium.)

It should be noted that 'absolute' music, so defined, means more than 'abstract' music. There are other abstract arts, including architecture and some forms of painting. To call them abstract is to say that they are not representational. It is not to imply that they are to be understood by reference to no external purpose and no subjective state of mind. An abstract painting does not have to lack expression. Yet 'absolute' music is an ideal that will not allow even that measure of impurity.

As an ideal it certainly existed before the jargon of its name. Boethius and Tinctoris gave early expression to it, and even Zarlino was under its influence. Paradoxically, however, the rise of instrumental music and the development of Classical forms saw the temporary disappearance of the absolute ideal. Only after Herder and his followers had introduced the word, and Wagner (through his opposition to it) the concept, did the ideal once more find expression in serious aesthetic theories.

The advocacy of absolute music has brought with it a view of musical understanding that is as questionable as anything written by Liszt in defence of the symphonic poem. It is of course absurd to suppose that one understands Smetana's *Vltava* primarily by understanding what it 'means'. For that seems to imply that the grasp of melody, development, harmony and musical relations are all subordinate to a message that could have been expressed as well in words. But so too is it absurd to suppose that one has understood a Bach fugue when one has a grasp of all the structural relations that exist among its parts. The understanding listener is not a computer. The logic of Bach's fugues must be heard: it is understood in experience and not in thought. And why should not the musical experience embrace feeling and evocation just as much as pure structured sound? Hearing the chorus 'Sind Blitze sind Donner' from the *St Matthew Passion* may provide a renewed sense of the significance of the *Art of Fugue*, and that sense may originate in a recognition of the emotional energy that underlies all Bach's fugal writing. Clearly, however 'absolute' a piece of music may be, it can retain our interest only if there is something more to understanding it than an appreciation of patterns of sound.

ROGER SCRUTON

Absolute pitch. The ability either to identify the chroma (pitch class) of any isolated tone, using labels such as C, 261 Hz or *do* ('passive' absolute pitch), or to reproduce a specified chroma – for example, by singing or adjusting the frequency of a tone generator – without reference to an external standard ('active' absolute pitch (AP): Bachem, 1937; Baggaley, 1974; Ward, 1982). Both skills may be called 'tone-AP'. Absolute pitch may also involve recognizing whether a familiar piece is played in the correct key (passive), or singing a familiar song in the correct key (active); this skill is known as 'piece-AP'.

Cognitively, both tone- and piece-AP involve two separate sub-skills: long-term pitch memory and an appropriate form of linguistic coding for attaching labels to stimuli (Levitin, 1994). True tone-AP requires individual internal pitch standards for all 12 chroma. This template can shift with age by as much as two semitones (Vernon, 1977; Wynn, 1992); shifts can also be induced neurochemically (Chaloupka, Mitchell and Muirhead, 1994). A musician with only one absolute pitch reference (e.g. a' = 440 Hz) and good relative pitch has 'pseudo-AP' (Bachem, 1937); so has an experimental participant who internalizes several, but not all, pitches of the chromatic scale (Cuddy, 1970). The labels used in tone-AP are musical note names; in piece-AP they are names of pieces and texts of songs.

The popular term 'perfect pitch' is misleading. Musicians claiming tone-AP are not necessarily better at discriminating tones of almost the same frequency, or at perceiving small deviations in intonation, than other musicians (Bachem, 1954; Burns and Campbell, 1994). AP possessors can typically tune pitches to within 20–60 cents of target frequencies (Rakowski and Morawska-Büngeler, 1987). In passive tasks, they regularly make semitone errors (Lockhead and Byrd, 1981; Miyazaki,

1988), and are not necessarily better than other musicians at identifying octave registers (Rakowski and Morawska-Büngeler, 1987; Miyazaki, 1988). There is nothing 'perfect' about absolute pitch.

Nor does absolute pitch appear to correlate with other musical skills. Composers with tone-AP (e.g. Mozart, Skryabin, Messiaen, Boulez) have not written indisputably better or worse music than composers without it (e.g. Wagner, Tchaikovsky, Ravel, Stravinsky: see Slonimsky, 1988). While tone-AP is sometimes an advantage (helping horn players to imagine tones before playing them, singers to perform atonal music and theorists to follow large-scale tonal structures by ear), it can also be a hindrance (e.g. when playing or singing in a key other than written). Regarding relative pitch, musicians with tone-AP can be less skilled than other musicians, calculating intervals and chords from note names rather than hearing them directly (Miyazaki, 1991–2, 1993–4). Moreover, their constant awareness of musical pitch labels can detract from their enjoyment of music.

Only about one person in 10,000 claims to have tone-AP (Profita and Bidder, 1988). The distinction between possessors and non-possessors is not clearcut: the former can usually label 70–100% of randomly selected middle-range piano tones (Miyazaki, 1988), while the latter identify up to 40% of the tones – well above the chance level of 8·3% (Lockhead and Byrd, 1981; Miyazaki, 1988). This is not surprising given that neurological information on absolute pitch is available at all levels of the auditory system (Moore, 1977). Even songbirds (Hulse, Cynx and Humpal, 1984), wolves (Tooze, Harington and Fentress, 1990) and monkeys (D'Amato, 1987–8) demonstrate absolute pitch memory.

Clearly, tone-AP must be learnt from exposure to music containing fixed pitches, coupled with knowledge of pitch labels (Wedell, 1934; Levitin, 1999). Chroma identification rates are higher, and response times lower, for white piano keys than for black (Miyazaki, 1989–90; Takeuchi and Hulse, 1991), presumably because white keys occur more often in piano music and have simpler labels (see Rosch, 1975). Similarly, piece-AP relies on repeated exposure to pieces played in the same key. Tone-AP may also be 'unlearnt' during musical acculturation in which familiar music and pitch relationships are regularly transposed into different keys; this may explain its rarity (Abraham, 1901–2; Watt, 1917).

Like language, tone-AP usually develops during a critical period in early life (Ward, 1982). Musicians who start musical training early are more likely to acquire tone-AP than those who start late (Wellek, 1938; Sergent, 1969). Younger children acquire piece-AP more easily than older children (shown by singing a song in its regular key: Sergeant and Roche, 1973). Tone-AP can be acquired in later life, but only with considerable motivation, time and effort (Meyer, 1899; Cuddy, 1968; Brady, 1970). Late acquirers of tone-AP are generally less spontaneous and accurate in their identification of pitches; they tend not to develop a complete internal chroma template, filling the gaps by means of relative pitch.

Both infants (Clarkson and Clifton, 1985) and adults (Wedell, 1934) seem able to perceive pitch absolutely within a range of about three semitones. According to the 'innateness hypothesis' (Révész, 1913; Bachem, 1937) newborns vary in their predisposition to acquire tone-AP, that is, to reduce this range to one semitone and apply chromatic labels. This hypothesis has not been confirmed experimentally. Even if it were, it would not provide unequivocal support for innateness: newborns have at least four months of prenatal auditory experience (Lecanuet, 1995). The search for an absolute-pitch gene (Profita and Bidder, 1988) or brain centre (Schlaug and others, 1995) may be in vain, given that, in a learnt skill, 'nature' and 'nurture' cannot easily be separated (Jeffress, 1962) and that absolute pitch involves several neurally separate sub-processes (pitch perception, classification, labelling, storage in long-term memory, retrieval from memory: Levitin, 1999).

Absolute pitch can be enhanced by association or integration with other perceptual or cognitive parameters (Siegel, 1974; Zatorre and Beckett, 1989). For example, tone-AP is enhanced by linking pitches to colours (*chromaesthesia*: Peacock, 1984–5; Rogers, 1987). Musicians with tone-AP tend to identify the tones of their main instrument more reliably than other timbres (Lockhead and Byrd, 1981), suggesting an intrinsic cognitive link between pitch and timbre. For similar reasons, piece-AP, involving complex, meaningful sound objects, is more widespread than tone-AP: musicians not claiming tone-AP can recognize whether a familiar piece is played in its correct key (Terhardt and Seewann, 1983–4), and non-musicians can sing well-known tunes in the same key on different occasions (Halpern, 1989; Heaton, 1992), or in the keys in which they learnt them (Levitin, 1994), at levels considerably exceeding chance. Piece-AP is further facilitated by the use of everyday linguistic labels rather than abstract note names.

Tests for absolute pitch should be designed to prevent other parameters from facilitating tone recognition. It is impossible to rule out the use of relative pitch (Ward, 1982; Costall, 1985), although slow reactions can be reliable evidence of its use (Bachem, 1954). Use of timbre can be completely eliminated by randomly varying the spectral envelope of presented tones, or by having participants sing their responses. Because the pitch of a pure tone depends on its intensity (Stevens, 1935), results of absolute pitch experiments using pure tones should be interpreted with caution.

RICHARD PARNCUTT, DANIEL J. LEVITIN

Abstossen [Stossen]. The normal German equivalent of the Italian verb *staccare* ('to separate or detach; to play staccato'); the noun *Stoss* was used to mean staccato. Like its Italian counterpart it implies not only separation but also, in many cases, accent. *Stoss* means literally a blow or shove and the verb means to push, shove or jab. The prefix *ab-* indicates 'off'. J.G. Walther, in his *Musicalisches Lexicon*, 1732, made a distinction between *staccato* and *stoccato* deriving the one from *staccare* (Ger. *entkleben*, *ablösen*), and the other from *stocco* ('a stick'; Ger. *Stock*), which he considered to imply that the note was pushed or jabbed (*gestossen*). Walther's etymology, whether accurate or not, emphasizes the dual meaning of the term staccato in German usage. It was often, especially in the context of keyboard playing, used merely to indicate that notes were to be shortened; thus Türk equated the noun *Stossen* with ABSETZEN and was at pains to point out that 'notes that are to be played gently may be staccatoed [*gestossen*]' (*Clavierschule*, 1789). Reichardt, on the other hand, referring to violin playing, associated a degree of 'sharpness' (*Schärfe*) of the bow with notes that were to be staccatoed (*abgestossen*), though this was partly connected with tempo, and he warned that in adagio even on notes marked with the sign for *Abstossen* the bow should not entirely leave the string (*Ueber die Pflichten des Ripien-Violinisten*, 1776, pp.25–6).

See also BOW, §II, 2(vii).

CLIVE BROWN

Abstrich (Ger.). In string playing *Abstrich* and *Aufstrich* denote 'down-bow' and 'up-bow', respectively. 'Down-bow' is indicated by the sign (a stylized representation of the frog of the bow) and 'up-bow' by (representing the point of the bow). These symbols were first described by Baillot (*L'art du violon*, 1834) who implied that they had been in general use for some time. *See* BOW, §II, 2(i).

PETER WALLS

Abt, Franz Wilhelm (*b* Eilenburg, 22 Dec 1819; *d* Wiesbaden, 31 March 1885). German composer. His father, a clergyman and an enthusiastic pianist, gave him his first instruction in music; he then went to Leipzig to study theology and music at the university and the Thomasschule. There he made friends with Lortzing, Mendelssohn and Schumann. On the death of his father (1837), he decided to concentrate entirely on music. Though engaged in Bernburg (1841) as Kapellmeister, he soon left for Zürich, distinguishing himself there as an outstanding and immensely popular choirmaster. He was appointed director of nearly all of its numerous choral societies in succession, often winning prizes for them. In 1852 he became conductor at the opera house in Brunswick, which had been designated a national theatre in 1818. He was appointed director of the Hofkapelle in 1855. Faithful to his first love, choral conducting, he developed an international reputation and was invited to conduct in many capital cities of Europe. A spectacular

reception awaited him on his tour of the USA (1872). Overworked and in poor health, he retired to Wiesbaden in 1882.

Abt's works run to more than 600 opus numbers comprising over 3000 individual items. Vocal music was his main interest, especially male choral music, whose impoverished repertory he strove to enrich. His style is popular, his melodies simple and fresh, with a pleasing and varied accompaniment, so that some – like *Wenn die Schwalben heimwärts ziehn* and *Die stille Wasserrose* – are easily mistaken for genuine folksong.

His son Alfred (*b* Brunswick, 25 May 1855; *d* Geneva, 29 April 1878) was a Kapellmeister in Rudolstadt, Kiel and Rostock.

WORKS
(*selective list*)

Ops: Des Königs Scharfschütz, 1873; Die Hauptprobe, Reisebekanntschaften, both male vv

Many choral works with orch, incl.: All-Deutschland, op.201; Schlachtlied, op.223

Song cycles, chorus, pf acc.: Ein Sängertag, op.85; Die Kirmes, op.101; Frühlingsfeier, male vv, op.181; Rotkäppchen, 2 solo vv, female chorus, pf, op.526; Ein eidgenössisches Sängerfest

Numerous partsongs, mostly 4 male vv, incl: Vineta, op.163 no.3; Waldandacht, op.175 no.2; Die stille Wasserrose, op.192 no.2; Mir träumte von einem Königskind, op.276 no.4

Solo songs, pf acc.: Wenn die Schwalben heimwärts ziehn, *c*1850; Agathe, op.39 no.1; Gute Nacht, du mein herziges Kind, op.137 no.2; Es hat nicht sollen sein, op.213 no.2

Children's songs, 2–3vv

Many early works for pf, chiefly salon pieces

Abū'l-Ṣalt Umayya (*b* Denia, Spain, 1067; *d* Mahdia, Tunisia, 1134). Arab scientist and philosopher. His works, mainly on scientific topics, are said to have included a now lost *Risāla fī al-mūsīqī* ('Treatise on music'). It is presumably from this that a surviving anonymous Hebrew translation was made which suggests that it originally formed part of the mathematical section (quadrivium) of an encyclopedia. It deals with the standard topics of definitions, intervals, tetrachord species, instruments and rhythm, and is largely derived from AL-FĀRĀBĪ.

Abwāq (Arab.; sing. *būq*). *See* BŪQ.

Abyndon [Abingdon], **Henry** (*b* *c*1420; *d* 1497). English church musician. He was noted as a fine singer and skilful organist. After service in the household of Humphrey, Duke of Gloucester (until 1447), and as a lay clerk of Eton College (1447–51), where he was one of the four clerks specially responsible for singing polyphony in the college chapel, he became a clerk of the Chapel Royal in 1451, and Master of the Choristers there from 1455 to 1478. His duties included teaching the boys to play the organ and to sing plainsong and improvised polyphony; also it seems probable that he was instrumental in the introduction about this time of the use of boys' voices in composed polyphony. The award to him in 1464 of a Cambridge MusB reflects his eminence in the musical profession – he is the earliest known recipient of this degree – while the patronage of Bishop Bekynton brought him valuable sinecures in the diocese of Bath and Wells. His last years were spent as a resident of Sanctuary Yard, Westminster Abbey.

ROGER BOWERS

Abzug (i) (from Ger. *abziehen*: 'to draw off', 'to divert'). A tuning indication (*im Abzug*) found in 16th-century German lute tablatures. It directs the player to lower the pitch of the lute's sixth course by one whole tone from its normal tuning. (*See* CORDES AVALLÉES and SCORDATURA, §3.)

JAMES TYLER

Abzug (ii). According to C.P.E. Bach, Marpurg and Quantz in the 18th century, an *Abzug* is a decrescendo into the principal note from a long appoggiatura. Georg Simon Löhlein (*Clavier-Schule*, 1765 and later) said 'Abzug' is synonymous with 'Schneller', that is, a trill with one repercussion starting and ending with the main note, the ornament called 'inverted mordent' by some writers. For these meanings of the term see F. Neumann: *Ornamentation in Baroque and Post-Baroque Music* (Princeton, NJ, 1978, 3/1983). *See also* ORNAMENTS, §§8.

HOWARD MAYER BROWN

Abzug (iii). A term occasionally used by organ builders to refer to a rank of pipes forming part of a mixture or other compound stop that can be detached and used as an independent stop.

HOWARD MAYER BROWN

Académie des Inscriptions et Belles-Lettres. French institution. Created as the Petite Académie in 1623, the organization that was to become the Académie des Inscriptions et Belles-Lettres was initially dedicated to the glory of the king and to the history of his reign. Its scope was enlarged in 1703 by Gros de Boze, who called for the study of all aspects of civilization, from its origins to the 18th century. Discussions of music seem to have taken place from the end of the 17th century under the aegis of Charles Perrault, although documentation of such discussions dates only from 1706. The study of ancient music was begun under Galland and Fraguier and continued under Burette. The music of the ancients constituted the favourite subject of the academicians throughout the first half of the 18th century, and was revived by Michel de Chabanon and J.B. Rochefort between 1770 and 1780. A prize was established by Durey de Noinville in 1733. The winning essays, some of which concerned music, were published independently, while many of the essays read

outside the regular meetings were published in the *Mémoires de l'Académie des Inscriptions et Belles-Lettres.*

Académie Royale de Musique. Parisian institution, founded in 1672 for the performance of opera, and identical with the Paris Opéra. *See* PARIS, §§III, 3; IV, 3; VI, 3.

Academy.

1. Terminology. 2. The Platonic academy. 3. Italian academies. 4. French academies. 5. Germany, England and elsewhere: 18th and 19th centuries.

1. TERMINOLOGY. At various times in musical history, the word 'academy' has meant diverse things, including (i) a formal association of people interested in mutually communicating their opinions on various philosophical, intellectual or cultural issues (most such academies sponsored theatrical events with music and some included discussions of musical questions on their regular agenda), or even, in some few cases, a formal association devoting itself primarily to the study of music; (ii) a more loosely formed circle of intellectuals interested in holding lively discussions on various topics; (iii) an official national society that serves as an arbiter of tastes and standards; (iv) a society formed specifically to sponsor musical performances (including opera); (v) a single concert, either public or private; or (vi) an institution for the training of musicians.

2. THE PLATONIC ACADEMY. The first of these definitions must be considered the original and therefore the primary meaning. The word itself derives from the mythological character Akademos, after whom a garden or grove in Athens was named, where it is said that the Greek philosopher Plato met his students to discuss philosophy, although recent scholarship has shown that exclusive reference to Plato was never intended by users of the word (Chambers, 1995). In spite of the existence of various medieval institutions formed to debate intellectual or philosophical questions, and which therefore might be called 'academies', the tradition of the academy in the West is often associated with the alleged resuscitation of the idea of the Platonic academy in late 15th-century Florence. This 'Platonic Academy', founded in 1470, centred on the figure of Marsilio Ficino, a philosopher supported by members of the Medici family and commissioned by them to translate the works of Plato into Latin. It has been claimed that Ficino conceived the idea of bringing together occasionally, on an informal basis, in emulation of Plato's original academy, those Florentine nobles and intellectuals who had intellectual interests in common, especially a desire to hear him expound his ideas about Plato (see della Torre, 1902); revisionist writing has, however, dismissed the Accademia Platonica as fictitious (Hankins, 1990).

The 16th century saw the rise of numerous academies in Italy, if not in direct response to the Platonic Academy in Florence – their character also owes much, for example, to the religious and secular confraternities of the late Middle Ages – then at least echoing the general idea of a meeting place for intellectual discussion. Several thousand such societies in Italy from the 16th century to the 19th have been listed (see Maylender, 1926–30). Some of those established in the 16th and 17th centuries, such as the Accademia della Crusca in Florence (founded in 1582), the Accademia dei Lincei in Rome (1603), and the Accademia Filarmonica in Bologna (1666), are still in existence today. Others flourished for only a few years, for example the Accademia degli Elevati of Florence, devoted exclusively to the cultivation of music; founded by Marco da Gagliano in 1607, it enjoyed an active life up to 1609, but seems thereafter to have languished, disappearing from view altogether by 1626 (see Strainchamps, 1976).

Most of these associations brought together members of the upper classes of society, scholars and intellectuals, literati, artists and musicians. The typical Italian academy of the 16th century had its own constitution and held regularly scheduled meetings where papers on literary, artistic, philosophical and even sometimes musical questions were read and discussed. In many academies the members took academic pseudonyms (for example, Count Giovanni Maria de' Bardi of Florence was known as 'il Puro' in the Accademia degli Alterati, his son Pietro as 'l'Avvinato' and the poet Ottavio Rinuccini as 'il Sonnacchioso'. Academies became important forums for the dissemination of ideas in 16th-century Italy and also served as models for associations of various kinds in later times and different places. Among their more important functions – which have little or nothing to do with the history of music – many academies had as their mission the obligation to establish and preserve the vernacular language and to identify the principal intellectuals of their countries. Thus the Accademia della Crusca in Italy took on the responsibility of compiling a definitive dictionary of the Italian language, while the various national academies of eastern Europe in the 19th and 20th centuries constitute associations of the leading official intellectuals in each country (they also serve to sponsor various research projects); and the Académie Française fulfils both functions, defending the purity of the French language and by electing from time to time new members to join the ranks of the 'immortel(le)s'.

3. ITALIAN ACADEMIES. During the 16th century, Italian academies became important venues for the airing of musical questions. The discussions in various Florentine academies about the nature of ancient music are probably the best-known examples of the way topics of current intellectual interest were handled by academicians. Members of the Accademia degli Alterati of Florence, for example, contributed to the lively debate in the late 16th century about the implications for modern music of speculations about the organization of ancient music and its powers to communicate with its audience (Palisca, 1968). Even more theoretical in its approach to music was the Venetian Accademia della Fama (also known as the Accademia Venetiana). Under the guidance of Zarlino, who was a member, the academy proposed to publish a number of treatises by both ancient and modern writers as part of an ambitious publishing programme covering all the main areas of knowledge. This scheme, which owed much to Aldo Manuzio's conception of the intimate relationship between scholarship and the press in the pursuit of accurate and authoritative texts, never came to fruition (see Fenlon, 1995).

Besides the importance of Italian academies in discussing musical questions, they played a significant role in musical history simply because those connected with

princely courts were among the most important sponsors of the theatrical entertainments. Many academies organized performances of comedies and other plays, in which their members acted, and sometimes academies (or individual academicians) were charged with arranging the entertainment for princely weddings, state visits by visiting dignitaries or other important occasional or regular events. Through these activities, music became an important element of the academic enterprise, for theatrical entertainments almost always included some musical component. The plays most closely associated with the Accademia degl'Intronati in Siena, for example, *Il sacrificio* and *Gl'ingannati*, apparently written by various members of the academy and first performed by them in 1531, are filled with music. Francesco Corteccia composed five madrigals to words by the poet Ugolino Martelli that were sung as *intermedi* at the first performance of Francesco d'Ambra's comedy *Il furto*, sponsored by the Accademia Fiorentina in 1544; Corteccia's cycle is one of the very few complete sets of non-courtly *intermedi* to have survived from the 16th century. And the most famous *intermedi* of the entire century, those organized by the Medici court in Florence in 1589, to celebrate the wedding of Ferdinando de' Medici to Christine of Lorraine, were first performed between the acts of Girolamo Bargagli's *La pellegrina*, which was acted by members of the Sienese Accademia degl'Intronati, of which Bargagli was himself a member. One of the earliest court operas, Monteverdi's *Orfeo* (1607), was commissioned by Prince Francesco Gonzaga of Mantua to entertain members of the Accademia degli Invaghiti.

By the 18th century the Accademia degl'Intronati had its own theatre, described on the title-page of various opera librettos as the 'Teatro Grande della nobilissima Accademia degl'Intronati', where opera was performed during Carnival season. Various other academies even served as financial guarantors of opera seasons. Thus the Accademia degli Immobili in Florence supported opera productions at the Teatro della Pergola during the early 18th century.

A few academies in 16th-century Italy concentrated exclusively on the study of music; several more made it a prominent aspect of their activities. The earliest to do so, the Accademia Filarmonica of Verona, was founded in 1543 as a coalition of two previously existing organizations (Turrini, 1941). They had a formal constitution, held regular meetings, and owned a meeting-room with an extensive library (including a good deal of music) and a collection of instruments. In 1548 they hired as musical director a full-time professional musician, Giovanni Nasco, who was required to be present every afternoon, presumably to assist members by giving them instruction and performing with them. He was also charged with setting to music whatever poetry members gave him. The settings remained the property of the academy, and Nasco had to get permission to publish them.

Although the members of the Veronese Accademia Filarmonica appear to have made music mostly for their own amusement – visitors were normally not allowed into their meetings – they also gave public performances from time to time. They appear to have specialized in performing compositions (mostly madrigals) in combinations of voices with instruments, although their library included a wide variety of genres and kinds of compositions. They sponsored, for example, a new polyphonic Mass of the Holy Spirit to be performed in a Veronese church annually on 1 May, the anniversary of their founding, and organized more secular entertainments during Carnival. Perhaps it was for these outdoor Carnival celebrations that they used the trumpets, drums and fifes that they owned, and which still survive.

Nasco left the academy in 1551; a succession of relatively well-known composers were subsequently hired to take his place, including Vincenzo Ruffo, Alessandro Romano and Lambert Courtois. The academicians achieved a certain fame throughout Italy during the 16th and early 17th centuries; more than half of the madrigals published in the 16th century that were dedicated to academies were addressed to the Accademia Filarmonica, including volumes by Ruffo (1554), Wert (1571), Pallavicino (1579), Marenzio (1582 and later) and Ingegneri (1587). Similar in orientation was the Accademia degli Unisoni, founded in Perugia by Raffaele Sozi in 1561. In addition to its regular meetings to perform vocal and instrumental music, the Unisoni promoted lectures and discussions of other 'speculative sciences', including mathematics, rhetoric, moral philosophy and poetry, as well as music. Other Italian academies that had madrigal books dedicated to them – and thus were presumably especially interested in music – include the Costanti of Vicenza (Nasco, 1557; Portinaro, 1557; Bonardo, 1565); the Desiosi of Conegliano (Piccioni, 1577); the Elevati of Padua (Portinaro, 1560); the Novelli of Verona (Cavatoni, 1572); and the Olimpici of Vicenza (Pordenon, 1580). In 1585 the Olimpici inaugurated their new theatre, designed by Palladio on Vitruvian principles, with a performance of Sophocles' *Oedipus rex* in the vernacular; for this occasion choruses in a suitably 'antique' style were composed by Andrea Gabrieli.

The two Italian academies most famous in the history of music – the Accademia Filarmonica of Bologna and the Accademia degli Arcadi of Rome – grew up in the 17th century. In his monastery of S Michele in Bosco, near Bologna, Adriano Banchieri founded the Accademia dei Floridi in 1614 or 1615 (the date is traditionally given as 1615, but Banchieri had published the academy's constitution in his *Cartella musicale* of 1614). The academy was devoted to the study of music, concerts and the cultivation of *belles lettres*. The Accademia dei Floridi underwent various transformations in the following several decades, changing its name first to Accademia dei Filomusi and then to the Accademia dei Filaschisi. Eventually it served as a model for the Accademia Filarmonica, founded in 1666 by Count Vincenzo Maria Carrati, an academy that still survives. There were three classes of musicians elected to membership in the Accademia Filarmonica: *compositori*, *cantori* and *suonatori*. Early in their existence the Filarmonici met twice weekly in the Carrati palace, to hear music composed and performed by their members. They soon gained a European-wide reputation as a distinguished musical academy. During its long life, it has admitted to membership a large number of well-known composers, performers and scholars, including G.B. Vitali, Tosi, Corelli, Torelli, Francesco Gasparini, Benedetto Marcello, Farinelli, Jommelli, G.B. Martini (whose notes on the history of the academy have been published in modern edition: see Martini, 1776 and 1973), Grétry, Mozart, Meyerbeer, Liszt, Rossini, Verdi, Wagner, Brahms, Saint-Saëns, Puccini and Ravel.

The intellectual vacuum left in Rome after the death in 1689 of Queen Christina of Sweden led to the establishment the next year of the Accademia degli Arcadi by members of her circle of literary figures and musicians, notably G.M. Crescimbeni. The Arcadian academy soon became one of the most important cultural institutions of its time, even establishing branches (or 'colonies') in various other Italian cities, probably the only academy to consolidate its cultural power in this way. Pretending to escape the complexities of modern life by reverting to the idyllic lives of shepherds, the Arcadians were in the vanguard of the attempts to counteract what were seen as Baroque excesses by recourse to a new simplicity and an aesthetic based on the rules of reason and moderation. Among the musicians associated with the Arcadians were Corelli, Pasquini, Alessandro Scarlatti and Benedetto Marcello. The Accademia degli Arcadi, is especially famous in the history of music, though, for its influence in the establishment of a new kind of opera libretto in which, among other things, the characters make decisions based on reason or on moral issues larger than their own amatory interests. The librettos of Apostolo Zeno (a member of the Venetian colony of Arcadians) exemplify these new principles. The new ideals are best exemplified in the librettos of the Arcadian Pietro Metastasio, dating from the 1720s onwards, with their strong political bias in extolling the nobility of good rulers. It is from debates around the Arcadians, too, that the view began to be held that academies supported conformity and encouraged conservative art.

Besides formal academies – with constitutions, regular scheduled meetings and fixed agendas – there were also, as early as the 15th century, a number of more loosely organized circles of intellectuals in Italy. These more informal groups have also been described as academies and need to be taken into account in any fuller history of the institution. Beginning in the early 1440s, for example, King Alfonso I of Aragon, ruler of Naples, met regularly with his more erudite courtiers to discuss cultural questions, and this circle of intellectuals (which much later became the Accademia Pontaniana) has been called the earliest academy in Italy. According to Antonfrancesco Doni, Verdelot was among the 'people with intellectual interests, whether foreigners or Florentines' (Nardi, *Le storie della città di Firenze*) who met in the gardens known as the Orti Oricellari; members of these informal gatherings, among them Machiavelli, included music among their activities. Similarly, the circle around the Venetian patrician Domenico Venier in the mid-16th century – initially devoted to the cultivation of Pietro Bembo's literary ideals – has been called an academy (among others, by Venier's Venetian contemporaries), although it was never formally organized as such and had no constitution or regular meetings; the fact that the poet and composer Girolamo Parabosco was a member suggests that music may have been among its concerns. Such loose groupings of like-minded intellectuals, centred on one dominant figure, might better be called 'salons' and should in any case be distinguished from regularly constituted academies.

The most famous of these salons were, of course, those in Florence in the second half of the 16th century: the Camerata of Count Giovanni de' Bardi and later the companions of Jacopo Corsi. In the 1560s and 70s Bardi and his companions discussed various literary and cultural questions, but they seem to have been especially interested in music and in particular the nature of ancient Greek music and how its alleged impact in the ancient world could be reproduced in modern times. Such groups fulfilled the functions of regular academies in disseminating current ideas about culture fairly widely throughout upper-class society. In the case of Bardi's and Corsi's salons, too, various members also influenced the composition of Florentine court spectacles, such as the well-known *intermedi* for the 1589 Medici wedding (unified around the theme of the power of music), and the earliest operas.

The word 'academy' was also used as early as the 16th century in Italy and elsewhere to describe single concerts, especially (at the beginning) private concerts. Such terms as 'adunanza', 'ridotto' and 'cenacolo' were used – as well as 'accademia' – to denote a meeting of intellectuals, meetings that could include music, or consist mostly of music. The well-known *ridotto* that met in the palace of Mario Bevilacqua in Verona was a group of this kind; it is described in Pietro Porito's *Ragionamento* (1588) as a place where 'almost daily, gentlemen gather and exercise themselves in virtuous matters such as playing and singing and discussion of similar topics'. Performances of cantatas in Roman private houses in the 17th century were often called academies, and the usage continued into the 18th century and beyond. To take but one example, the cantata performed in honour of 'Beato Agostino Novello' at the Ospedale di S Maria della Scala in Siena in 1761 is described on its title-page as 'in occasione della pubblica Accademia fatta dagli Alunni e Convittori del Seminario Soleti in onore di detto Beato': that is, as a public concert (an 'accademia') given by the students and alumni of the school.

4. French academies. The earliest academy in France, the Académie de Poésie et de Musique, was established by Jean-Antoine de Baïf and Joachim Thibault de Courville in 1570, with the royal sponsorship of Charles IX. The Académie, which met regularly in Baïf's house in Paris, had two classes of membership: musicians (that is, singers, poets and instrumentalists) and auditors (that is, the subscribers, who were to support the academy financially).

The aim of the academy was to revive the kind of poetry and music used by the ancient Greeks and Romans. Baïf, however, did not wish to study the music of the distant past merely for antiquarian reasons; instead, he attempted to transform the nature of French poetry by applying to it principles of quantitative metre as in Latin (*vers mesurés à l'antique*) and by setting to it a simple music that would closely follow the ancient metres (*musique mesurée à l'antique*). He wished to do this not so much for purely aesthetic reasons but rather to bring a new order into music and hence into public order and morality, following neo-Platonic ideals that connect music with morality. His ideas derive, at least distantly, from his knowledge of Ficino's Accademia Platonica in Florence. He was also strongly influenced by his association with the great teacher Jean Dorat of the Collège de Coqueret in Paris and by his friendship with Pierre de Ronsard and the other poets of the Pléiade. There is reason to believe that natural philosophy, mathematics and other subjects were discussed at meetings, not only poetry and music. To further his aims, Baïf sought the help of a number of French musicians, of whom the most

distinguished was doubtless Claude Le Jeune, whose experiments with *musique mesurée* influenced the setting of French poetry to music for several generations even though the Académie de Poésie et de Musique soon disbanded and the examples of 'pure' *musique mesurée* are not entirely convincing aesthetically.

With the death of Charles IX, the Académie languished, although it revived for a time during the reign of Henri III, meeting in the Louvre as the Académie du Palais. With its disappearance, the academic movement remained moribund in France until the second third of the 17th century, in spite of various unsuccessful attempts to form new academies of one kind or another. In 1635, however, Cardinal Richelieu founded the Académie Française as an institution to maintain and preserve the purity of the French language and to serve as an arbiter of French literary taste. There followed in short order a number of other publicly instituted academies: the Académie Royale de Peinture et de Sculpture (1648), the Académie de Danse (1661), the Académie des Inscriptions et Belles Lettres (1663), the Académie des Sciences (1666), the Académie Royale de Musique (1669) and the Académie d'Architecture (1671). This series of official institutions survived the Revolution, was reorganized under Napoleon in 1803, and exists today, differently organized, as the Institut de France.

The Académie Royale de Musique was founded in 1669 by the Abbé Pierre Perrin and Robert Cambert. It was intended from the very beginning as a society to bring opera to France. Perrin and Cambert, however, did not succeed, and by 1672 Jean-Baptiste Lully had become its master, enjoying a monopoly over opera productions in France until his death in 1687. The Académie continued its existence into the 18th century and beyond and maintained its central position as national opera company and forum for lively debate about new operatic trends, including intense arguments about the merits of Rameau, the Querelle des Bouffons and indeed about the relative merits of French and Italian opera in general. The connection of French opera with the academy continues to the present day: over the entrance of the Palais Garnier in Paris, one can still read the inscription that names the Paris Opéra as the 'Académie Nationale de Musique'.

5. GERMANY, ENGLAND AND ELSEWHERE: 18TH AND 19TH CENTURIES. In the 18th and 19th centuries academies continued to pursue their traditional goals. But the kinds of organization to bear the name took new forms and their efforts were directed towards an ever broader public. Moreover, the word 'academy' no longer exclusively denotes a particular kind of institution; many of the academies of this period could as well have been called 'society', 'institute' or some other more or less generic term.

Some national academies dedicated to preserving their national heritage had musical sections; others were dedicated solely to the organizing and sponsoring of concerts and operatic performances (presumably with the aim of disseminating music to a wider audience); some became more specialized societies, to study and perform particular repertories (like the Academy of Ancient Music in London and the German Singakademien); and yet more were institutions dedicated to the training of young professionals, educating an ever broader segment of the public. In the 18th and 19th centuries, too, the word 'academic' came to mean something related in a general way with an institution for higher learning (thus J.N. Forkel was appointed the first Academic Music Director at the University of Göttingen in 1779, a position that involved conducting 'academic' concerts).

In 17th-century Germany there were societies to cultivate literature, such as the Fruchtbringende Gesellschaft of Weimar, founded in 1617. But academies as such scarcely predate the establishment of the Akademie der Künste in Berlin in 1696 and the founding of the Akademie der Wissenschaften in Berlin in 1700 to a plan by the philosopher Leibniz. To some extent these, like their French models, had as their goals the establishment of national standards and the study, maintenance and preservation of the vernacular language; but in the spirit of German idealism the academies also wished to cultivate the free and reasoned investigation of cultural issues. In that sense, they are products of the Age of Enlightenment and models for our own modern ideas about the freedom of academic inquiry.

The Berliner Singakademie, founded in 1791 by C.F. Fasch for the cultivation of choral music, and especially older choral music, became a part of the Akademie der Künste in 1793. This was the organization that did much to revive interest in the music of J.S. Bach, and it sponsored the early revivals of the *St Matthew Passion* (conducted by Mendelssohn in 1829), the *St John Passion* and other major Bach works. In 1804, a school for the training of singers, the Ordentliche Singschule, was established as a part of the Akademie der Künste, the first such state-supported school in Prussia. C.F. Zelter was appointed to its faculty in 1806 and in 1809 he became a professor of music when the University of Berlin was established.

Many of the various associations of amateurs and professionals devoted to the performance of music formed in Germany from the 16th century onwards were called COLLEGIUM MUSICUM, and these societies constituted a kind of academy. Fasch's Singakademie, it could be argued, was a kind of collegium musicum. Its formation spurred the foundation of other similar singing societies in many German cities during the 19th century, and most of these were also called Singakademie. There were as well other concert-giving societies called 'academies' in Germany, such as the Musikalische Akademie of Munich, formed by the court musicians there in 1811. As in other countries, the word 'academy' was also often used in Germany and in Austria to mean a single concert (Mozart habitually used the term), although 'academic concerts' were those held at universities, probably following Forkel's model in Göttingen.

In England, too, the role of academies in disseminating culture throughout the upper classes was fulfilled by schools, universities and court circles until the early 18th century. No institution called academy seems to have existed before the formation of the Academy of Ancient Music (possibly dating from as early as 1710) and the Royal Academy of Music in 1719. The latter was a consortium of rich patrons formed to sponsor the introduction of Italian opera to England and especially to support the performance of Handel's operas. Intended as a commercial venture, to make money, it was unsuccessful and collapsed in 1728. An attempt to revive it in 1729 was equally unsuccessful.

The history of the Academy of Ancient Music and its relationship with the Academy of Vocal Music is less clear. The Academy of Vocal Music was a group of

aristocrats, amateur musicians and professionals who formed a society in 1726 to revive ancient church music. Their original intention was to follow earlier Renaissance ideals in studying music scientifically and educating each other, but in fact they (or their successor society) eventually became a sponsoring organization for public concerts. After a scandal in 1731 involving charges of plagiarism against G.B. Bononcini, the society broke apart, and some of the members may have established the Academy of Ancient Music as a direct continuation of the earlier society, even though Hawkins dates the Academy of Ancient Music back to 1710. The Academy of Ancient Music, under the direction of Pepusch, Benjamin Cooke and others, gave regular concerts until its dissolution in 1792.

At one time Pepusch intended to make the Academy of Vocal Music a school of music. In fact, no institution for the education of musicians was called an academy in England until the Royal Academy of Music was founded in 1823. Its establishment is an early manifestation of the rise of state-supported music schools everywhere in the Western world in the 19th century. Many of these came to be called academies, for example, those in Berlin (the Ordentliche Singschule of the Akademie der Künste, established in 1804), Rome (the Accademia di S Cecilia, named Accademia in 1839, established as a music school in 1876, based on the Congregazione dei Musici di Roma, established in 1566), Dublin (the Royal Irish Academy of Music, founded in 1848), Philadelphia (the Philadelphia Musical Academy, founded in 1870), Glasgow (the Royal Scottish Academy of Music and Drama, founded in 1890 as the Athenaeum School of Music), Munich (Akademie der Tonkunst, founded in 1874) and Vienna (Akademie für Musik und Darstellende Kunst, so named in 1909). In most Western countries during the 19th century, the same general situation obtains as in Germany and England. Institutions called academies were founded. Most of them consisted of official national institutions for the preservation of the national heritage, or of concert- or opera-giving societies, or of music schools.

HOWARD MAYER BROWN/IAIN FENLON

Academy of Ancient Music (i). London society, founded in 1726 as the Academy of Vocal Music. *See* LONDON, §V, 2.

Academy of Ancient Music (ii). English ensemble. It was founded in 1973 by CHRISTOPHER HOGWOOD to play 17th- and 18th-century music on period instruments. Based in London, it performs and records as a chamber group or as a small orchestra, covering repertory from

Locke and Purcell through the high Baroque to Mozart and Beethoven. Among an impressive list of recordings, the complete symphonies of Mozart and Beethoven have been hailed as revelatory.

GEORGE PRATT

Academy of Music. New York theatre opened in 1854. *See* NEW YORK, §4.

Academy of St Martin-in-the-Fields. London orchestra founded in 1959 by Neville Marriner. *See* LONDON, §VII, 3.

Academy of Vocal Music. London society, founded in 1726. It was later renamed the Academy of Ancient Music. *See* LONDON, §V, 2.

Acaen. *See* CAEN, ARNOLD.

A cappella [alla cappella] (It.: 'in the style of the church [chapel]'). Normally, choral music sung without instrumental accompaniment. Originally (*c*1600) the term was used to distinguish works composed in the older polyphonic style of the Renaissance from those written in the newer concertato style of the early Baroque. During the 19th century the Roman Catholic Church idealized 16th-century polyphony and the works of Palestrina in particular. Noting that no instrumental parts were included in the sources containing this music, and unaware that instruments were often used during the Renaissance to double or substitute for vocal parts, musicians came to believe that *a cappella* referred to unaccompanied choral singing (*see* CHORUS (i), §4). Since that time, the term has become synonymous with 'unaccompanied singing', both religious and secular.

The spelling *capella* is occasionally found; Giovanni Gabrieli marked sections for chorus alone 'capella', and J.J. Fux (*Gradus ad Parnassum*, 1725) referred to 'Stilus à Capella'.

A capriccio. *See* CAPRICCIO, A.

Accademia (It.). *See* ACADEMY.

Accademia dell'Arcadia. *See* ARCADIAN ACADEMY.

Accademico Bizzarro Capriccioso (*fl* 1620–23). Italian composer. He was a member of the Accademia dei Capricciosi, from where he assumed his name. He was a pupil of Massimiliano Fredutii, *maestro di musica* of Fano Cathedral. He dedicated his op.1 to Fredutii and included a short instrumental piece by Fredutii in his op.2; each volume also includes one piece by Girolamo Avanzolini. Bizzarro's secular works, which are chiefly for two voices and continuo, are lively settings of light-hearted texts; some include short ballettos for two violins and continuo.

WORKS

Trastulli estivi concertati, 2–4vv, bc, libro primo, op.1 (Venice, 1620)
Il secondo libro de trastulli estivi concertati, 2–4vv, bc, op.2 (Venice, 1621)
Motetti . . . concertati, 5vv, bc, libro primo, op.3 (Venice, 1623)

Accademico Formato. *See* CASTRO, FRANCISCO JOSÉ DE.

Accardo, Salvatore (*b* Turin, 26 Sept 1941). Italian violinist and conductor. He studied the violin with Luigi d'Ambrosio at the Naples Conservatory, took the diploma in 1956 and a postgraduate course with Yvonne Astruc at the Accademia Musicale Chigiana, Siena. He won the international competitions at Vercelli (1955) and Geneva (1956), and in 1958 both the RAI Spring Trophy and the Premio Paganini international violin competition at Genoa. He toured throughout Europe and North and South America and soon became one of the best-known and most admired Italian violinists of his generation. An instinctive player with an easy, agile and brilliant technique, he is an all-round musician with a repertory ranging from Vivaldi and Bach to contemporary composers, many of whom have written works for him, including Franco Donatoni (*Argot* for solo violin, 1979) and Xenakis (*Dikhtas*, 1980). He is considered a fine interpreter of Paganini (whose 24 capriccios and six concertos he has recorded). Accardo has developed an interest in chamber music and is one of the organizers of the ensemble music week held at Naples each year; in 1968 he founded the Italian Chamber Orchestra in Turin, which he also conducted, and from 1972 to 1977 he led the ensemble I Musici. He taught at the Accademia Musicale Chigiana, Siena, from 1973 to 1980, and in 1994 was appointed chief conductor of the Teatro S Carlo orchestra in Naples. He owns several Stradivari, including the 'Hart' (1727), bought from Zino Francescatti, the 'ex-Reiffenberg' (1717) and the 'Firebird' (1718), and a 1733 Guarneri del Gesù.

PIERO RATTALINO/R

Accelerando (It.: 'hastening', 'quickening'; gerund of *accelerare*). A direction to increase the speed of a musical performance, often over a fairly long passage. It is usually abbreviated to *accel.*, and is in practice much rarer than its contrary, *rallentando*. Koch (*Musikalisches Lexikon*, 1802), translating it as *eilend*, drew attention to terms he considered more common at the time, *il tempo crescendo* and *poco a poco il tempo va crescendo*, but these soon fell into disuse.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

□

Accelli, Cesare. *See* ACELLI, CESARE.

Accent. The prominence given to a note or notes in performance by a perceptible alteration (usually increase) in volume ('dynamic accent'); a lengthening of duration or a brief preceding silence of articulation ('agogic accent'); an added ornament or pitch inflection of a melodic note ('pitch accent'); or by any combination of these. The term is also used for any of the notational signs used to indicate that such prominence is required. On instruments capable of immediate dynamic nuance, including the voice and most strings, wind and percussion, an increase of volume is usually the chief element in this prominence, commonly at the start (with a more assertive effect), but alternatively just after the start (with a more insinuating effect, for which one specific term is SFORZANDO). On instruments not capable of much if any dynamic nuance, such as the harpsichord and the organ, prominence of this type can be given, and an effect of dynamic accentuation simulated, by agogic accents. In principle, any quality that distinguishes notes from their

predecessors and successors can produce a 'subjective' or 'perceptible' accent.

1. History. 2. Theory. 3. Notation.

1. HISTORY. Accent derives ultimately from singing and dancing: metrical accent can be associated with dance and motivic accent with speech rhythms. Indeed ancient Greek had a system of signs denoting accentuation, introduced by Aristophanes of Byzantium, though these probably originally denoted variations of pitch rather than dynamic stress. Wolf (1918–19) sought the origins of modern periodic metric accentuation in medieval dance; and displacements of metric accentuation, resulting from the interpolation of rests, can be found in the 13th- and 14th-century hocket.

The rules of counterpoint also played a part: perfect consonances fell on strong beats in medieval polyphony (with imperfect consonances, but not dissonances, also permitted to do so in Netherlandish Renaissance polyphony). However, the treatment of dissonance in Palestrina's time is also regulated in terms of accent: passing and incidental dissonances fall regularly on weak beats, whereas syncopated dissonances fall equally regularly on strong beats; this style displays a certain restraint in its employment of accent.

By the early 17th century, secular vocal and instrumental polyphony was employing a regular alternation of strong and weak beats, although free rhythm was still prevalent in solo song and chant; even in Bach's fugues the rhythm remains free from any slavery to the bar-line. And over a long period the *stile recitativo* retained the ideal of a rejection of metrical and periodic structure.

Zarlino in the 16th century had opposed violations of verbal accentuation in musical settings as *barbarismi* (*Le istitutioni armoniche*, bk I p.439); but it has been argued (Georgiades, 1954) that the turning-point in the association between musical accent and semantics came with the work of Schütz in the 17th century, on account of the fact that the German language, unlike Greek or Latin or the modern Romance languages, mostly retains verbal stress unchanged on word stems (compare the stable stresses in German 'Veréhrung', 'veréhre', 'veréhrte' with the changing stresses in Latin 'adóro', 'adorátio', 'adoratiónis'). This, it is further argued, permitted the development of the pre-Classical and Classical styles (Eggebrecht, 1991, pp.499, 502), in which pivotal melody notes fall on strong beats within a primarily regular periodic structure.

Until the 18th century, the term *accentus* signified an ornament; Gottsched was responsible for transferring this concept to dynamic accents. The original sense is still primary in Walther's *Musicalisches Lexikon* of 1732, but he adds: '*Accento* also denotes the emphatic sound and tone of a word'. In English sources, however, 'accent' denoted emphasis and expression at an early date (see Strahle, 1995).

In the Classical style, accent is grounded in harmony, melody and rhythm, none of which enjoys a monopoly, and metrical and periodic structure are often at odds. Eight-bar structure may be the norm, but numerous other periodic structures are found, and extreme displacements of accent are tolerated. Mendel's *Lexikon* (article 'Accentuation' by W. Tappert) offers a rationale for the undermining of periodic structure, in terms of the affections produced: 'Voices from the grave, oracles announcing implacable Fate, shadows from the underworld, the utmost resignation, lethargy, anguished despair, silent madness... all these dispense with melodic accent'.

In the 19th century, Schumann was one of those most actively inclined to disturb the 'tyranny of the bar-line' by displaced accents and return to the supposed origins of music in 'free speech, ... a higher poetic form of punctuation, as in the Greek choruses, the language of the Bible or the prose of Jean Paul' (Schumann, i, 1854, 74). Although Moritz Hauptmann, opposing Schumann, Wagner and Liszt, saw a moral principle at stake in his attempts to defend classical measure, no abolition of metre was envisaged by 19th-century composers such as Berlioz, Tchaikovsky or Richard Strauss, or even Wagner, who advocated a sparing use of heavy accentuation in favour of the 'most diverse and finest transitions of expressiveness' (1872, iv, 177). The consequences of Wagner's application of 'musical prose' extend well into the 20th century, with the music of Berg and Ligeti.

Other types of rejection of periodic structure are found in Russian (e.g. Musorgsky) and French music (e.g. Debussy, who specified a greater range of different accents than can be found in any of his contemporaries). Accent is crucial in Webern's music too: 'every rhythm achieves unprecedented relevance, and must be apprehended as if the entire world depended on the smallest accent' (Adorno, 1977, xv, 302). In Stravinsky, on the other hand, it has been argued that the rejection of Wagnerian ideals resulted in an absence of accent and hence a static rhythm (Benary, 1967, p.97). In the serial music of the 1950s accentuation was isolated from the other parameters of musical organization that were formerly interdependent with it, subjected to serial organization and in the process arguably reduced to merely mechanical significance; in 20th-century popular music, too, it has been argued that the unremitting reinforcement of crude metrical accent is merely an 'outward sign of the degree of inner mechanization in musical life' (Uhde, 1988, p.140).

2. THEORY. Theoretical writers over the past 200 years have not found rhythm and metre easy subjects, and it is possible that they have been documenting a history of decline; Kirnberger already complains of a loss of musical sensibility in the conflation of 18/16 time with 9/8, even though earlier composers had drawn a distinction between the two in terms of rhythmic and accentual projection (1776–9, pt 1, i, p.129). In particular, an adequate modern view needs to be historically informed, rather than purely systematic in the manner of Riemann.

Among the ancient Greeks, Plato's theory of rhythm was ethical in essence; Aristoxenus was concerned with physical measurements and arithmetic as a formative principle for rhythm, but distinguished these from rhythm as formed. The Greek principle of *rhythmos* is close to the *numerus* of medieval theory, which does not essentially take account of verbal stress accent and therefore had difficulty accommodating languages which (unlike ancient Greek and Latin) rely on stress rather than syllable length.

From the 17th century, strong and weak accents replaced long and short durations as the basis for rhythmic theory, although mensural notation and its tendency to contradict metre continued to influence practice into that century; metre became a central category for the first time in Kircher (1650, i, p.217). The question of the relationship between accent and metre was raised around the middle of the 18th century, but has arguably never been satisfactorily answered, since accent is so variable in

character and so dependent on context; Steele wrote in 1779:

> The affections of *heavy* and *light* were always felt in music, though erroneously called by some moderns *accented* and *unaccented*; however the *accented* or heavy note, was never understood to be *necessarily loud*, and the other *necessarily soft*...

18th- and 19th-century theory mostly adopted a concept of 'graduated accents', mapped on to metrical grids; Kirnberger set out the necessity for a 'periodic return' of strong and weak accents in the constitution of time and metre (1776–9, p.113). For instance, in 4/4 time each bar contains a notional grid of four beats in the sequence heavy – light – half-heavy – light, reproduced at the next hierarchic level in grouped bars, even though in reality graduated accents must occur as rarely as genuinely graduated dynamics, and the regular alternation of stress is arguably the 'least typical characteristic of Classical music' (Henneberg, 1974, p.268). On the other hand, various attempts were made from the 18th century onwards to theorize the differences between metrical and expressive accents. E.W. Wolf wrote of 'internal' metrical accents and 'external' expressive accents; Koch (1802) distinguished between grammatical, oratorical and pathetic accents; Momigny related accents to various different types of cadence; and Lussy drew very fine distinctions between different types of accent.

Riemann proposed an eight-bar model in his theory, exemplified also in his performing editions; this essentially maintains the traditional grid, and was still being reprinted in German encyclopedia articles as late as 1989. Nietzsche already in 1888 criticized Riemann's assumption that a single ideal interpretation could be established which would do justice to the nuances of a composer's inspiration; and his criticism arguably highlights the decline in musical understanding that was suggested above: 'To the same extent that the eye adjusts to the rhythmic phrase, it becomes blind to broad, long, large-scale forms'.

Accent in non-Western music attracted comment in the early 20th century: Von Hornbostel drew attention to accented 'weak beats' in oriental and North American music, and similar deformations of predicted musical patterns of accentuation occur in the music of the Balkans, Turkey and Egypt; the TALA of Indian traditional music also offers some exaggerated accentual patterns.

3. NOTATION. The extent to which medieval (modal and early mensural) notation implies accent is still a matter of controversy, and in any case modern transcriptions (whether with or without bar-lines) falsify the complexity of the originals, either by strait-jacketing them in a metrical structure or by suggesting an exaggerated metrical freedom. Even up to the 17th century, bar-lines were used as simple guides to orientation, without implications concerning accentuation.

Up to the 20th century, there was great latitude in the notation of accents and the use of signs such as <, >, ^, *sf* or *marcato*. In Baroque music, accents are not generally specified directly, except in the use of STACCATO dots and dashes. But it is not always easy to distinguish between a staccato dot or dash and an accent. The use of a dot for an accent is still normal in Mozart and Chopin, but became less common during the 19th century as finer distinctions were drawn between dots, wedges, horizontal strokes and so on. A small 'hairpin' wedge for an accent was in use by the early 19th century as an alternative to '*sf*' or '*fz*'; and treatises on performance and instrumental tutors of around 1800 agree that this sign, and ^, denote a less sharp accent than '*sf*'. (Beethoven, however, specified that Act 2 scene 2 of *Fidelio* was 'to be played very softly, and the *sf* and *f* must not be too strongly expressed'.) Schubert used a variety of accentual markings such as >, *fp*, >*fp*, *fzp*>, *fzp*, and *fz*, though on notational grounds alone it is often almost impossible to distinguish between accents and diminuendos in his music or in that of composers such as Berlioz and Chopin.

By the late 19th century (for example in the music of Debussy) an elaborate hierarchy of signs denoting various types of accent had come into use. The horizontal stroke, sometimes accompanied by a dot, was later termed a 'weight-mark', for a note or chord 'intended to impress itself upon the hearer's attention by a *piano* or *pianissimo*, instead of by a *forte* or *fortissimo*' (Macpherson, 2/1932, p.30). Riemann invented the concept and term 'agogic accent', described in his *Musikalische Dynamik und Agogik* (1884) as a means of securing accent in phrasing where a dynamic accent is out of place (*see* ARTICULATION AND PHRASING); he used a special shallow circumflex sign to indicate the agogic accent in his phrasing editions. Schoenberg adopted the marks ′ and ˘ (taken from metrics) to indicate rhythmically stressed and unstressed notes respectively.

In 20th-century music attempts have been made to grade different accents precisely in terms of their weight or attack (Read, 1964); for a useful distinction of different types of accent in general (non-historical) terms, see Blom (*Grove5*); for other French and German uses of the term, *see* ORNAMENTS.

MATTHIAS THIEMEL

Accento (It.). An ornament defined by Zacconi and Bovicelli as a dotted figure filling in or expanding a written interval. *See* ORNAMENTS, §§1, 4 and 8.

Accentuation. The use of ACCENT in musical performance, real or imagined. The term may refer to particular notes or chords, or more comprehensively to an entire performance; in the modern Western tradition, accentuation, together with phrasing, articulation, dynamics etc. contributes to 'expression', and in vocal settings since the 16th century at least this has often been taken to imply a responsibility of conforming expressively to the spoken accentuation of the text.

Over the centuries composers and theorists have offered more or less precise guidelines for accentuation. Some 13th-century writers (Anonymus 4, Franco of Cologne, Odington and Lambertus) stated that singers should moderate dissonances occurring at points of emphasis or at the beginnings of compositions. Keyboard composers up to the early 18th century advocated the use of 'strong' and 'weak' fingers on 'strong' and 'weak' beats. In general, however, polyphonic music of the Renaissance and Baroque periods is characterized by freedom in the accentuation implied by the separate parts: Rousseau observed that 'there are as many accents as there are modifications of the voice; and there are as many kinds of accent as there are differences between such modifications' (*Dictionnaire de musique*, 1768). Geminiani and others opposed the practice of stressing the beginnings of bars. However, the French style seems to have accepted the practice of observing the basic metre, which is advocated also in Leopold Mozart's *Violinschule* (1756), 'if the composer has not added any other expression'.

Koch's *Musikalisches Lexikon* (1802) already explicitly recognizes AGOGIC accent: it states that an accent consists either in an increase of volume or in a certain 'expressive lingering, so that it seems as if one were waiting a moment longer than its duration requires'. Beethoven, like A.B. Marx, criticized the smooth playing of contemporary pianists; his fingerings reveal a preference for grouping, articulation and accentuation that militates against the simplicity of the basic metrical pattern. In a sense, this tendency persisted in the New Viennese school's stress on the primacy of pitch over metrical organization; Schoenberg wrote:

> The measure, which should be, after all, a servant of music-making, has set itself up as the master – so much so that an amateurish overaccentuation of the strong beats of the measure has come about, which stands in the way of every free-floating phrasing that satisfies *meaning*. This is precisely the reason why pianists and other instrumentalists, and even singers and conductors as well, have lost their feeling for a cantabile performance. Their musical insecurity requires them to shorten the distance from one fixed point to the next as much as possible… they are like swimmers who dare not leave the shore.

Any tendency to accentuate the final tonic chord in performance, for example, might similarly be thought to betray a misconception of the nature of harmonic tension and resolution; accentuation is an expression of the performer's understanding of large-scale structure, informed by the music theory and performing practice of the period represented by a composition.

Writings on accentuation in the broader sense have developed in parallel to writings on musical expression, and are a product of the late 18th and 19th centuries. Metrical theory had begun to dictate that the bar-line indicated the position of the strongest accent in the bar as well as the division of the time, and in consequence many of the 'convenience' and traditional aspects of notation from the period up to about 1850 began to imply incorrect accentuation. So Lussy (1874), for example, raised the necessity for accenting dissonances and chromatically altered notes. Riemann (1884) discussed the need for allying accentuation, and dynamic rise and fall, with phrasing theory (*see* ARTICULATION AND PHRASING). Lussy's book represented an attempt to reproduce the practice of an earlier period (including accentuation) in modern terms; the same may well have been true of many of the phrasing editions of Riemann and other editors. For this reason they are worth scrutiny as a source of information about performing practice in the early 19th century.

MATTHIAS THIEMEL

Accentuirte Brechung (Ger.). Term used to describe a broken chord with passing note. *See* ORNAMENTS, §8.

Accentus (Lat.). A term used in the 16th century (e.g. Ornithoparchus, *Musicae activae micrologus*, 1517) for the simple forms of plainchant based on recitation tones as used in the EPISTLE, GOSPEL, prayers etc.; for a general survey of such forms *see* INFLECTION (i). *Accentus* forms are contrasted with *concentus* forms, or with the more developed forms such as antiphons or responsories.

Accessory [auxiliary] **stop.** Those organ stop-knobs, levers, pedals etc. that operate couplers, wind-valves, ventils, tremulants, registration aids or semi-musical effects such as toy stops (*see* SPEAKING STOP).

Acciaccatura (It.; Fr. *pincé étouffé*; Ger. *Zusammenschlag*). A 'crushed note'. C.P.E. Bach (1753) and F.W. Marpurg (1755), who provided the German translation *Zusammenschlag*, defined the acciaccatura as a non-harmonic note played a tone or semitone below any of the main notes in arpeggiated chords, and immediately released. In 18th-century German sources such as C.P.E. Bach's treatise, it was frequently indicated with an upward diagonal stroke through the stem between the harmonic members of the chord. In melodic usage, the same writers classed the unprepared, simultaneously struck dissonant 2nd followed by the release of the lower note as a form of mordent. The Italian theorists Francesco Gasparini (1708) and Francesco Geminiani (1749) reserved the term acciaccatura for dissonances a whole tone below the harmonic notes played during arpeggiation, but used the terms *mordente* (Gasparini) or *tatto* (Geminiani) when the dissonant note was a semitone below the main note. These writers were unclear about the necessity of releasing the non-harmonic notes of whole tone interval; but Geminiani stated that the *tatto* 'is performed by touching the Key lightly, and quitting it with such a Spring as if it was Fire'. Typical of their largely improvisatory practices, the Italians did not notate the acciaccatura or *mordente*/*tatto*. In the 19th century, acciaccatura came to mean quick single grace notes, usually a major or minor 2nd above the main note; these were defined as short appoggiaturas in the 18th century by Quantz (1752) and C.P.E. Bach. It is possible that these non-rhythmic short notes were seen as the single-line instrumental or vocal analogues to the 'crushing' of harmonic notes by dissonant notes available on the keyboard. This type of acciaccatura is generally notated as a small note of semiquaver value before the main note. The custom of writing these semiquavers as quavers with perpendicular slashes through their flags originated in the 18th-century shorthand notation of single semiquavers (especially in Italian sources), whether ornamental or structural notes: it is easier to draw the second flag across the first rather than parallel to it. For further information *see* ORNAMENTS.

ROBERT E. SELETSKY

Acciaiuoli, Filippo (*b* Rome, 24 Feb 1637; *d* Rome, 7 Feb 1700). Italian impresario and deviser of scenic effects. He studied at the Seminario Romano, where he performed in the Latin tragedies and *intermedi* produced during the carnivals of 1651–3. In January 1657 he joined the Florentine Accademia degli Immobili, which produced comic operas. Before he became a Knight of Malta on 9 August 1666 he had to serve in at least four caravans, and thus travelled widely, even to Asia, Africa and America. He returned to Rome for the reign of Pope Clement IX, 1667–9 (the opera librettist Giulio Rospigliosi), who named Acciaiuoli's brother Niccolò a cardinal in 1669. During the next three decades Filippo was the theatrical master-mind behind many spectacular operas produced in and around Rome. He may have been involved with most of those given at the Palazzo Colonna, where his first two were produced in 1668–9: Jacopo Melani's *Il Girello* and Alessandro Melani's *L'empio punito*. In 1672 he was among the founders of the Accademia degli Sfaccendati, and he was the prime mover behind its productions given in 1672–3 at the Palazzo Chigi in Ariccia: Bernado Pasquini's *La sincerità con la sincerità, overo Il Tirinto* and P.S. Agostini's *Gl'inganni innocenti, overo L'Adalinda*. The librettos of these four works are usually attributed to Acciaiuoli; but he probably provided only a plot featuring spectacular scenes, leaving Giovanni Filippo Apolloni to write the verse. Scenic transformations were the main attraction of his productions, and he was presumably responsible for those in another work, *Chi è cagion del suo mal pianga se stesso* (1682, Rome, Palazzo Colonna), with 'text by Ovid and music by Orfeo'. Morei identified Acciaiuoli as both Ovid and Orfeo, but this claim is not substantiated elsewhere.

In 1671–2 Acciaiuoli served as impresario and deviser of *intermedi* for the inaugural seasons of the Tordinona, the first public opera house in Rome. From 1679 he was apparently behind the scenes at the new Teatro Capranica, the second Roman opera house. Morei reports that he invented a puppet theatre for the young Ferdinando, Grand Prince of Tuscany, which included 124 marionettes and 24 scene changes; its mechanism was so ingenious that Acciaiuoli could manipulate everything by himself. (He has, however, been credited incorrectly with the design of the puppets used at the Teatro S Moisè, Venice, in 1680–82.) A Trojan horse that he designed for a production of Pagliardi's *Il Greco in Troia* (1689) needed such expert manipulation that he was summoned to Florence to operate it. He devised at least one intermezzo, *La noce di Benevento, o sia Il consiglio delle streghe*, for the extravagant production of Pasquini's *La caduta del regno dell'Amazzoni* at the Palazzo Colonna in January 1690. Raguenet ended his book with a description of one marvellous transformation devised by Acciaiuoli at the Teatro Capranica in 1698: a phantom of a woman was 'with one Motion transform'd into a perfect Palace', while guards struck their halberds on the stage and 'were immediately turn'd into Water-Works, Cascades, and Trees, that form'd a charming Garden before the Palace'. This led the editor (probably Nicola Haym) of the English translation to report that Acciaiuoli devised 'many more equally surprizing' spectacles at Roman theatres during the 1690s. The editor names four, then describes at length 'the most famous of all, . . . the Intermede of Hell' in Perti's *Nerone fatto Cesare* (1695): 'great Numbers of Foreigners came to *Rome* on purpose to behold it, and confess'd when they had seen it, that it far exceeded the Expectations Fame had given 'em of it'.

LOWELL LINDGREN

Accidental. A sign placed, in modern notational practice, before a note, which alters its previously understood pitch by one or two semitones. The sharp (♯; Fr. *dièse*; Ger. *Kreuz*; It. *diesis*) raises a note by one semitone; the double sharp (×; Fr. *double dièse*; Ger. *Doppelkreuz*; It. *doppio diesis*) raises it by two semitones. The flat (♭; Fr. *bémol*; Ger. *Be*; It. *bemolle*) lowers a note by one semitone; the double flat (♭♭; Fr. *double bémol*; Ger. *Doppel-Be*; It. *doppio bemolle*) lowers it by two semitones. The natural (♮; Fr. *bécarre*; Ger. *Auflösungszeichen* or *Quadrat*; It. *bequadro*) cancels a previous sharp or flat. A double sharp is changed to a single sharp by writing ♮♯ or occasionally ♯, a double flat to a single flat by ♮♭ or occasionally ♭.

For a discussion of the addition of accidentals to early music *see* MUSICA FICTA; *see also* EDITING and SOLMIZATION. For the notation of some non-Western music and 20th-century compositions using intonations other than the 12-note system, *see* NOTATION, §III, 4(vi).

1. Early use. 2. Accidentals and solmization. 3. Use from the 17th century.

1. EARLY USE. The ♭ sign on the one hand and the ♮ or ♯ signs on the other originate in the forms suggested by Guido of Arezzo for the two possible pitches of the note B: *rotundum* ('round b'; also *b molle*: 'soft b') and *quadratum* ('square b'; also *b durum*: 'hard b'), representing modern B♭ and B♮ respectively (see Table 1). The two shapes appear in the treatises *Aliae regulae* (*GerbertS*, ii, 36) and in *Micrologus* (chap.2: *CSM*, iv, 1955, p.93), both of which date from about 1030. Guido was not the first to suggest different shapes for the two notes B. The process whereby the notes of plainchant melodies became more or less permanently associated with the letter names that most of them still retain seems to have been completed by the end of the first millennium (*see* NOTATION, §III, 1(iv)). Although it would have been possible to eliminate the need for one of the two forms of B by notating melodies using B♭ a 4th lower or a 5th higher, or conversely by notating melodies using B♮ a 5th lower or a 4th higher, this was never systematically done. Many melodies included both notes; and the alphabetization may originally have assumed two notes E and two notes F as well (see Jacobsthal, on the fate of these and the use of transposition to accommodate them). A notable early witness to the alphabetization of chant is the celebrated tonary of St Bénigne, Dijon, written by 1031 (*F-MOf* H.159; facs. in PalMus, 1st ser., viii, 1904): this employs an alphabet from 'a' to 'p'; for the two notes B the letters 'i' and 'ỉ' are used. A copy of the tonary of Odorannus de Sens, made in Sens just before Odorannus's death in 1046 (*I-Rvat* Reg.577), uses an inverted letter b, that is, q, for B♮. (For other systems and the decisions of medieval musicians regarding the tonality of chants with accidentals see M. Huglo: *Les tonaires*, 1971.)

TABLE 1

(i)	♭♭	modern double flat
(ii)	♭	modern flat
(iii)	*b*	*b* rotundum ('round')
(iv)	ƀ	*b* quadratum ('square')
(v)	♮	modern natural
(vi)	♯	modern sharp
(viii)	ж	*b* iacente ('recumbent')
(viii)	×	modern double sharp

Recognition of the two notes B therefore precedes Guido's work on notation; and although the shapes and nomenclature that he suggested have become standard they are not purely the outcome of his hexachord theory and solmization technique, with which they are usually connected.

Apart from a few exceptional uses of other letters and/or unorthodox use of the coloured line system in early chant manuscripts (see Smits van Waesberghe, 1951, p.43), the ♭ sign and the ♮ or ♯ or *quadratum* signs were used for lowering or raising a note by a semitone on any degree of the scale. This is not to imply that every note could be both lowered and raised, and in practice it was always one or the other (e.g. C could not be lowered nor E raised) until the chromatic madrigals and fantasias of the late 16th century, when, for example, both G♭ and G♯, D♭ and D♯ might appear in the same piece. This meant that ♮ before E after a series of appearances of E♭ restored E♮, or in a piece with E♭ signature indicated a temporary E♮, but before F meant the modern F♯.

The choice of the *quadratum*, ♮ or ♯ signs for these purposes depended on the scribe's training or the printer's custom. The form ♮ for the *quadratum* is found as early as the 12th century, and ♯ in the 13th. The B *iacente* sign ('recumbent B': see Table 1 (*vii*)) gained ascendancy in the second half of the 15th century, the ♯ regaining supremacy in the 18th, by which time the ♮ was restricted to a cancelling function. German printers of the 16th century used the letter 'h' for the *quadratum*, and this passed into common German currency, which has B for B♭ and H for B♮.

The term *molle* has persisted in the French and Italian names for B♭; and *molle* and *durum* survive in the German terms for minor and major keys: *moll* (with flat or minor 3rd) and *dur* (with sharp or major 3rd). The application of the term *diesis* (Gk.) to the ♯ sign is a 14th-century development: the term has quite different origins (*see* DIESIS (ii)).

2. ACCIDENTALS AND SOLMIZATION. In Guido's *Micrologus* hexachord theory is at an early stage of formation: at first only transposition of the series C–D–E–F–G–A up a 5th was discussed, and not until the 12th century was the distinction between the *hexachordum naturale* (C–D–E–F–G–A), the *hexachordum molle* (literally 'hexachord with the soft-cornered B': F–G–A–B♭–C–D) and the *hexachordum durum* ('hexachord with the sharp-cornered B': G–A–B♮–C–D–E) regularly made (see Smits van Waesberghe, 1969, p.116).

The hexachord system and its solmization (fitting the syllables *ut–re–mi–fa–sol–la* to the hexachord, always understanding a semitone between *mi* and *fa*) facilitated the memorization of the position of semitones in a plainchant melody, and in the case of B♭ and B♮ helped to avoid the need to think of a note which, written on the staff, had two possible meanings. Most music in the Middle Ages and Renaissance was performed from memory, and its intervallic structure was learnt not as a series of visual signs on a page but in terms of hexachord constructions and solmization syllables. This affected the attitude to written music of even the most accomplished

solo performers who could sight-read their parts (but whose training would have been dominated by solmization from their earliest years). A proper skill in solmization obviated the need for a use of accidentals as explicit as in modern practice: once the performer had decided that a passage belonged to certain hexachords, its intervallic structure was determined; only the accidentals necessary to ensure the correct choice of hexachord, and thus the correct solmization, needed to be entered in a copy of the music. They were often written several notes in advance of the one they affected most directly: in terms of solmization they affected all the notes of that passage. Reconstruction of the decisions in solmization likely to have been made by performers of medieval and Renaissance polyphony is a prerequisite of editing and performing the music.

The use of ♭ as a prefacing signature at the beginning of a staff (or even, in the absence of any other letter, as a clef in early English sources: *see* CLEF) is found in the earliest manuscripts using the staff (11th–12th centuries). A two-flat signature appears in the conductus *Hac in die rege nato* (*I-Fl* 29.1, f.332*r*) in both voices for six whole systems (f.333*r*); the piece begins and ends without signature. Such signatures affected the interval structure of the whole piece (or a long section of a piece), but the intervals were as liable to modification in detail as a piece without signature. Much early polyphony relied on the interval of the 5th for most of its structurally important harmonies; this meant that the voices of, for example, a two-part composition might very frequently be in a relationship parallel to that of the *hexachordum naturale* (with next highest note B♭) to the *hexachordum durum* (with B♮). Consequently pieces with one more flat in the signature of the lower part(s) than that of the upper part(s) are not rare in the 13th century and became very common in the 14th.

3. USE FROM THE 17TH CENTURY. The introduction of bar-lines to mark off regular metric periods in music (as opposed to bar-lines that merely help to coordinate voices of polyphony notated in score, which are of no metrical significance) is found in German organ tablature of the 15th century, and in printed music of the late 1520s. But not until the end of the 17th century were bar-lines generally understood to terminate the effect of accidentals. By this time too the influence of modal theory on the use of signatures had waned. Discrepancies to be found in early 18th-century music between modal and the modern tonal practice chiefly occur in pieces written in the modern 'minor keys', but notated in Dorian (*d–d′* without signature) or transposed Dorian modes (one flat less than modern practice). Such pieces are Bach's 'Dorian' Toccata and Fugue (BWV538) and, from the *Clavierübung*, iii, BWV680, 681–2 (one extra sharp), 683–5 and 689. The modern forms of double flat and double sharp were also accepted generally by the 18th century.

The restriction of the efficacy of an accidental to the note immediately succeeding it was first suggested and practised by composers of chromatic madrigals at the end of the 16th century (e.g. Lassus, Vincenzo Ruffo etc.: see Kroyer, p.81). The difficulties caused by strongly chromatic and atonal music became critical at the end of the 19th century. While Schoenberg, in many works from the last movement of the Second String Quartet op.10 (1907–8), prefaced every note with an accidental (♯, ♭ or ♮) which was to apply to one note only, Dieren (*Six Sketches*, 1911) and Busoni (*Sonatina seconda*, 1912) used ♯ and ♭ but not ♮, again to affect only the note they immediately preceded.

Acclamation (Lat. *acclamatio*, *clamor*, *conclamatio*, *laudatio*, *laus*, *vox* etc.; Gk. *euphēmia*, *euphēmēsis*, *phēmē*, *polychronion*, *polychronisma*). A corporate shout or public cry of affirmation or dissent. Common to many performative contexts across a broad range of traditions, acclamations became particularly important in political and religious rituals in East and West. Originating as spontaneous calls, some evolved into standardized formulae with fixed text and, occasionally, with set music.

A ruler's ascent in the ancient world was often accompanied by acclamations. Biblical evidence possibly reflecting practice in the 9th century BCE reveals that newly appointed monarchs were saluted with 'yeḥi hamelekh!' ('Long live the King!', *1 Samuel* x.24). Rulers in antiquity were also greeted with acclamations during royal entrances, especially after victory (*1 Samuel* xviii.7).

In ancient Rome acclamations were used to hail triumphant generals ('Io triumphe!'), to punctuate oratorical events ('Bene et praeclare!') and to accompany bridal processions ('Talassio!'); some were stamped on coins (e.g. 'Victoria aeterna Aug[usti]'). During the Republic acclamations were considered as formal votes in public assemblies; in the late Republic they functioned similarly in the Senate. In Imperial Rome acclamations such as 'Axios!' (Gk.: 'Worthy!') became a constitutive part of proclaiming a new emperor. So important were they as barometers of public opinion that Nero hired a corps of Roman noblemen to lead appropriate acclamations in his presence (Tacitus, *Annales*, xiv.15). These powerful, sometimes negative, proclamations could not always be left to chance.

Acclamations often migrated between secular and religious spheres: some could be addressed separately to a deity or a monarch, for example, 'hoshi'ah na' ('Save, we pray!', Psalm cxviii.25 and 2 *Samuel* xiv.4); others might be addressed simultaneously to both (e.g. *Judges* vii.20). Occasionally rulers were themselves acclaimed as gods (Livy, i.16.3). In ancient Israel ritual cries erupted in battle (*1 Joshua* vi.5), before the Ark of the Covenant (*1 Samuel* iv.5), and when building the Temple (*Ezra* iii.11). The psalmist urged the Israelites to 'shout to God' (xlvii.1) and considered people who knew the 'festal shout' as blessed (lxxxix.15). 'Halleluyah' was a common acclamation appended to several psalms, while 'amen' sealed oaths and public prayers.

Christianity borrowed some acclamations from Judaism (e.g. 'Miserere') and constructed others after biblical precedents (e.g. 'Gloria'). Greco-Roman influence is detectable in Christianity's adoption of 'Dignum [= *Axios*] et iustum est', which by the early 3rd century introduced some eucharistic prayers, and 'Kyrie', which appeared in the liturgy by the 4th century. Christians also developed new cries such as 'marana atha' (Aramaic: 'Our Lord is coming'). They directed acclamations to their god and to leaders of the community. Acclamations (e.g. 'Dignus') were part of episcopal elections from the 3rd century, and at church councils ritual cries accompanied the proclamation of dogmas and the condemnation of heretics ('Anathema').

Elaborate acclamations emerged in the Byzantine empire. At the Hippodrome the various factions, grouped according to colour, organized acclamations for their charioteers. The increased importance of the circus in Byzantine life made the Hippodrome the scene of other acclamations either confirming or challenging imperial or patriarchal decisions. *Euphēmiai* ('songs of praise') and *polychronia* or *polychronismata* (repeatedly calling for 'long life') were standard elements in Byzantine imperial ritual: by the late empire *euphēmiai* were reserved for ecclesiastics while *polychronia* or *polychronismata* honoured royalty. At the height of the empire professionally proclaimed acclamations by choirs of court officials directed by the *praipositos* accompanied imperial ceremonies, while at more properly religious events choirs of minor clergy greeted ecclesiastics or joined in imperial acclamations. Many of the texts for these acclamations survive in the *Book of Ceremonies* of Constantine VII Porphyrogennetus (*d* 959) and the *On the Offices* of Pseudo-Codinus (*c*1350–60). Performance by two choirs was normal, although evidence exists for four-part acclamations (*De ceremoniis*, ii.19). Choral acclamations often included a refrain for the assembly. While some acclamations may have included instrumental music – to cue the assembly, for example – most were sung unaccompanied. Some acclamations with music survive from the end of the empire (e.g. *GR-ATSpantocrator* 214N dating from 1433), possibly reflecting earlier usage.

Byzantine acclamations probably provided the pattern for the Frankish LAUDES REGIAE that appeared at the end of the 8th century. Music from the 10th century indicates that these were syllabic settings of limited range which allowed the participation of all. Acclamations survived among the Vikings, who publicly affirmed candidates for leadership while they were hoisted on a shield. They were also introduced into coronation ceremonies for Goths and Anglo-Saxons. Set formulae greeted English and French kings from at least the 13th century.

Acclamations were important in medieval Christian worship, especially during papal coronations and canonizations of saints. Modified *Laudes regiae* were reintroduced into the Roman rite when the feast of Christ the King was instituted in 1925. Since the Second Vatican Council 'acclamation' has become a technical term in the Roman rite and also in some Protestant rituals for specific worship elements, for example the 'Memorial Acclamation' in the eucharistic prayer.

Accollatura (It.). *See* SYSTEM.

Accompagnando. *See* ACCOMPAGNATO.

Accompagnato (It.: 'accompanied'; past participle of *accompagnare*). A short term for *recitativo accompagnato*, i.e. RECITATIVE accompanied by the orchestra with expressive motifs, equivalent to *recitativo obbligato*. It is often used to designate a dramatically important scene, often a soliloquy (e.g. 'Abscheulicher' in *Fidelio*), which is usually followed by an aria. Handel used the term both in the strict sense of recitative, where the accompaniment allows the singer freedom (e.g. 'O notte' in *Amadigi*), and as a description of what would more correctly be described as arioso, where a regular tempo is implied ('For behold, darkness shall cover the earth' in *Messiah*). The appearance of the word 'accompagnato' where a tempo mark would be expected is therefore also an indication that the pulse may be irregular. The gerund *accompagnando* ('accompanying') is sometimes used to denote the subsidiary nature of a part in, for instance, Stravinsky's Symphonies of Wind Instruments.

See also TEMPO AND EXPRESSION MARKS.

JACK WESTRUP, DAVID FALLOWS

Accompanied keyboard music. A term used to describe 18th-century chamber music with a substantially or fully written-out keyboard part and one or more accompanying instrumental parts. 18th-century sources most often designated these works by such terms as sonata, trio, terzetto, or divertimento for harpsichord or, simply, keyboard (later with the option of fortepiano), 'with the accompaniment of' or 'that can be played with' a violin (or flute), with or without cello. The accompanying parts could also be optional (*ad libitum*), resulting in the popular commercial practice of arranging solo sonatas as accompanied works. Larger ensemble scorings, especially the concerto-inspired grouping for keyboard instrument, two violins and bass, were also possible. Accompanied keyboard music is the direct ancestor of 19th-century chamber music with keyboard, especially the sonata for piano and violin and the piano trio.

To limit the genre to sonatas for fully written-out keyboard (without patches of continuo) and subsidiary or optional accompaniment is to capture only a segment of this vast and heterogeneous repertory. The genre appears concurrently with and as a manifestation of the rise of the harpsichord as a solo instrument, in a sense as a corrective to its purely supportive role in the Baroque sonata for melody instrument and continuo. As the small-ensemble counterpart to the emerging keyboard suite, sonata and solo concerto, accompanied keyboard music bore the stylistic marks of these three genres for decades. The solo sonata with continuo accompaniment, however, played virtually no role in its development; both genres were cultivated independently into the second half of the century, often by the same composer (e.g. C.P.E. Bach),

before the continuo sonata disappeared with the demise of the thoroughbass tradition.

The Baroque trio sonata for two melody instruments and continuo, however, played a decisive role in the emergence of accompanied keyboard music in Germany. J.S. Bach made the first substantial contributions to the genre with his sonatas for obbligato keyboard and violin, viol or flute (BWV1014–19, 1027–9, 1030, 1032), all written before 1741. In concept they are with some exceptions trio sonatas translated to duo scoring (the first viol sonata is an arrangement of the trio sonata for two flutes and continuo, BWV1039). Bach's legacy persisted well into the 1760s in Berlin in the duos with obbligato keyboard by J.G. Graun, Schaffrath and especially C.P.E. Bach, whose 14 Berlin duo sonatas (W71–8, 83–8) include works that are arrangements of original trio sonatas and others that virtually replicate the severe texture of the latter, including liberal episodes of figured bass in the keyboard. But we can also trace in Emanuel's works the emergence of a more homophonic *Liebhaber* style with a fully realized keyboard part: it is especially prominent in the *Sonata o vero sinfonia* W74 for violin and harpsichord (1754) and the Sonata W87 for flute and harpsichord (1766).

The modern accompanied sonata was born in 1734 in France in a single collection, Mondonville's six *Pièces de clavecin en sonates avec accompagnement de violon* op.3. Exploiting the full range of ensemble possibilities for two independent and fully realized instruments, Mondonville's sonatas established a model for the genre in their idiomatic writing and their brilliant amalgamation of elements of the Italian trio sonata and the French clavecin suite, with the concerto emerging in the last sonata. Rameau's *Pièces de clavecin en concerts* (1741), for keyboard with optional accompaniment for violin/flute and viol/violin, set the precedent for *ad libitum* scoring, which would persist to the end of the century. These collections elicited an upsurge of interest in such music in Paris, with collections by Boismortier, C.-F. Clément, Guillemain, Luc Marchand, Corrette and Simon following in their wake. The reprinting by Walsh of Rameau's collection in 1750, followed by Mondonville's in 1753, brought the French models to London, inspiring a generation of composers there. The results included trio sonata-inspired duos with violin by Giardini (op.3, 1751) and trios by C.F. Abel (op.2, 1760), keyboard sonatas with optional string accompaniment for two violins and cello by Charles Avison (op.5, 1756) and concerto-inspired duos with violin by William Jackson (op.2, *c*1757).

Mid-century French and English composers and critics of the genre agreed with Simon's observation in the preface to his *Pièces de clavecin dans tous les genres* (op.1, 1761) that the added violin served to adapt the 'choppy' sound of the harpsichord to the demands of a more lyrical style. But they also repeatedly invoked the challenges of ensemble balance, prescribing that the strings perform very quietly or 'à demi-jeu'. In rare evidence for the use of the clavichord in accompanied keyboard music, the *Hamburger Correspondent* referred in 1777 to a home performance of C.P.E. Bach's trios W91 in which the composer played his Friderici clavichord, accompanied by a 'muted violin and discreetly played cello'. Modern performers of accompanied sonatas would do well to keep in mind Avison's suggestion that:

> the accompanying Violins which are intended to enforce the Expression of the Harpsichord, should also be kept *always*subservient to it; for thus an Effect results from the whole, as from the Sound of one improved, or . . . multiplied Instrument (*Six Sonatas* op.7, 1760)

By the 1760s accompanied keyboard music formed a major category in publishers' catalogues in Paris and London. That decade was dominated by the Parisian Schobert, who established the fashion for virtuoso keyboard sonatas with largely optional accompaniment. This popular scoring is found in publications by Honauer (op.1, 1761 and op.3, 1769), Mozart (opp.1–3, 1764–5), J.C. Bach (op.10, 1773), Edelmann (op.1, 1775) and Abel (op.13, 1777), as well as in arrangements of Wagenseil's solo keyboard divertimentos published by Huberty (op.6, 1760), A. Hummel (opp.1–2, 1761) and Le Menu (*c*1777). Even C.P.E. Bach was not untouched: in 1775 he wrote to Forkel that he had 'finally had to bow to fashion and write sonatas for keyboard that are easy, and that one can simply play alone without missing anything'. The results were his 13 keyboard trios (with violin and cello) W89–91 (1775–7).

Vienna was isolated from most of these developments – and these foreign publications – until the 1770s. Early Viennese chamber music with keyboard was an indigenous tradition dependent on Austrian models. In the 1750s and 60s the genre was cultivated by the leading keyboard players, Wagenseil, Hofmann, Steffan, Vanhal and especially Haydn, whose early keyboard trios are the expression and summit of this style. The duo sonata with violin was virtually unknown there; the Viennese preferred the left hand of the keyboard to be doubled by a string instrument (cello or viola). The keyboard trio and the concertino or divertimento for harpsichord, two violins and bass were the scorings of choice. The *ad libitum* string texture was restricted for the most part to the keyboard quartet scoring. The keyboard trio reveals a strong tradition of obbligato violin writing, inspired by the Austrian trio sonata and string trio. In the absence of a local publishing industry, this repertory was disseminated in manuscripts; Wagenseil's op.5 (1770) is the only Viennese print of chamber music with keyboard during this period. And the genre was virtually abandoned in Vienna in the 1770s by all but Vanhal and the Pressburg composer Anton Zimmermann.

The international dominance of Vienna in the accompanied sonata begins in the 1780s with the establishment of a flourishing publishing industry and commercial market for music, the rise of the fortepiano and the arrival of Mozart. From this time accompanied keyboard music, especially the trio, was widely represented among the Viennese publishers' offerings. Much of this music was written specifically for amateurs, with Kozeluch, Pleyel, Vanhal and even Haydn specializing in trios with brilliant but accessible keyboard parts and easy string accompaniments.

The vogue for the fortepiano, with its range of dynamics and articulation and its lyrical capacity, and the rise of a new class of virtuosos on the instrument opened a period of rapid change for the genre in the 1780s. Capable of holding its own in an ensemble with violin and cello, the fortepiano no longer demanded subservience of its partners. Mozart's six violin sonatas published by Artaria in 1781 were recognized as a qualitative leap for the genre, both in the brilliance of their keyboard writing and the full integration of the violin into the texture. His piano trios K502 (1786) and 542 (1788) established a similar

precedent for the trio, including sporadic independent writing for the cello that points to its eventual freeing from the keyboard left hand. By 1789 Haydn's trios HXV:11–3 were judged by a reviewer to be too difficult for sight-reading; his London keyboard trios are professional music written in response to his contact with piano and violin virtuosos there.

These changes were for the most part ignored on the title-pages of the first editions of these works, which persisted in referring to them as 'Sonatas for harpsichord or fortepiano, with the accompaniment of violin (and cello)'. Beethoven's 'Trios' op.1 for 'pianoforte, violin and cello' (Artaria, 1795) were a turning point in the genre and in the way it was viewed, while the full title of his 'Kreutzer' Sonata op.47, 'per il piano-forte ed un violino obligato, scritta in uno stilo molto concertante, quasi come d'un concerto' (1802–3), leaves no doubt as to the role of the violin in that virtuosic work. The accompanied sonata yielded to the modern concept of 'chamber music' with keyboard in the early 19th century: performances were transferred to the salon and the concert hall; technical and musical demands on the performers increased; the harpsichord was abandoned, even as a performance option; and, in works such as Beethoven's Piano Trios opp.70 (1808) and 97 (1810–11) and Schubert's Piano Trios opp.99 (?1828) and 100 (1827–8), the cello became a full partner to the violin and piano.

MICHELLE FILLION

Accompaniment (Ger. *Begleitung*). In the most general sense, the subordinate parts of any musical texture made up of strands of differing importance. A folksinger's listeners clap their hands in accompaniment to the song; a church organist keeps the congregation to the pitch and tempo with his or her accompaniment; the left hand provides the accompaniment to the right in a piano rag; when one part of a Schoenberg string quartet momentarily carries the symbol for *Hauptstimme*, the other parts are an accompaniment, though they may take their turns as *Hauptstimmen*later on. The meaning of the term 'accompaniment' is variable and not subject to rigorous definition. The countersubject of a Bach fugue 'accompanies' the subject, but in principle all the voices are equal and the countersubject may well be more prominent than the subject. In one sense, the added parts of a cantus firmus composition are an 'accompaniment', yet the pre-existing tune may be so stretched out and buried as to become less a melody than a kind of Schenkerian *Urlinie*. One might even postulate layers of accompanimental function, as for the CONTINUO accompaniment of the orchestral accompaniment of an opera.

To discuss accompaniment in all its ramifications would be to write a history of music. What is worse, it would involve one in futile hair-splitting at every turn. Is the lute part offered as an alternative or supplement to the lower voices in a Dowland *Ayre* an 'accompaniment'? Does Wagner's orchestra 'accompany' his singers? The purpose of this article is partly to direct the reader to other articles dealing with special kinds of accompaniment or with topics that include considerations of accompaniment. The focus of attention here is on accompaniment by the chordal instruments – those capable of playing part-music: keyboard instruments, lute, guitar, harp, and so forth – and on the accompaniment of the keyboard by melody instruments.

There is much vocal part-music for which no written accompaniment has been provided by the composer, but to which the sensibilities of later ages have caused performers to add accompaniments to their own taste. If the aim is historical performance, practical considerations apart, we may put the question: 'were accompaniments added, and if so, how and when?' A full discussion of these questions would raise issues such as the '*a cappella* ideal' (*see* CHORUS (i), §4), and in any case we do not always have enough information to allow us to formulate rules. Still, there is evidence that 16th-century church music was sometimes accompanied on the organ, though little evidence to tell us whether the composers thought it desirable; and there is increasingly abundant and reliable evidence that as the 17th century wore on into the 18th unaccompanied singing became an even greater rarity.

The introduction of melody instruments to double or substitute for the parts of a vocal ensemble was probably the simplest way of accompanying when there was no score and everyone performed from partbooks; in church music, however, this practice may have impinged on questions of liturgical propriety and the mixing of the 'consort' of voices with melody instruments was not the ideal, although it may have happened not infrequently (*see* PERFORMING PRACTICE, §4). In the absence of a score, keyboard players of the 16th century had the options of playing directly from a group of partbooks – an accomplishment sometimes required of organists of the time – of making their own 'short score' from the partbooks, or else of playing as well as they could from the bass part. The organ accompaniments to Victoria's volume of masses (Madrid, 1600) furnish examples of the 'short score', and the last option led ultimately to the continuo of the Baroque era.

The subject of accompaniment in the 16th century and early 17th is inseparable from those of improvisation, transcription ('intabulation' of vocal polyphony), the development of continuo practice and the history of all the forms of music where accompaniment is found: the lute ayre, consort music and the verse anthem, the Italian madrigal, dramatic music, and so on. Two works will illustrate the complex interrelations of vocal polyphony and instrumental accompaniment at this time. In Luzzaschi's *Madrigali per cantare e sonare* (published in Rome in 1601, but probably composed in the 1580s), one to three voices are accompanied by a keyboard part which

appears to be an intabulation of the 'other voices', but which was in fact conceived from the beginning in its present form; Monteverdi's *Lamento d'Arianna* (1608) was first an operatic solo with continuo accompaniment and then, in a reversal of a process that must have been familiar in the late Renaissance, was expanded by the composer into five-part polyphony and published in his sixth book of madrigals (1614).

For the rest of the 17th century and all of the 18th, the art of accompaniment was identical with that of continuo in all but a few areas of music: English consort music with a keyboard part written out (Coprario, Jenkins, William Lawes), ACCOMPANIED KEYBOARD MUSIC, organ accompaniments to hymns and chants (*see* KEYBOARD MUSIC, §§I–II) and, after about 1750, most solo songs. Lute and guitar accompaniments to songs in the 17th century, especially in France and England, were fully written out in tablature, reaching a high level of sensitivity and refinement; and in the later 18th century figured bass song accompaniments gradually gave way to keyboard (or harp) accompaniments that were fully written out, the earliest important collection being C.P.E. Bach's *Geistliche Oden und Lieder* of 1757 (published 1758).

Owing to its great flexibility and economy, the piano has been the overwhelmingly preferred instrument for accompanying a singer since the end of the 18th century, except in church (*see* LIED, §III–V). In the 20th century, the art of accompanying has been elevated to the level of a professional speciality by many first-class pianists, some of whom have written about their art. The history of the development of the art song from the 18th century to the 20th is to a large degree a history of piano accompaniment – of the growing and changing contribution of the piano part to the total effect and expression of the song.

'Musical accompaniment' can also mean the music performed with a dance, a silent film etc. – for any event where the sound of the music is not the focus of attention.

Accord (i) (Fr.). Being in tune.

Accord (ii). *See* CHORD.

Accord (iii). The tuning of an instrument. *See also* ACCORDATURA and SCORDATURA.

Accordatura (It.). A general term for the tuning of an instrument, especially string instruments. Accordatura is often used in the sense of the 'usual' tuning as opposed to a special or exceptional tuning. For the latter, *see* SCORDATURA.

Accordion [accordeon, accordian, squashbox, squeezebox] (Fr. *accordéon*; Ger. *Akkordeon*, *Handharmonika*, *Klavier-Harmonika*, *Ziehharmonika*; It. *armonica a manticino*, *fisarmonica*; Russ. *bayan*, *garmonica*, *garmoschka*). A term applied to a number of portable free-reed aerophones. Their common features include a mechanical keyboard under each hand, manipulated by the fingers to select pitches. The keyboards are connected by folded bellows which induce air to flow through the reedplates; these move horizontally and are controlled by arm-pressures that in turn regulate the loudness of the sound emitted. An air-button or -bar on the left-hand end, operated by the thumb or palm, is used to fill and empty the bellows without sounding a note. Straps hold the instrument in the hands or on the shoulders. The casework around the keyboards and covering the reedplates is usually of a style and decoration that has become associated with the type of accordion and is sometimes identifiable with its company of origin. Accordions are related historically, organologically and technologically to the REED ORGAN, specifically the table harmonium, and the harmonica (*see* HARMONICA (i)).

The word 'accordion' is widely used specifically to mean the type of instrument with a rectangular body shape, a chromatic right-hand keyboard (whether with piano keys or buttons) parallel to the player's body and a bass button keyboard under the left hand. The bass keyboard of this kind of instrument has combinations of buttons that play single notes and buttons that are mechanically coupled to sound chord formations. The term 'melodeon' is sometimes used for smaller diatonic button accordions, types typically with one or two right-hand rows of buttons (*see* MELODEON (ii)). 'Concertina' refers to chromatic and diatonic instruments with buttons parallel to the bellows. Some varieties of concertina have polygonal shapes (usually hexagonal), but square, box-shaped concertinas have also been made since they were first developed in the 1830s, notably the diatonic 'Chemnitz' concertina. The BANDONEON is essentially a variant of the Chemnitz concertina, also being square or rectangular in shape. In some respects these instruments have distinct histories, usages and repertories (*see* CONCERTINA). It is possible, therefore, to distinguish between the accordion and the concertina as two distinct groups within the same family of instruments. However, in many languages and cultures the term 'accordion' is more generally assigned to all instruments of this family, to the extent that the specificity of the distinctions is lost. Furthermore, a historical view of the evolution of these instruments shows profuse interrelationships in terms of their invention, countries of origin and manufacture, and their construction and terminology. A world-view of the accordion must therefore allow the inclusion of all kinds of free-reed aerophone that conform to the definitions outlined in the first paragraph of this article.

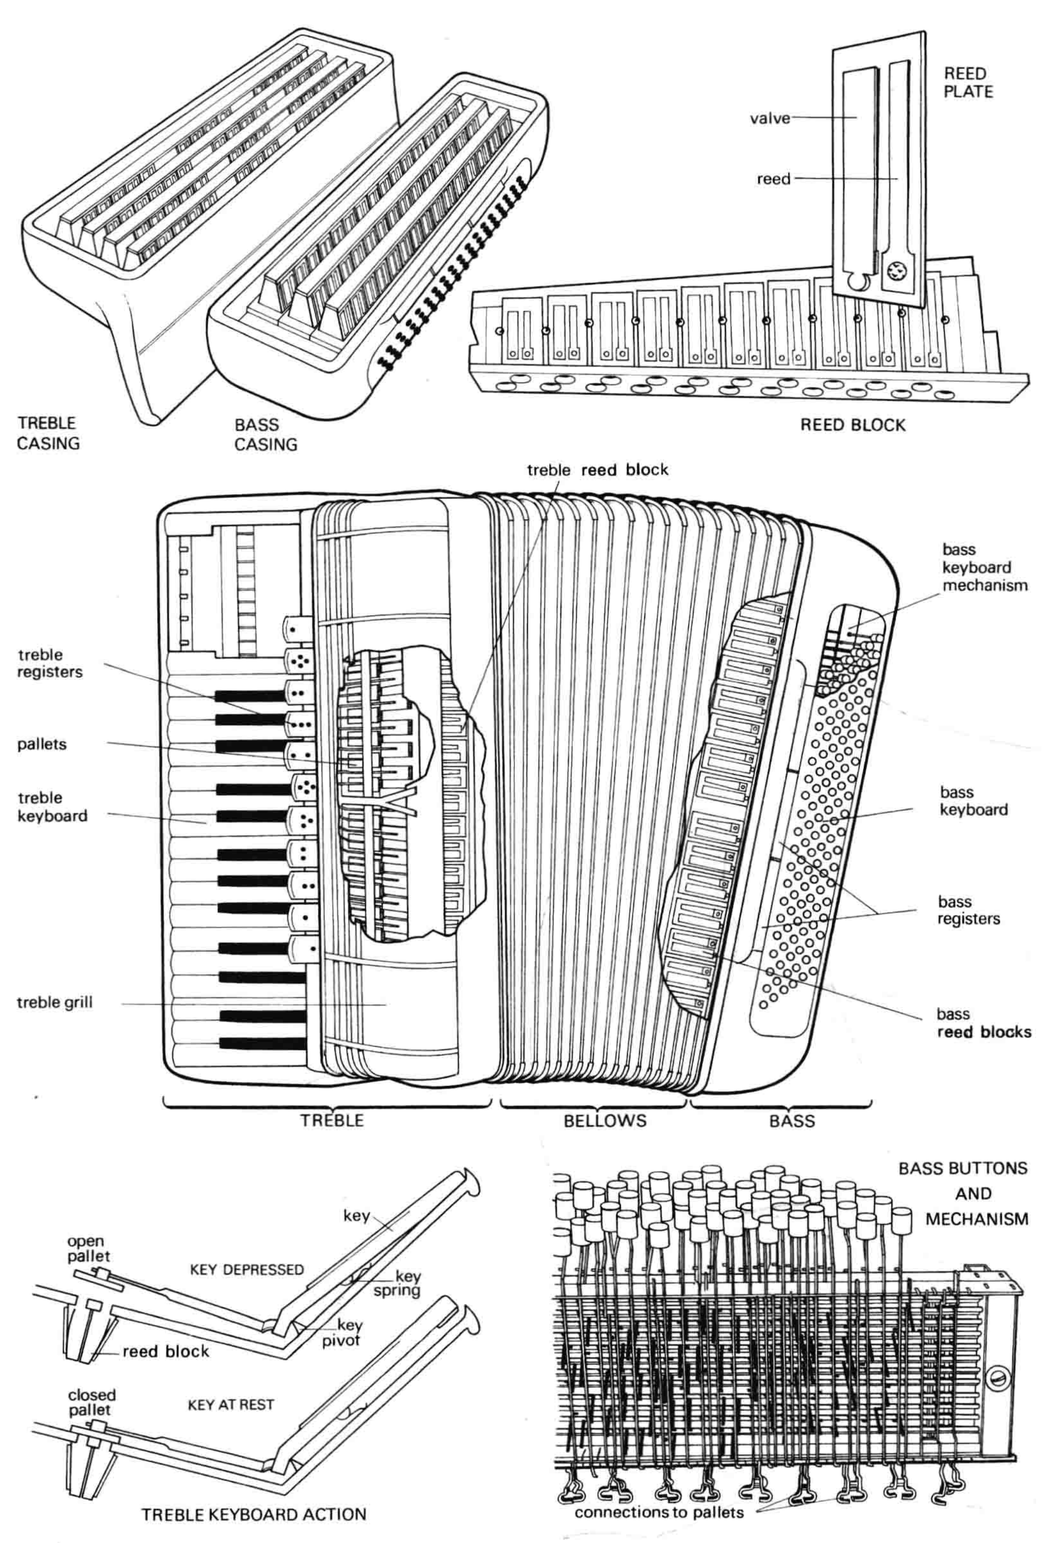
1. CONSTRUCTION. Although the following describes the construction of a full-size piano accordion (fig.1), all types of accordion work on variations of the same principle. The sound is produced by free reeds, made of highly tempered steel. The reed tongues are riveted to an aluminium alloy reed-plate containing two slots of the same size as the reeds, one reed being set on each side of the plate and a leather or plastic valve attached on the opposite side to each reed. A set of reed-plates corresponding to the range of the keyboard is affixed in order on a wooden reed block which aligns with the holes in the palette board (pan), and up to six of these blocks are fitted in the treble casing. The treble keyboard is attached at a right angle to the casing. The reed blocks and the slide mechanism of the register switches (shifts) are inside the bellows, on the palette board.

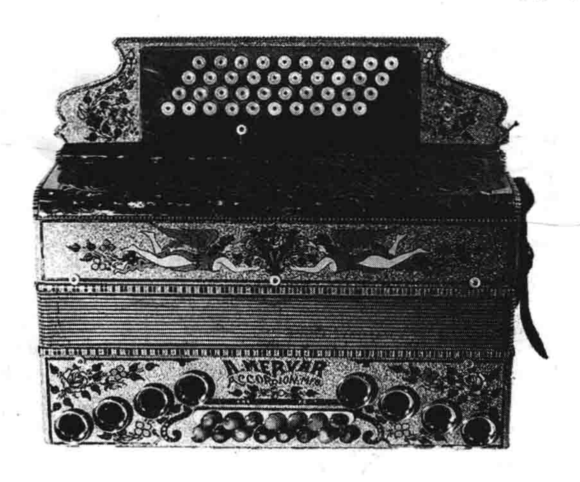
The depression of a treble key raises the palette, and allows air to pass through the reed block to actuate the reed; the air-flow is created by the inward or outward movement of the bellows. The palette action is usually covered by the treble grill, a fretted metal, wood or plastic cover lined with a decorative, thin fabric, which allows the passage of both air and sound. The bass side is similarly constructed, though the bass palettes are connected to the buttons by rods and levers. A bass hand-strap is fitted over the full length of the bass board and an air-release valve is provided to enable the bellows to open and close silently when desired.

The bellows are built of heavy cardstock paper with fibrous grain, folded and pleated with soft leather gussets inset in each inner corner and shaped metal protectors on each outside corner, secured and reinforced by a gauze-lined plastic called bellows tape. Wooden frames connect each end to the casings; soft leather or foam rubber keeps the instrument airtight. Internal locks or external straps are provided to keep the bellows closed when not in use. Virtually all accordion-family instruments have a wooden casing, which is covered with a skin of cellulose or wood veneers, and decorated with inlays, rhinestones, etchings, paint or other finishing processes. Less commonly, instruments are constructed with aluminium-alloy sub-frames, in total or in part. A few others are made of high-density rigid plastic with resonance characteristics. The nature of the frame and its decoration have little impact on the sound quality of the instrument; of greater consideration in the choice of materials is stability, durability and weight.



The fundamental tone of the accordion is that produced by a single reed at normal (8′) pitch over the entire range of the keyboard. Shifts (also called 'stops' or 'switches') may be provided, on larger models in both the treble and the bass sections, worked by stop knobs or tablets. They make available extra sets of reeds to be sounded simultaneously with the main rank, in various combinations, giving a variety of tone colours. Examples of shifts include unison, suboctave (16′), superoctave (4′), quint and tremolo ranks. Simpler instruments with no shifts may be tuned either 'dry' (with two reed banks tuned in unison) or to varying degrees of 'wetness' (with the two banks tuned slightly out with each other so that they beat together, creating an undulating effect akin to the Voix céleste of the organ). On larger accordions such tremolo ranks may be brought on and taken off with a shift. The sound characteristic of two banks of reeds detuned to produce two or three beats per second is commonly referred to as 'Italian tremolo'. Wider tremolos are called 'German', 'French', 'Slovenian' and so on. A true 'musette' tuning requires each key to sound three reed banks, the middle one tuned 'pure' and the two outer ones tuned respectively sharp and flat to the main note (and with about 40 cents difference between each other), producing a wide tremolo. Accordions are most commonly tuned to equal temperament.

2. TYPES. The accordion family of instruments has a complex taxonomy. The first level of division within the family is determined by whether the same or different notes are produced on a single key or button on the opening and closing of the bellows. Instruments that produce the same notes (sometimes said to have 'double action') usually have a chromatic compass. Those that produce two notes per key ('single action') have a diatonic compass. Accordions may be further classed according to body shape, keyboard type and the organization of notes. Particular models also vary greatly in terms of intrinsic quality of manufacture, refinements of design, numbers of parts, tuning systems, and extra ranks or registers of different-sounding reeds (operated by shifts).



The members of the accordion family currently in mass production and common usage include diatonic and chromatic versions of button accordions, concertinas and bandoneons, and chromatic piano accordions. Versions of all types have been produced with electronic modifications such as pick-ups, synthetic sound generators or MIDI systems. These instruments therefore become electronic controllers. A dilemma of classification arises when all acoustic sounding parts have been omitted and the sounds produced are all electronic samples (*see* ELECTROPHONE). The current convention is to consider all accordions with electronic applications within the category to which their body-shapes and keyboards belong.

(i) Diatonic accordions. The button diatonic accordion is certainly the most popular type of accordion, and is manufactured in most regions of the world. Virtually every culture has its own favoured version, adapted by key, note selection and note order to the requirements of its music. At least 40, but perhaps as many as 55 varieties can be identified. Its predominant usage is in traditional music, though some players, especially in Germany and Ireland, achieve concert-artist status as soloists, in ensembles or orchestras. Those models that employ the most advanced technologies originate in Germany (e.g. the Hohner 'Morino Overture' model). Italy produces the most varied range of models, and the Cajun-style single-row button accordion is the product of American cottage-industry, although some major European manufacturers also produce Cajun-style models (alongside 'Viennese-' or 'German-style' one-row diatonics).

The buttons on the right-hand keyboard are arranged in rows of 10 to 13 buttons, usually containing a major scale. With the push of the bellows the major triad of the home key is obtained, and the other pitches of the scale are obtained on the pull. Models are made with up to five rows, though one and three are probably the most common. Many key combinations may be found, but common ones include G/C, C/F, D/G, G/C/F, G/C/F/B♭, B/C/C♯, B/C and C/C♯. Left-hand buttons play bass notes

1. The working parts of an accordion

2. Button diatonic accordion with four treble rows and 15 bass buttons, c1933, by Anton Mervar, Cleveland, OH

and chords for accompaniment and are also often single action. The number of bass buttons ranges from two on one-row melodeons (which play the bass note and triad of the key of the melody row on the push, and of the dominant on the pull) to about 24 on larger models (fig.2). The air-button or -bar is especially necessary during performance on these instruments to replenish during passages requiring many notes in one direction. The instrument may be strapped to hands or have additional shoulder straps. Some instruments have pull-stops at the chin-end of the treble casing and some have shift-tablets on the grill-face.

Cajun players use one-row diatonic accordions, often made in Louisiana by turn-of-the-century methods. Zydeco players use either three-row button diatonics or piano accordions. Players of Irish traditional music often use two-row B/C diatonics, some specially modified to meet the performance needs of the individual players. Tex-Mex or Conjunto players use three-row button diatonics.

Other diatonic members of the accordion family include the Anglo (or Anglo-German) CONCERTINA, the square-shaped German *Konzertina* (or Chemnitz concertina) and its derivative, the BANDONEON.

(ii) Chromatic accordions.

(a) The piano accordion. As its name suggests, the right-hand section of this accordion contains a piano-type keyboard, commonly having up to 45 keys. Shifts that isolate or couple reed-banks appear on most models, although the numbers of reed-banks available vary from model to model: full-size instruments usually have four.

Various systems of bass buttons have been developed. The most common type is the 120-button 'standard' or 'Stradella' bass, consisting of six rows of buttons: two rows of single bass notes a major 3rd apart, called fundamental and counterbass rows, arranged according to the circle of 5ths; and the remaining buttons arranged in four rows playing major, minor, dominant 7th and diminished chords respectively for each fundamental. Various 'freebass' systems have been designed, which consist of single-note buttons with a range of up to five octaves. 'Converter' accordions are capable of switching from standard bass to freebass (fig.3*b*). 'Combi' or 'Manual III' models have five or six standard-bass rows in addition to three freebass rows containing a compass of about three octaves. Standard basses usually have five reed-banks, and freebass instruments can have eight or nine.

Bellows usually have 16 to 19 folds. Piano accordions can vary in weight from 4 to 14 kg. They are manufactured in many countries, but the finest originate in Germany (the Hohner 'Gola' and 'Morino' models) and Italy (e.g. models by Pigini), and the largest output comes from China (manufacturers such as Parrot, and Bai Le). Piano accordions are used to perform all kinds of music from folk and popular styles to jazz and concert music, whether solo or in ensemble.

(b) The button chromatic accordion. Known as the *bayan* in Russia and the *musette* in France, these differ from piano accordions mainly in that the right-hand section of this type of accordion is organized in three, four or five rows of buttons, usually coloured black and white. Adjacent buttons along the rows are in minor thirds, and three of the rows are arranged symmetrically a semitone apart. Rows four and five duplicate, and are coupled to rows one and two respectively, offering alternative fingerings. Because all keys are fingered identically, transposition is easy. There are four common varieties, named after the placement of a particular note on the outside row. The 'B' system (fig.4*d*) is preferred in Germany and Russia, 'C' (fig.4*b*) in Italy and North America, and 'G' (fig.4*a*) almost exclusively in Finland. The 'reverse B' is declining in popularity (fig.4*c*). Other details of their construction, including the organization of the basses, are much the same as on the piano accordion, though different cultures favour characteristic tuning styles. The finest button chromatics are made in Italy (the Pigini 'Mythos' and 'Super-Bayan' models; fig.5), Russia (the 'Jupiter' model made by the Moscow

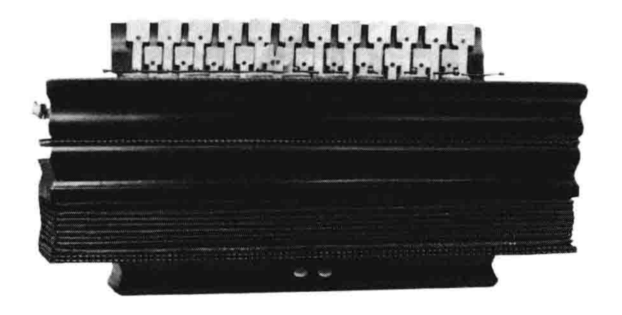
Experimental Laboratory) and Germany (the Hohner 'Gola' and 'Morino' button models).

The English concertina is a chromatic instrument, and there are chromatic varieties of bandoneon.

(iii) Hybrid and other models. Many types of accordion have been made with various combinations of diatonic and chromatic keyboards (fig.3*a*), most of which are rare and no longer in production, and various other keyboard systems have also been adapted to the accordion. These include half-chromatic hybrids, which play chromatically in one section and diatonically in the other; 'common accordions', where the right-hand is diatonic and the left-hand section plays standard-bass; 'two-system trebles', which combine chromatic rows of buttons with one or more diatonic rows; the 'uniform-keyboard' (or 'checkerboard keyboard'), designed by John Reuther (1905–84), which is an adaptation of the Janko piano keyboard (*see* JANKO, PAUL VON) to the accordion.

5. Button chromatic accordion: 'Super Bayan' by Pigini, Castelfidardo, near Ancona, 1996



The *garmoshka* is a large group of accordions found in both diatonic and chromatic varieties in Russia and eastern Europe. They are intended as folk rather than concert instruments, and they evolved largely independent of Western influences. A typical instrument has in the right hand a single diatonic scale produced from double-action reeds activated by buttons arranged in two rows. The left hand has 12 or more buttons arranged in 5ths.

3. HISTORY AND MANUFACTURE. Although the principle of the FREE REED has been known since pre-historic times, and in China has been applied to the SHENG since the second millennium BCE, it was not until the late 18th century that Europeans were experimenting intensively with the principle for use on organs. The first true reed organs were invented at the beginning of the next century

(*see* REED ORGAN). In 1821 Christian Friedrich Ludwig Buschmann (1805–64) made his mouthblown 'Aura', effectively the first harmonica, designed primarily as a tuning tool. The 15 reeds were cut from a single piece of metal and fastened onto a piece of wood with chambers and blowholes for use by the mouth. The following year he applied leather bellows, and closure pallets with a rudimentary keying device over the individual reed-chambers, and patented the instrument as the 'Handaeoline'. This instrument was developed further by the Austrian Cyril Demian (1772–1847) whose patent of 1829 under the name of 'Accordion' added accompanying chords. In the 'complete accordion', built by Demian and his sons Guido and Karl in 1834, a second treble row of chromatic 'helper' notes was added, and the left-hand section included a chromatic row. By 1830 Demian-type instruments were being copied in Belgium by Charles Buffet and in Paris by J.-B.-N. Fourneux and M. Busson (fig.6). These diatonic instruments were made in various keys with brass reed work, having ten to 12 treble keys and two bass buttons and casework made in rosewood with inlays of ivory and mother-of-pearl. Another Austrian, Matthaeus Bauer, is credited with the invention in 1838 of a reed block with individual reed-chambers, open at one end but closed off by pallets at the key-rod end. By 1863 Paolo Soprani was making diatonic accordions in Castelfidardo, near Ancona, Italy, which has remained a major centre of accordion manufacture to the present day.

The first chromatic button accordion was built by the Viennese musician Franz Walther in 1850. It had 46 buttons (later expanded to 52) in the right hand, arranged in three rows of minor 3rds, each row a half-step apart. The bass section had eight (later 12) diatonic buttons divided between single bass notes and two-note chords. Before the end of the century the Dallapé company (at Stradella, near Piacenza) developed a model that included free basses. In Russia, mass-production of accordions began in Tula in the 1830s. In 1870 the Russian Nikolai Beloborodov, working in Tula, developed the three-row chromatic that became the *bayan*.

Busson in Paris is sometimes given the credit for the invention of the piano accordion in 1855 (*accordéon-orgue*, *flûtina* or *harmonieflûte*). In fact, Bauer had exhibited a three-octave 'Clavierharmonika' at a trade fair in Vienna the previous year. Bauer had already experimented with the chromatic accordion of Walther, and had built his first Clavierharmonika (with buttons) in 1851. The bass section, like that of Walther's accordion, was diatonic. The 1854 description of the Clavierharmonika contains the first written notice that the piano keyboard was to be played with the right hand, the bass buttons with the left and the bellows pulled horizontally (Richter, A1990). Busson's *accordéon-orgue* had a small three-octave piano keyboard, single-action reeds and reservoir bellows (which could be pumped by the left hand or, with the instrument placed on a stand, with a pedal mechanism), but no basses or air button, giving uniform tone, rather similar to the contemporary seraphine or harmonium. It was the accordion's uniform tone, considered novel at the time, and its breadth of nuance-rich music, as well as its portability and affordability, that endeared it to large populations. Popular demand inspired mass production and established economic foundations for such firms as Hohner (Trossingen, 1857), Soprani (Castelfidardo, 1872) and Dallapé (Stradella, 1876), among others, to become known worldwide. The bass keyboard was gradually developed, so that by the beginning of the 20th century it could provide accompaniments in all keys.

6. *Demian-type, two-row button accordion, with 23 treble buttons and two basses, by M. Busson, Paris, c1845*

Early accordions and concertinas were physically small and contained few internal parts. Within a few years of the first patents, driven by increasing competition and a continual interest in expanding the instrument's musical capacity and efficiency, makers were constructing larger and stronger instruments with wider tonal ranges. The specifics of size and content of each member of the family evolved in different regions to accommodate the demands of the culture in which it flourished. As ideals of artistic breadth grew to include abstract concert and virtuoso performance, the most complex instruments have come to tax the limits of human endurance in size and weight. In the present day, some manufacturers are continuing to seek ways to lighten the burden while retaining its range, capacity and controllability.

The manufacture of piano and button chromatic accordions is centered in mass production by large companies. While some accordions built around the 1950s and 1960s, notably Hohner 'Morinos' and 'Golas', have escalated greatly in value and are prized by performers, the competitive brands of the end of the 20th century are continuing to incorporate innovative refinements that set increasingly higher standards for their top-models. Small companies and home production also continue, especially in concertinas and button diatonic accordions. While some of these are similarly interested in improving their products, others judiciously retain construction practices related to those of the 1930s, explained perhaps by a ground-swell of nostalgia for traditional music and instruments.

Seen worldwide, the accordion industry is both healthy and troubled. Escalating costs of labour and materials are reflected in the faltering viability of many traditionally solid companies. Most notable perhaps is the sale of Hohner in Trossingen, which for nearly a hundred years was one of the foremost producers and innovators. The former East German company Weltmeister, of Klingenthal, has been returned to private ownership, renamed Harmona.

By far the most important source of accordion-family instruments is Italy, the pre-eminent center being Castelfidardo. Located in this city are a few dozen larger and smaller exporters that satisfy much of the world market for parts and complete instruments, including Borsini, Bugari, Castagnari, Excelsior, Menghini, Pigini, Scandalli,

Victoria and Zero Sette. Many brands are produced only for export to particular countries (thus North American brands such as Bell, Castiglione, Colombo, Excelsior, Gabanelli, Guilietti, Imperial, Iorio, Kuchar, Lo Duca, Mervar, Modern, Monarch, Noble, Pancordion, Petosa, Silvertone, Titano – see fig.3, Video and Wurlitzer have past or present American ownership, but are produced in Italy). American manufacturers such as the Chemnitz concertina maker Christy Hengel use reeds produced in Italy.

In Russia accordion manufacture followed a nearly separate, unique evolution. Since World War II, the Moscow Experimental Laboratory (MEL) has produced high-quality *bayans*, whose sound qualities are much admired even if the instruments are exceedingly large and heavy. The Pigini company in Italy is working together with MEL to produce the 'Mythos' *bayan* model that conjoins the best of Italian manufacturing techniques with the Russian aesthetic. Other east European countries are also producing good quality but reasonably priced instruments, such as Delicia in the Czech Republic. China and other East Asian countries have come to prominence in the last few decades of the century for mass manufacture of inexpensive student instruments.

4. THE CHROMATIC ACCORDION: EDUCATION, PERFORMERS AND CONCERT REPERTORY. By the early 20th century the accordion was associated around the world with traditional music, cafés, dance halls and music halls. In order for it to be taken seriously as a concert instrument there was a need for schools to give high-level instruction on the instrument, for the development of an original repertory by recognized composers, and for refinements to be made to the instrument so that it could produce what the new repertory required. It also needed to be capable of responding consistently to the demands of subtle artistic performance. Ernst Hohner grasped the dilemma and approached Paul Hindemith (whose *Kammermusik no.1*, 1922, included an accordion in the chamber orchestra) to write original music for the instrument. Hindemith recommended a talented young composer, Hugo Herrmann, for the task. Herrmann agreed and wrote *Sieben neue Spielmusiken* (1927), the first original work for solo accordion.

In 1931 Hohner founded the Harmonika-Fachschule in Trossingen. Herrmann became its director, hiring an extraordinary body of staff, including Hermann Schittenhelm, Armin Fett and Ly Braun, who each retain historic prominence, and together they attracted serious students to the study of the instrument. It later became an official state academy. Herrmann and colleagues devised a curriculum that for decades produced artists and teachers of unequalled calibre. The graduates (who included Rudolf Wuerthner, Marianne Probst and Hugo Noth) were qualified to work for others or for themselves, perform with excellence and repair their own instruments. Many composed and arranged new music for accordion, and some became scholars in their own right. As the quality of repertory and performance rose, so the Hohner factory was driven to become a world leader in technological research and development of free-reed instruments. Many innovations in construction, along with clarification of an idealized acoustic aesthetic, responded to new demands from the concert stage. Also in 1931, Hohner began publishing music and teaching materials for all sorts of accordions.

By about 1945 large-scale pieces were being written with a preference for polyphonic styles. Freebass or combi (the 'Manual III' system, which has three rows of chromatically arranged freebass buttons above a full set of standard-bass rows) accordions were preferred, and fewer original pieces were written for standard-bass only. One example that is still part of the concert repertory is Hans Brehme's *Paganiniana* (1952), in which the treble keyboard is played with the freebass in strict polyphony, punctuated by chords played on the standard-bass. Free tonality and atonality became the preferred styles for composition, made possible with the advent of freebass accordions (e.g. Herrman's *Irland-Suite*, 1955; Rudolf Wuerthner: *Morgen im Bergen*, 1965; Carmelo Pino: Suite for Accordion, 1969). In 1947 the Orchestra des Hauses Hohner was founded under the direction of Rudolf Wuerthner (1920–74; Wuerthner acted also as soloist, arranger and composer), using the Hohner Morino and Gola models (and the electronic accordion, the 'Elektronium'), and helped promote the new repertory by touring in many countries of the world. Following this lead, many such accordion orchestras arose throughout Germany, and others were set up by accordion clubs throughout the world. In East Germany, Klingenthal and Markneukirchen were centres of construction and teaching, and many advances were made there that were disseminated among other Eastern bloc countries.

A tremendous growth in original repertory took place from about 1963, when the Städtische Musikschule Trossingen sought to expand the presence of experimental music and atonal styles in its concerts. One of the most important composers of new music for the accordion of this period was Wolfgang Jacobi (1894–1972). This period was also marked by the publication of accordion music by Scandinavian composers such as the Danes Ole Schmidt and N.V. Bentzon and the Swede T.I. Lundquist (for a full repertory list, see Maurer, C1990). By the 1980s, however, the Hohner Company was in financial turmoil, leading to a decline in the resources of the school and its activities (*see* HOHNER). Trossingen still hosts many international events, holds the Hohner Archiv and remains a centre for accordion activities in Germany.

The Association Internationale des Accordeonistes (now the Confederation Internationale des Accordeonistes) was founded in Paris in 1935 with the primary aim to elevate the status of the accordion (which at the time was scarcely recognized as a serious musical instrument) in the world of music. The British College of Accordionists was founded in 1936 and its syllabus of examinations has proved a vital factor in the musical development of the accordion in Britain. Several associations were founded in the USA, including the American Accordionists' Association (founded 1938) and the Accordionists & Teachers Guild International (1940), and many large and small private teaching studios and accordion clubs exist nationwide. The only accordion-specific museum in the USA, and one of the largest collections in the world (1000 instruments) is A World of Accordions Museum, opened in 1993 and located in Duluth, Minnesota.

The huge popularity of chromatic button and piano accordions in the USA is inspired by the virtuosos who arrived from all over Europe in the early decades of the 20th century, and this diversity of origin is reflected in the repertory and teaching methods that have abounded, as well as in the plethora of ethnic musical styles that survive

in various parts of the country. Especially influential on the piano accordion as concert performers and composers were Italian emigrants such as Pietro Deiro (1888–1954; in 1912 he made the first recording of a piano accordion, Victor 35345) and his brother Guido, Pietro Frosini (1885–1951; one of the first accordionists to use the freebass system) and Anthony Galla Rini (*b* 1904). Another important early American accordion player was Charles Magnante (1906–?1988). The accordion became established as a dance band component by performers such as Myron Floren and Lawrence Welk (1903–92), Frankie Yankovic and Joey Miskulin. Virtuosos like Dick Contino (*b* 1930) demonstrate the accordion's entertainment appeal, and similarly, the jazz stylings of Art Van Damme, Joe Mooney, Eddie Monteiro, Frank Marocco and Amy Jo Sawyer have attracted a great popular following. Artists whose seriousness and varied accomplishments stand as examples to the future are Carmelo Pino and Peter Soave. Notable teachers such as Willard Palmer (1917–96) and his partner Bill Hughes, Joan Cochran Sommers, Robert Davine, and Lana Gore have influenced the development of generations of students (some who became world champions). Palmer was instrumental in the development of the quint-converter accordion. In the 1990s there was a nostalgic resurgence of interest in accordion- or bandoneon-led traditional musics such as the tango (William Schimmel, Peter Soave), the polka (Frankie Yankovic), Cajun, zydeco and Tex-Mex/conjunto.

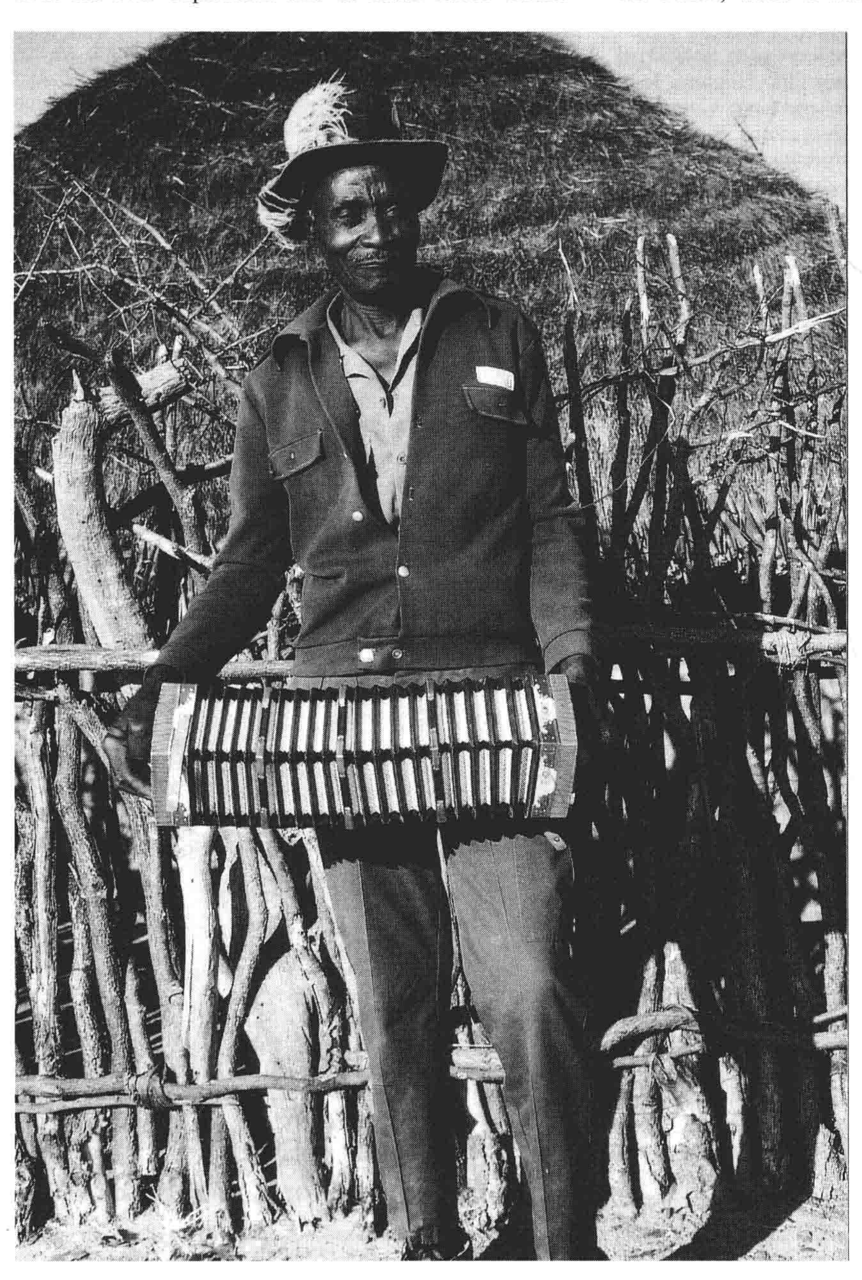
The existence of many hundreds of method books for playing various types of diatonic accordion reflects the popular nature of the instrument and its appeal to the amateur player. One feature of many of these books is the attempt to find some kind of suitable tablature for the instrument in order to obviate the readers' need to learn how to read normal music notation. Few such tablatures have been successful, being usually specific to a particular model of accordion; indeed, some have even proved harder to learn than notation.

Composers of works featuring the accordion have included Alban Berg (*Wozzeck*, 1923), Roy Harris (Theme and Variations, 1947), Paul Dessau (*Die Verurteilung des Lukullus*, 1949), Carmelo Pino (*Sonata Moderne* op.2, 1956; Concertino for Accordion and Strings, 1964), Alan Hovhaness (Suite for Accordion, 1958; Accordion Concerto, 1959; *Rubaiyat*, 1979), Paul Creston (Accordion Concerto, 1958), Wallingford Riegger (*Cooper Square*, 1958), Henry Cowell (*Iridescent Rondo*, 1959; *Concerto brevis*, 1960), David Diamond (*Night Music*, 1961), Robert Russell Bennett (Quintet for accordion and string quartet, 1962), Nicolas Flagello (Introduction and Scherzo, 1964), GUY KLUCEVSEK (an accordionist himself, he has composed many works for the instrument), William Schimmel (*Fables*, 1964; *The Spring Street Ritual*, 1978), Pauline Oliveros (many works, including *Horse Sings from Cloud*, 1975), Eric Salzman (*Accord*, 1975), Robert Rodriguez (*Tango*, 1985) and Luciano Berio (*Sequenza XIII*, 1995).

Although the accordion was well known and popular in the Baltic countries and Russia shortly after its invention – disseminated through trade and travellers as in the rest of the world – during the Soviet period its evolution was largely independent of and different from that of the Western world. The instruments were redesigned to fit the needs of the different cultures; some diatonic instruments became very different from those found in western Europe. Mirek (A1992) illustrated hundreds of accordion types, many not found outside the former Soviet Union. The principle concert accordion is, however, the chromatic button accordion or *bayan*; piano accordions and diatonic models are regarded as folk instruments.

The Communist Party's support for folk music paved the way for the establishment of a *bayan* conservatory programme at Kiev Conservatory in 1927; other courses are at the Gnesin Academy of Music, Moscow, at St Petersburg Conservatory and at the Vladivostok Accordionists Association. The standard of performance in the former Soviet Union is incredibly high, as demonstrated by its dominance of world competitions during the last 30 years of the 20th century. The first *bayan* sonata (1944) was composed by Nikolay Yakovlevich Chaykin (*b* 1915). Some of the greatest contemporary composers, such as S.A. Gubaydulina (*De profundis*, 1978), have found inspiration in Russian accordionists such as Fridrikh Lips (*b* 1948), Aleksandr Dmitriev (*b* 1950) and Oleg Sharov (*b* 1946). Some composer-performers such as Vyacheslav Anatol'yevich Semyonov (*Bulgarian Suite*, 1975) have found in themes of folk origin the starting point for their own masterworks.

At times the accordion has found usage in several of the countries of East Asia. Its portability and ease of performance endeared it to missionaries and political activists alike, while its slightly later association with the proletarian touring performance ensembles of the former Soviet Union made the accordion acceptable in contexts where other Western instruments were banned. A large



7. South African accordionist Alfred Makhalima during a recording session at Gallotone studios, Johannesburg, 3 December 1975

amount of music for accordion has been published by the Chinese music presses, most of it in Western idioms and intended for instructional use or the accompaniment of massed singing.

5. THE ACCORDION IN AFRICA. Accordions and concertinas have been present in most parts of sub-Saharan Africa since the 19th century, though with a somewhat scattered distribution. They were first brought to African coastal cities by European and West African (notably Kru) sailors, merchants and settlers, and taken inland by migrant workers. Many different models from Europe and elsewhere have been used. Although never attaining the popularity of the guitar, the accordion family has been a fundamental factor in the rise of several popular styles in both urban and rural areas. Accordions have been used both for solo expression and in small dance bands. Intrinsically African musical ideas have been transferred to these instruments, producing original and individual playing styles and techniques.

It is of limited relevance in African music to distinguish between the accordion and the concertina, since they have been used interchangeably and have had comparable functions in African cultures. They are also connected conceptually and historically to the harmonica, another early European import. During the first decades of the 20th century in particular, many concertina or accordion players began as teenagers playing the harmonica. During the 1980s and 90s accordions were increasingly replaced by electronic keyboards.

According to Hugh Tracey (D1952, p.9) the concertina has been known among the Xhosa of South Africa since the 1820s, when it was introduced by settlers in the

8. Gabriel Sakaria, concertina player, Ongali village, Ovamboland, Namibia, 4 October 1993

Eastern Cape. Among the musical uses developed by the Xhosa for this instrument is the accompaniment of group dances such as the *umteyo* (shaking dances), in which the player moves up and down between the files of dancers in order to be heard by all. In the 1950s Tracey found solo accordion music concentrated especially in Swaziland, among mine workers who could afford to buy such instruments. Musicians such as Yelanjani Matula, Mkakwa Mugomezungu and (unusual in Africa) a female player, Josefa Malindisa, developed personal styles within the local tonal-harmonic system. Tracey described this music as 'topical song with concertina' featuring satires about life in the mines, love affairs, philosophical statements about women, and personal laments. Commercial recordings have also been made of accordion and concertina music in South Africa. In the 1970s record companies equipped their musicians with large, professional instruments for playing in the electric-guitar-based urban style known as *simanje-manje* or *mbaqanga*. This kind of instrumentation became known as 'accordion jive'. One notable performer at the Gallotone studios in Johannesburg in the 1970s was Alfred Makhalima (fig.7), who played in the Township Boys. The concertina player Gabriel Sakaria (*b* 1920; fig.8), from northern Namibia lived in Swakopmund, near the port of Walvis Bay, in the late 1930s. Elements of *maringa* music (*see* HIGHLIFE) from Congo and Sierra Leone are prominent in his diverse repertory, which includes church hymns, presumably the result of contact with sailors from West and Central Africa.

The accordion has been an inseparable ingredient of the Portuguese-Angolan musical culture of Luanda, especially the popular ballroom dance music called *rebita* or *semba*. *Rebita* first emerged in the late 19th century and similar developments occurred in other Portuguese-speaking areas of Africa, notably Cape Verde. In 1982 there were still four *rebita* clubs meeting regularly: instruments played at the Muxima Ngola club in the Rangel township included an accordion (*ngaieta*) and a scraper (*dikanza*), with dancers forming a circle and carrying out the *umbigada* (belly bounce). António Victorino Imperial (*b* 1906) was regarded as one of the most remarkable accordionists of his generation.

From the 1920s to the 50s accordions were popular in port cities all along the West African coast, from Matadi in Congo-Zaïre to Douala (Cameroon) and Freetown (Sierra Leone), and were disseminated to rural areas by migrant workers. In Cameroon they had been introduced before World War I, when the territory was still under German colonial administration, and remained popular especially in the southern part of the country, although by the early 1960s the accordion was being superseded by contemporaneous styles based on highlife and Congolese guitar bands. The most important centre in West Africa for the rise and dispersal of accordion styles was Freetown, Sierra Leone, where the accordion was intimately linked with the Krio culture and with Kru mariners. According to Wolfgang Bender (D1994, p.235), one of the most favoured Mende singers and accordion players was Salia Koroma (*b* 1903), who made a large number of recordings spanning 40 or 50 years. Other Sierra Leone accordionists singing in Mende include Famous Foday and Edward Tokohina.

Accordions were also present on the East African coast from the early 20th century. They were part of the *taarab* ensembles recorded by Tracey in Dar es Salaam in the 1950s, along with four violins, two *udi* (lutes), ukulele or mandolin, clarinet, bass and drums. In Kenya the accordion was used in one of the earliest rumba bands, the Rhino Boys, in the 1940s. The *m'bwiza* music played in Yao-speaking areas of Malawi and Mozambique is performed with accordion (*kodiyoni*), tin-rattle (*wayala*), hoe-blade (*khasu*) and a large double-headed drum (*ngolo*). Rooted in tonal concepts that are non-Western, this music demonstrates the wide margins of usage for the accordion in non-Western societies. One of the most outstanding performers of this music, Jonas Chapola (*b* 1933), recorded in 1983 at Malamya, north of Makanjila (Kubik and Malamusi, D1989), played a middle-size Hohner accordion.

Accordo (It.). *See* CHORD.

Accorimboni [Accorimbani, Accorimbeni], **Agostino** (*b* Rome, 28 Aug 1739; *d* Rome, 13 Aug 1818). Italian composer. Breitkopf's 1785–7 catalogue records his name as Agosti, and this led both Gerber and Eitner to list him also under that name. A. Fuchs recorded his dates of birth and death, and his studies with Rinaldo di Capua, on the title-page of a *Recordare virgo* by Accorimboni; in his memoirs the abbot Lucantonio Benedetti noted that Accorimboni's opera *Il marchese di Castelverde* drew a large crowd of noblemen 'because the composer also belonged to the patrician class'.

Between 1768 and 1786 he wrote several operas, all but one of them comic, and he is also known to have composed several religious pieces. His *Il regno delle Amazzoni* enjoyed particular success, with restagings in Bologna, Florence, Genoa and Prague. Martinotti mentioned a cantata composed for the return of Pope Pius VII which led to an appointment (apparently refused) to the Württemberg court.

MICHAEL F. ROBINSON

Accouplement (Fr). *See* COUPLER.

Acculturation. This refers to culture change in conditions of direct contact between people of different cultures. It does not imply assimilation in the sense of loss of culture, and it can be directly observed and reconstructed ethnographically, unlike diffusion, a historical process inferred speculatively from the distribution of cultural traits. The term first appeared in print in an 1880 study of changes in American Indian languages 'under the overwhelming presence of millions' of white settlers (Powell, 1880, p.46).

The anthropologist Melville Herskovits, an advocate of the systematic study of acculturation, argued for a flexible definition. He contended that the concept should be 'entirely colourless concerning the relative complexity of the two cultures involved, and whether one is dominated by the other or contact takes place on a plane of comparative equality', whether one culture borrowed from another or the exchange was reciprocal, and whether it was between literate and non-literate peoples or between two 'primitive' peoples (1958, p.10). In other words, he sought a concept of broad utility for the study of 'the dynamics of human life' in instances of culture contact.

In fact, as the original usage suggests, the concept flourished in anthropology and later in ethnomusicology because of the colonial encounter between the dominant cultures of Europe and Euro-America and the American and African natives anthropologists intended to study. In the early years of 'scientific' fieldwork in the 1920s and 30s, they found that a 'revolution' in life ways had already occurred or was in progress, and acculturation provided them with a concept and method to account for the cultural changes they were observing in the wake of colonialism. Fundamental to the method of studying acculturation was the reconstruction of an understanding of the life of a people before contact. This 'baseline' could be uncovered through a careful correlation of interviews with informants, reports of soldiers, missionaries and travellers in the period at and immediately after contact when the culture was presumably in full flower, and the findings of others working on related groups. The baseline could then be compared to ethnographic observations of the current culture and the impact of change due to culture contact (i.e. acculturation) assessed.

Herskovits' advocacy of acculturation studies influenced a number of ethnomusicologists who passed through Northwestern University (where he was teaching), especially Richard Waterman, Alan Merriam and Klaus Wachsmann. All wrote on musical acculturation in the 1950s and 60s, as did Bruno Nettl. Unlike Herskovits, who felt that acculturation called for certain methods to study particular instances of culture contact, their work tended to seek the general laws and principles that might everywhere explain musical acculturation, a legacy of the then still vigorous scientific approach of comparative musicology. Waterman's seminal study (1948) posited the theory that acculturation would occur between similar traits in the musics in contact, because they would be easiest to understand. Though many remember only this part of his argument, restated as a kind of law by Merriam (1955), Waterman went on to point out that many other social and cultural factors were at work in musical acculturation, including the way the two groups actually came in contact and lived together, the relative sizes of the two populations, and the attitudes of the European culture towards African culture. Wachsmann (1961) added the notion that the attitude of the colonized to the colonizers might also be relevant, and Nettl suggested that the music of the dominated might actually be taken up by the dominant group against the 'general trends'; that the larger of the two repertories in contact might be more influential and less subject to change than the smaller; and that 'strong features' in a style, ones necessary for its survival, would resist change.

As ethnomusicologists from the 1970s on turned their attention to idiographic studies of music as culture, interest in positing such general laws declined, and musical acculturation tended to be replaced by discussions of 'musical change'. Later surveys of the processes and results of intercultural contact on music either did not use the term (Nettl, 1978) or criticized it and suggested alternative terms such as transculturation (Kartomi, 1981). It continues to turn up in the titles of some works (Lutz, 1978; Achinivu, 1979; and Baumann, 1992), but by the 1990s ethnomusicologists were more engaged by the musical contact and change facilitated by the international market in music media and by the diasporic wanderings of migrant workers, immigrants and refugees than by the kinds of direct culture contact covered by the term acculturation.

TIMOTHY RICE

AC/DC. Australian heavy metal band. Formed in Sydney in 1973 by the brothers Angus Young (*b* Glasgow [Scotland], 31 March 1955; guitar) and Malcolm Young

(*b* Glasgow [Scotland], 6 Jan 1963; guitar), its best-known line-up stabilized in 1975 with Mark Evans (*b* Melbourne, 2 March 1956; bass); Phil Rudd (*b* Melbourne, 19 May 1954; drums) and Bon Scott (Ron Belford Scott; *b* Kirriemuir [Scotland], 9 July 1946 *d* East Dulwich [London], 19 Feb 1980; vocals). Cliff Williams (*b* 14 Dec 1949) replaced Evans in 1977, and upon Scott's death, he was replaced by Brian Johnson (*b* 5 Oct 1947). By 1976, they were Australia's leading rock band and decided to move to London in the hope of broader success, which they achieved in the UK and the USA by the end of the decade. They are known for crude, rowdy and sometimes juvenile lyrics that celebrate excess, transgression and communal bonding, delivered through very hoarse, sometimes screaming, vocals. Their music is blues-based, displaying few of the Baroque influences that strongly affected most heavy metal bands. It is usually built around riffs that are primarily chordal and rhythmic rather than melodic. Their ensemble work is both forceful and precise, featuring effective use of the two guitars for complementary rhythm parts. Their most popular and critically-respected album was *Back in Black* (Atl., 1980), which sold more than ten million copies.

ROBERT WALSER

Açebedo, Francisco Correa de. *See* CORREA DE ARAUXO, FRANCISCO.

Acelli [Accelli], **Cesare** (*fl* 1586–8). Italian composer. Five madrigals by him survive in four anthologies of the 1580s. Three of these (RISM 1586[9], 1588[14] and 1588[18]) feature Mantuan composers, and this could be a clue to his origins, though he is not found in any of the Mantuan court documents. He is also represented by two works in a volume of three-voice madrigals (1588[20]).

HARRY B. LINCOLN/R

Acevedo Vargas, Jorge Luis (*b* San José, 24 Aug 1943). Costa Rican composer, ethnomusicologist and baritone. He obtained a teaching diploma and the BA at the University of Costa Rica Conservatory, with singing as his special subject. During 1975–6 he lived in Paris, where he studied singing at the Ecole Normale Supérieure de Musique, Gregorian chant and choral conducting at the Catholic University and ethnomusicology at the Sorbonne. He taught at the Escuela de Artes Musicales of the University of Costa Rica (1976–90; director of the Escuela, 1983–7; dean of the fine arts faculty of the university, 1987–91). In 1994, with the painter Ronald Mills, he co-founded the Centro de Investigaciones y Documentación de Musica y de Artes Plásticas, researching the traditional music of Guanacaste and Limón provinces and of the Costa Rican indigenous people, conducting field studies in Costa Rica, Guatemala and Mexico, making recordings, publishing books and articles, and holding lectures and seminars.

He has given song recitals in Costa Rica and in Europe, and has sung leading roles in operas by Cimarosa, Donizetti, Gluck, Mozart, Puccini and Salieri with the Compaña Lírica Nacional, which he founded in 1980 and directed (1980–84). He also founded and directed the Coro Lírico of the University of Costa Rica Conservatory (1983–90). His opera *El Sukia* (1986), the second of three operas performed by the University of Costa Rica SO and the Castella Conservatory, was awarded the Aquileo Echeverría National Prize. He has been invited to all the Caribbean Composers forums since 1988, was editor for Costa Rica of the *Diccionario de la música española e hispanoamericana* (1983–5) and has contributed articles to a number of journals and newspapers, notably *La nación* and *Clásica*, where he is on the editorial board.

WORKS
(*selective list*)

Dramatic: Mamaduka (op, 3), Teatro Castella, 1984; El Sukia (op, 3), Teatro Nacional, San José, 1986; Serrabá (op, 3), Teatro Nacional, 1987; Itza (dance score), perf. 1989

Orch: Suite Guanacaste, perf. 1985; Pequeña obertura, perf. 1993

Vocal: Cantos de un trovador, song cycle, perf. 1979 [after Guanacaste trad. music]; Cosas de la Pampa, song cycle, perf. 1979 [after Guanacaste trad. music]; Opera (cant., J. Debravo), solo vv, chorus, pf, perc, wind qnt, 1989

Chbr: Apunte interior, fl, pf, perf. 1990; Guayabo, fl, pf, perf. 1990; 3 cantos de cuna Bribris, ob, pf, perf. 1992; 4 cantos fúnebres para un infante indígena, fl, pf, perf. 1992; Despertar de primavera, ob, cl, pf, perf. 1993; Estados de ánimo, brass qnt, perf. 1994; La Ramona, trad. diatonic mar, pf, perf. 1994; Muturranga, fl, pf, perf. 1995; La catedral olvidada, vc, pf, perf. 1996

ENRIQUE CORDERO RODRÍGUEZ

Aceves (y Lozano), Rafael (*b* La Granja de S Ildefonso, Segovia, 20 March 1837; *d* Madrid, 21 Feb 1876). Spanish composer. In 1853 he entered the Madrid Conservatory, where his composition teacher was Emilio Arrieta, and in 1858 he won a gold medal for composition. For an opera competition in 1869 he composed, in collaboration with Antonio Llanos (1841–1906), the prize-winning *El puñal de misericordia*; he also wrote some religious music, most notably a *Stabat mater*. However, he was influenced mainly by Arrieta towards the composition of zarzuelas. His works in this genre were well received in his time, particularly *Sensitiva* (1870), but his fame has now been eclipsed by that of contemporaries such as Barbieri and Oudrid (in collaboration with whom he composed *El testamento azul*) and Caballero (with whom he composed *El trono de Escocia*).

WORKS

Achron, Joseph (*b* Lozdzieje, Poland [now Lazdijai, Lithuania], 13 May 1886; *d* Hollywood, CA, 29 April 1943). American violinist and composer of Lithuanian birth. He was the brother of the pianist and composer Isidor

Achron. He began the study of the violin with his father at the age of five, and first performed in public three years later in Warsaw. At the St Petersburg Conservatory, from which he graduated in 1904, he studied the violin with Auer and composition with Lyadov. In 1913 he went to Russia, becoming head of the violin and chamber music departments at the Kharkiv Conservatory, and served in the Russian Army between 1916 and 1918. In the years after World War I he toured extensively as a concert artist in Europe, the Near East and Russia. He was appointed head of the violin masterclass and chamber music department at the Leningrad Artists' Union. In 1925 he emigrated to the USA and settled in New York, where he taught the violin at the Westchester Conservatory. He performed his Violin Concerto no.1 with the Boston SO in 1927. His Golem Suite, also written during this period, was chosen by the ISCM for performance in Venice in 1932; its opening section is recapitulated in exact retrograde to symbolize the downfall of the monster referred to in the title. In 1934 he moved to Hollywood, where he composed music for films and continued his career as a concert violinist. He performed his second violin concerto with the Los Angeles PO in 1936 and his third (commissioned by Heifetz) with the same orchestra in 1939. Atonality and polytonality are among the techniques used in his later works. A full list of his works is included in P. Moddel: *Joseph Achron* (Tel Aviv, 1966).

Acid Jazz (i). English record company. It was established in London in 1988 by the DJs Eddie Piller and Gilles Peterson. Their original intention was that the label would represent an alternative to the nascent acid house scene, based more around live musicians than the technology so central to acid house. Their policy stated 'no house music' and championed obscure soul and funk artists of the 1960s and 70s. Peterson left in 1989 to set up Talkin' Loud, a rival imprint backed by Polygram, leaving Piller and his assistant Dean Rudland to develop Acid Jazz as a small but fashionable independent label. In the early 1990s they signed bands such as Brand New Heavies and Jamiroquai, who have since achieved considerable commercial success with major record labels. In the late 1990s the company diversified its musical base, with separate labels dedicated to drum 'n' bass, reggae and pop. In 1994 it acquired the Bass Clef, a jazz club in Hoxton, East London. Renamed the Blue Note, by 1996 it was one of the most fashionable clubs in London and Hoxton was at the epicentre of the 'Cool Britannia' trend. Despite this, the profile of Acid Jazz as a label has remained low, perhaps due to a desire to remain independent. Like Motown and Studio One, the name of the label itself has come to define a musical style.

RICHARD BECKETT

Acid jazz (ii). Musical subculture of the late 1980s and 90s. Acid jazz is largely a fusion of black American musical styles such as funk, soul and hip-hop combined with a visual aesthetic which borrows extensively from both British popular culture of the 1960s and black American street style of the 70s. Fundamentally a form of street style, it combined music, fashion and recreational drug use to create an 'attitude' that owed much to the beatniks of the 1960s (hence 'jazz') and a nostalgia for the 1960s and 70s, regarded as a time when musicianship was vital to good dance music as opposed to the more contemporary technological emphasis. The term covers a wide range of musical styles, from the electronic disco styling of bands such as Jamiroquai and Brand New Heavies to the Santana-inspired funk rock of Mother Earth and the Mendez Report. The common denominator is usually the influence of funk, drawing on syncopated rhythmic interplay between the instruments and the use of chromatic chord sequences used widely in post-bop jazz but rarely in mainstream pop or dance music.

As many of the first acid jazz groups took their inspiration from funk and jazz artists of 20 years previously, they tended to eschew the modern techniques of sequencing and sampling in order to replicate the sound of their predecessors as faithfully as possible. This 'retro' approach can be heard in recordings such as *Dad Man Cat* by Corduroy and *Mission Impossible* by the James Taylor Quartet, both on the Acid Jazz label. They also highlight the influence of film composers such as John Barry and Lalo Schifrin. Later bands such as Freak Power and Goldbug made use of digital technology in sampling extracts from vintage soul and funk records to create a more contemporary sound from old material. This 'cut-and-paste' approach to composition owed much to the techniques of the hip hop artists such as the Sugar Hill Gang and Digital Underground, and is also prominent in several acid jazz bands, such as Galliano and Urban Species.

Acid rock. *See* PSYCHEDELIC ROCK.

Acker, Dieter (*b* Sibiu, 3 Nov 1940). German composer of Romanian birth. He studied the piano, the organ and theory privately with Franz Xaver Dressler in Sibiu

(1950–58). From 1959 to 1964 he studied composition with Toduta at the Cluj Academy of Music where, after receiving his diploma, he remained to teach composition and music theory. In 1969 he moved to the Federal Republic of Germany to teach at the Robert Schumann Conservatory, Düsseldorf (1969–72) and attend the Darmstadt summer course (1969). He was appointed to teach theory and composition at the Munich Musikhochschule in 1972, becoming professor of composition there in 1976. His awards include the composition prize of the Prague Spring Festival (1966), the Stuttgart Stamitz prize (1970), the city of Stuttgart composition prize (1971), the Stroud Festival composition prize, the Hitzacker prize (1974), the Henriette Renié prize of the Académie des Beaux-Arts, Paris (1988), and the Mannheim Stamitz prize (1990). Acker's early music uses tonal and dodecaphonic materials freely. Around 1970, however, he rejected serialism and its inherent compositional constraints in favour of techniques allowing for the greatest possible structural freedom.

Ackerman, Alexander. *See* AGRICOLA, ALEXANDER.

Ackley. American family of composers of gospel music. Alfred H(enry) Ackley (*b* Spring Hill, PA, 21 Jan 1887; *d* Whittier, CA, 3 July 1960) composed and edited gospel hymns and choruses and was associated with Homer A. Rodeheaver. Alfred's brother, Bentley DeForest Ackley (*b* Sping Hill, PA, 27 Sept 1872; *d* Winona Lake, IN, 3 Sept 1958) was also a composer of gospel hymns and songs. *See also* GOSPEL MUSIC, §I.

Ackroyd, Samuel. *See* AKEROYDE, SAMUEL.

Ackté [Achté], **Aïno** (*b* Helsinki, 23 April 1876; *d* Nummela, 8 Aug 1944). Finnish soprano. She studied first with her mother, a principal soprano of the Helsinki Opera, and made her début there in 1893. After further study at the Paris Conservatoire, she appeared at the Opéra, on 8 October 1897, as Gounod's Marguerite. Her success there and in other European cities led to her engagement at the Metropolitan Opera, where in 1904 and 1905 her roles included Marguerite and Juliet in Gounod's operas, and Wagner's Eva, Elsa and Elisabeth. In 1907 she sang with Van Dyck's company in the German season at Covent Garden, and in the same year at Leipzig gave her first performance as Richard Strauss's Salome, the role for which she became most famous. She sang it also in the British première in 1910 under Beecham and was commended especially for performing the Dance of the Seven Veils herself. The later part of her career was spent largely in Finland, where in 1911 she helped to found the Domestic Opera (from 1914 the Finnish Opera), and for one year (1938–9) became its director. She also wrote the libretto for the opera *Juha*, set by both Aare Merikanto and Leevi Madetoja. A cultivated musician as well as a striking personality, she was the dedicatee of Sibelius's *Luonnotar*, of which she gave the first performance in 1913. Her few and rare recordings suggest an emotional, impulsive singer with considerable power and a good range. She wrote two autobiographical books, *Muistojeni kirja* ('The Book of my Recollections', Helsinki, 1925) and *Taiteeni taipaleelta* ('My Life as an Artist', Helsinki, 1935). (C.L. Bruun: 'Aino Ackté', *Record News* [Toronto], v (1960–61), 83–9 [with discography])

J.B. STEANE

Acosta, Afonso Vaz de. *See* COSTA (i), (1).

Acourt (*fl c*1420). Composer. His three-voice rondeau *Je demande ma bienvenue* survives only in the manuscript *GB-Ob* Can.misc.213 (facs., Chicago, 1995; ed. in CMM, xi/2, 1959). Its extreme simplicity and economy of gesture suggest that the composer is not identifiable with HAUCOURT, composer of an apparently much earlier virelai in the same manuscript.

DAVID FALLOWS

Acousmatic music. *See* ELECTRO-ACOUSTIC MUSIC.

Acoustic [acoustical]. A term, meaning 'not electric', used in this special sense to designate a recording cut with a stylus activated directly (through a diaphragm) by sound waves rather than by electronic impulses, or, as in 'acoustic guitar', an instrument not amplified electronically. It was first applied to recordings in the early 1930s (electric recordings were first made in 1925), and to instruments in the mid-1960s, in response to the widespread use in commercial folk and pop music of electric guitars and other electronically amplified instruments. Used of a room, it indicates that room's acoustical characteristics.

BRUCE CARR

Acoustics. A term that can embrace all aspects of the science of sound and hearing, but is here treated in two specific senses, that of room acoustics, considered only with reference to the performance of music, and that of sound-source acoustics, limited to various classes of musical instruments and the voice. For other acoustical matters *see* HEARING AND PSYCHOACOUSTICS and SOUND; for the history of the subject *see* PHYSICS OF MUSIC.

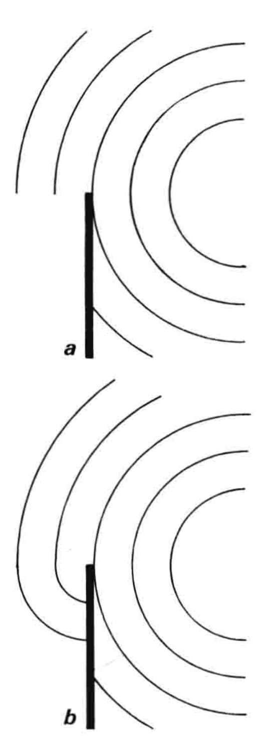
I. Room acoustics. II. String instruments. III. Keyboard string instruments. IV. Wind instruments. V. Percussion instruments. VI. The voice.

I. Room acoustics

1. Introduction. 2. Reflection: (i) Transmission and the design of reflectors (ii) Reflectors as diffusing surfaces. 3. Resonance, reverberation and absorption. 4. Insulation against noise. 5. Radio and

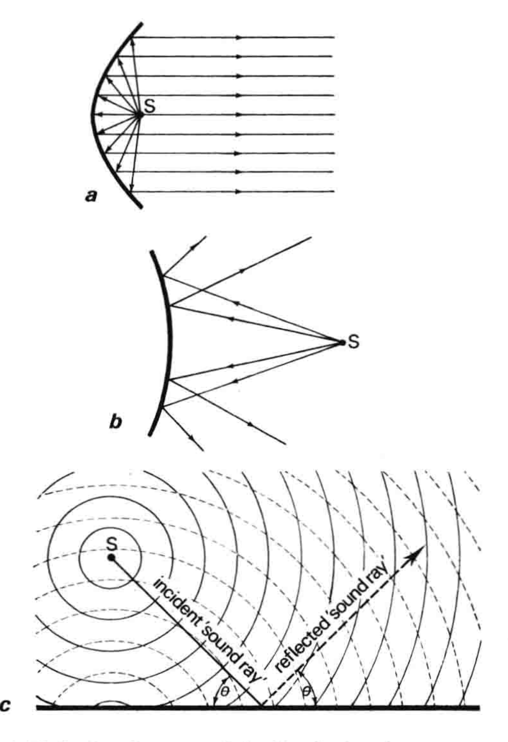
television studios. 6. Introduction to the history of acoustics. 7. Classical times. 8. Medieval times. 9. Renaissance and Baroque periods. 10. 18th and 19th centuries. 11. The science of acoustics. 12. The contemporary performance of early music.

1. INTRODUCTION. A room that has good acoustics is one in which it is possible to hear each sound clearly in all parts of the room; or, in other words, a room in which the sound is adequately loud and evenly distributed. In addition, it is normally required that the quality of sound being listened to in the room should match the type of sound being produced by the source. Room acoustics are relied on in some cases to sustain the sound in the room after the original source has stopped producing it, thus masking unevennesses in the ensemble, while in other cases sound too much sustained would mask the clarity of individual instruments or small groups. Acoustical problems are further complicated if opera is to be performed, for here every syllable is expected to be clearly heard and understood, and therefore only moderate sustained sound is desirable, yet the large ensemble demands sustained sound. Although scientific study permits a certain degree of accuracy in acoustical design, great difficulty is still experienced in determining the correct specification of the acoustics that ought to be provided.



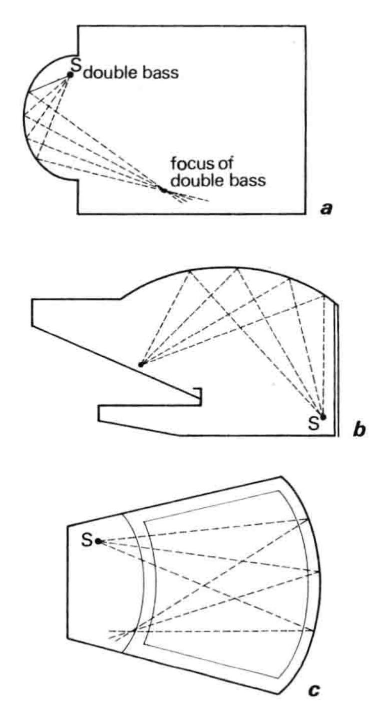
2. REFLECTION. Sound travels across a room in the form of vibrations in the air. Inevitably the amount of energy is diminished as the sound waves spread across the room, which means that there is a limit to the distance an average sound will travel without becoming faint. For increased loudness one normally relies on reflections from walls, ceiling and floor to augment the direct sound arriving at the ears. These reflections are also the source of the reverberation of sound in the room (see §3 below).

Sound can conveniently be thought of as spreading out from its source along straight paths and, like light, casting a shadow when it meets an obstruction (fig.1*a*). But the nature of this shadow depends on the relationship between two quantities, the wavelength and the dimension of the obstruction. The waves 'bend' at the edges of the obstruction, so that if the wavelength of a sound is large compared with the width of the obstruction, practically no shadow is formed (fig.1*b*). This condition is easily achieved with low-pitched sounds and the objects or screens in a normal room.



Sounds can be focussed to a point by concave reflectors, in the same way as a headlight beam is focussed, or spread out by convex reflectors so that their effect is diminished (fig.2*a* and *b*). Because the wavelengths of sounds are so much longer than those of light, the sizes of the reflectors needed to perform these tasks are quite large. For middle C an adequate size would be about 2·5 m.

Similarly, sound can be reflected by a plane wall in just the way light is reflected by a plane mirror. There is an 'image' formed behind the wall, which acts as the imaginary source for all sound reflected from the wall. As with light, the angle of incidence is equal to the angle of reflection (fig.2*c*). Very small reflectors do not work effectively for fundamental sounds, and reflectors for even the higher instrumental sounds need to be relatively wide; for the lowest range of notes reflectors more than 6 m wide are necessary.

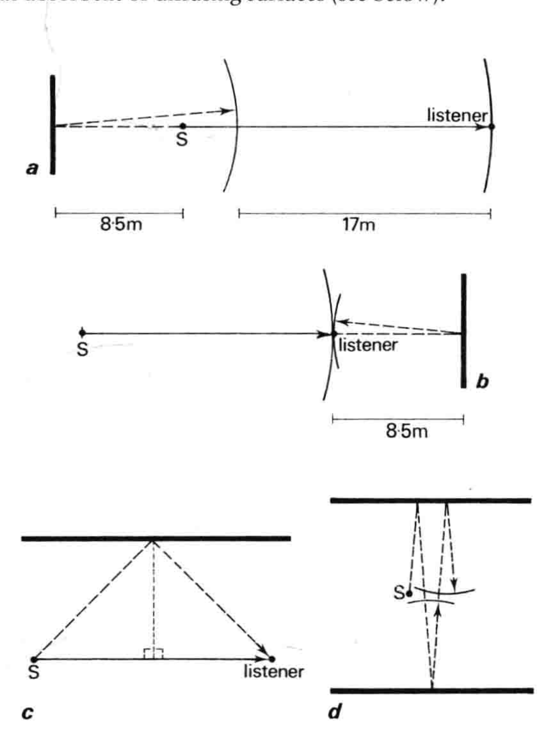


If there is too much reflection in a room the sound may be loud and reverberant, and the endless reflections produce booming effects. Or concave reflectors may focus

1. (a) Creation of an acoustic shadow by an obstruction in the path of a sound wave; (b) absence of an acoustic shadow behind an obstruction when the sound wave is of low frequency (i.e. of a wavelength large relative to the size of the obstruction)

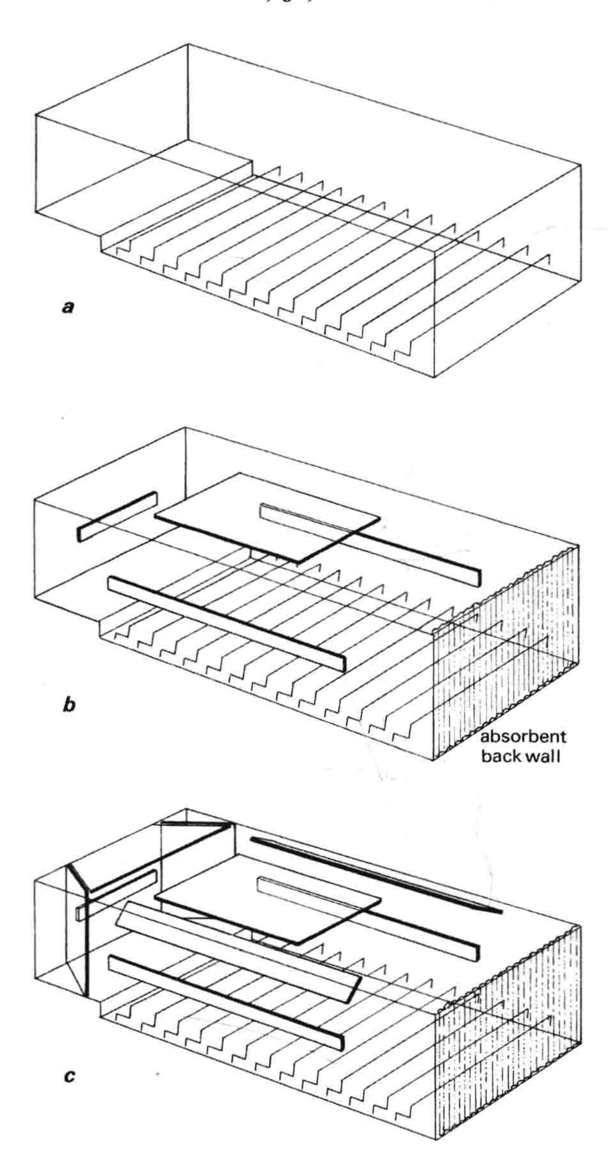
2. (a) Reflections from a parabola; (b) reflections from a convex surface; (c) reflections from a plane surface (after Parkin and Humphreys, 1958)

3. *(a) Undesirable foci from an orchestra created by a concave reflector behind the platform; (b) undesirable focus created on a balcony by a concave ceiling; (c) undesirable focus created in a seating plan by a concave rear wall*



sounds so that some areas of the room receive little or none. Examples are the use of a curved wall behind an orchestra, which produces 'sound foci' in parts of the audience (fig.3*a*), and the use of a hard domed surface on the ceiling of a ballroom; in fig.3*b* the curved ceiling of the section produces the maximum focussing effect and by corollary the maximum area of diminished sound, sometimes known as a 'dead spot'. A further example is that of the curved rear wall in an auditorium, which may concentrate sound back on the source or on the people in the front rows (fig.3*c*).

Echo is one of the most serious problems introduced by reflections. Fortunately it occurs only when there is a pronounced audible gap between the direct sound and the first reflection (or between two reflections). In other words, an echo is a discrete reflection that stands out over and above the other reflections. Ability to hear echoes varies with the individual, but a time interval of 0·08 seconds can be perceived by most people as an echo in music (as compared to less than 0·04 seconds in speech), and has therefore to be avoided. The distances travelled by the two sound paths would have to differ by 27 m before this time interval would occur in music (13·5 m in speech) (fig.4*c*). This means that any reflector behind the source or behind the listener and more than 13.5 m away is potentially likely to produce an echo (fig.4*a* and *b*). Reflectors in side walls or ceilings can generally be further away before they produce echoes, as the difference in length between direct and reflected sound paths is less than in the former case.



A complicated echo occurs when two reflective walls, or a reflective floor and ceiling, are exactly parallel and opposite each other. The difference in paths of travel of the sounds necessary to produce the echo is then formed again and again, resulting in a multiple or 'flutter' echo (fig.4*d*). This is particularly disturbing to the person producing the sound, but may also be heard by members of the audience. For this reason it is normal practice to ensure that reflectors are not exactly parallel; the deviations from the true parallel need not be so much that they are seen.

Two of the problems in room acoustics may be solved with the aid of properly designed reflecting surfaces. The first is the transmission of sound from the front to the back of the room so that it may be heard with reasonable loudness (yet without introducing any artificial coloration, as would almost inevitably happen with electronic amplification). The second is the problem of uneven distribution of sound, which is dealt with by 'diffusion', with the aim of producing a 'diffuse sound field'.

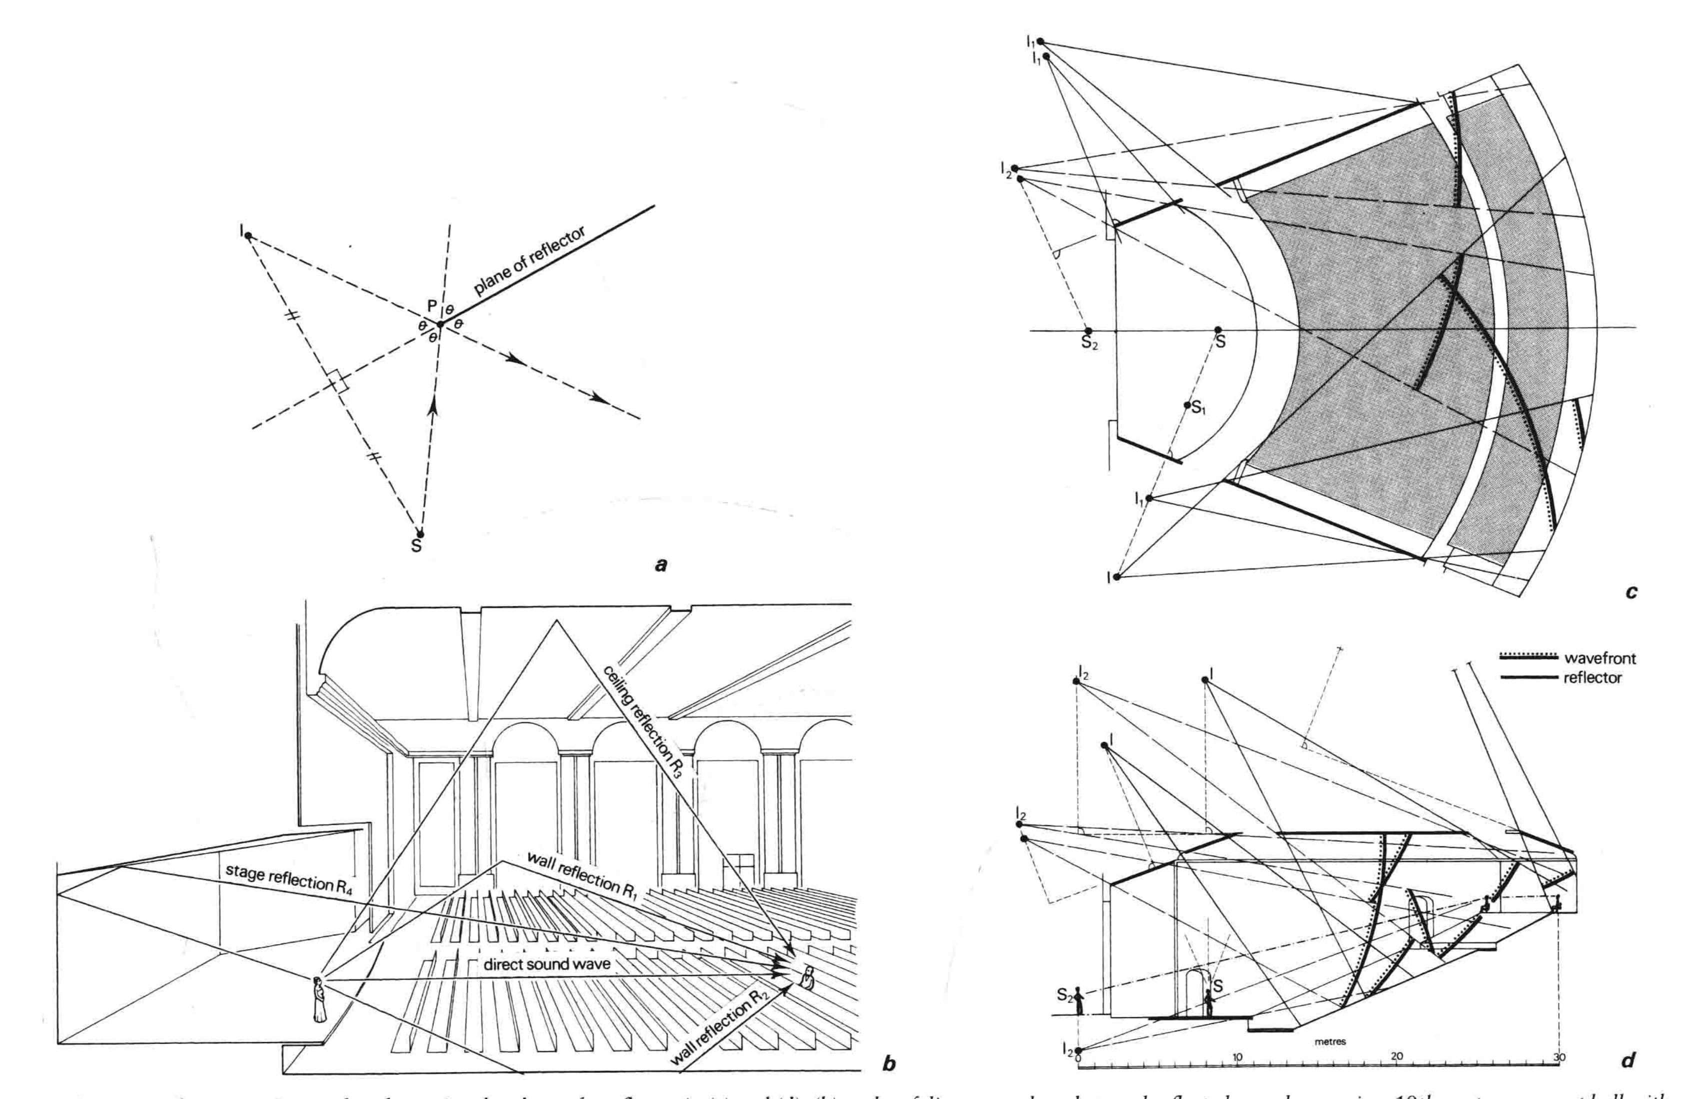
(i) Transmission and the design of reflectors. The transmission of sound from the front to the back of a room is normally aided by specially designed reflecting surfaces. As an example, consider a recital room of small size, with a flat floor, fairly low ceiling and a raised podium for the performer. It is shown in fig.5*a* before the reflectors are designed, in fig.5*b* after reflectors on walls and ceilings have been calculated and in fig.5*c* after additional angled reflectors have been added to strengthen the sound. The remaining surfaces are not useful areas for strengthening the loudness of the sound, and indeed may be dangerous if they are left as flat reflectors, introducing echoes or sounds that are too prolonged. For this reason the remaining areas of wall and ceiling are usually treated as absorbent or diffusing surfaces (see below).

4. *Creation of an echo by (a) a reflector more than 13·5 m behind the source of sound; (b) a reflector more than 13·5 m behind the listener; (c) a difference in sound paths of more than 27 m; (d) flutter echo produced by sound reflected from two parallel surfaces*

5. A small room (a) without reflectors, (b) with reflecting areas calculated on walls and ceiling, (c) with the addition of angled reflectors

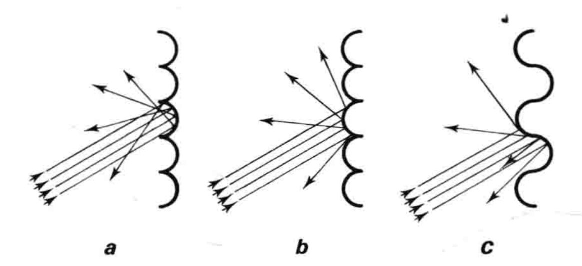
In larger rooms the shape of the walls, of the ceilings, and even of the floor, may be determined by acoustic needs. Shaping the floor is usually thought necessary when the audience numbers more than 100, and desirable even when it is only 50. The audience seats are raised on tiers so that sound can travel unobstructed to the ears, passing over the heads of the people in front; this compensates to some extent for the greater distance sound has to travel. As an added improvement the musicians may also be raised on tiers so that they are unobstructed by performers in front. It is an old adage among designers that 'if one can see well one can hear well'. Fig.6*c* shows a floor shape thus determined, and fig.6*d* shows the plan of the seating so that the entire audience has a clear view of the whole source of sound. Three sources are shown (S, S_1, S_2), together with their images (I, I_1, I_2) produced by reflection from the various reflecting surfaces, the images being constructed here geometrically.

Electronic amplification may be used when reflection is insufficient to produce a suitable volume, but the argument that there is concomitant coloration and distortion has tended to discourage its use except in the special case of electronic music or when quiet instruments (e.g. harpsichord, guitar) are required to sound well in a large hall.



(ii) Reflectors as diffusing surfaces. Any rough surface will scatter sound waves, and hence 'diffuse' the sound field. Unless the roughness is pronounced, however, the sounds affected will be limited to those at the extreme upper end of the frequency scale. In order to affect sounds over the whole of the frequency range the roughness of the wall has to be of the order of at least 0·75 m and generally it is designed even larger. In the design of diffusing surfaces curved surfaces are often favoured, whether in concave sections, in convex sections or undulating (fig.7). Research has suggested that diffusing surfaces made up of rectangular parallelepipeds are equally efficient, but diffusion can also be achieved in quite different ways, by alternating small areas of absorbing and reflecting materials, or by the use of so-called stepped or profile diffusers, which consist of wells of unequal depth.

It is an ideal in acoustics to produce a 'diffuse sound field', so that the sounds reaching the audience are coming from every direction at equal strength. This ideal is never attained, but its approximation is important in producing predictable acoustical behaviour in a room.



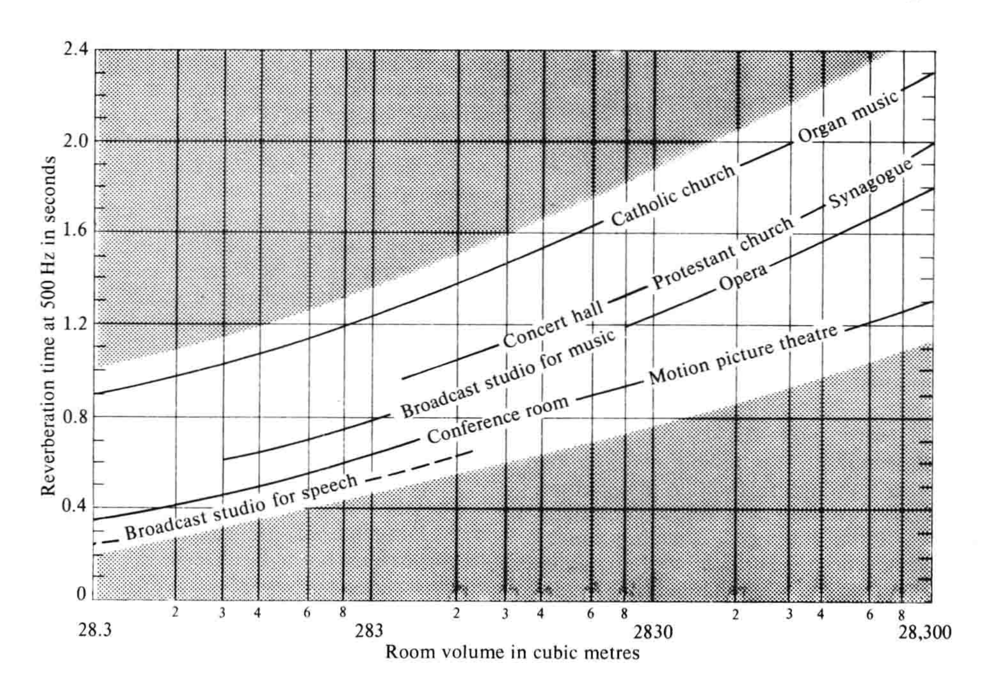
3. Resonance, reverberation and absorption. The property of sympathetic vibration is encountered in its direct form in room acoustics in the rattling of window panes, light shades and movable panels in the presence of very loud sounds, such as may occasionally be produced by a full organ. As these things rattle (or even if they do not audibly rattle) sound energy is being converted into mechanical energy, and so the sound is absorbed. Wood panelling and anything else that is lightweight and relatively unrestrained have the same effect. Absorptivity is at its highest at the resonant frequency, usually near or below 100 Hz.

Volume resonance occurs when standing waves are created by correspondences between the wavelengths of a fundamental sound and the dimensions of the room, and may result in uneven distribution of sound. This effect is at its worst in small rooms and becomes decreasingly serious in large volumes, where the dimensions are so great that they exceed the fundamental wavelengths of the lowest audible sounds.

A sound that is prolonged by multiple reflections around walls, floor and ceiling is said to have reverberated. The time of reverberation can be used as a simple yardstick to compare the capacities of different rooms for prolonging sound but for the yardstick to be practically serviceable, all the variables have to be specified. These include the frequency at which the reverberation is tested, and the range of loudness over which the decay is measured. Thus, for practical purposes, the 'reverberation time' is defined as the time taken for the sound in a room to die from 60 decibels to inaudibility (fig.8). It is customary to compare the reverberation times of rooms at 'mid-frequency' (an average of values measured at 500 Hz – just below *c*″ – and 1000 Hz), but for fuller comparisons reverberation time at 125, 250, 2000 and 4000 Hz are also used, to provide a composite picture of the prolonging

6. *(a) Geometrical construction used to determine the plane of a reflector in (c) and (d); (b) paths of direct sound, and several reflected sound waves in a 19th-century concert hall with traditional horizontal floor and ceiling and parallel side walls (the diagram illustrates the different types of reflection which aid listening in a concert hall; after Beranek, 1962); (c) plan of the seating (shaded) and stage, showing the complexity of the calculations necessary to determine the wall reflectors of a small auditorium; (d) shape of the floor and ceiling of same, showing the calculation for the ceiling reflectors (after Bagenal and Wood, 1931)*

7. Diffusion produced by (a) a surface of concave reflectors of small radius, (b) a similar surface of convex reflectors, (c) a similar undulating surface



characteristics of each room throughout the musical spectrum.

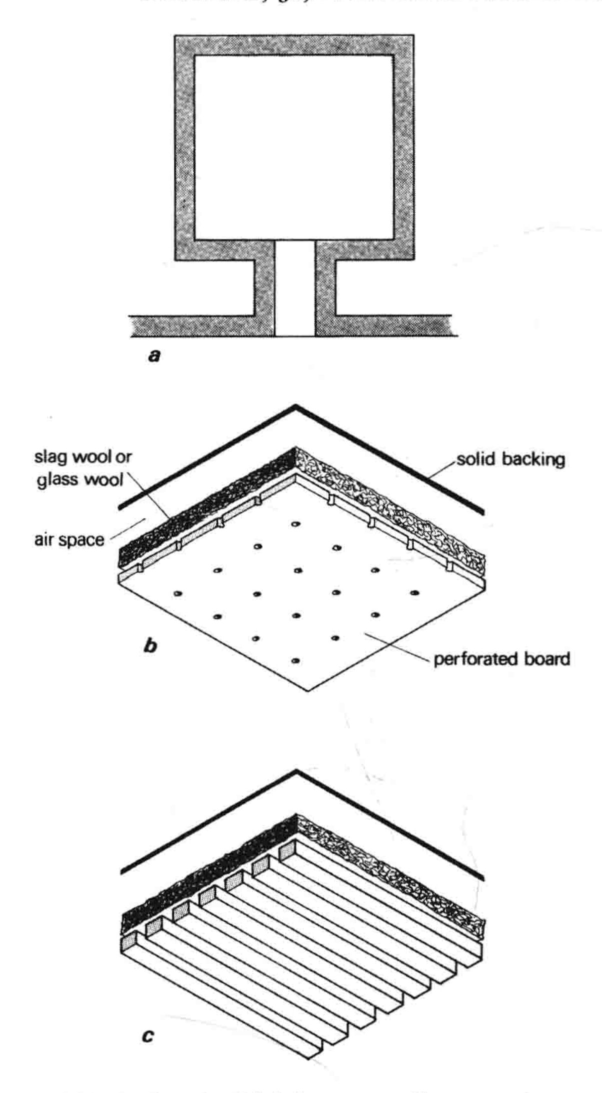
Reverberation is determined by the ability of sounds to bounce around a room for some time, that is, by the number and area of reflecting surfaces. A larger room naturally has sounds travelling for a longer period and the reverberation is more prolonged, though it can be reduced by replacing reflecting surfaces with absorbing ones. A reverberant room offers less clarity but is louder than a non-reverberant room, and vice versa. Analyses have been made of the acoustic characteristics of many concert halls throughout the world that are thought to have 'good' acoustics so that they may be compared and a synthesis of the optimum acoustic characteristics determined. The reverberation characteristics are summed up in the graph in fig.9. Using this it is possible to compare the reverberation of a projected room (calculated in advance by means of a standard formula) with the accepted aggregate norm. However, there are more recent additional criteria for satisfactory acoustics, which are discussed below.

Audience size affects reverberation markedly. In concert and recital halls where most surfaces are reflective, people are often the main absorbers of sound. In an endeavour to reduce the effect of this inevitably variable function, the seating is usually designed to provide a maximum of absorption when empty; it is covered with softly padded fibrous material, and the underneath surfaces perforated. But this is only a partial solution to the problem of varying audience size, for at middle frequencies the absorption of the seat is little more than half the absorption provided when a person is sitting in it.

The absorbing surfaces in a room vary in efficiency with the pitch of the sounds reaching them. High frequencies are normally absorbed by fibrous materials – woollen curtains or carpets, or specially designed surfaces incorporating fibrous materials. Sometimes cheap wood fibre blankets are placed behind perforated surfaces to achieve the same end. Glass fibre or slag wool blankets may also be used in this way, or wood fibre may be pressed into boards or tiles ('acoustic tiles') that are drilled

8. Sound waves, including all direct and reflected sound waves together as they are heard in a room of (a) long and (b) short reverberation time (RT); (c) effect of a long reverberation time (approximately 2·5 seconds) in the blurring of consecutive sounds in the opening bars of Beethoven's Eighth Symphony; (d) increased clarity achieved in the same passage when played in a room with a short reverberation time (approximately 0·75 seconds)

9. Optimum reverberation times of rooms according to volume and use (after Beranek, 1962)



or otherwise roughened to allow sound to penetrate into the material. Low frequencies are absorbed by using the capacity of resonant surface materials to absorb energy in the manner previously described. Resonant surfaces of this type usually depend partly on a trapped air space behind them; in other words, they are rather like sounding boxes, which, though never activated by enough sound energy to produce audible sounds, continue to resonate whenever small amounts of energy impinge on them. The resonating surface is usually wood or some flexible panel material.

An invention applying this resonating principle to absorb low-frequency sounds is the Helmholtz resonator, which uses the principle of sympathetic vibration of an organ pipe or an open bottle. A container, generally made of concrete or fibrous cement, is fixed behind the ceiling or walls, and connected to the room only by a small opening, or 'neck' (fig.10*a*). Helmholtz resonators are more frequency selective than resonant panels, and a series of them are used to correct specific peaks in the low-frequency spectrum. For this purpose holes are often left in some surfaces in a room when it is being built, enabling Helmholtz resonators to be inserted to correct unevenness in the acoustic spectrum, should that be necessary when the room is completed.

The Helmholtz resonator principle has been used in the design of a special panelled surface that combines the advantages of all three types of absorbent discussed above, absorbing sound over a wide frequency range. The Helmholtz resonator panel surface, or perforated resonating panel, has a dense surface material (compressed hardboard or asbestos cement) perforated with holes usually 3 mm in diameter spaced approximately 25 mm apart; to the volume behind it each perforation acts as the neck of a single Helmholtz resonator (fig.10*b*). The frictional resistance of each hole is often increased by gluing hessian across the back of the board. Whether this is provided or not, a layer of fibrous material (slag wool or glass wool, usually 2·5 cm in thickness) behind the holes provides considerable frictional resistance and absorbs resonant vibrations as they are set up in the air space and the panel. An important factor is the size of the air space (i.e. the distance between the panel and the wall behind it); this is approximately 13 cm ideally, and the absorption reduces in efficiency as it is decreased.

Another absorbing surface, which has the advantage of improved appearance though it is less efficient, is the strip panel resonator (fig.10*c*). This is made by fastening narrow strips of wood side by side, leaving small air gaps between them that act as the necks of individual Helmholtz resonators, although these operate only in one dimension of the surface (i.e. at right angles to the direction of the strips). The important dimensions here are those of the width of the strips (not much more than 2·5 cm), the width of the gaps between them, which should be between one fifth and one tenth of the width of the strips, and the depth of the air space, optimally 13 cm as above. Hessian and porous materials are fixed as with perforated resonating panels. The final appearance of the wood strips may be varied considerably; they may be shaped, patterned, painted or varnished without affecting the acoustic absorbent properties of the surface. Also, using the same Helmholtz resonating surface principle, many other absorbent devices are possible. A valuable derivative is the suspended absorbent cone, made of perforated hardboard or fibrous cement, which may be hung in rooms in which the walls and ceiling are difficult to render absorbent. Today, fibrous absorbers of varying thicknesses are widely used.

Besides absorption provided by the walls, floor, ceiling and furnishings of a room, and by the audience, reverberation is also affected by the absorption of the air in the room; in particular, high frequencies are absorbed if they travel considerable distances through air. But the effect of

10. (a) Section through a Helmholtz resonator; (b) axonometric section through a Helmholtz resonator panel; (c) axonometric section through a strip panel resonator

such absorption is only really noticeable in large spaces, especially when the air is dry.

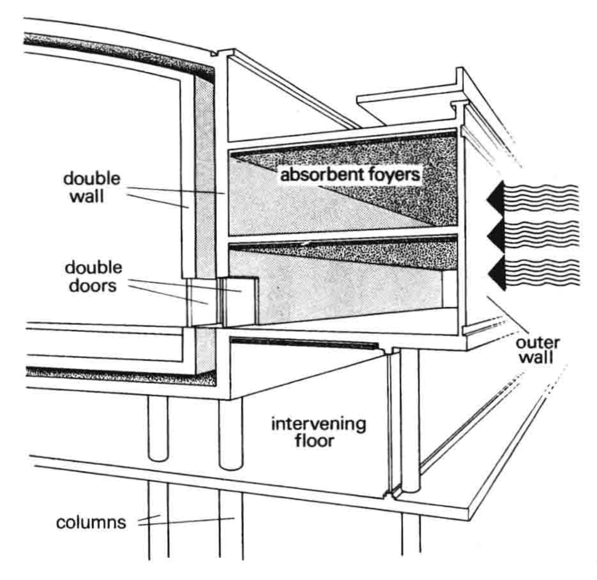
Since an acoustical experience depends not only on the reverberation time, which tends to be fairly uniform throughout a room, but also on the strength, the timing and the direction of arrival of individual reflections, the sound in no two seats, let alone two widely separated areas of an auditorium, is exactly the same. The discerning listener knows this and selects a seat accordingly. Thus 'perfect acoustics in every seat' is unlikely to be achieved, yet halls that are known for their good acoustics tend to be accepted as such wherever people sit.

Achieving uniformity is often most difficult in small rooms. Great pains have to be taken to create the diffuse sound field necessary for good acoustics, by scattering the absorbing surfaces so that they alternate with reflecting surfaces in relatively small areas, and by the provision of broken, concave or convex diffusing surfaces. Two spaces connected to each other by an opening, such as the stage tower volume connected to an auditorium by the proscenium opening, may produce curious acoustical affects. Coupled volumes that are more reverberant than the auditorium have been designed to enhance the acoustics of halls in which adequate reverberation is lacking. On the other hand, openings to spaces that are less reverberant than the auditorium act as absorbers.

Reverberation can be measured in completed rooms by a number of methods using physical recording equipment, or by the subjective tests of trained observers. In models it can be measured reasonably accurately, provided care is taken to duplicate materials and surfaces at a smaller scale, or to make allowances for their omission. The patterns of wave distribution may be studied by the use of wave patterns on the surface of water when model sections of the room are placed in test tanks, or by spectrum photographs of the behaviour of sound inside a model placed in a smoke chamber. These time-tested modelling methods are now being replaced by computer programs that allow the designer to study complex reflection patterns and determine parameters, the calculation of which by hand would take many hours.

In severe cases of lack of reverberation, artificial reverberation may be introduced by distributing loudspeakers around the walls, floors and ceiling of a room, and relaying suitably delayed recorded sounds through them into the room. In the analogue era a specially devised tape recorder was used which allowed delays of a fraction of a second to be achieved between recording and replay. Modern digital audio systems not only create a longer and non-colorating reverberation in dry rooms, but add controlled early reflections to enhance the clarity or spaciousness of the sound using complex digital signal processing systems and numerous microphones and loudspeakers. While the result achieved is often a great improvement if too small a room is being used for orchestral, choral or organ music, its use tends to be confined to recording and broadcasting studios, because of the resistance of performers and audiences to artificial alterations of the natural sound in live performance.

At the Royal Festival Hall, London, unexpected deficiencies were found in the frequency spectrum of sound as a result of excessive absorption at certain frequencies. To correct this, artificial resonance was introduced by placing loudspeakers in resonant cavities closely resembling Helmholtz resonators, designed to resonate at the deficient frequencies, and activated by specially placed microphones. In this way the reverberation at many frequencies was increased without audible artificiality or coloration of sound. The many parameters which create an acoustically pleasing environment are constantly revalued. Concert halls and music rooms in general cannot be rank-ordered on an absolute scale of acoustical merit. Like the art for which they are built, they evoke responses that vary from person to person. Some prefer clarity, others a 'large' sound that can only be had at the expense of clarity. Musicians expect the room to respond, but they also want to hear each other.



Until recently, the main room-acoustics parameter used by acousticians was reverberation time. While reverberation time is still an important consideration, other, newly developed acoustical measures are thought to be at least as important. These include the clarity index C (the ratio of 'early' to 'late' energy, in which the boundary between early and late is 0·08 seconds after the arrival of the direct sound), the loudness descriptor G and a quality called

'spatial impression' which depends on the directional distribution of the energy. There is continuing discussion among acoustic researchers and consultants as to which measurements are most significant. Besides these objective measures, there are some purely subjective parameters to consider. A good example is the reverence for wood among musicians – a notion that finds limited scientific support, but on which musicians assessing room performance still rely heavily, perhaps through analogy with the rich resonances associated with wood in many musical instruments.

4. INSULATION AGAINST NOISE. Satisfactory listening is only possible in a room which is relatively quiet. Music rooms should have noise levels approaching inaudibility. Nevertheless, a very low noise level is not always ideal. In offices, for instance, some noise (typically that of the air-conditioning system) is often felt to be preferable to no noise, because in masking other unwanted sounds, such as voices from the next room, the sound contributes to a sense of acoustical privacy. For optimum acoustics in a room for listening to music, it is essential to achieve the lowest possible noise level. As well as quietening the ventilation system, this means insulating the room against two quite different types of noise. The fist is noise reaching the room through the air, whether from inside or outside the building, usually called 'air-borne sound'. Ideally, external sound should be eliminated, but this is often both difficult and expensive, especially as it involves sealing windows and doors, which in turn necessitates air-conditioning the room. The second is sound generated in the solid material of the building, or in the ground or solid material of neighbouring buildings, known as 'impact sound'. Of these two, the latter is by far the more difficult to cope with, and treatment of impact sound normally deals with many of the problems of air-borne noise.

Impact sound ranges from the noise of water falling in drainage pipes to slamming doors, footsteps, and the vibration of passing trains or buses. Internally all the floors of the building are usually designed to 'float' on insulating pads, so that impact noises are not carried into the structure. Alternatively, the floor material itself becomes the insulator, being soft and resilient, and thick enough to absorb vibrations; materials like thick cork or pile carpeting can be used in this way. Slamming doors and plumbing and drainage noises are either eliminated by careful design, or kept from the structure by thorough insulation. External vibration travelling through the ground and then up into the building through the foundations is much more difficult to deal with. Thick fibrous or rubber pads (when compressed remaining 15 cm thick, or even thicker) may be placed under the foundations to provide some improvement. In the case of the Royal Festival Hall, the whole auditorium was raised three storeys above the ground on tall slender columns that are thought to attenuate some of the solid-borne vibrations within their height (fig.11).

Air-borne noise ranges from sounds made by telephones and instruments playing in other parts of the building to chiming clocks, traffic noises and aeroplanes. In order to insulate the auditorium from all these noises it is sometimes found best to surround it with two completely separate skins of construction supported on separate foundations at ground level (see fig.11); it is thus difficult for any vibrations set up in the outer skin to pass into the inner skin, which serves as the envelope of the room. This insulation is effective only if the gap between the two skins is at least 30 cm, and its effectiveness is sometimes slightly improved by introducing into the gap a fibrous insulating material, such as fibreglass blanket. The points of weakness in such a design are clearly the windows and doors; windows may be sealed and double-glazed with a large gap between the panes (preferably no less than 10 cm), but this is not possible for doors, so they should be made airtight using gaskets, and a 'sound trap' in the form of a small sound-absorbent lobby must be provided at all points of access. As a final precaution the whole of the auditorium volume is surrounded by a blanket of other rooms and foyers, all treated with absorbent surfaces so that sounds passing through them are absorbed before reaching the auditorium, as in fig.11. Even with all these precautions, complete sound insulation is never achieved, and the principle of masking referred to above has to be relied on to disguise some external noise and air-conditioning hum. A large audience usually provides a natural masking level of between 20 and 30 decibels.

11. Section through the Royal Festival Hall, London, showing the methods of sound insulation (after Parkin and Humphreys, 1958)

5. RADIO AND TELEVISION STUDIOS. The acoustics of radio and television studios follow the same general principles as normal room acoustics, with more rigid standards necessitated by: the special problems of recording and transmitting sounds via microphones; the double reverberation problem introduced by having one reverberation in the room of the broadcast or recording and another in the receiving room; and the outside noise, which has an even more serious effect on broadcast than on live sound.

Reverberation becomes a major concern in studio acoustics because too much of it reduces the definition and clarity of broadcast sound. On the other hand, elimination of reverberation would weaken the 'character' of the sound, and is, of course, inconceivable for the performance of music in ensemble. Of particular importance is the variation of acoustic behaviour in different parts of the room, which must be avoided if several microphones are to be used at the same time. For these

reasons the reverberation is reduced but not eliminated, and great pains are taken to achieve even diffusion of sound.

The commonest type of studio in a radio broadcasting centre is the small announcing studio with a listening room alongside equipped for control, editing or playback. Of domestic room size, such studios provide spoken programmes of all kinds, and from them drama and music programmes are announced and monitored. A broadcasting centre has larger studios for drama, as well as a range of studios of different sizes for the performance of music; the largest are comparable in size with concert halls.

Stereophonic transmission does not greatly alter the acoustic requirements of studios, and as a rule the same studios are used, with different microphone placings. However, noise interference must be guarded against even more stringently, and precautions taken to avoid strong reflections altering the apparent position of a sound source; the latter usually involves increasing the areas of absorption at microphone level.

The design of small studios is affected by their tendency to add colorations to the sound; these disappear if the studio is made larger. A great deal has been learnt about the acoustic correction of this and other defects in small rooms (see Gilford, 1972). Briefly, this is done in two ways: by improving diffusion, ensuring that all walls, the floor and the ceiling have approximately the same absorption; and by careful measurement of the dimensions of a rectangular room so that prominent standing waves are separated from each other by intervals of 20 Hz or more.

Since all the available evidence suggests that the radio audience prefers music with the same balance and character as under live conditions, experiments with microphone placing have gradually ceased in favour of a placing that duplicates the ears of a single listener in the body of a reasonably sized concert room, and at a distance that produces a good blend and a natural reverberation. It has been found that the ratio of intensity of reverberant sound to direct sound should be approximately 5:8, and that the absence of an audience can be compensated for by moving the microphone closer to the source than it would be under normal conditions. With these assumptions, broadcast studios for music generally have the same design problems and solutions as concert halls. Care has to be taken to achieve adequate diffusion by using irregularities to scatter the wavefronts during reflection, and to avoid masking the bass by allowing too long a bass reverberation relative to middle and upper frequency reverberation. Predominant bass is sometimes avoided by placing special absorbers near loud brass and percussion instruments. For live audiences, experience suggests that the early energy, which includes the direct sound, should be a decibel or two lower than the late (reverberant) sound.

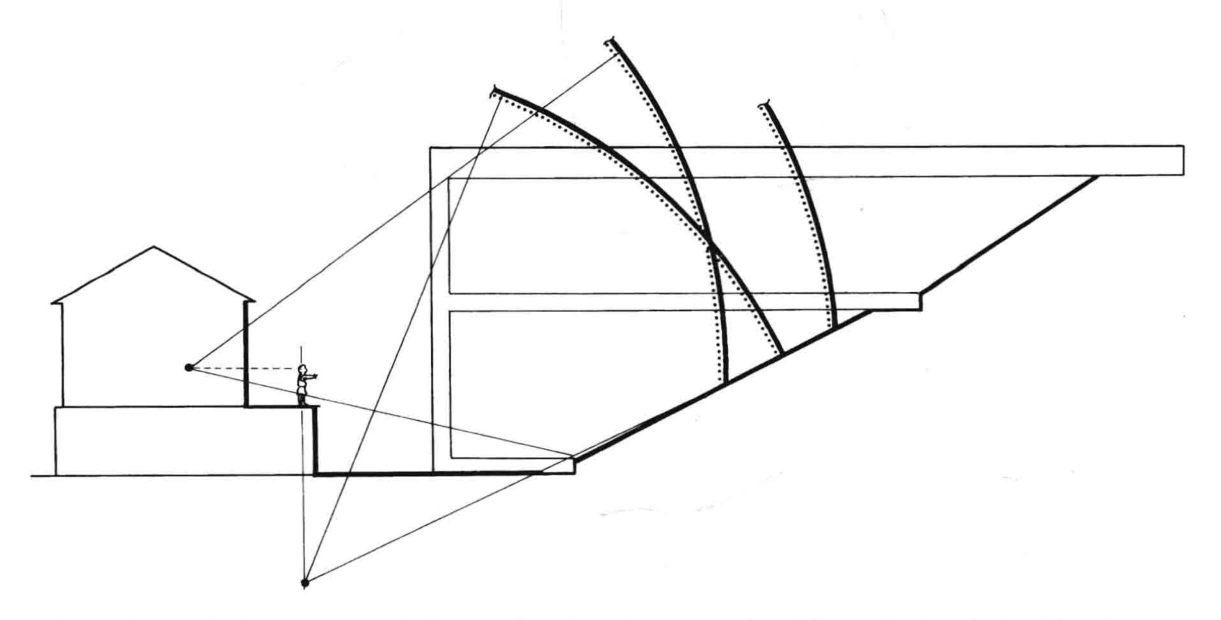
6. Introduction to the history of acoustics. Although a good deal was known about the propagation of sounds and the acoustics of musical instruments from ancient Greek times onwards, the acoustics of rooms was imperfectly understood until well into the 20th century, and many traditional concepts and remedies are now known to have been false. Acoustic designs were empirical, successful in the evolution of efficient shapes but permitting the growth of a good deal of mystique where 'resonance' and 'absorption' were concerned. A particular misconception was the nature of resonance in room acoustics; it was thought that the principle of the sounding box of a lute or lyre could be transferred to architectural design, not taking into account the large amounts of mechanical energy needed if such 'resonant chambers' were to operate as amplifiers and enrichers of sound, energy far in excess of any that could be transmitted by the travel of sound through air. The result was that in many cases the 'resonant chambers' acted instead as absorbers of lower-frequency sounds, quite the opposite of the intended function. Equally fallacious were many of the attempts to absorb sound; it was thought by some designers until quite recently that any material soft to the touch would absorb sound energy, whereas many resilient materials are in fact poor absorbers (e.g. cork and rubber). Wires suspended around a room above head height were used to absorb excess sound energy, although they are now known to have had negligible effect because of their small cross-sectional area. The properties of wood panelling and large volumes of air as absorbers of sound energy were not generally known. Viewed with hindsight, therefore, the acoustics of the rooms for which much great music and opera was written must be expected to vary a great deal from what would now be considered satisfactory conditions. Nevertheless, the acoustics in those rooms that were considered excellent in earlier periods often approximate closely to those that would now be chosen for the performance of the same music. This is becoming clearer as famous churches and music rooms undergo thorough testing with recently developed techniques.

7. Classical times. Before classical times there are only the vaguest references to buildings designed to allow music or speech to be clearly heard (e.g. royal courtyards for audiences or theatre in India were to be 'built so that each sound [*svara*] and letter [*aksara*] should be audible', *Manasara*, xxxiv, 506).

The basis of the modern science of acoustics was formulated in Greece by the Pythagoreans in the 6th century BCE; Aristotle and his followers, the Peripatetics, continued its development as an empirical science. Aristoxenus of Tarentum (4th century BCE), whom Horace called *musicus idemque philosophus*, examined the study of musical sounds from a physical–acoustical point of view, going beyond the origin and propagation of sound to consider the problems of perception by the human ear. The work concerning acoustics of Vitruvius (1st century BCE), the Roman writer on architecture, is largely based on Aristoxenus's writings (see below).

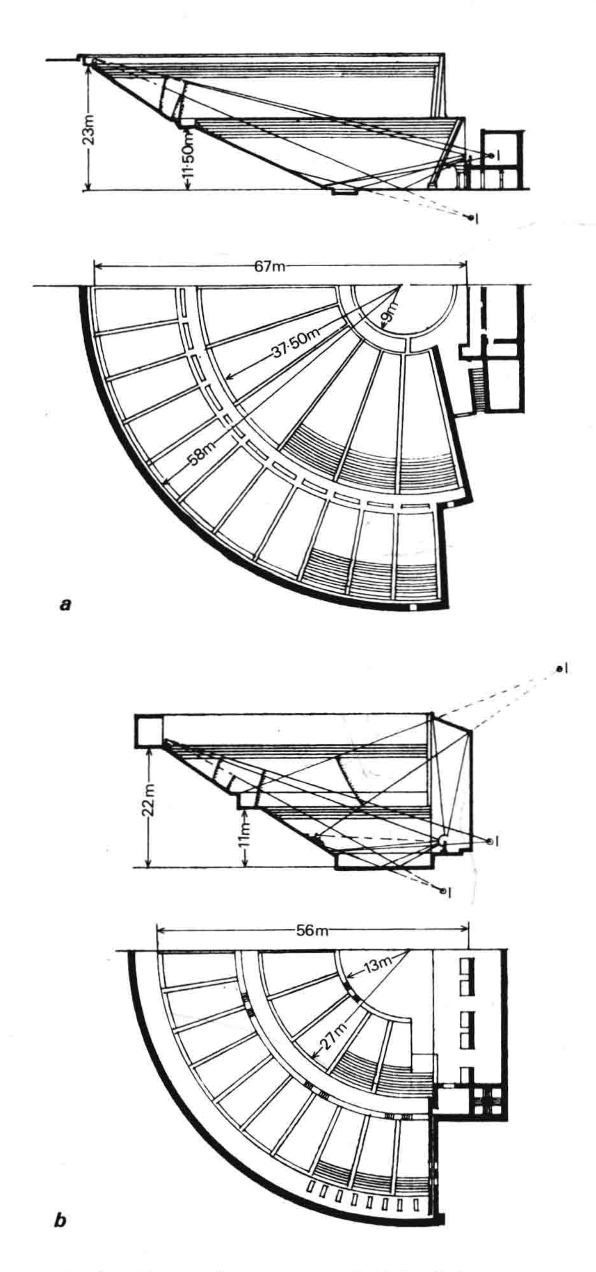
Greater understanding of acoustics at the beginning of the 5th century BCEis exemplifed in the design of the first of the great Greek theatres, that of Dionysos at Athens (*c*498 BCE), and its successor, the theatre at Syracuse (475 BCE). The seats were arranged in curved rows round the circular orchestra, which provided a large horizontal reflecting surface to transmit sounds made by the chorus and by actors on the raised platform that served as a stage behind. Further high-frequency reflections were provided by the scenes, painted on skins, which are thought to have served as backdrop and wings to the stage. Because of the shape of the seating the furthest distance between the stage and the back row was only about 30 m. The propagation of sound to the audience was aided by the megaphone effect of the masks worn by the actors; besides providing facial expressions of nobility, anger or mirth,

these masks improved the mechanical coupling between the vibrations within the actors' heads and the surrounding air, thus enabling more of the available vocal energy to emerge in the form of sound waves and directing it towards the audience. A notable feature of later masks was the large opening of the mouth, which concealed megaphone-shaped cavities within the lips. Cassiodorus (51st epistle) remarked that the actors' voices were so strengthened by 'concavities' that it was difficult to believe they could issue from the chest of a man. Acoustical devices were used in the design of the theatre to enhance vocal effects. For example, the space under the wooden stage platform, open to the audience and partly enclosed by removable wooden panels, appears to have been intended to act as a kind of resonant chamber. A similar but smaller volume in the middle of the orchestra housed an altar that was raised for thymelic spectacles but also played an acoustical role when the chorus chose to call down into it. It is thought that the narrowness of the stage was necessary to prevent the actors stepping so far back that the orchestra floor ceased to function as the main reflector, or so far forward that the backdrop lost its reinforcing effect on the higher frequencies (fig.12).



Later developments in the shape of theatres are all thought to have been due to attempts at improving the acoustics. In the second half of the 5th century BCE, notably at Catania and Magnesia, theatres became more exaggerated in shape, with side walls converging not to the orchestra but to the stage. In the 4th century BCE this trend was reversed with the erection of the great semicircular theatre at Epidaurus (fig.13*a*). The increased length of the seating area brought more of the audience close to the stage and thus improved the acoustics, especially as less of the sound could escape at the sides of the orchestra, and consequently more was retained in the volume of the auditorium. On the other hand, the direction in which the actors were facing became of greater importance, and the height of the stage building was increased and made of stone to provide more reflection from behind and improve the distribution of the sound. In the following centuries the older theatres were enlarged, both by extending the seating at the sides and by building more seats beyond the back rows to emulate and surpass Epidaurus. Eventually the distance from the stage to the rear seats became 70 m at Syracuse and as much as 100 m at Athens. The stages had to be increased in height and further framed to contain the sound.

In the late Hellenistic drama the chorus assumed a reduced role, while action and scenery grew in importance; the stage was enlarged and began to encroach on the orchestra, so that it no longer formed a complete circle. This was the model for the Roman theatre (fig.13*b*), in which the stage building was for the first time completely joined to the seating. Thus the whole building became one compact form, with a very high *skēnē* carrying a large slanting roof over the stage, which deflected sound towards the audience. The stage could now become much deeper, since the reflecting properties of the back wall were not of such importance for the clarity of speech. Similarly, a gallery was built over the back seats to deflect sound back to them. There were even examples of parabolic ceiling reflectors, apparently for directing the sound more accurately back into the auditorium (e.g. the theatre at Orange, 1st century CE).



In *De architectura* (1st century BCE) Vitruvius discussed both the fundamental principles of acoustics and their application to the design of theatres (bk v, chaps. 3–8). In chapter 5 he referred for the first time to acoustic vases (*echea*):

Now in accordance with these researches bronze vases should be made in mathematical proportions [to each other], taking into account the size of the theatre: and they should be designed so that when they are excited they sound a series of notes at intervals of a 4th, 5th, and so on up to two octaves.

Then cubicles should be built among the auditorium seats on the basis of music theory, and the vases placed in them in such a way that they are not in contact with any of the upright stonework, and have a free space around and above; they should he placed upside-down,

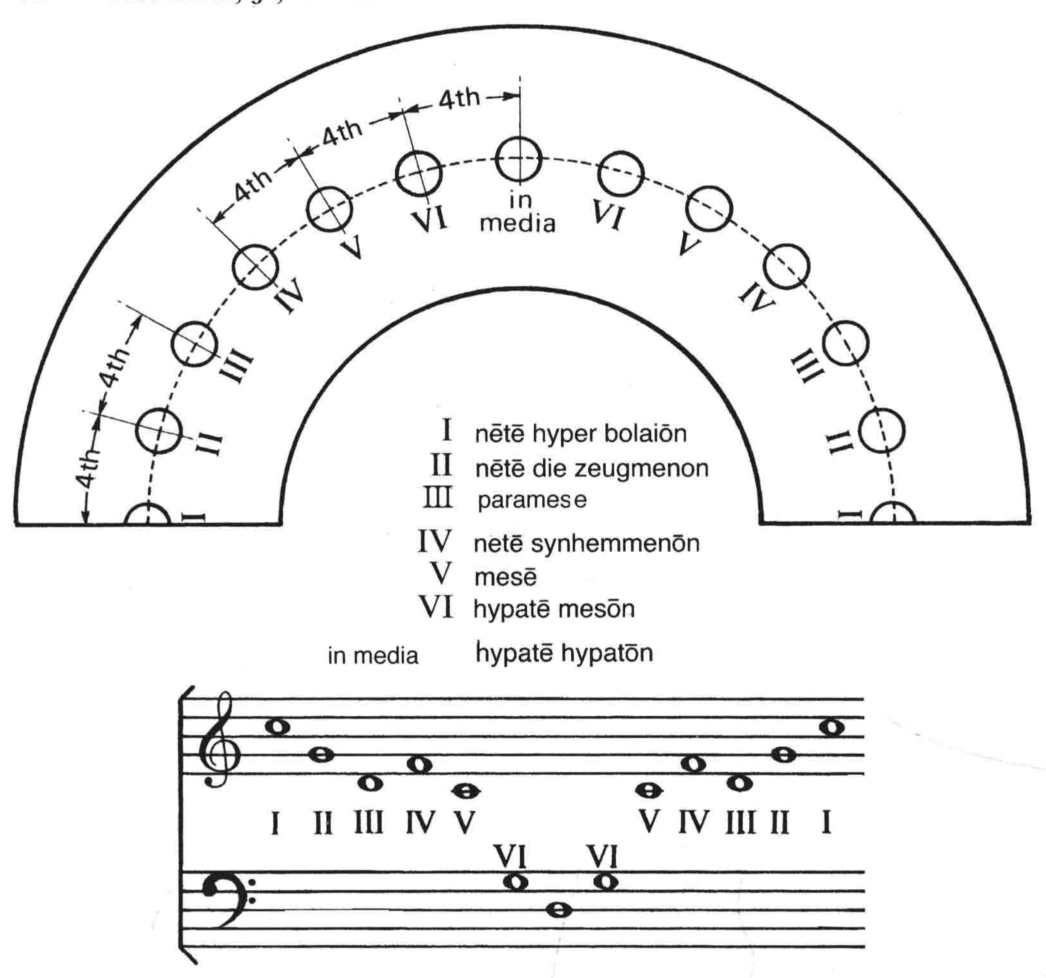
12. Section through a Greek theatre showing the direct wavefront of sound, and the wavefronts following close behind reflected from the orchestra floor and the skēnē (after Bagenal and Wood, 1931)

13. Greek and Roman theatres compared: (a) Greek theatre at Epidaurus, c340 BCE*; (b) Roman theatre at Aspendos, late 2nd century* CE *(after Bagenal and Wood, 1931)*

with wedges not less than [15 cm] high under them, on the side facing the stage. And in line with these cubicles openings should be left [in] the slabs of the lower rows, [62 cm] wide and [15 cm] deep.

The method of marking out the positions in which the jars are to be placed is as follows. If the theatre is not very large, a horizontal line should be marked out, halfway up the slope [of the auditorium], and 13 vaulted cubicles built, with 12 equal intervals between them: then the sounding jars as described above are placed in them [fig.14].

So by this arrangement, the voice, radiating from the stage as from a centre, spreads itself around [the auditorium]: and, by exciting resonance in particular vases, produces an increased clarity and a series of notes which harmonize with itself.



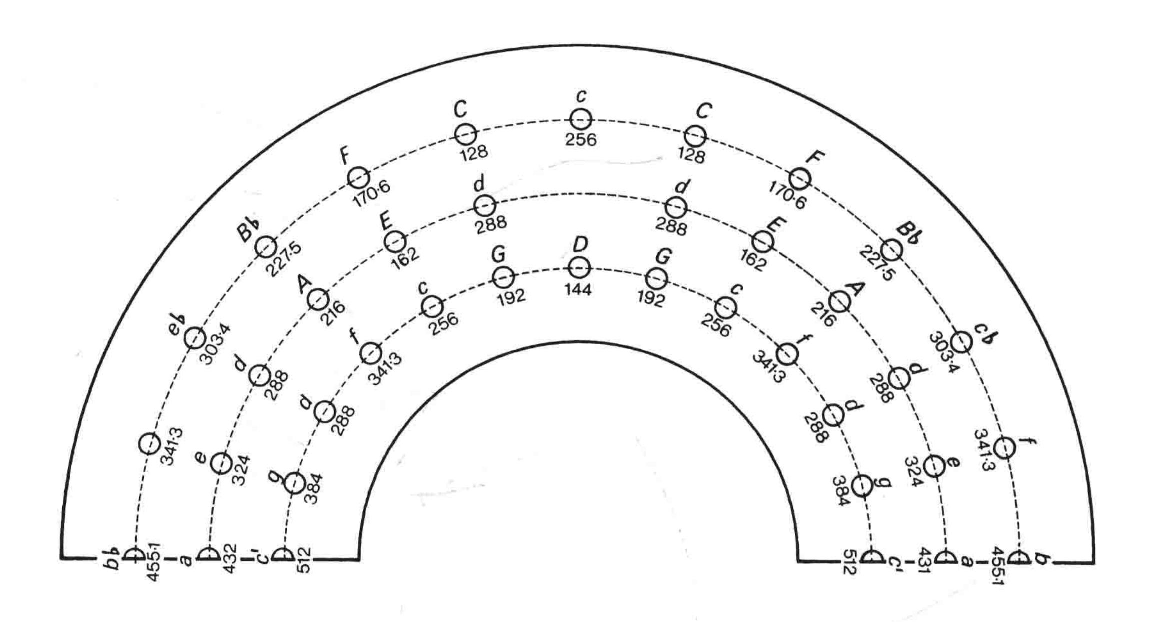
Chapter 5 elucidates how such a system of acoustic vases might be extended in a larger theatre, with three horizontal rows of cubicles, one for the *harmonia*, a second for the chromatic and a third for the diatonic (fig.15).

The term for 'clarity', *claritas*, is probably an equivalent for the Greek term *lamprotēs*, defined by Aristotle in *De audibilibus*, implying, besides distinctness, loudness and purity; and the context almost certainly implies a singing rather than a speaking voice. The function of the vases would have been to make some sounds louder than others, and to make them purer by stressing their fundamentals and suppressing their harmonics or overtones. The 'series of notes which harmonize' with the voice seems to refer to the fact that each vase would resonate and then reradiate sound after the voice had ceased singing its fundamental note, so that if the concordant scale were sung, a number of the vases might be heard sounding together. In this way a kind of artificial reverberation time (estimated as 0·2–0·5 seconds) of particular quality would be produced in an open-air theatre that otherwise had none.

Although some 20th-century scientists (e.g. Knudsen) have dismissed the efficacy of such acoustic vases, others (e.g. Brüel) have attempted to duplicate their behaviour by direct experiment. As Vitruvius's original diagrams illustrating the size and shape of the bronze vases were lost in late antiquity, these experimental vases were made in a wine-beaker shape of hard-burnt baked clay and with wider mouths than would be necessary to absorb low frequencies. The experiments showed that they enhanced reverberation at the resonant frequency, although they were not tested in an open-air theatre. There is a clear need here for further practical research. That resonance can be used to augment reverberation is confirmed by acoustical theory (see Gilford, 1972, p.155) although the amount of augmentation is limited. No remains of bronze resonators from antiquity have survived, which is scarcely surprising, since throughout the Middle Ages and the Renaissance ancient bronze was melted down for metal.

12 pairs of compartments corresponding to those described by Vitruvius have been found in the supporting wall of the uppermost row of seats of the Greek theatre at Aizani in Phrygia, eight in the podium of the Roman theatre at Nicopolis, and seven in the Greek theatre at Scythopolis in Syria. There are 20 niches in the upper part of the Greek theatre of Gerasa in Jordan; at Ierapetra and Gortyn in Crete the theatres have 13 niches each; and at Lyttos, also in Crete, there are three rows of 13 niches each (fig.16; Belli, 1854, Müller, 1886).

Vitruvius was at some pains to explain why acoustic vases were not used in the theatres of Rome built in his day. He said it was because of their wooden construction. Singers who wished to sound a loud note could direct their voices towards the scene doors (*valvae*) and 'receive help' from them; when the theatre was to be built of solid materials, such as stone or concrete, which do not resonate, then it should be equipped with the sounding jars described. According to Vitruvius there were many examples of theatres that used them in Greek cities and in the provincial towns. The theatre of Corinth was cited as a classic example; when Lucius Mummius sacked the town (146 BCE) he carried off the bronze jars as part of his spoil, and dedicated them at the temple of Luna in Rome, where Vitruvius had seen three of them. Finally, Vitruvius mentioned that 'many clever architects who have built theatres in small cities, from the want of others have made use of earthen vessels, yielding the proper tones, and have introduced them with considerable advantage'.



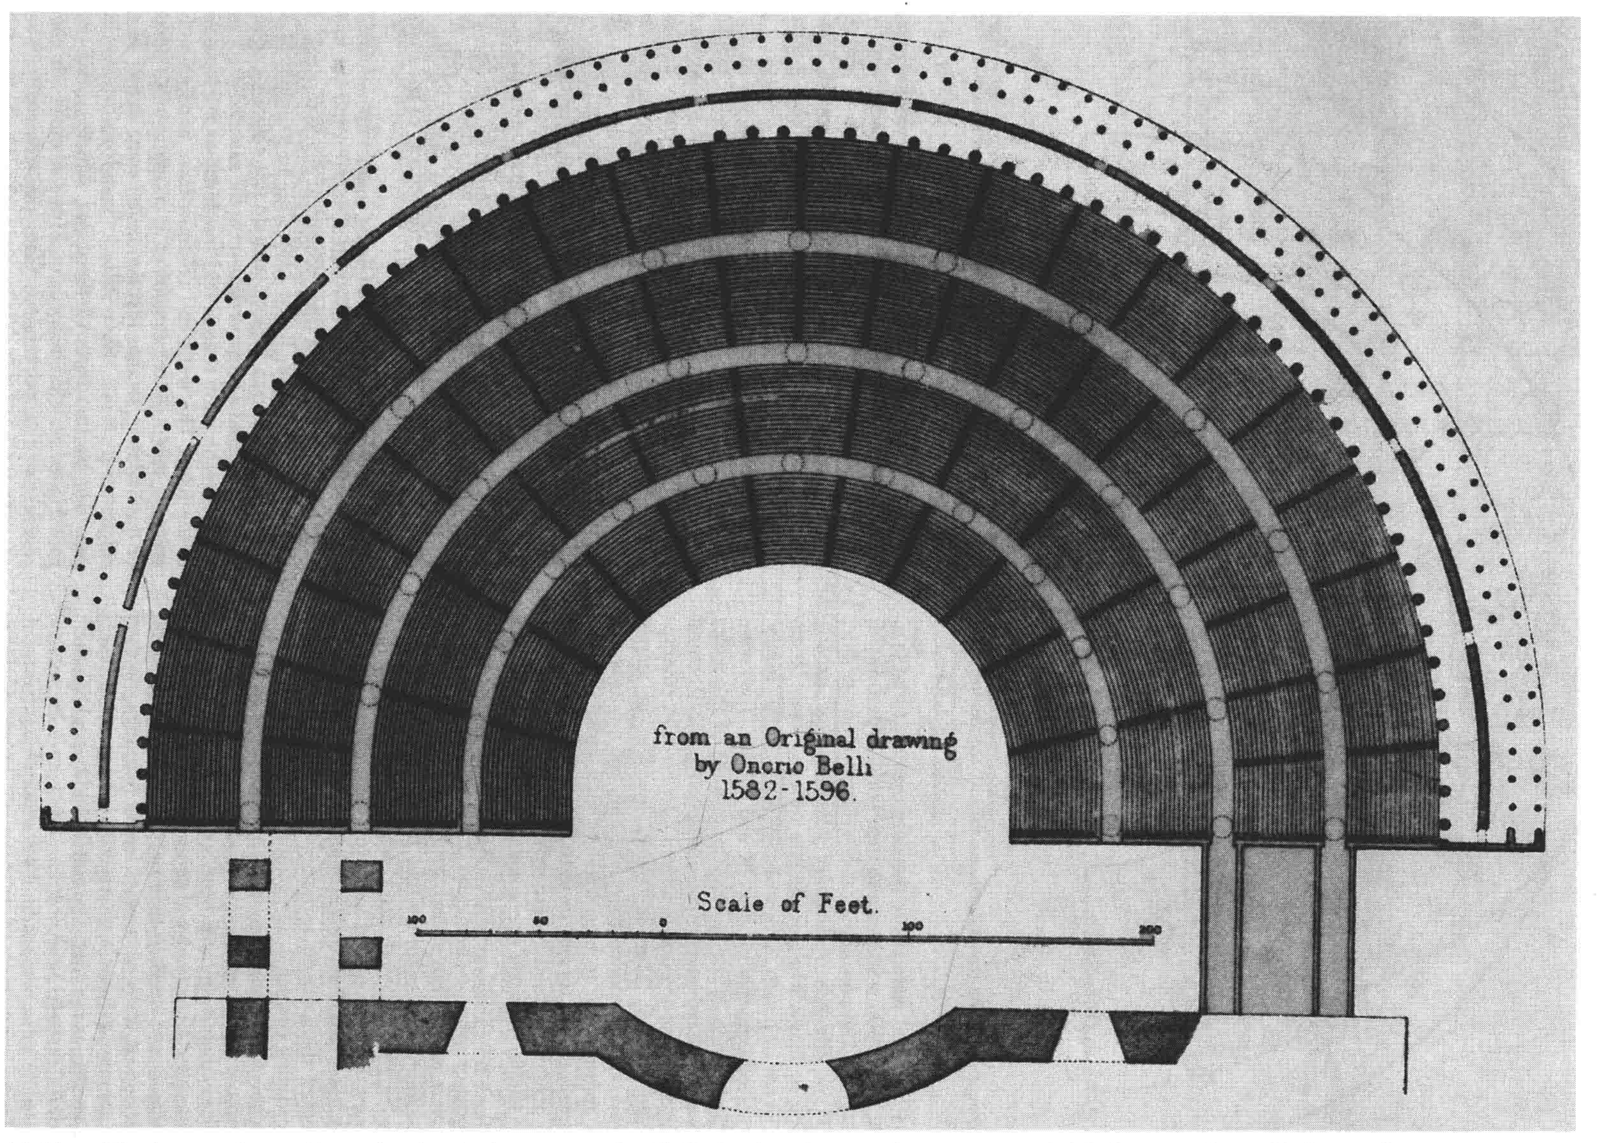
14. Plan of a Roman theatre, according to Vitruvius, showing the disposition of acoustic vases he recommended, and with pitches (with Greek names) to which they should be tuned (after Landels, 1967)

Besides bringing a reverberant response into the Greek theatre, it is possible that the acoustic jars helped an unaccompanied singer to keep to proper pitch for long periods. The vases resonating in various parts of the auditorium may also have served to disguise inferior musicianship by giving emphasis to musically important pitches. At the beginning of some early editions of Terence there is a short treatise in which the commentator, whose name is unknown, spoke of brass vases. He assigned to them the same use as Vitruvius, and then added:

> I hear that there exists to this day something very like them, in some ancient temples, which have been preserved in their integrity down to our time. At the lower and upper parts of the roof are to be seen holes distributed on both sides, and corresponding diametrically with each other. In these holes are set vases of brass, the opening of which is smaller than the body, and is turned outwards, without projecting. The voices of those who sing in the temple, reverberating in these vases, grow more distinct and harmonious.

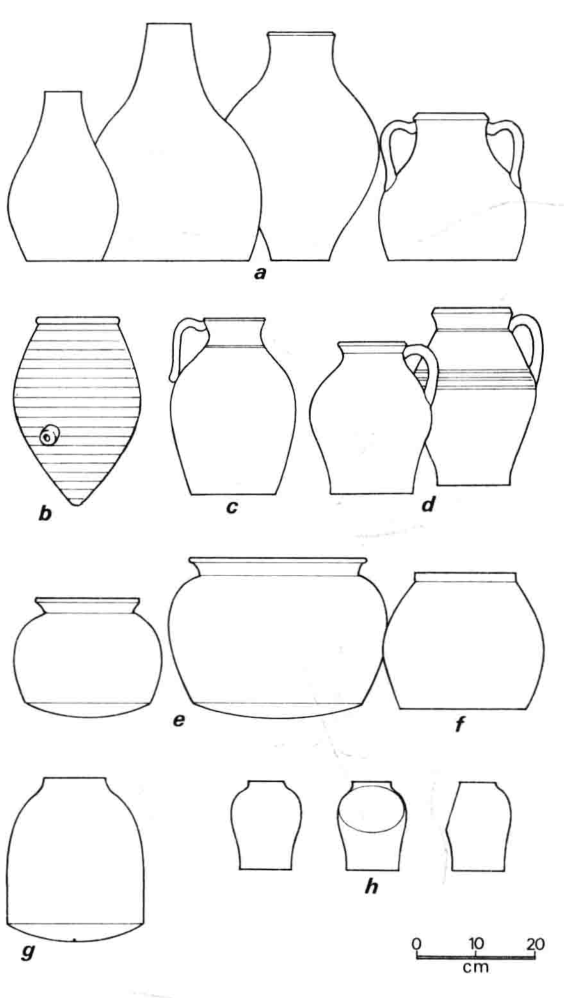
8. MEDIEVAL TIMES. With medieval acoustics one can turn from speculation about acoustic vases to the consideration of their tangible effects, for many examples survive in church buildings throughout Europe, from Russia to Britain (see Harrison, 1967–8); terms for them exist in most European languages. Although little modern research has been done on their effectiveness it appears that earthenware jars were used both as absorbers (see Brüel, 1947) and as resonators.

The methods of use of medieval acoustic jars may be roughly summarized as follows: (*a*) Areas of spaced jars in two or three rows inserted in the stone walls of the interior above ground level, usually about 2·5 m from the floor, with their mouths opening inwards to the nave or choir (e.g. Fairwell, near Lichfield; and St Clement's, Sandwich, Kent). According to Viollet le Duc, in his *Dictionnaire*, many examples in France are placed near angles in the walls. (*b*) A single or double row of jars inserted in the stone walls just below the ceiling, trusses or vault, often extending down the full length of both side walls (e.g. St Nicholas, Leeds, near Maidstone, Kent – 48 or 52 vases). (*c*) Jars inserted at regular intervals across the stone barrel vaulting of the choir (e.g. St Martin, Angers; Bjeresjoe, Sweden – about 45 in five rows; and Montréale, France, according to Viollet le Duc). (*d*) Jars inserted in the sleeper walls below the choir stalls or in pits or cavities (e.g. St Peter Mancroft, Norwich – 40 jars; Fountains Abbey, York – seven jars). These are often separated from the volume of the church by the wooden flooring (e.g. St Peter Permountergate, Norwich – 16 jars) but in other cases a gap is left so that the jars are acoustically coupled to the air in the church (Church of the Cordeliers, Amiens).



15. Arrangement of the acoustic vases in a large Greek theatre according to Vitruvius, with their fundamental resonances in Hz next to their pitches

The jars used were either specially manufactured (e.g. Leeds, Kent – about 50 jars with their bottoms perforated; and Luppitt, Devon – about six jars flattened on one side; fig.17), or else jars of ordinary domestic type, greatly varying in shape. Most of the jars were between 20 cm and 30 cm in length, and probably resonated at fundamental frequencies of between 90 and 350 Hz. They were 13–15 cm wide at the mouth; the mouths of the wider jars were often reduced in aperture by being placed behind perforated stone or wooden screens (Denford, Northamptonshire; and St Mary-le-Tower, Ipswich) or partly plugged with a wooden block (fig.18), but a number of vases appear never to have had any such constriction of the opening. The former seem to have been intended to act as absorbing resonators to reduce echoes in corners or in the vaults, the latter as resonators to enhance or assist sound. Some of the unconstricted vases in Scandinavia had peat or ashes in them, and it has been thought that they were intended to absorb sound by damping instead of re-radiating resonant sounds. It should be noted that many of the medieval vases were cemented into the masonry, and not placed loose in an air cavity like the Greek vases described by Vitruvius. This would not have prevented them acting as resonators, but it may have reduced their efficacy.

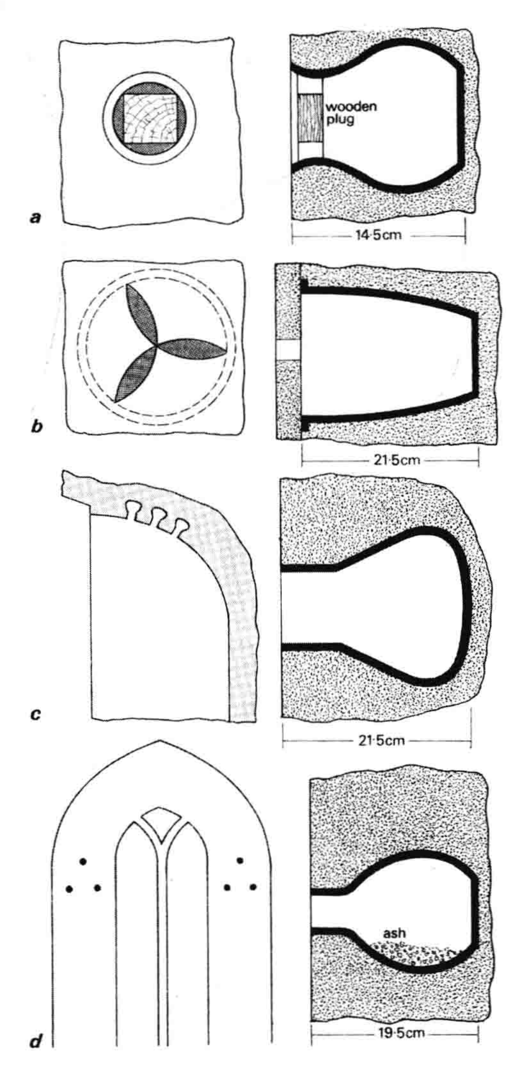


Archaeologists have frequently been sceptical about the function of these vases in spite of the existence of records testifying that they have been known as 'acoustic' or 'sound vases' since medieval times; they have often been considered relic vases, or their purpose was thought to be the drying of walls to protect fresco paintings, or they were assumed to have some structural purpose. However, such sources as the Metz Chronicle (1432) establish their function clearly: 'il fit et ordonnoit de mettre les pots au cuer de l'église et pensant qu'il y fesoit milleur chanter et que il ly resonneroit plus fort'. Acoustic jars are therefore a valuable indication of the attitude of medieval designers to acoustics. At least some of the vases were clearly intended to add resonance and amplification to speech and music, although the Chronicler commented, after recording the Metz example: 'je ne seay si on chante miez que on ne fasoit'.

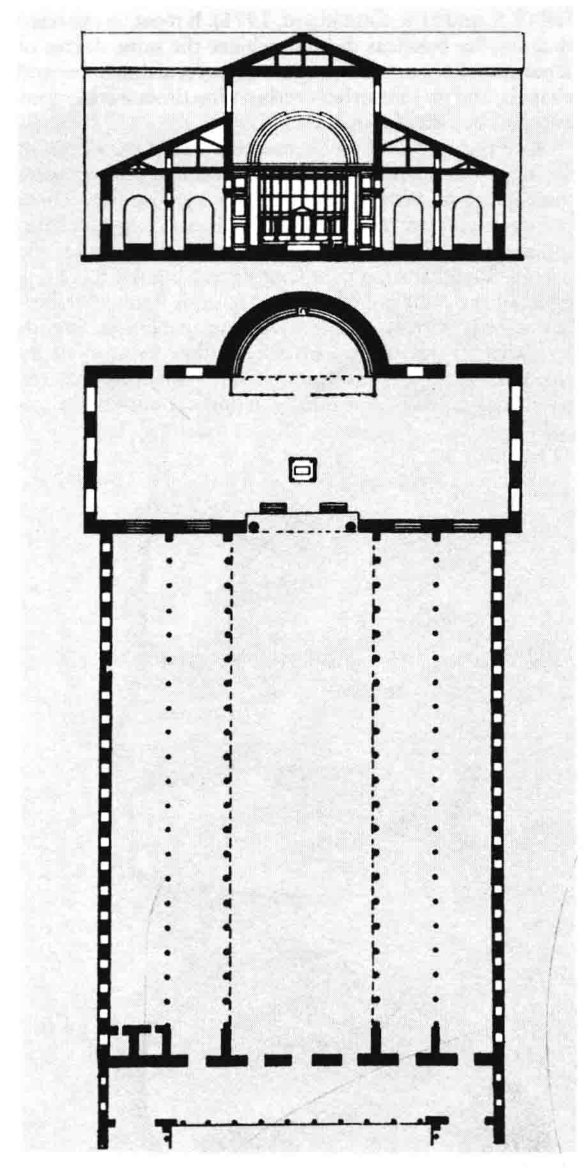
Vitruvius was certainly the source from which the medieval use of these vases originated. Harrison cited 12 copies of his works known to have existed in England during the Middle Ages, and there were many copies available elsewhere in Europe. They appear to have been used throughout the medieval period and up to the 17th century. In a satire by Claude Pithoys, published in 1662 at Saint Léger, Luxembourg, he reproved the clergy for negligence of their duties: 'Of 50 singing men that the public maintain in such a house, there are sometimes not more than six present at the service; the choirs are so fitted with jars in the vaults and in the walls that six voices there make as much noise as 40 elsewhere'. Little scientific research has been done on the actual effects of the vases in these churches.

The reverberation times of some important medieval churches have been carefully tested, and this has led to a better understanding of their acoustical characteristics. S Paolo fuori le Mura, Rome (386 CE), an example of a large early Christian basilica with double aisles, an open trussed roof and a transverse *bema* at the east end (fig.19), has a reverberation time at mid-frequency of 9·1 seconds in the nave. The walls and columns have hard smooth surfaces, leading to close acoustical coupling of all parts of the building, so that it functions to some extent as a single air volume. Nevertheless, some absorption is provided by the depth of the aisles, which scatter the sound so that it does not return to the nave; for this reason there is no echoing from the side walls. The acoustic result is a sustained sound in the church, but also

16. Plan of the theatre at Lyttos, Crete, showing the three rows each with 13 chambers for acoustic vases, as recorded by Onorio Belli, c1580 (from Hills, 1882)



17. Examples of acoustic vases from medieval churches: (a) Youghal, Ireland; (b) Saint Laurent-en-Caux; (c) Fry; (d) St Peter Permountergate, Norwich; (e) St Olave's, Chichester; (f) Denford; (g) Leeds, Kent; (h) Luppitt (after Hills, 1882)



a relatively clear one, with no confusion, echo or fluctuation in intensity. The low-frequency reverberation is more pronounced than reverberation at other frequencies, though the decrease to the higher-pitched sounds is a gradual one (R.S. and H.K. Shankland, 1971). It is likely that in its original form, before its rebuilding after a fire, the diffusion caused by ornament and fluting would have improved the acoustics even further.

S Paolo is an exceptionally large church subdivided by screens of columns, and some of its special acoustical quality is due to its size. Other large basilicas with similar screens that have been tested, such as S Maria Maggiore, Rome (352 CE), have been found to have even better acoustics, with shorter reverberation times, providing almost ideal listening conditions for choral and organ music when full. S Maria Maggiore has only single aisles, but there are chapels beyond the side walls, and a chancel arch separating the apse from the nave. The large volume is therefore broken up into a number of separate volumes coupled together, with the surrounding volumes absorbing sounds made in the nave. The measured reverberation times are 4·9 seconds when empty and 2·5 seconds when full (R.S. and H.K. Shankland, 1971). It must be expected that smaller basilicas did not achieve the same degree of separation between the volumes of nave, aisles, *bema* and chapels, and therefore the reverberation times were longer, and the acoustics less satisfactory.

With the arrival of the Romanesque style the height of the nave was increased, and stone vaulted ceilings were introduced to protect the interiors against fire. These ceilings increased reflections and reduced diffusion, leading to a significant change in acoustic quality; not merely was the reverberation time lengthened, but the focussing effect of the ceilings brought fluctuations in the reverberant sound, with a resultant decline in clarity. Sounds appeared to pile on top of one another to produce an effect of surging confusion. Gothic cathedrals suffered from the same kind of unruly acoustics, but conditions

were often better in large buildings, where the great height of the ceilings reduced the interference of sounds reflected from them. Tests in Durham, Canterbury, Salisbury and York cathedrals have shown that they have remarkably similar acoustics, the reverberation times falling from an average of 8 seconds at low frequencies to 5·5 seconds at mid-frequencies, and continuing to decline as high frequencies are reached. All have volumes of more than 30,000 m³; in such conditions the presence or absence of the congregation has little effect on the acoustic quality (Purkis, 1963). Furthermore, the acoustics of very large volumes are often more satisfactory because there is seldom enough energy produced in them to excite the room.

There seems no doubt that long reverberation times were thought to enhance both music and prayer. Writing in 1535, Francesco Giorgi of Venice recommended that a new church should 'have all the chapels and the choir vaulted, because the word or song of the priest echoes better from the vault than it would from rafters'. This was still thought to be true for singing in the 17th century (the music of Heinrich Schütz, for example, was carefully written to exploit the long reverberation of the Kapelle in Dresden). But an increased concern with clarity of speech during the sermon led architects as early as the 13th century to omit aisles and transepts altogether, and design churches with single volumes (e.g. S Francesco, Assisi; S Caterina, Barcelona). Even so, it was found that the reverberation continued to be pronounced until the vaults had been lowered and the ceiling flattened. The final improvement was replacing the stone ceiling with a wooden one, which absorbed the predominant low-frequency reverberation, and covering the surface of the ceiling with elaborate decoration of small ribs or coffering, which greatly reduced the fluctuation of sound by increasing uniform diffusion. Giorgi mentioned both these effects in making his recommendations of 1535. 'In the nave of the church, where there will be sermons, I recommend a ceiling (so that the voice of the preacher may not escape nor re-echo from the vaults). I should like to have it coffered with as many squares as possible ... they will be very convenient for preaching: this the experts know and experience will prove it'.

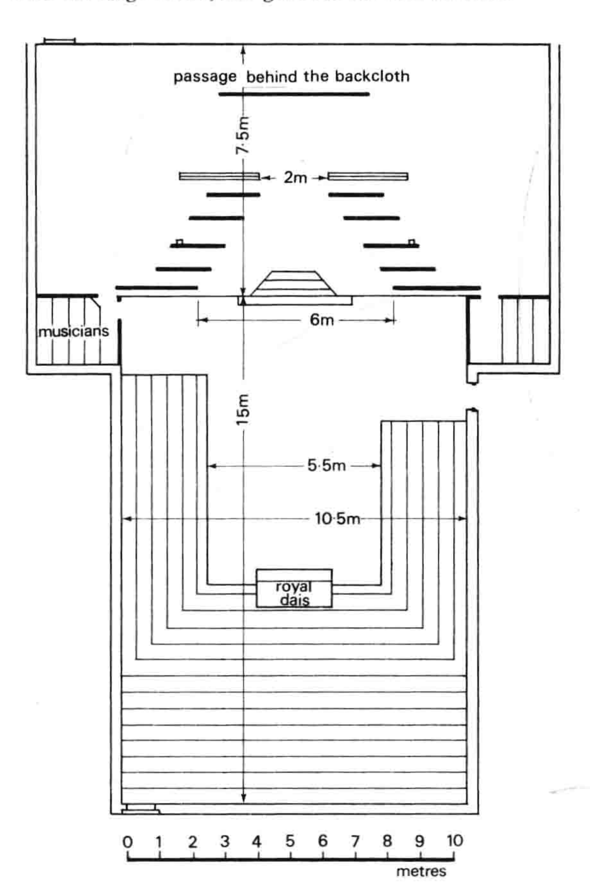
Spacious Gothic churches, such as those of the Netherlands and Germany built without transepts and with nave and aisles of equal height, often have excellent acoustics. On the other hand, late polyphonic music was frequently written to exploit the peculiar acoustics of the older churches. S Marco in Venice had two organs and two choirs by the 15th century; the two choirs, with the accompanying organs, were placed facing one another in the tribunes, halfway up the height of the choir, from which position the unusual acoustical effects of the cathedral could be used without too long an initial delay in reflections from the ceilings. The choral and instrumental groups were gradually multiplied, until as many as four choirs and four organs, with instrumental accompaniment, provided the means for achieving a unique kind of polyphonic vocal and instrumental music. Such a disposition of resources still remained in Salzburg cathedral in the late 17th century, when Biber wrote church music utilizing them.

9. Renaissance and Baroque periods. Reformation church builders laid great emphasis on acoustic clarity, which suited sermons but necessitated adjustments in church music. Luther arranged his congregation around the sides of his churches, and later Gothic churches were altered by the Protestants to enable similar focussed seating arrangements; an example is the Thomaskirche, Leipzig, to which galleries and tribunes were added, with an especially wide organ loft gallery at the west end used by Bach for the choir and orchestra (fig.20). As the vaults of this spacious Gothic church were low (8 m), the introduction of the galleries created shallow volumes with short paths of reflection. The reverberation time was quite short when the church was crowded (1·6 seconds), with excellent diffusion and absorption of low frequencies due to wooden panelling, hanging draperies and carving; at the same time the high frequencies were bright and clear (Beranek, 1962).

S Pietro in Rome has a remarkably short reverberation time, caused by the combination of its exceptional size and its complex internal structure; in effect the basilica is

20. Thomaskirche, Leipzig: plan and section showing the galleries and tribune added to the Gothic church in the Reformation period (after Bagenal and Wood, 1931)

five large churches interconnected and acoustically coupled, each damped by the air spaces leading into the others (R.S. and H.K. Shankland, 1971). Thus sound travels from the nave into the side spaces, where it undergoes extensive multiple reflection and delay before returning in a markedly attenuated form. The result is a reverberation time in the nave of 5 seconds at mid-frequencies when a large congregation is present.



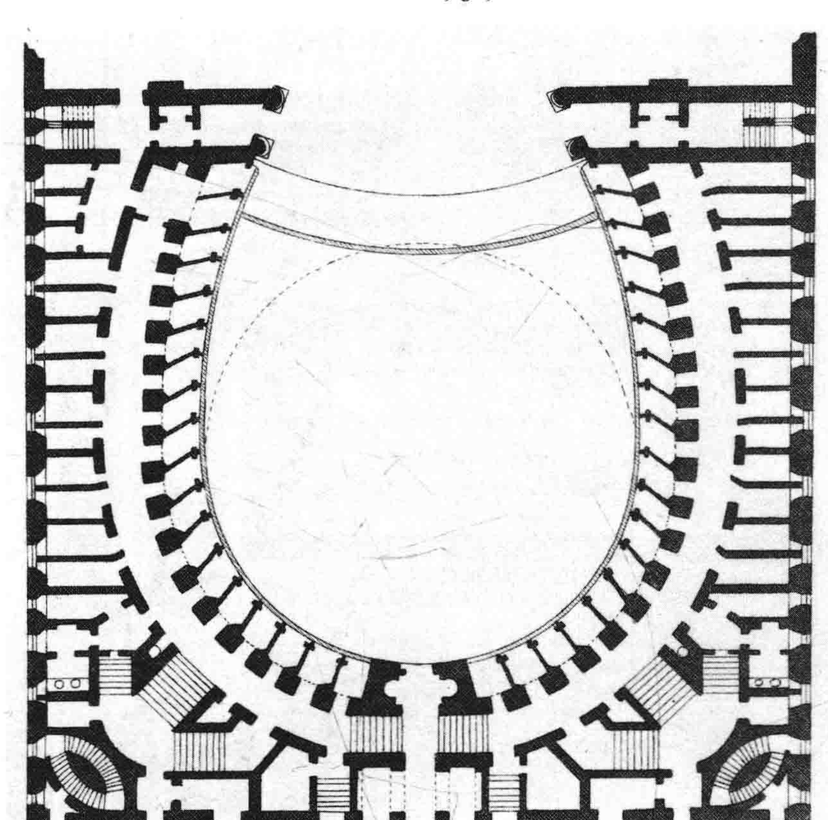
During the Counter-Reformation one of the main aims was the design of churches in which every word of the service might be clearly heard. Vignola, the architect of the Gesù in Rome, was instructed to design the church with a nave as wide and short as possible, and without aisles, clearly with the intention of improving the acoustics. This was a quality that does not seem particularly to have concerned the Church of England, for Wren's St Paul's Cathedral in London has pronounced reverberation due to its relatively long low vaults and high central dome, and the fact that the nave, choir and dome do not function as acoustically separate volumes. When nearly empty the reverberation time is approximately 12 seconds at mid-frequencies, but it improves steadily as the congregation size increases, until it is 6·5 seconds at maximum capacity (Purkis, 1963).

The earliest Renaissance theatres maintained the forms, and therefore presumably some of the acoustic qualities, of the classical Greek and Roman theatres as described by Vitruvius; examples include Serlio's Vicenza theatre (1539) and Palladio's Teatro Olimpico, Vicenza (1588). An orchestra was added to the latter, seated on either side of the proscenium between the actors and the audience, but it apparently played only an occasional accompaniment or interlude. The extensive use of wood in the construction of these theatres, the use of elaborate

decoration, and in particular the addition of wooden coffered ceilings, must have ensured good diffusion with brilliant high frequencies and rather dulled low frequencies. Allowing for the dense crowding of audiences which was common, the reverberation times must have been very short.

In the earliest operas, music was subordinated to the clarity of the text. It is known that in the first public performance of Peri's *Euridice* (1600) the orchestra was placed behind the scenes. Cavalieri's instructions for the performance of his *Rappresentatione di Anima, et di Corpo* in the same year were explicit. It was to be given in a theatre or a hall containing not more than 1000 spectators; the orchestra was to be situated behind the scene and be 'adapted to the needs of each performance', the latter presumably referring to acoustic conditions as well as other exigencies.

The masques held in the banqueting hall of Whitehall Palace early in the 17th century used musicians seated on either side of the stage at the front; this position appears to have been a common one, necessitated partly by the fact that the flat floor area between the stage and the raised seats of the audience was used for dance. There is a design for a masque house by Inigo Jones that has the same arrangement with the orchestra partly screened fig.21). (The Duke's Theatre in Dorset Garden, London (1671), designed by Wren, had a music balcony above Grinling Gibbons's stage front, proscenium balconies over the stage doors, and galleries for the audience.

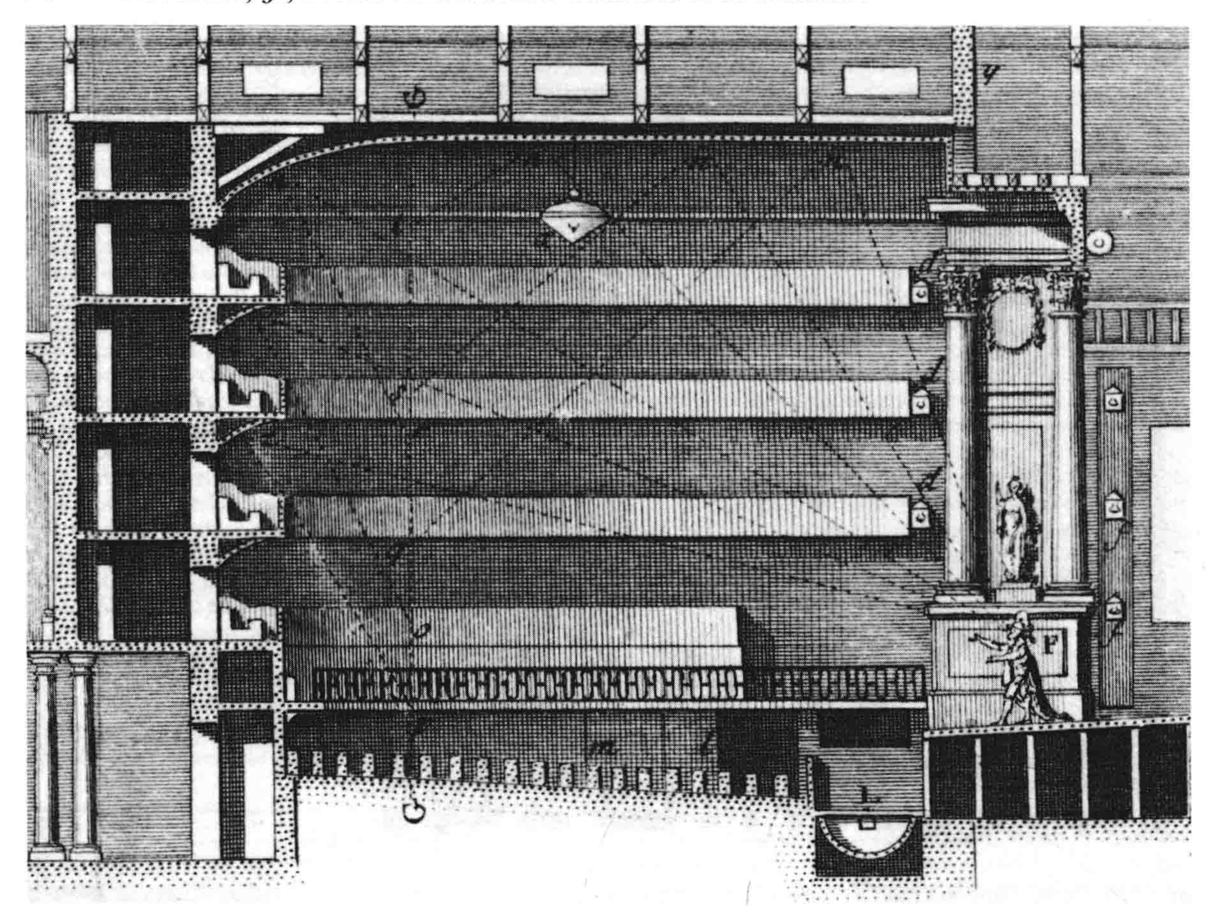


21. Design for a masque house after a plan by Inigo Jones (GB-Lbl Lansdowne 1171)

The first theatres to be built with ranges of boxes one above the other, the Venetian theatres of S Cassiano and SS Giovanni e Paolo (1637–8) – the latter modified especially for opera with five tiers of boxes in 1654 – were characterized by the crowding of a lay audience into the flat floor area in front of the stage. Boxes were sometimes reserved for the use of musicians on either side of the stage, these boxes being called 'proscenium boxes' or 'trumpet loges'. Often an area in front of the stage was enclosed for the use of other members of the orchestra, later increased in size to become the orchestra pit. Such theatres had surprisingly good acoustics. They were small, with closely packed audiences, were largely made of wood and had flat ceilings. The sound had only a short distance to travel to the audience, and there was little risk of echo because of the large areas of absorption provided by the audience and the boxes. Sound reflected from balcony fronts and ceiling was scattered by decorated surfaces to aid in achieving uniform diffusion. The reverberation time was short, and low frequencies were absorbed by the wooden construction, which reflected high frequencies to preserve brilliance.

Even the great opera houses of the 18th century retained these qualities. The original La Scala in Milan (1778) had about 2300 seats, packed closely together, many with a view of only two thirds of the stage area because of the horseshoe shape of the six tiers of boxes (fig.22). The openings of boxes were relatively small, 1·4 m square, which meant that a greater reflecting surface than usual remained in the box fronts. The acoustics were good for all members of the audience, except those at the rear of the boxes; sound was loud and clear, warm in tone and brilliant. The reverberation time at mid-frequencies was about 1·25 seconds (Beranek, 1962). But it must be remembered that the acoustic quality of the voices fell off markedly if the singers retreated from the forestage into the volume of the scenery behind the proscenium arch.

The literature of acoustics begins with the theatrical treatises of the 17th century. Carini Motta's study of the design of theatres and stages (1676) mentions the importance of the ceiling as a sound reflector, and recommends that it and the supporting structure should be of wood. Motta believed that rooms used for performances in private palaces should have the same kind of construction.



10. 18TH AND 19TH CENTURIES. In 18th-century theatres ingenious methods were often resorted to in order to improve the acoustics. In the theatre in Turin (1740) the architect attempted to overcome the lack of balance between a large chorus and a small string orchestra by constructing a hard-surfaced semi-cylindrical resonant chamber running the full length of the orchestra pit below the wooden floor (fig.23). The dish shape was clearly meant to act as a reflector of sound back to the orchestra, while the floor and the volume of air acted together in resonance. The device was often copied, sometimes, apparently, with grilles opening into the orchestra pit from the resonant chamber. In other cases, as at Turin, there were two tubes connecting the ends of the resonant trough with the front of the stage so that the orchestral sound could be heard better by performers and audience. Patté, in his *Essai sur l'architecture théâtrale* (1782), stated that the Turin theatre had good acoustics, and attributed this to the housing of the orchestra. The volume of sound from the orchestra was considered so strong in

its largely enclosed space that it could activate the floor and the volume of air underneath to cause an amplifying resonance.

The success of these features led to further experiments with shaped sections of masonry. In the Teatro Nuovo in Parma the entire parterre of the theatre was built over an enormous masonry saucer, shallow and semi-elliptical in section, with sound passages entering it from the orchestra pit. It is not clear whether grilles were set into the parterre floor allowing sound to pass into the audience without obstruction by the floor. In the Teatro Argentina, Rome (1732), the acoustic problems of an extremely large house, with six tiers of boxes, are said to have been satisfactorily solved using another original device. Here the problems introduced by the size of the theatre were compounded by the elimination of the forestage, which meant that singers' voices on the stage could not be clearly heard. The design of the theatre was modified after its opening by the introduction of a channel of water under the parterre running from the stage to the back of the theatre; it appears that sound was reflected from the surface of the water inside a vaulted brick enclosure and thus travelled under the parterre whence it emerged through grilles in the floor.

In his project for the theatre at Besançon (1778), Ledoux proposed both a semi-cylindrical resonant chamber under the orchestra pit floor, and a semi-cylindrical stone dish reflector behind the orchestra (fig.24). This must have had an extraordinary focussing effect on the players themselves, but the result was judged successful, as is proved by the repetition of the same device in other theatres, such as Covent Garden, London (1809). Another part of the theatre considered of great importance for its acoustic effect was the ceiling of the auditorium. Writers continued to recommend that it should be made of wood (Algarotti, 1762, for 'a full, sonorous and agreeable sound'). The ceiling in the Turin theatre had in addition a 'resonating' chamber above it, but here its only effect could have been to increase the absorption of low frequencies. The Bordeaux theatre (1773), which was generally considered to have excellent acoustics, was, like all 18th-century theatres, very compact; the maximum distance from the stage to the boxes was only 19·5 m.

Rooms specifically built for the public performance of music without acting or stage presentation began to appear in the late 17th century. The earliest concert room specifically built as such was probably one erected in York Buildings near the Strand in London in 1675; in this 'great room' there were 'proper decorations for musick'. The music of Purcell was performed there, and its last recorded use was for the first performance of Handel's *Esther* in 1732, the first appearance of oratorio in England (Forsyth, 1985, citing North). The oldest music room still in use in Europe is that at Holywell, Oxford, opened in 1748 (fig.25) and designed to satisfy a demand for oratorio and choral works. Before the addition of a curtain to one of the side walls (in 1959) the hall, seating 300, must have had a relatively long reverberation time;

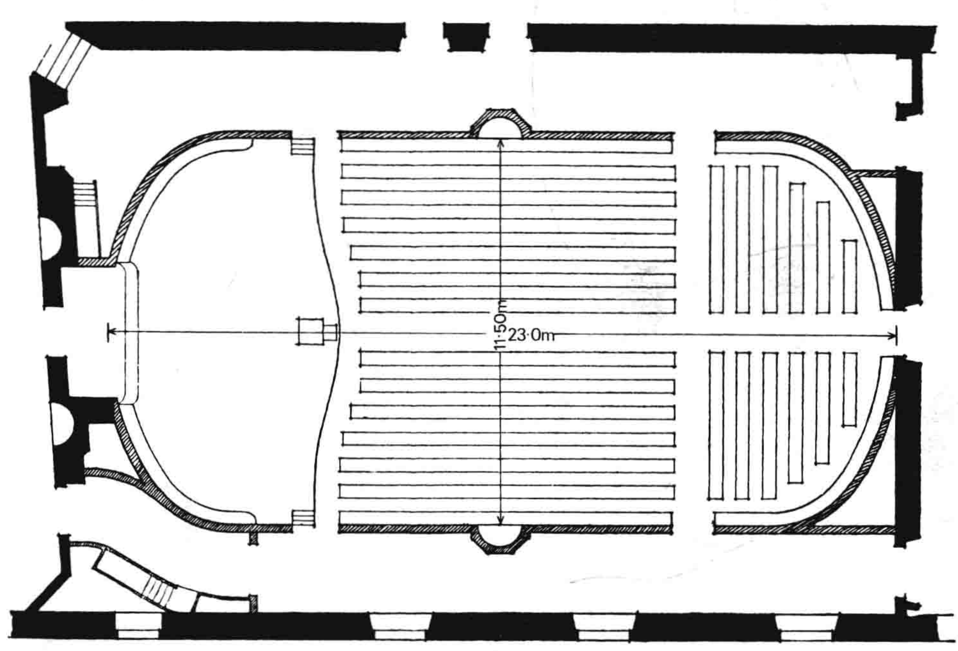
24. Section of the theatre at Besançon, designed by Claude-Nicolas Ledoux, 1776–83: engraving from M.H. Raval, 'L'architecture considerée sous le rapport de l'art' (1804)

the present value is 1·5 seconds at mid-frequencies (Beranek, 1962). That composers of this period considered the reverberation time of theatres and opera houses too short is indicated by, for example, Handel's remark on hearing on one occasion that his theatre would be half empty: 'Never mind, the music will sound the better'.

The precise music of the Classical period, particularly, required a predominance of direct over reflected sound. Mozart wrote, after a performance of *Die Zauberflöte* in 1791: 'You have no idea how charming the music sounds when you hear it from a box close to the orchestra – it sounds much better than from the gallery'. This implies that a narrow rectangular hall, such as was often used at this time for concerts, enhanced the music better than a wide hall. The narrow Redoutensaal in the Hofburg, Vienna, in which a good deal of Haydn's, Mozart's and Beethoven's music was first performed, is estimated to have had a reverberation time of about 1·4 seconds at mid-frequencies with a full audience of 400. For the study of historical performing practice the acoustical properties of the four halls for which Haydn wrote most of his symphonies, and in which he performed them with the local orchestras (whose exact size is known), are particularly interesting. Measurements have been made in the two existing halls: that of the castle of Eisenstadt (*c*1700) has a volume of 6800 m^3 and a mid-frequency reverberation time of 1·7 seconds with 400 persons; the music room of Esterháza castle (1766) has a volume of 1530 m^3 and a reverberation time of 1·2 seconds with 200 persons. Acoustical values have been calculated for two halls in London (both before 1790) that have been destroyed: the Hanover Square Rooms had a volume of 1875 m^3 and a reverberation time of 0·95 seconds with 800 persons; the King's Theatre had a volume of 4550 m^3 and a reverberation time of 1·55 seconds with about 900 persons. All these rooms had an increasing reverberation time with low frequencies, as did the concert room in the palace of Prince Lobkowitz in Vienna (where Beethoven's 'Eroica' Symphony was first performed), which has a volume of only 950 m^3 and reverberation time of 1·45 seconds with 160 persons.

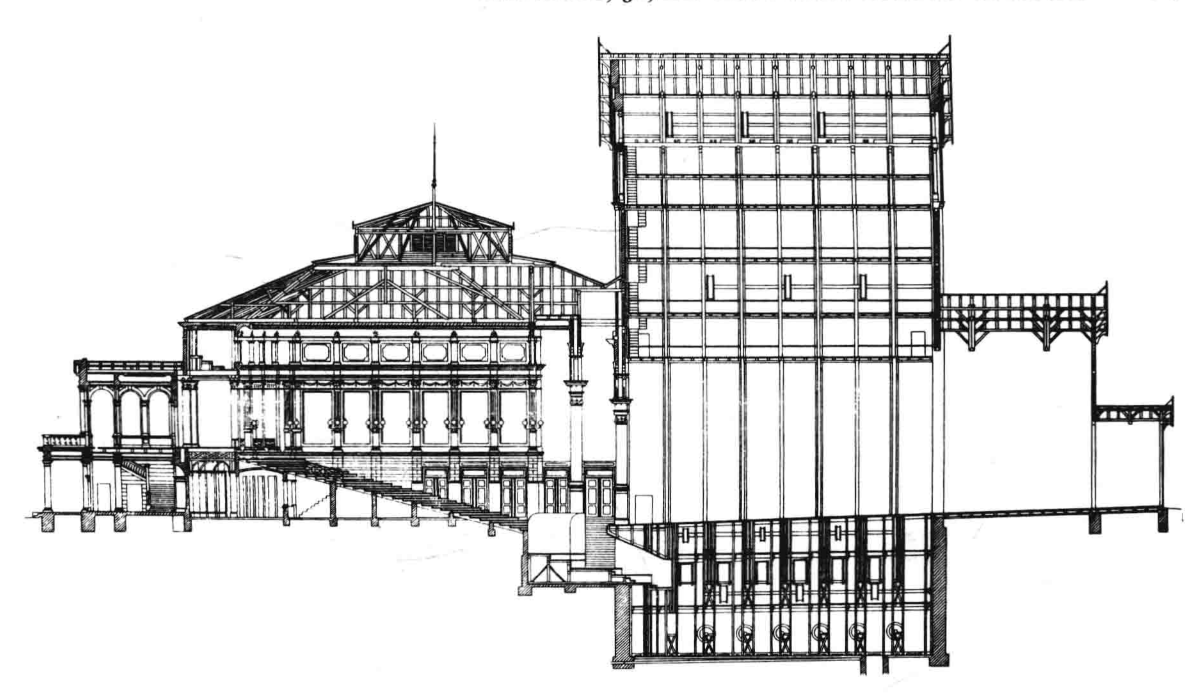
Meyer (1978) draws a connection between the halls for which Haydn's symphonies were originally written and their instrumentation and scoring. Many of the middle-period symphonies were first performed in the small Esterháza hall, with a short reverberation time: the orchestral works have a chamber music character, with emphasis on clarity and quick changes in effect. By

25. Holywell Music Room, Oxford, opened 1748



contrast, the London symphonies were written for the King's Theatre, which had a longer reverberation time; Haydn allows a bar's rest between a *fortissimo* chord and a quiet passage, to permit reverberation to take effect – as in the first movement of Symphony no.102. Further, Haydn appears to have tried to utilize the effect of the space in the same movement: there is a long unison passage, in which a *piano* section swells to a *crescendo* followed by a *diminuendo*; this would have been aided by the large room, a sense of spatial broadening produced by the lateral reflections becoming audible during the *crescendo* passage, after which they would have receded to inaudibility. (It is significant that the Esterháza works often exist in two versions, one using trumpet and kettledrums for performance in other places, including the open air, and another, without these instruments, apparently the original version written for the intimate acoustics of the music room at Esterháza.)

The much admired Altes Gewandhaus (1780) in Leipzig (fig.26), also a narrow rectangular hall, accommodated an audience of 400 and had a reverberation time of only 1·3 seconds (Beranek, 1962). This building, in which Mendelssohn held his concerts from 1835 to 1846, was entirely constructed of wood, securely jointed, which was thought to lend the hall the quality of an immense musical instrument. But the value of a long narrow hall lay in its inherent ability to combine clarity (due to the quickness of the reflections reaching the ear) with a sense of spaciousness (thanks to the reflections, including the late reflections that are perceived as reverberation, being lateral). Wide halls usually lack the clarity and the reverberance that distinguish the best narrow halls.



The development of the orchestra in the early years of the 19th century seems to have given rise to the desire for more sustained reverberation. When the first large halls were constructed specifically for concerts, in the middle of the century, they had longer reverberation times and a lower ratio of direct to reflected sounds. The old Boston Music Hall (1863) had a reverberation time at mid-frequencies of over 1·8 seconds with an audience of 2400; the Grosser Saal (1870) in the Musikverein in Vienna had a reverberation time of 2 seconds with an audience of 1680. Halls of this type with classical ornament characteristically also had highly diffuse sound fields.

Wagner wished the architects of the Bayreuth Festspielhaus (1876) to create a building that would enhance the orchestral sound but still permit the work to be intelligible. At length the reverberation time of 1·6 seconds at mid-frequencies was arrived at, with a full audience of 1800. An important development was the complete sinking of the orchestra pit so that the musicians could no longer distract the audience by their movements (fig.27). A carefully shaped orchestra chamber projects the sound, but at the same time blends the orchestral tones so that instruments cannot be heard individually. The steeply raked, fan-shaped parterre permits clear vision of the stage and ensures minimum shading of direct sound from the singers by the heads of the audience in front. Also, the paired columns along the sides of the seating towards the stage act as acoustic reflectors, diffusing the sound effectively. The important influence of studies of ancient Greek theatres on the acoustical success of this opera house has been demonstrated by Izenour (1992).

Not all concert halls were acoustically satisfactory. The Royal Albert Hall (1871) in London was regarded as disastrous from its opening when 'The Prince of Wales' ... welcoming address ... in many parts ... could be heard twice, a curious echo bringing a repetition of one sentence as the next was begun'. Of immense size, 90,000 m³, and an awkward shape, elliptical in plan with a huge dome, the Albert Hall seats 5000 people. The reverberation time must have exceeded 3 seconds when it was opened, and it remains 2·5 seconds after extensive correction (fig.28). Such a hall only begins to function satisfactorily when

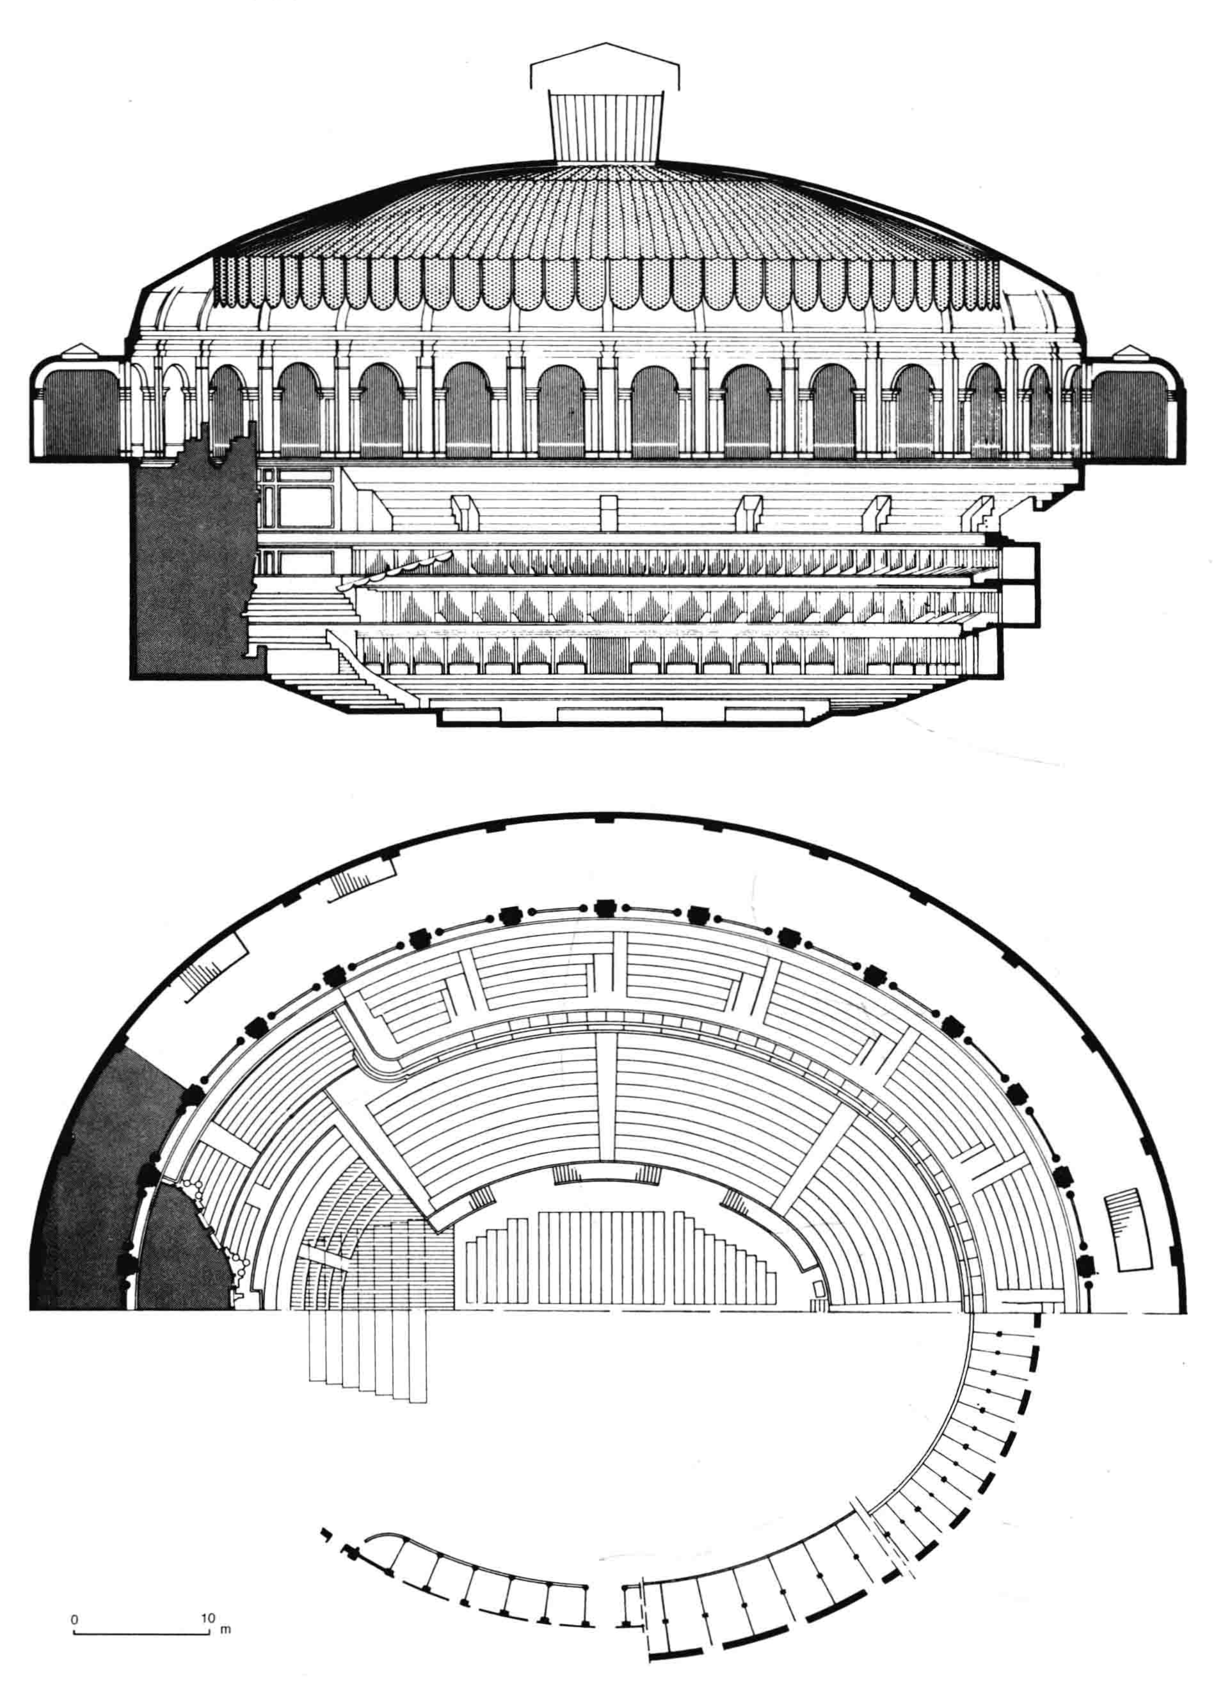
27. Section of the Festspielhaus, Bayreuth, 1876: from Sachs and Woodrow, 'Modern Opera Houses and Theatres', i (1896)

orchestral and choral forces are large. Nevertheless the visually unifying shape of the Albert Hall is preferred by many performers and listeners to the more acoustically desirable rectangular shape of other famous concert halls.

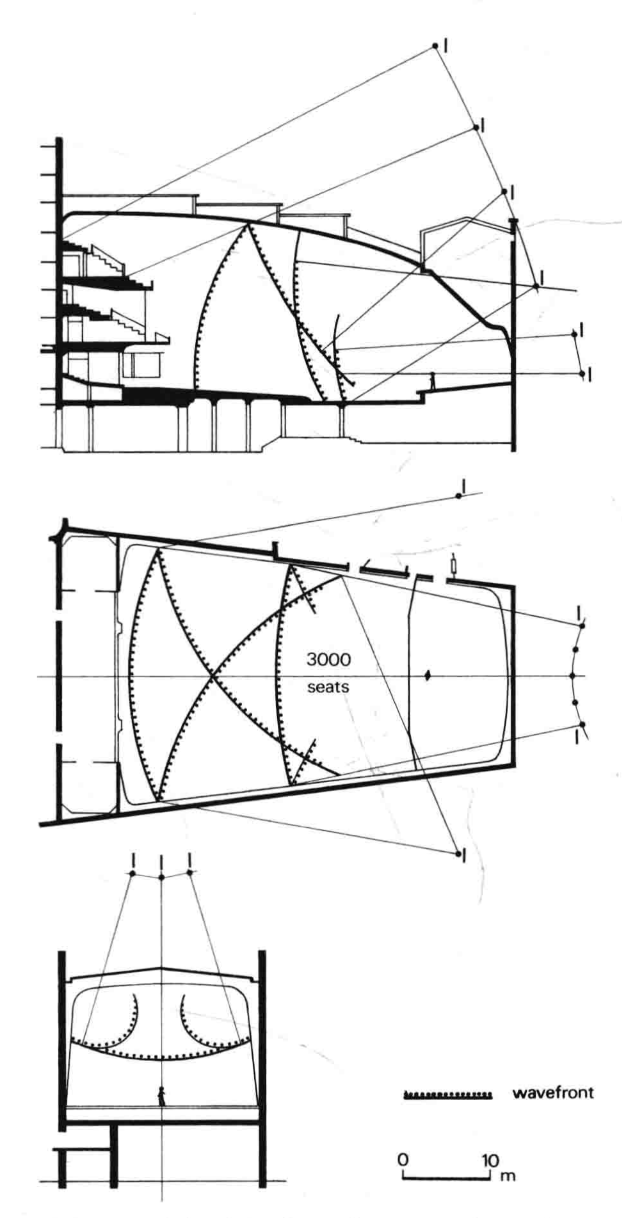
The undoubted acoustic success of the Paris Opéra's building (1869–75) was shrugged off by the architect, Charles Garnier:

> I gave myself great pains to master this bizarre science [of acoustics] but ... nowhere did I find a positive rule to guide me; on the contrary, nothing but contradictory statements ... . I must explain that I have adopted no principle, that my plan has been based on no theory, and that I leave success or failure to chance alone ... like the acrobat who closes his eyes and clings to the ropes of an ascending balloon.



11. THE SCIENCE OF ACOUSTICS. The science of acoustics received its name from Sauveur, its first noted exponent, who discovered and studied overtones at the beginning of the 18th century. His work was further developed by Euler, who devised a system of binary logarithms to facilitate musical calculations. Ernst Chladni's *Akustik* (1802) contained his studies of the vibration of strings, rods and plates by means of sand figures and his discovery of the modal lines. Charles Delezenne (1776–1866) applied calculus to the solution of acoustic problems, and Félix Savart (1791–1840) made investigations into resonance, especially in string instruments. D.B. Reid of Edinburgh published in 1835 his 'On the Construction of Public Buildings in Reference to the Communication of Sound' (*Transactions of the British Association*). It shows an accurate application of recent discoveries in physics to room acoustics, and contains the earliest clear recognition of reverberation.

Hermann von Helmholtz (1821–94) laid the foundations for much modern physical and physiological research in acoustics. Rudolf Koenig (1832–1901) manufactured instruments for the study of acoustics and conducted extensive research. Others who followed closely behind were John Tyndall (*Sound*, 1867), Lord Rayleigh (*Theory of Sound*, 1877–8) and Carl Stumpf (*Psychology of Tone*, 1883–90). Stumpf's insistence that the scientific system of music theory depended on the psychological interpretation of acoustic data opened a new discipline and many new avenues for research.



W.C. Sabine pioneered the study of applied acoustics in buildings in the period 1895–1915, publishing his results in a series of important papers. Sound decay was analysed in detail and the prediction of reverberation time in rectangular rooms by calculation was made possible. The impedance method of specifying acoustical materials was developed, and a wide variety of acoustical materials began to be manufactured. At the Bell Telephone Laboratories, Harvey Fletcher studied loudness and masking in the 1920s and 30s, and developed new, more accurate techniques of acoustic analysis and measurement. Other research laboratories, especially those in California, England and Germany, contributed to rapid advances in scientific acoustics.

The first large-scale experiment in the application of the new scientific understanding of acoustics to room design came with the building of the Salle Pleyel in Paris (1927), which seated 3000; it was a 'notorious disappointment' (Beranek, 1962). The whole shape of the hall, in plan and section, was designed to send sound to the audience (fig.29). Sound diffusion was poor and uneven, and reverberation short. The result was a room in which a large audience could enjoy recitals and chamber music, but in which orchestral music lacked body and colour. In addition, the seats in the front and middle of the parterre received their first reflections from the ceiling, high at this point, with too long a delay after the direct sound, resulting in the loss of any sense of intimacy (Knudsen, 1932).

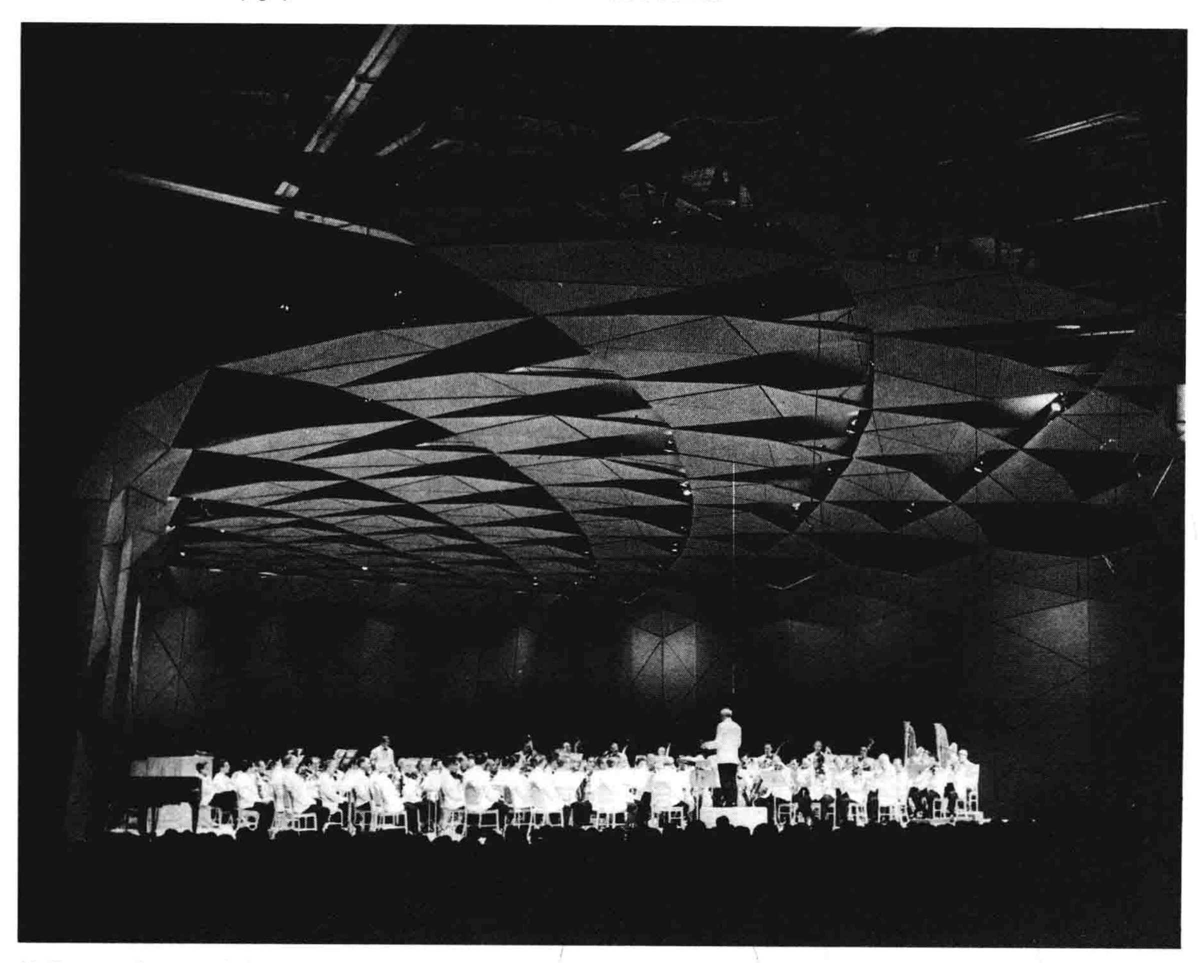
After the disappointment of the Salle Pleyel, no major attempt to apply the new scientific knowledge of acoustics to design was made until the building of the Royal Festival

28. Plan and section of the Royal Albert Hall, London, 1871 (after Beranek, 1962)

29. Sections and plan of the Salle Pleyel, Paris, 1927, showing the waves from various surfaces and the theoretical positions of the images (I) from which they originate (after Bagenal and Wood, 1931)

Hall in 1948–51 (*see* LONDON (i), fig.40). Great care was taken to avoid external and internal noise interference (see fig.11); the entire auditorium was raised high in the air and a double construction used to isolate the interior. In this respect the hall was an important and successful experiment.

The interior was designed along principles not dissimilar from those of the Salle Pleyel, and with some of the latter's defects. In particular, concentrating the first reflections at the audience by reflectors over almost the whole ceiling means that a large proportion of the sound energy is absorbed in a much shorter time than the reverberation time of the hall. The effect is to make reverberation much less evident than it is in the older concert halls because it is relatively less loud, and so the hall seems 'dry', especially in loud ensemble passages.



Later advances in acoustics have therefore concentrated on finding methods of increasing the amplitude and the length of reverberation while maintaining a high level of direct and first-reflection sound to all the seats. One solution is that adopted with success in the Koussevitzky Music Shed in Lenox, Massachusetts (1959; fig.30); a pattern of suspended ceiling panels reflects a proportion of the sound to the audience from quite a short distance above the orchestra, while the spaces between allow the rest of the sound to travel into the volume above, where it is diffused before returning as prolonged reverberation. A defect of this technique is that sounds of short wavelength are almost completely reflected by the panels, whereas sounds of long wavelength pass almost completely around them, giving an imbalance in first reflections and a further imbalance in reverberation. Such problems led to the initial failure of one of the major concert halls to be built in the 1960s, Philharmonic (now Avery Fisher) Hall at Lincoln Center in New York (1961).

Other recent concert halls have concentrated on relating the volume carefully to the type of music for which the hall is built, achieving ceilings that are more diffuse and providing fewer reflectors of direct sound close to the orchestra. The result has been a considerable increase in the reverberation time and in the relative strength of the late or reverberant sound; the Maltings at Snape, Suffolk (1967; fig.32), for example, has a reverberation time of 2·25 seconds at mid-frequencies, whereas the Royal Festival Hall, with a volume nearly three times as large, has a reverberation time of only 1·47 seconds. Today, many new concert halls are expected both to provide for audiences of varying sizes and to accommodate new demands that far exceed the needs of auditoriums even 50 years ago.

Simply referring back to acoustically approved music rooms of earlier times will not deal with these problems. New rooms are being successfully designed which demonstrate the benefit of our increased scientific understanding. Certain new concert halls, such as the Doelen hall in Rotterdam, have more uniform reverberation, with diffusion and reflection on walls and ceiling; all sound paths are within calculated limits, and the balance between low and high frequencies is carefully maintained. Others, like the Segerstrom Hall of the Orange County Performing Arts Center, California (1986), which seats 3000, are multi-purpose halls, yet, by the use of flexible acoustical adjustments, manage to achieve good uniformity and 'a particularly surprising suitability for solo, chamber and opera performances ... an enveloping sound character, but more immediate' than the normal concert hall (Barron).

Flexible acoustical conditions can be created by physically manipulating the surfaces, by varying the number of coupled volumes, and even by reducing or increasing the overall volume, as has been introduced at the Jesse Jones Hall, Houston, the experimental workshop L'Espace de Projection at IRCAM in the Centre Pompidou, Paris (1978) and the Theater de Maaspoort in Venlo, the Netherlands (1986).

While reverberation time remains a prime consideration in designing concert halls, the importance of early reflections that create a sense of acoustical intimacy has come to be increasingly recognized. Recently, attention has focussed on the spatial qualities of sound and the factors that control these qualities: the early lateral

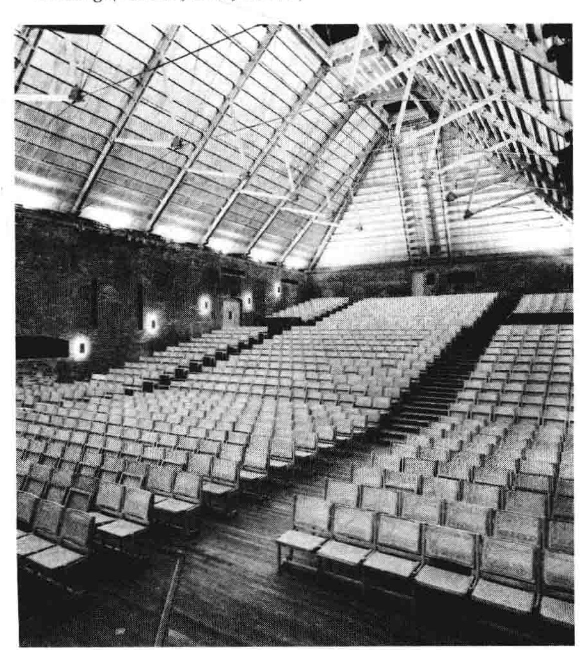
30. Koussevitzky Music Shed, Tanglewood, Lenox, MA, 1959

reflections, which make a source appear wider than it is; the late lateral energy, which provides a sense of being enveloped by sound; and loudness, which further adds to a hall's spaciousness.

12. THE CONTEMPORARY PERFORMANCE OF EARLY MUSIC. Sensitivity to the acoustics of rooms seems always to have affected the composition and performance of music. This is clear in the character of much early music, but only rather late was it actually written about. Quantz, in his book *Versuch einer Anweisung, die Flöte traversiere zu spielen* (1752), recommends:

> In the choice of pieces in which he wishes to be heard in public, the flautist ... must adjust ... to the place where he plays ... . In a large place, where there is much resonance, and where the accompanying body is very numerous, great speed produces more confusion than pleasure. Thus on such occasions he must choose concertos written in the majestic style, and in which many passages in unison are interspersed, concertos in which the harmonic parts change only at whole or half bars. The echo that constantly arises in large places does not fade quickly and only confuses the notes if they succeed one another too quickly, making both harmony and melody unintelligible.

The practice today is to attempt to relate the size of the orchestra not merely to that originally used, but to the room acoustics – to compensate for a weak bass response in a hall, for example, by increasing the bass section relative to the upper parts. Where the volume of the room is considerably larger, and the impact of the original small orchestra would be substantially reduced, some increase in orchestral size is necessary to compensate for differences in loudness and spatial impression. Changes in the composition and style of an orchestra are therefore often judged necessary in order to respond to altered acoustical conditions in particular halls. Where possible, conductors often prefer to select rooms that are naturally appropriate to particular types of early music, but this usually restricts audience size, and may therefore be uneconomic.



The acoustician's contribution to the problem of matching concert halls to the style and type of performance has been to provide, in a number of recent examples, designs allowing considerable variation of the acoustics of concert halls at will (see §11 above).

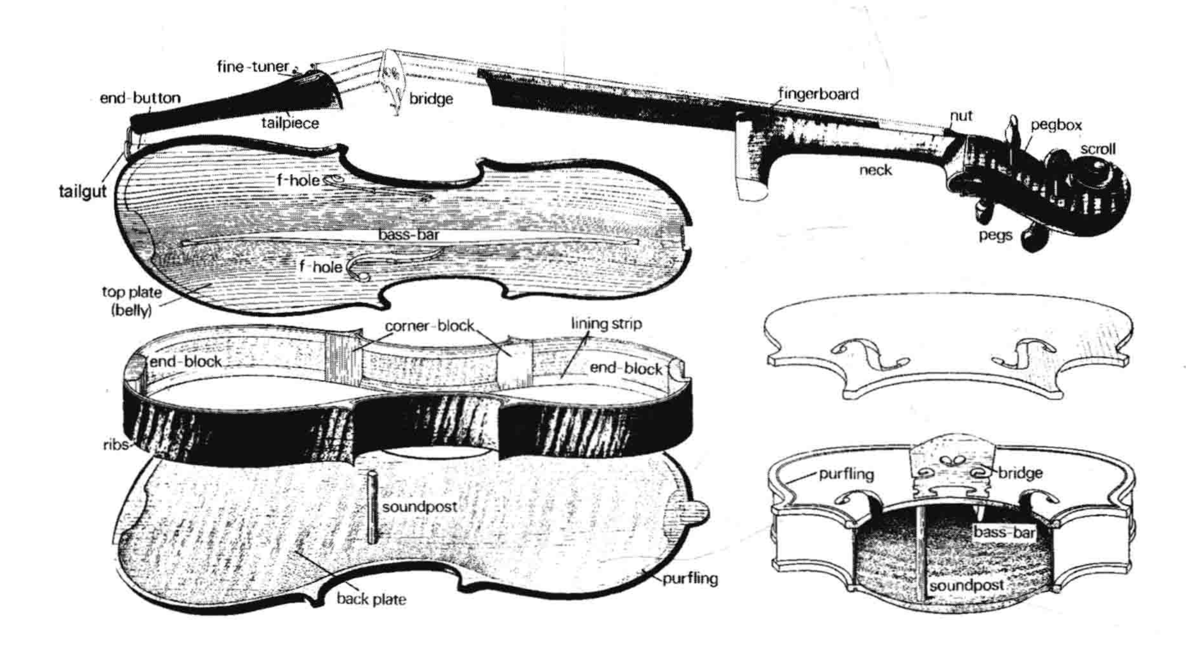
II. String instruments

1. Foundations. 2. Differences between viols and violins. 3. Wood and varnish. 4. Acoustical findings important for violin tone. 5. The mute

and vibrato. 6. Sound radiation. 7. Bowing. 8. The plucked string. 9. Current research.



1. FOUNDATIONS. The essence of the bowed string families (violins and viols) and of the plucked strings (guitars and lutes) is a set of strings mounted on a wooden box containing an almost enclosed air space. Some energy from the vibrations of the strings is communicated through the bridge to the box and air space, in which are set up corresponding vibrations. The loudness and nature of the sound, putting aside the acoustics of the room and the skill of the player, depend on the transfer of vibration from the strings to the sounding box to the air. The following discussion relates chiefly to bowed string instruments; plucked strings are dealt with in §8 below.

The sounding box, or body, of a finished viol or violin consists of a resonant top and a hardwood back (usually spruce and curly maple respectively) which are from 2 to 6 mm thick and firmly glued to the ribs (sides). The latter are 1 mm thick strips of wood, usually of the same species as the back. The ribs are bent to the shape of the instrument by means of moisture and heat, and glued to small blocks at each corner and at the upper and lower ends. The ribs, together with the top and back soundboards, form a sturdy, very thin-walled box able to support the tension of the strings – in the violin, about 25 kg weight. This tension exerts a downward force through the bridge of 7–9 kg. The vibrations from the strings are carried by the bridge to the top plate and thence through the entire structure, including the air of the cavity (fig.33).

The sounding box has two functions without which there would be no violins or viols as we know them today. First, it unites two soundboards possessing different patterns and amplitudes of vibration which support each other within an important range of frequencies. When a single soundboard, such as that of the piano, is smaller than the wavelength of the sounds coming from it, the radiations from its two sides tend to cancel each other when heard from a distance. In the violin and viol, however, the top and back soundboards of the box radiate with sufficient independence that their radiations do not cancel each other. The second function of the box is to create a resonant cavity in which vibrations of the inner air interact with those of the wood of the entire instrument including scroll, neck/fingerboard, chinrest and even pegs. These interacting air and wood vibrations are critical to the tone and playing qualities of the finished instrument.

The soundholes – f-shaped in the violin family, and C-shaped or flame-shaped in the viol family – also play an important role, particularly in the lower range of violins and viols. They not only provide a flexible platform for the rocking motion of the bridge, but allow for the air vibrations to move in and out of the cavity. The lowest of these vibrations is the so-called Helmholtz resonance or mode, which in the violin lies around 270–280 Hz, giving fundamental reinforcement to the mid-range of the G string and low range of the D string of the violin. This resonance is enhanced by a breathing motion of the body in which the top and back flex in opposite directions. The frequency of the Helmholtz mode depends on the volume of the violin cavity, the flexibility (compliance) of its walls, and the area and edge thickness of the f-holes.

The soundpost is a rod of straight-grained spruce thin enough to pass through the soundhole. It is carefully fitted and positioned approximately under the high-string foot of the bridge. The soundpost provides a fulcrum for the rocking of the bridge: the low-string foot of the bridge makes wider up-and-down excursions than the high-string foot, creating asymmetrical motions of the top and back plates. Moreover, a strong rocking motion occurs at the ends of the soundpost itself (Fang and Rodgers, 1992), indicating that the compliance of the post plays an important role in the sound of an instrument.

33. Exploded diagram of a viola (after Hutchins, 1962)

The insertion of the soundpost reduces the flexibility of the top and back plates. This results in a rise not only of the frequency of the plates, but also of the cavity resonance modes, particularly the Helmholtz mode, depending on how tightly the post is fitted (C.M. Hutchins, 1974). The position of the soundpost between top and back, its fit, wood quality, shape and stiffness are so important to the sound and playing character of the instrument that the Italians call the soundpost the 'anima' and the French the 'âme' or soul.

The bass-bar is a straight-grained tapered bar of spruce glued to the underside of the top plate and extending about three-quarters of its length, approximately under the string of lowest tuning. It serves not only to help support the down-bearing force from string tension, but also to carry the vibrations from the low-string bridge foot to the upper and lower areas of the top, keeping them in step with each other. Modal analysis has shown that the bending and twisting of the bass-bar help determine the frequencies and resonance modes of the top plate and thus of the whole instrument (Marshall, 1985). The proper shaping or tuning of the bass-bar is critical to the sound of the finished violin.

The bridge acts as a filter, transmitting the vibrations of the strings to the wooden structure of the instrument and to its cavity resonances via the close-fitting feet, which rest on the top at a position indicated by the notches of the soundholes, one foot standing approximately over the soundpost and the other over the bass-bar. The sound of violins and viols is markedly affected not only by the bridge's position on the top, but also by its density, stiffness, mass distribution and acoustical transmission characteristics. All these characteristics are partly determined by the actual cutting of the bridge in the hands of a skilled maker. The important bending modes of a violin bridge up to 6000 Hz, as revealed by hologram interferometry, are shown in fig.34 (Reinicke, 1973). A calibrated study of bridge action has been made by Trott (1987), and the effects of bridge trimming have been measured by finite element analysis (Rodgers and Masino, 1990). Müller (1979) has studied the transmission functions of the bridge, relative to the skills of the violin maker.

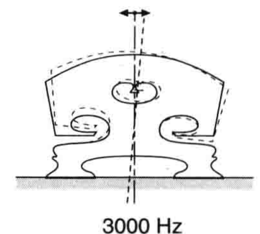
The tailpiece not only serves to hold the ends of the strings, but also can have considerable effect on the tone and playing qualities of an instrument. Adjustments are made by changing the tuning of the strings between tailpiece and bridge, the length and stiffness of the tailgut, and the mass and frequency of the tailpiece-plus-tuners. Experiments show that these adjustments are most effective when the tailpiece frequency matches or is a simple partial of one of the cavity or body modes of the violin (C.M. Hutchins, 1993).

2. Differences between viols and violins. Although both viols and violins have arched top plates of spruce (or occasionally another species of wood), with the grain following the longer dimension, the tops of viols tend to have somewhat higher archings and slightly thinner wood than violins. The early master violin makers carefully matched the arch of the top to the arch of the back of a violin. In contrast, viols traditionally have thin flat backs, usually of curly maple, which are reinforced in several places with fairly heavy cross-braces, on one of which the soundpost rests. Thus the back of a viol serves primarily as a support for the soundpost and closure for the sounding box, and traditionally has not been 'tuned' as in the case of the violin. Instead of the four strings characteristic of the violin family, viols have five, six or more strings, more slackly tuned than violin strings and supported by a flatter, heavier bridge. Their tailpieces are heavier and more rigidly supported than those of violins. Consequently viols have less brilliance, power and dynamic range than violins.

The viol family consists of a balanced consort of five or more instruments with uniformly designed bodies in graduated sizes from the high-pitched descant viol to the violone. All the voices are adequately represented, with some, such as the treble and tenor, in two or three sizes. All viols are held in a vertical position, the necks are fretted, the bows are held the same way and the fingering technique is uniform.

The violin family as described by Praetorius (1619) consisted of seven or eight *Geigen* in graduated sizes from a three-string treble instrument to a seven-foot bass. With the development of the violin and violoncello by the master luthiers of the 17th and 18th centuries, the tenors and large altos fell into disuse. In the early 19th century composers such as Berlioz demanded more power from the strings to fill increasingly large concert halls. To achieve this violin makers lengthened the neck of the violin and increased its angle relative to the plane of the body, while at the same time enlarging the bass-bar to provide appropriate stiffness and support.

Since the mid-1950s eight instruments of the violin family, one at each half-octave from the tuning of the double bass to an octave above the violin, have been developed through a combination of mathematics, acoustical theory and testing, and skilled violin making (C.M. Hutchins, 1962, 1967, 1992). Designed to project the resonance characteristics of the violin into seven other tone ranges, these instruments, known as the New violin family, provide consistent quality of string tone and increased power covering the musical range, thus bringing to fruition the concept of Praetorius (fig.35).



3. Wood and varnish. It is no accident that spruce (*Picea*) has traditionally been chosen for practically all instrument soundboards. In addition to having a high ratio of velocity to density and a long decay time (the time it takes for a sound to die away), it possesses the property unique among wood species of being at least ten times stiffer along the grain than across it.

Curly and tiger maple have become the preferred woods for violin backs, although the early master violin makers used a variety of other woods such as poplar (*Populus*), sycamore (*Platanus*), beech (*Fagus*), birch (*Betula*), and apple and pear (*Pyrus*). Curly-grain wood is not only beautiful but provides a more nearly isotropic material with a desirable stiffness ratio of along to across the grain of about five to three. Selection of wood with straight grain and a more or less even growth pattern is highly important. Violin and viol makers have long known how to assess these characteristics by the sound and the feel of the wood in their hands (Müller, 1996). According to tradition, at least five years of seasoning in covered outdoor sheds and then indoors for a matter of years is desirable for top wood, and eight to ten years for back wood however, 50 years or more is ideal for fine tone quality. Acoustical studies of these characteristics include Haines (1979), M.A. Hutchins (1981, 1983), McIntyre and Woodhouse (1984–6) and Dunlop (1989); studies

2690 Hz

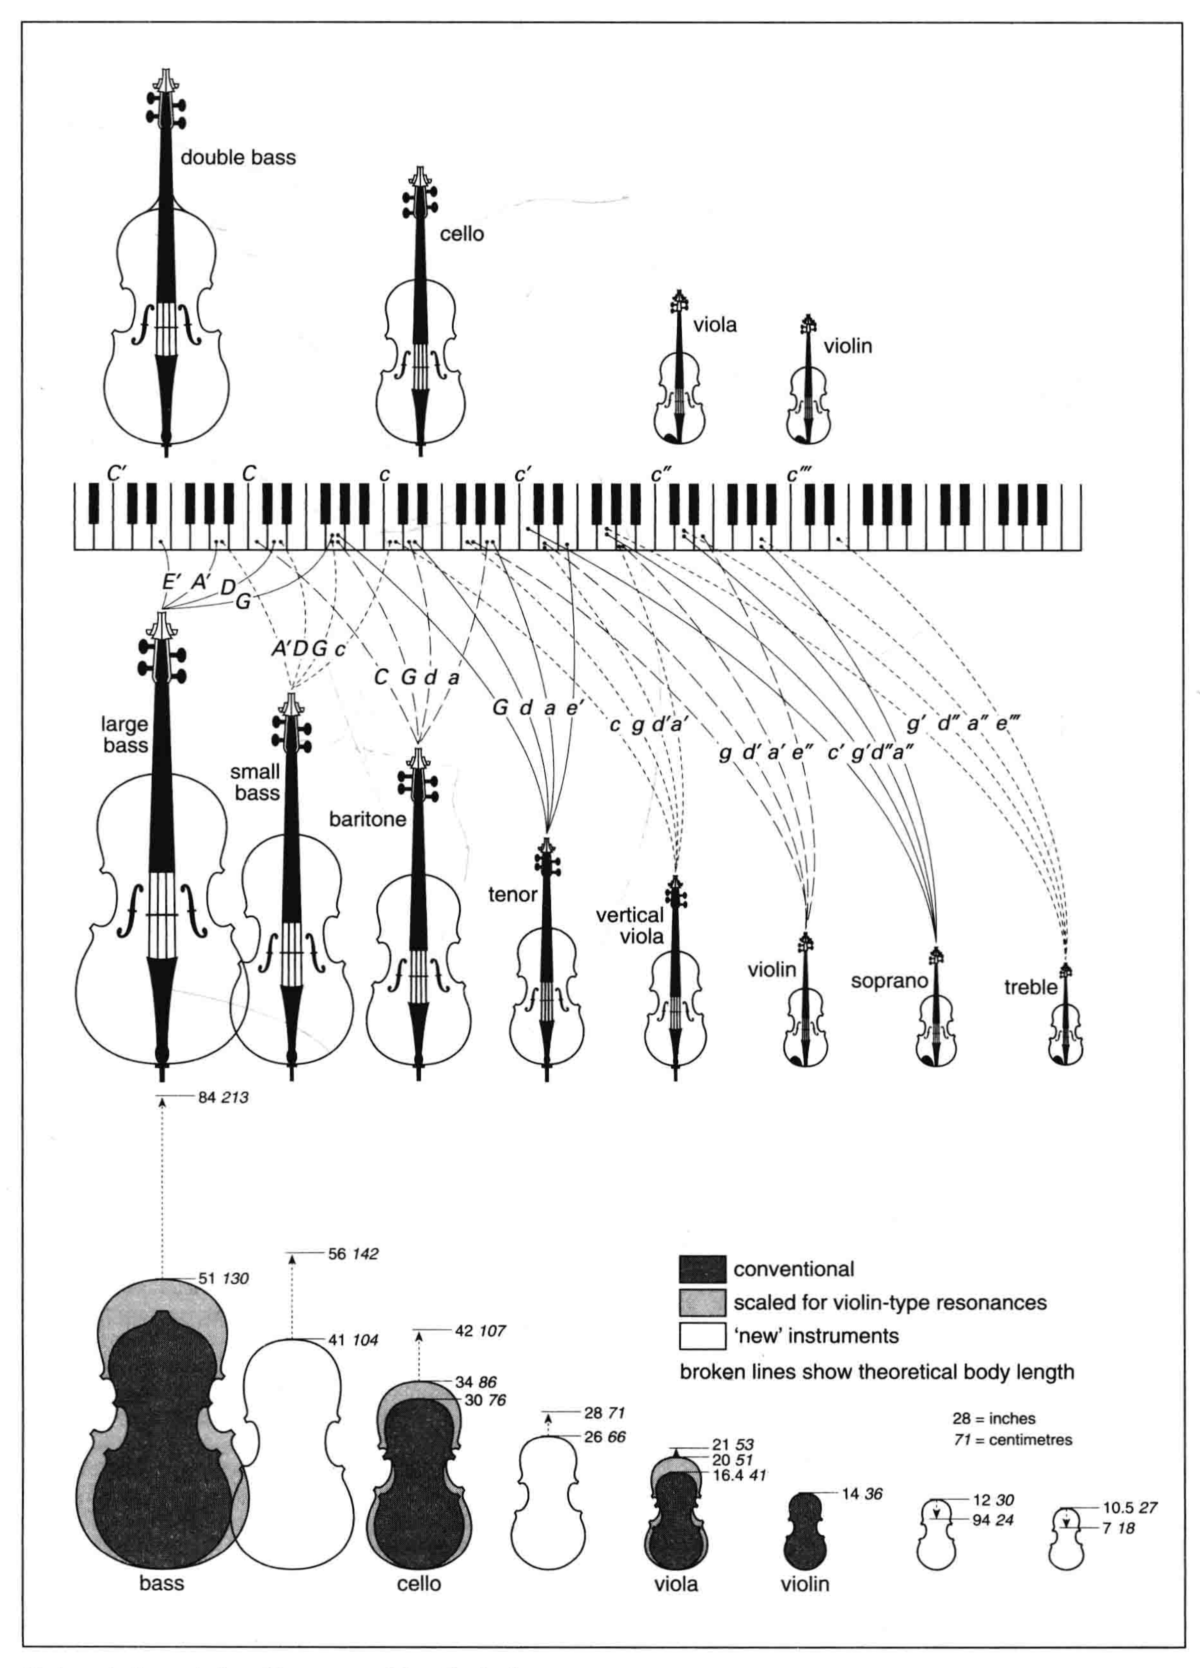
6000 Hz

34. Eigenmodes of a violin bridge to show how it bends at three different frequencies: (top, 2690 Hz) the bridge is bending back and forth primarily at the top and sides; (middle row, 3000 Hz) two bending modes: on the left the whole upper section of the bridge is bending back and forth as indicated by the vertical dotted line in the centre drawing; the interferogram on the right shows a bending motion of the two sides of the bridge around the centre line; (bottom row, 6000 Hz) the entire bridge moving up and down on its feet as indicated by the dotted lines in the sketch (after Reinicke, 1973)

using ultrasonics include Bucur (1987) and Bucur and Archer (1984).

Varnish research can be grouped into three categories: (1) historical and archaeological research based on surviving instruments and contemporary literature about the great makers; (2) attempts to prescribe recipes to modern makers for treating wood; and (3) experiments to determine the effects of wood treatment on vibrational behaviour and thus on the sound of the instrument.



In a study that falls in the first category, Barlow and Woodhouse (1989) analyzed several samples from authenticated old instruments and discussed what can be deduced about the materials used by their makers. They were mainly concerned with the 'ground layers' of varnish, which they studied by means of a scanning electron microscope combined with X-ray analysis, not only to obtain pictures of the topography of the sample, but also to determine its chemical constituents.

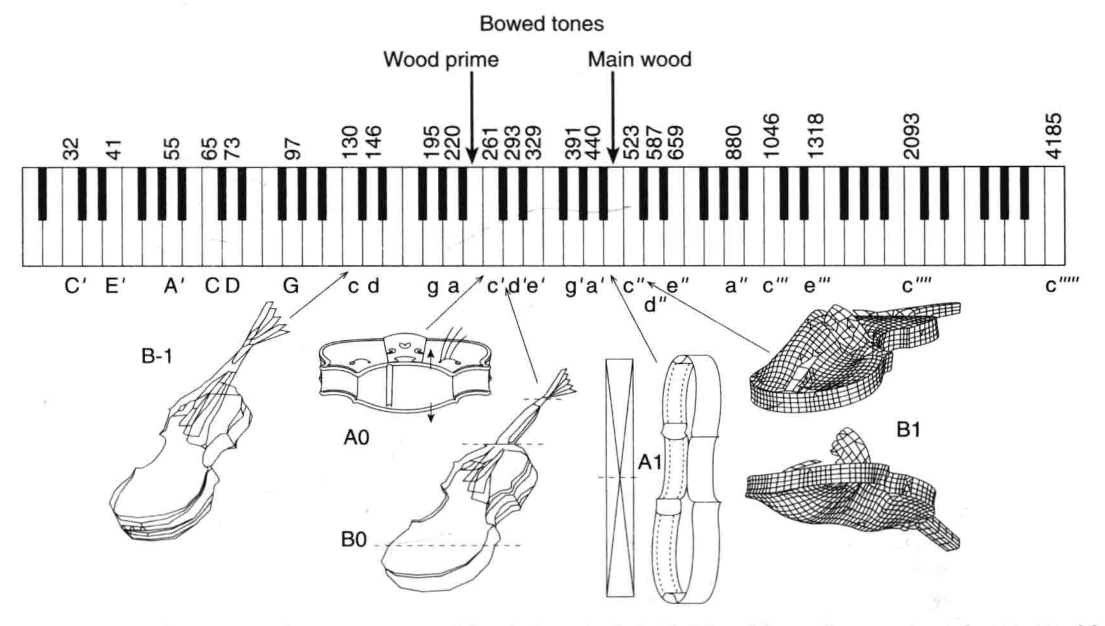
The second category consists of experimental attempts to create a modern equivalent of the 'old master' varnishes (Fry, 1904; Michelman, 1950; Condax, 1968; and Fulton, 1974–5).

In the third category, a study of the effects of five years of filler and varnish seasonings on the bending modes of four pairs of free or unattached viola plates (C.M. Hutchins, 1987) showed surprisingly small changes in the modal frequencies of the plates. In a study of the acoustical effects of four different sealer materials, followed by two coats of an oil-type violin varnish added each year over a period of four years, M.A. Hutchins (1991) showed that the greatest changes were in the cross-grain strips of spruce where there was an increase in weight, density and damping, and a concomitant decrease in strip frequency and stiffness.

4. Acoustical findings important for violin tone. Modern acoustical science has been applied to violin making with significant results. The normal bending modes of unattached violin plates have been revealed by hologram interferometry and other vibration methods. These show the frequency sequence and configuration of the normal resonance modes basic to the sounds and stiffnesses in free violin plates that violin makers have long known how to assess by flexing, feeling, tapping and listening. The frequencies and damping characteristics of modes 1, 2 and 5 in both top and back free plates are critical to the sound of the violin in spite of the fact that they are not transferred intact into the finished instrument (fig.36). It has been found that the best instruments result when modes 2 and 5 are tuned to matching frequencies in both top and back free plates and the two pairs are an octave apart, with mode 1 in the top an octave below that of mode 2 (C.M. Hutchins, 1981). This finding has been corroborated by many violin makers. However, its successful application depends on other factors such as wood quality, and the arching and thickness characteristics basic to good violin making. Current thinking is that the free-plate modes provide the violin maker with clues as to the desired local stiffnesses in the plates, which then share in the bending modes of the entire instrument (C.M. Hutchins, 1991). Finite element analyses to quantify free-plate tuning show the effects of wood stiffness, local thickness changes, plate arching and local thickness patterns on free-plate frequencies (Rodgers, 1988, 1990, 1993; and Molin, Lindgren and Jansson, 1988).

The body and cavity modes of the whole violin have been mapped in various ways since the early 19th century (Savart, 1819; Backhaus, 1931; Meinel, 1957; Reinicke and Cremer, 1970; and Stetson, 1970). More recent studies by means of modal analysis (Marshall, 1985) and

35. Acoustically matched set of instruments of the violin family



36. Nodal patterns of modes 1, 2 and 5 in pairs of violin top and back plates ready for assembly

finite element analysis (Knott, 1987) have elucidated the unsuspected and bewildering body vibrations, up to about 1300 Hz, not only in the top and back of the violin, but also in the ribs, neck, fingerboard and scroll. Fig.37 gives a three-dimensional representation of the three important body modes (B–1, *c* 145–190 Hz; B0, *c* 250–300 Hz; and B1, *c* 500–570 Hz), as well as the two important cavity (air) modes (A0, *c* 260–290 Hz; and A1, *c* 430–490 Hz) in the first 1000 Hz of the violin range.

For centuries the 'Helmholtz' or breathing mode (A0) of the violin cavity was thought to be the only cavity mode. Research since the 1970s has shown that there are many cavity modes whose frequencies depend on the geometry of the box, the stiffness of its walls and the special characteristics of the f-hole openings.

The interrelations of wood and cavity modes are critical in the final tuning of an instrument in playing condition. Very desirable effects in tone and playing qualities result when the Helmholtz mode and the nearby body mode (B0) are at the same frequency (C.M. Hutchins, 1985). The A0 mode frequency is essentially fixed in the finished violin by the dimensions of the cavity, the compliance of its walls and the characteristics of the f-holes. The B0 mode frequency can be moved up or down by altering the mass and stiffness of the neck, fingerboard, pegs and chinrest. With practice the pitch of the A0 mode can be heard by blowing across an f-hole. The pitch of the B0 mode can be heard by holding the violin at the nut (a node of B0) and tapping on the end of the fingerboard or on the chinrest.

When one hums into an f-hole, a slightly lower pitch can be heard; this is shown in fig.37 as the wood prime bowed tone. Good tone and playing qualities also result when Bo and wood prime are at the same frequency.

37. Geometry and approximate frequency positions of three body modes (B-1, B0, B1) and the two lowest cavity modes (A0, A1) of the finished violin

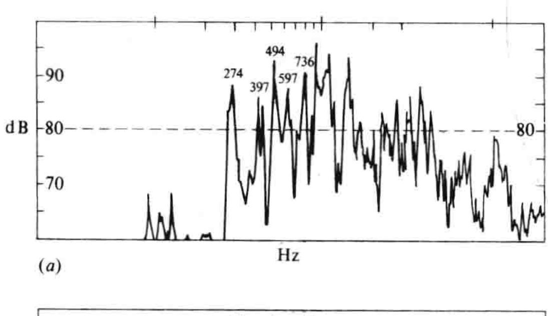
Wood prime is not a fundamental vibration; it is a strong bowed tone, due to reinforcement from the main wood bowed tone (*c* 440–570 Hz), which is an octave higher and acts as its second harmonic. These two bowed tones, main wood and wood prime, do not exist in a single frequency (sine-wave) excitation of the violin; however, they are two of the strongest tones in the bowed violin.

The main wood bowed tone usually lies just above the open A string of the violin, and has been found to be a combination of the A1 and B1 modes when the instrument is bowed. The frequency spacing between the A1 and the B1 modes indicates whether the tone qualities of a violin are very harsh (over 100 Hz), brilliant for solos (65–80 Hz), or suitable for orchestral work (45–65 Hz), chamber music in small halls (25–45 Hz) or more intimate Hausmusik (0–25 Hz) (C.M. Hutchins, 1989).

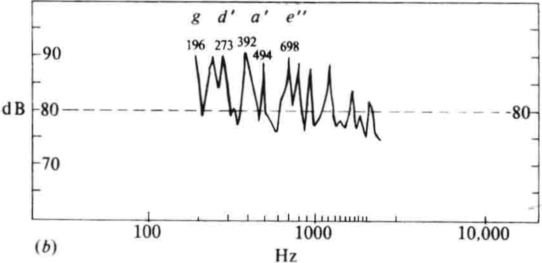
Controlled vibration tests of violins in playing conditions show that over an extended period (more than 1500 hours) the frequency of the B1 mode goes down about 25 Hz, resulting in smoother tone and playing qualities. After a rest period of several months the B1 frequency rises 10–15 Hz, but never regains its original frequency. This effect is due to the fracturing of the microfibrils in the cell walls, as well as to the decoupling of the long-chain cellulose polymers under stress and vibration. During a rest period variations of moisture and temperature slowly reverse these changes. Thus after many years of use the tone of a violin becomes smoother and the instrument becomes easier to play. The Hill brothers estimated that it takes 20–80 years of playing to bring a violin to optimum condition (W.H., A.F. and A.E. Hill, 1931). Experiments show that the B1 mode frequency can be raised or lowered some 10–20 Hz by means of various structural changes (Hutchins and Rodgers, 1992). This process indicates (1) that violins played over many years slowly change tone qualities, losing brilliance and power, and eventually wear out in spite of restorations by excellent violin makers; (2) that violins left unplayed for some time need to be 'played in' again, since during the rest period the wood cells tend to reform partially under temperature and moisture changes, thus altering the tone qualities; and (3) that new violins which seem harsh and stiff will improve with playing or some form of vibration, a fact that expert violin makers have known for many years (Otto, 1817).

5. THE MUTE AND VIBRATO. The mute, which consists merely of a suitable mass attached to the top of the bridge, changes both the volume and quality of the sound. Its tendency to immobilize the top of the bridge increases with frequency, so that higher tones are reduced and timbre becomes softer and less brilliant; the loudness of sound is correspondingly reduced. The low partial notes of the instrument are not greatly affected, but the loudness of the low notes is indirectly reduced by virtue of the 'residue effect'. According to this, the subjective sensation of fundamental pitch produced by the higher harmonics is somewhat reduced.

Of vibrato, much has been written from a musical point of view. Here only the physical characteristics will be considered, namely the changes in frequency level (recognized by the ear as pitch changes) and intensity level, and variations in harmonic structure of the sound. The changes in pitch as the finger moves back and forth on the string are quite familiar. This motion causes all the harmonics to have the same rate of pitch variation as the vibrato rate, typically four to six per second. The intensity level of each harmonic also varies at this rate, but is different for each harmonic, some having a high intensity level and some a very low. Also, for some of the harmonics the intensity level is increasing, while at the same time it is decreasing for others. These variations cause the aurally pleasing changes in the quality of the sound of notes played with vibrato. For further details see Fletcher and Sanders (1967).



6. SOUND RADIATION. The mechanical subsystems of the violin discussed thus far all contribute to how the violin functions as a musical instrument in the hands of

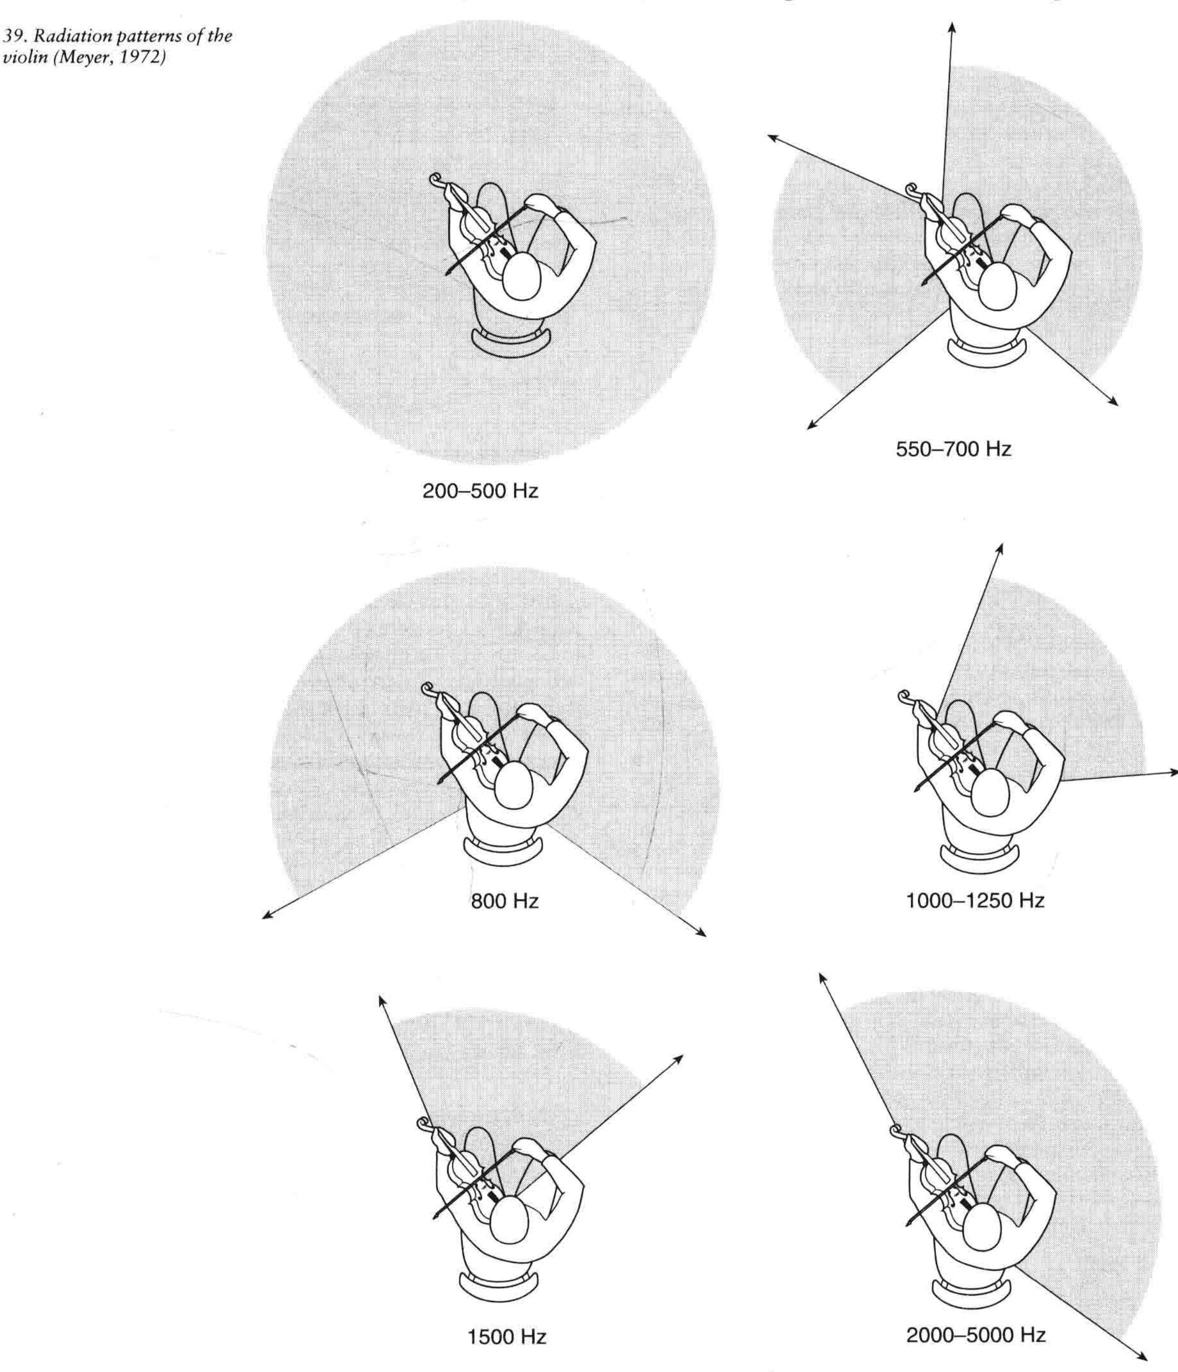


the player. The sound waves radiated by a violin activated by the broad-band input from the bowed string contain all the partials of the note played, which are essentially in simple multiples of the fundamental: 1, 2, 3, 4 etc. If any part of the instrument, including the air of the cavity, resonates at one of the partial frequencies, the amplitude and sound quality of that partial are enhanced. The quality of the sound heard depends largely on the strength of the various partials as they are affected by the resonance modes of the instrument.

Modal analysis shows that there are some 41 modes in the first 1000 Hz of the vibrating violin (Marshall, 1985). However, a reciprocal method of vibrating the violin with sound and measuring the velocity of vibration at the bridge shows that of the many modes in the violin below 1000 Hz only six to eight are important for sound radiation (Weinreich, 1983).

Much research on the radiation of violins has been done using a single-frequency (sine-wave) input sweeping across the entire spectrum. The response is picked up by one or more microphones and plotted on a chart against a bowed 'loudness curve' (fig.38). By comparing many such charts with the tone and playing qualities of the violins tested, investigators have built up a body of knowledge enabling them to assess the tone qualities of an instrument (Moral and Jansson, 1982; Dünnwald, 1990; and Meyer, 1993). However, variations in methods make it difficult to compare tests carried out by different investigators.

The acoustic radiation field surrounding the violin has been measured in various ways. Fig.39 shows the main directions of radiation in the horizontal plane around the player. Fig.40 gives the measured radiation characteristics of different frequency ranges around the violin in a plane parallel to the bridge. Fig.40*a* shows wavelength large in comparison to source dimensions (290 and 517 Hz respectively); fig.40*b* shows wavelength comparable to source dimensions (922 and 950 Hz); and fig.40*c* shows wavelength small in comparison to source dimensions (2323 and 2630 Hz). A method capable of measuring the entire spherical output of a violin, giving phase and amplitude information, has been developed by Weinreich and Arnold (1980). Weinreich (1997) has also found that the radiation pattern of a violin varies rapidly, not only with direction but also with frequency, typically changing drastically from one semitone to the next. In a concert hall this can produce an illusion that each note played by a solo violin comes from a different direction, endowing fast passages with a special flashing brilliance. This finding has important consequences for the perception and reproduction of violin tone.

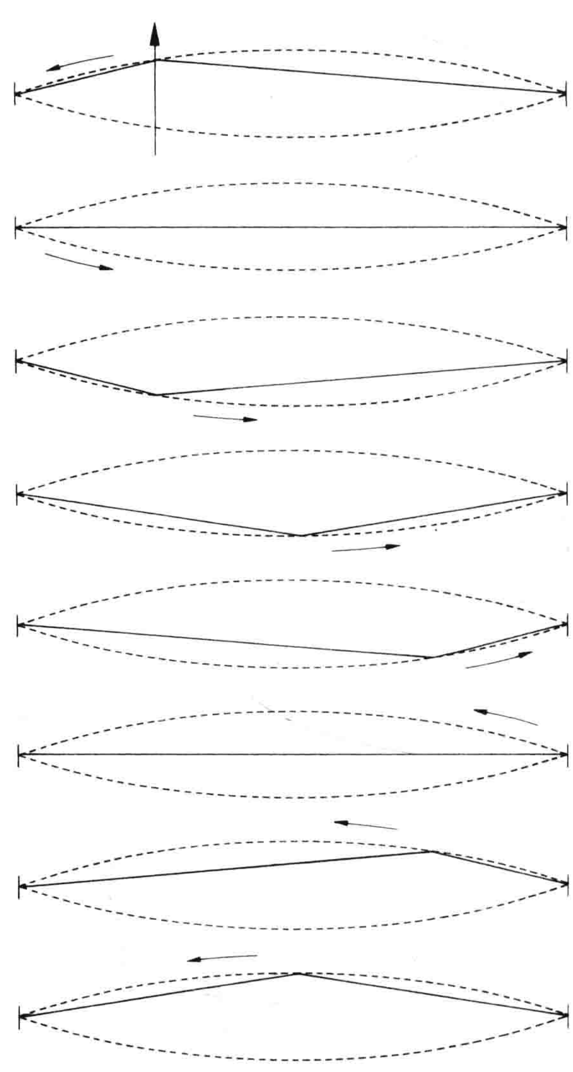


38. (a) Response curve showing the distribution and intensity of sounds produced by a violin when the force exerted on the bridge is simulated electronically; (b) loudness curve obtained on the same violin by bowing each semitone as loudly as possible

7. Bowing. When a bow is drawn across a string, the string appears as a lens-shaped blur. Within this blur the string is vibrating in a remarkable manner, first described by Helmholtz in 1877. If the motion is frozen in a series of snapshots (fig.41) the string is found to take the form of a sharply bent straight line. The 'corner' shuttles back and forth along the length of the string at the frequency of the note being played, for example 440 times per second for the open A string of a violin. While the corner travels from the bow to the player's finger and back the string is sticking to the bow hairs, and while it travels the shorter distance from bow to bridge and back the string is slipping rapidly across the hairs of the bow. The arrival of the corner at the bow triggers the transitions between these two states. This is what distinguishes the bowed string from other 'stick-slip' vibrations such as squealing brakes: the accurate timekeeping provided by the shuttling Helmholtz corner makes the pitch of the note very stable. When reversing from an up-bow to a down-bow stroke, the Helmholtz corner must be made to run in the opposite direction, one reason why it is hard to perform a completely inaudible bow change in a long note.

The player controls four quantities when bowing: the bow speed, the bow 'pressure' (more properly 'force'), the position of the bow on the string and the degree to which the ribbon of bow hair is tilted relative to the string. A consequence of the 'Helmholtz motion' is that, to a first approximation, the steady vibratory motion of the string is the same, regardless of these details of bowing. For ideal Helmholtz motion the waveform of oscillating force exerted by the string on the instrument's bridge, which is ultimately responsible for the sound, takes the form of a 'sawtooth wave'. Three factors affect the player's ability to influence the sound quality of a note. First, if the bowing parameters fall outside a certain range the Helmholtz motion is not possible at all, and something else (usually undesirable) happens, Second, within the range for which Helmholtz motion occurs, the fine details of the string motion do depend somewhat on the bowing parameters, enough for audible variations in sound quality to be produced for musical effect. Third, our perception of sound quality is influenced by the length and detailed nature of the transients – the brief sounds made by the way an individual note is started or stopped – and different bowings produce different transients.

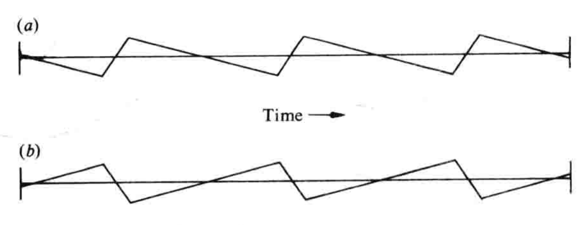
The range of bowing parameters for which Helmholtz motion is possible can best be appreciated with the aid of the diagram shown in fig.43. For a given bow position and speed the bow force must lie within a certain range. Below the lower limit the Helmholtz motion gives way to one in which the string slips relative to the bow more than once per cycle, producing what is usually described as



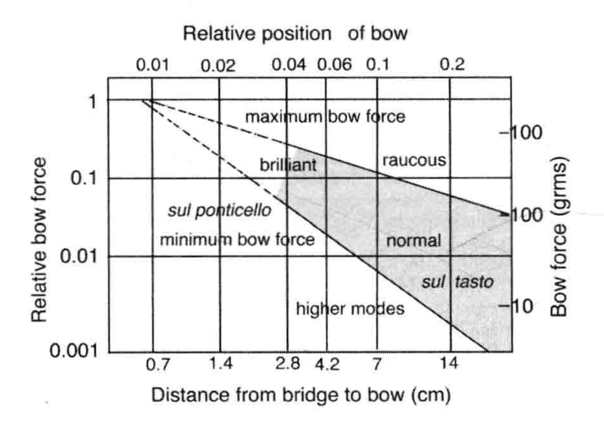
39. Radiation patterns of the violin (Meyer, 1972)

'surface sound'. Above the upper limit the arrival of the Helmholtz corner is insufficient to 'unstick' the string from the bow, the note ceases to be exactly repetitive from cycle to cycle, and the result is no longer a musical tone but a raucous 'crunch'. To bow nearer to the bridge (*sul ponticello*) the player must press harder and control the force more accurately: both limits rise but they become closer together. Beginners often fail to control the bow position on the string, and so may inadvertently leave the Helmholtz range by moving horizontally in the diagram.

The loudness of a bowed note is influenced by bow position, force and speed, while the brilliance is influenced mainly by bow force alone. The player must keep all three parameters in mind in order to produce the desired combination of volume and tone quality. Loudness is governed mainly by the amplitude of the string motion, brilliance by the exact shape of the Helmholtz corner: a rounded corner gives a more mellow sound, a sharper one a brilliant sound. The precise details of string motion following a particular bowing gesture are influenced by the material and construction of the string, and by its interaction with the body of the instrument and with the player's finger. For more details of the physics of bowing, see Cremer (1984). For an introduction to more recent



40. Measured directional characteristics of a violin in the plane through the bridge (after Meinel, 1957)



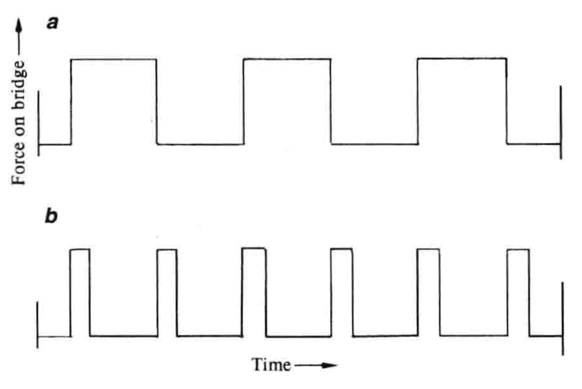
41. Shapes taken by a bowed string at a series of discrete points in time (solid lines) as the kink created at the point of bowing travels to the fixed end of the string and back once in every vibration, causing the optical illusion of a lenticular curve (dotted lines) (after Schelleng, 1974)

research using computer simulation, see Schumacher and Woodhouse (1995).

Bowed string instruments frequently display a disconcerting phenomenon known as the 'wolf' note, a narrow range of frequency within which the response tends to stutter or warble. This generally occurs around the

42. Sawtooth waveforms of string displacement produced by the alternate sticking and release of the rosined string by the rosined bow hair: (a) when bowed with a down-bow; (b) with an up-bow

43. Graph indicating the normal playing range for a bowed string instrument at constant bow velocity; the maximum and minimum bow force tend towards equality when the bow is very close to the bridge and diverge when it is further away (after Schelleng, 1974)



frequency of the most prominent resonance of the instrument (typically around *f′* on a viola G or C string, or *f* on a cello G or C string). The wood of the body vibrates so vigorously that the bridge does not provide a sufficiently solid support to the string, especially the heavier lower strings. The viola and cello are more prone to this problem than the violin because they have bodies which (for ergonomic reasons) are smaller than one would obtain by scaling up the violin in proportion to the tuning. To compensate, they have flimsier bodies and heavier strings, which exacerbate the wolf. The best way to ameliorate a wolf is to fit a 'tuned absorber' to the instrument. This takes the form either of a small resonant cantilever which can be installed inside the instrument by a repairer, or of a weight (a commercial 'wolf-eliminator' or a piece of plasticene) attached to one of the strings between bridge and tailpiece. It must be accurately tuned: fit a heavy mute to the bridge and adjust the mass and position of the eliminator until the short string, when plucked, rings at the pitch of the wolf.

8. The plucked string. When the string is plucked, the pull of the finger creates a kink, or discontinuity, that divides the string into two straight sections. On release, a dynamic condition is set up in which two discontinuities travel in opposite directions, one towards the bridge and one towards the nut. These are identical to the modes of motion described for the up-bow and down-bow action in the bowed string (see §7 above). Since they are now both present at the same time, however, the wave shape of the force exerted on the bridge is radically different from that of the bowed string. In the bowed string, the Helmholtz motion indicates a sawtooth wave in which reversal is instantaneous regardless of the position of the bow on the string (fig.44*a*). With the plucked string, on the other hand, the force at the bridge has a rectangular shape that depends on the point of plucking. If plucking occurs at the middle of the string, the shape is that of a square wave with a minimal content of the higher overtones (fig.44*b*). If the pluck is near the bridge or nut, a sharp rectangular wave is produced which is exceedingly rich in high-frequency components (fig.44*c*). Thus a wider range of timbre is possible by changing the point of plucking than by changing the point of bowing.

The plucked-string waveforms of fig.44 are highly idealized. Since energy is supplied once only at the start of the note, the string vibrations die away with time. Decay mechanisms include air damping, internal damping in the string material (dominant in gut and nylon strings) and energy loss to the body of the instrument. Only a small fraction of the string's vibrational energy is converted to sound. High-frequency string components tend to die out more rapidly than the low frequencies, though the decay rates depend on the precise dynamic response of the body. Thus the force waveforms, and the spectral content of the sound, vary considerably not only with time but also from note to note. In practice the player can exert further control over the spectral content of the sound by varying the plucking position or the angle of release of the string (which modifies the coupling between the string and body), or by modifying the shape and frictional characteristics of the plectrum or fingertip.

An important difference between bowing and plucking is that in the former the phenomenon is periodic, so that the overtones are kept in a strictly harmonic relationship to the fundamental. In a plucked string, which involves 'free' rather than 'forced' vibrations, stiffness in the string and coupling to the body create inharmonic partials. String stiffness causes higher partials to become slightly sharper than integral multiples of the fundamental. Strong coupling between the string and body, the result of an over-compliant soundboard (as commonly found in the guitar), can cause some partials to become sharp or flat. A little inharmonicity can add interest to the sound, but too much causes notes to sound out of tune or generally imparts poor sound quality.

9. Current research. It is apparent that, in respect to quantitative analysis and the predetermining of the effects of structure, wind instruments possess two important advantages over strings: their shapes are amenable to simpler mathematical description, and the resonating material, air, is homogeneous, with the same elasticity in all directions. By contrast, the shapes of string instruments, while a delight to the connoisseur, are forbidding to the mathematician, and the resonating material, wood, is neither homogeneous nor isotropic, and cannot be standardized. This uncertain property of wood is not a serious difficulty in woodwind instruments because their massive walls do not share vitally in the resonance of the instrument. The result has been that designers of wind instruments have had the possibility, which they have

44. Wave shapes of force (not to be confused with those of displacement shown in fig.42) of a vibrating string on the bridge: (a) a bowed string; (b) a string plucked at its centre

brilliantly used, of forecasting the effects of changes in design, while scientific luthiers have been far more dependent on a series of steps in carving the plates of their instruments, each step guided by the best means at their disposal.

Since the 1950s experimenters around the world have applied modern electronic and optical technologies to the acoustical problems of the violin. Efforts by individuals and by groups such as the Catgut Acoustical Society to relate these technical findings to the actual construction of fine violins are making it possible to build consistently fine-sounding violin-family instruments of any size and tuning. Modern violin makers have a ready market for their violins, violas, cellos and double basses, which are beginning to replace the fine early instruments that are gradually losing tone quality. However, we are still far from understanding fully how these apparently simple yet amazingly complicated instruments can produce such beautiful music.

III. Keyboard string instruments

1. Foundations. 2. Clavichord. 3. Harpsichord. 4. Piano.

1. Foundations. Keyboard string instruments are distinguished by key-operated mechanical devices which are used initially to shock the strings into free vibration, and finally to damp these free vibrations. Differences in the shape, size, material and function of these percussive and damping devices create most of the characteristic variations at the beginnings and ends of the notes. These differences also influence the timbre while the strings are vibrating freely, because the initial shock determines the waveform of the ensuing vibrations. There are other acoustical factors, such as the stiffness of the strings, the wrapping of the bass strings, the gradual damping of tone at the string supports, the number of strings per key, the acoustical properties of the structure supporting the strings and, in some cases, the effect of passive sympathetic strings.

The clavichord, harpsichord and piano all have systems of individually tuned strings lying approximately in a plane. Each string is under tension between a hitch-pin, secured in the string-supporting structure, and a tuning-pin which during tuning is rotated to and fro in a wooden pinblock. Between these two pins and generally near each of them the string bears against a point of sliding contact. The distance between the two intermediate contact points defines the length of the tuned vibrating string segment. Each string can vibrate freely at a series of frequencies which would be a harmonic series if the string were perfectly flexible. Because wire strings have some stiffness (remotely resembling a bar) the series of natural frequencies for string vibration is slightly, but audibly, inharmonic. Research has shown that this minute degree of inharmonicity is an important characteristic of the timbre. The inharmonicity also causes the optimum tuning of the instrument scale to be slightly stretched (flat on low notes, sharp on high notes) from the strictly mathematical scale of 2:1 octaves.

In keyboard string instruments the playing-key action causes a dynamic string excitation event. Some impact sound occurs immediately at the point of impact, and more comes through the string vibration system soon after. This is the 'cause' sound. The nature of both the impact and the resulting string excitation differs for each of the three major types of instrument, but in each case the shape of at least a portion of the tuned string segment is suddenly and momentarily changed. This string shape change is the pulse wave which travels up and down the string between the two contact points after the event occurs. This is the 'effect' sound.

The pulse wave is partially reflected back and forth repeatedly at the string contact points, causing the string vibration and the resulting note to sustain. However, some of the stored wave energy is removed during each reflection, eventually causing the note to die away. This vibratory energy, removed at the end of each round trip of the wave, vibrates the supporting structure, particularly the soundboard from which most of the sound energy enters the air. Only a small part of the sound reaches the air directly from the motion of the strings. The string typically vibrates at many frequencies simultaneously. Because these frequencies lie almost in a harmonic series, the listener hears the combination as a single note having a pitch corresponding to the lowest frequency in the series. The relative amount of sound produced at each frequency within the complex tone largely determines the timbre during the 'effect' portion of the tone. This depends on the shape of the pulse given to the string at impact, the response of the contact point of the supporting structure at each frequency of string vibration and the efficiency of the structure at each frequency in the transformation of vibration into sound.

In Table 1 the structural and mechanical differences between the three major types of keyboard string instrument are shown; the acoustical effects are explained below. For diagrams of the mechanisms described below, see articles on individual instruments.

2. Clavichord. The clavichord is typically a rectangular box with the keyboard occupying the left two-thirds of the long side. The strings are stretched in a horizontal plane from hitch-pins near the left end to tuning-pins near the right end. In the right end there is a very small horizontal soundboard supporting a bridge (sometimes segmented) which provides one of the downbearing contact points for each string. The longer bass strings are closest to the keyboard; the shorter treble strings are near the rear. Each playing key is pivoted on a balance-rail, and the key is guided by a rear tongue which rides up and down in a vertical slot. The unique mechanical feature of the clavichord action is the tangent, a wedge-shaped piece of iron or brass borne upon the rear key extension. As the key is depressed, the tangent rises and strikes the string directly, remaining in contact with the string until the key is released. The tangent thus serves two functions: its impact creates the string excitation without the aid of any intermediate action mechanism; and it provides the second downbearing contact point for its associated string, thus defining the length of the vibrating string segment and controlling its pitch frequency. In other words, the striking point and the termination point of the tuned segment are the same.

In many clavichords the same string is used for several notes that would seldom be played in combination (e.g. C and C♯), by positioning the tangents at different points along the same string. Such instruments are known as fretted clavichords. Some others employ individual strings for greater musical versatility.

The sustained contact between the key-borne tangent and the struck string gives the clavichordist a 'Bebung' tonal effect not obtainable with other keyboard string instruments. When the player varies the key force periodically (after striking) the string tension fluctuates, producing a pitch vibrato.

Between the tangent strike points and the hitch-pins there are strips of cloth interwoven among the strings.

TABLE 1: Comparison of typical acoustical factors in keyboard string instruments

Factor		*Clavichord*	*Harpsichord*	*Piano*
STRINGS:	*number per key*	1 or less	1 per footage	2/3
	material	brass/steel	brass/steel	steel

DAMPING:	*mode*	threaded through strings	jack weight/spring	damper head
	damper material	cloth	felt/cloth	felt
	damper shape	strip	flat	V/flat
	damper size	continuous	small	large

They quickly damp string vibrations to the left of the strike point where the string segment would not be properly tuned. They also damp the entire string vibration when the tangent contact with the string is released, making a separate damper action unnecessary.

Clavichords have several inherent acoustical advantages and disadvantages. The metal edge striking at the string termination excites a complete frequency series. The pulse shape sharpens with harder blows, giving dynamic range in brilliance. However, both the maximum tangent velocity and the area of the soundboard are so small that the clavichord is limited in output. The direct connection through the key from the player's finger to the string permits 'Bebung' vibrato, but it also provides mechanical damping which shortens note duration.

3. HARPSICHORD. Members of the harpsichord family have one of three orientations for the usually horizontally stretched strings. In the small rectangular virginals the strings run crosswise as in the clavichord; in the small wing-shaped spinet the strings extend obliquely from tuning-pins just behind the keyboard to hitch-pins in a row curving away to the right of the keyboard; and in the large harpsichord the strings extend directly away from the keyboard. This shape difference and the additional long bass strings make the harpsichord a larger instrument. Larger soundboards can provide greater tonal efficiency and fuller timbre.

In all three the strings are excited by the upward plucking action of a quill or plectrum which engages with, then releases the string. The plectrum projects from the central tongue portion of a narrow vertical jack which slides within guides, and is supported on the rear of the pivoted playing key. In large harpsichords there are two or more sets of strings and two or more manuals of keys. Thus different plectra borne by the same key can simultaneously pluck strings related by octave in the different string sets. The same string can also be plucked at different points along its length by plectra from different manuals. The closer the plectrum is to the string termination, the stronger are the higher, brighter partials of the note. The farther away, the stronger are the lower partials. Plectra may be quill, leather, wood, metal or plastic. The harder materials and the sharpest edges give the brightest timbre.

The most important acoustical difference between harpsichords and other keyboard string instruments is the plucking initiation of notes. The smallness and the sharpness of the plectrum edge, and the suddenness of string release as the plectrum passes on, produce a string waveform with ample high-pitched partials, giving the characteristic brilliance of harpsichord tone. In contrast with clavichord action, the string exciter leaves the string immediately and cannot absorb string vibration and so shorten note duration. The return of the plectrum on release of the playing key often produces a weak second excitation of the string. This stroke is minimized by the pivoting of the returning jack tongue. Although the resulting sound is a subtle characteristic of harpsichord tone, it happens so immediately before the jack-borne damper reaches the string that it sounds like part of the damping action.

4. PIANO. The first Cristofori piano was a harpsichord with the string-plucking action replaced by an upstriking hammer action with escapement. This freed the leather-covered hammer before impact, allowing it to strike the string and bounce back, in contrast with the tangent action of the clavichord. The hammer action gave both *piano* and *forte* levels with fully controlled gradations in between, introducing to a concert situation the keyboard dynamic expression previously possessed only by the

clavichord, which is too quiet to be played with other instruments. Cristofori's instrument was the predecessor of the grand piano. The piano hammers were larger and more rounded than the previous tangents and plectra, imparting a larger, rounder pulse shape to the strings. This gave more power in the low partials and less in the higher ones, making piano tone fuller than that of the harpsichord. Hammer sizes and shapes were smaller and more pointed for high notes, where brilliance is needed.

Later a smaller piano was developed by combining a simple, upstriking hammer action with a string vibration system derived from that of the clavichord. Because it was small, this piano was acoustically weak. Many different action mechanisms were invented for this popular instrument, the rectangular or 'square' piano.

The substitution of hammers for plectra allowed multiple coplanar unison strings for each note, which had not been feasible in harpsichords. This increased tonal loudness and produced other advantages described below. Forward-striking hammer actions were developed for vertical piano string systems, requiring less floor space than horizontal pianos. Cast iron plates to support string forces and steel piano wire of higher tensile limits permitted larger wire diameters and higher-tension strings, increasing tonal power and brilliance. Compressed felt replaced leather hammer covering, softening the tone and increasing hammer control and durability. Crossing bass strings over tenor strings reduced piano size, and more oblique cross stringing and drop actions led to the small vertical piano.

Multiple strings for each individual note contribute significantly to the distinctiveness of piano tone, adding a choral effect to each tone because of slight differences in string tuning. Research has shown that slight detuning of unison strings (less than 0·1%) is aurally preferred to mathematically exact tuning; experienced piano tuners typically leave this tuning margin. Immediately after piano hammer impact the multiple strings vibrate in close synchronism. At this time the rate of power transfer to the bridge and soundboard is maximal, causing rapid tone diminution initially. Later the strings gradually become asynchronous because their frequencies are slightly different, and the note dies away more slowly. This characteristic dual decay rate in well-tuned pianos lets successive notes stand out clearly over recently played, sustained notes, and this has influenced the development of composition for the piano. The vibrations of struck strings travel along the piano bridge to other strings, which can vibrate sympathetically when the sustaining pedal lifts the dampers, producing a stronger choral effect. In grand pianos the soft pedal moves the action transversely, reducing the number of strings the hammer strikes.

Except in the treble range, each piano note contains many partials, with the strongest lying between 100 and 1000 Hz. Hammer-string impact sound, which spreads throughout the pitch range, is an important characteristic of piano tone but is noticed only in the treble, where the partials are too sparsely spaced to conceal it.

Standard procedures used by piano tuners for tuning octaves produce a stretched scale. Upper notes are higher and lower notes lower than strict equal temperament by about a third of a semitone at each extreme, an effect resulting from slight inharmonicity of the partials of string tone. Research has shown that pianists and listeners prefer the piano scale stretched this way, and attempts to synthesize true piano tone from a strictly harmonic series of partials have had limited success.

The science, engineering and art that combine in the evolution of the piano comprise what is known as 'scale design', the configuration of tonally related major structural parts. These include the strings, hammers, dampers, bridges, soundboard, plate and, to some extent, the case, along with their material properties.

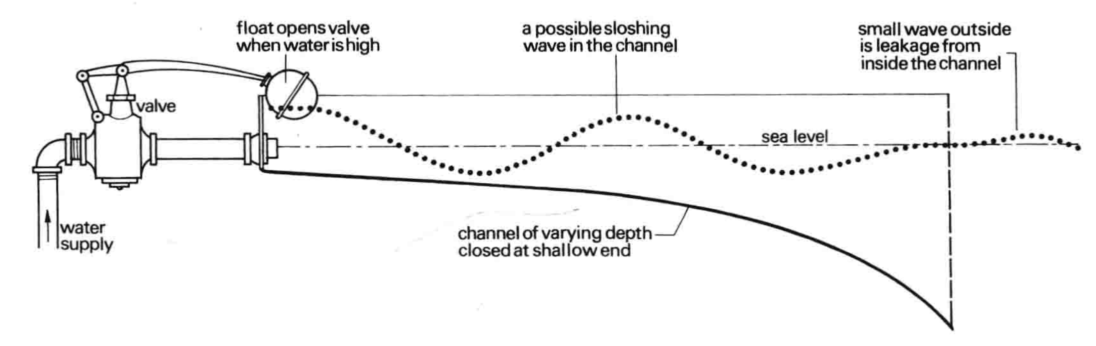
IV. Wind instruments

1. INTRODUCTION. Every wind instrument consists of a long and carefully shaped duct coupled to an airflow control system that converts the steady wind supply from the player's lungs, or from the wind chest of a pipe organ, into oscillations of the instrument's air column. The mechanism for controlling the airflow can be the reed of a clarinet or bassoon, the vibrating lips of a trumpet player, or the less easily visualized steering of a jet of air from the flautist's lips as it travels across the embouchure hole. In each of these the flow control device sends puffs

of air in a regularly varying sequence into the instrument's mouthpiece to keep the air column oscillating in its longitudinal vibratory motion. The nature and timing of these puffs are in turn controlled by acoustical variations taking place within the mouthpiece, these being a manifestation of the air column's own oscillations. In order to make this two-part oscillating system useful for musical purposes, the performer must be able to select one or another of the possible sounds that it can generate. A bugler who plays the notes of a call is making such a selection, as is a woodwind player who uses a single fingering to sound notes in the bottom and second registers of the instrument. A musician is able to fill in the remaining gaps left in the musical scale by transforming the original air column of the instrument into a longer or shorter one. These will give alternative sets of sounds from which he can choose according to his needs. In modern brass instruments, changes in air column length are produced by the addition of various lengths of tubing, as exemplified by the slide of a trombone or the valve loops of a french horn. In woodwind instruments these length changes are accomplished by opening a greater or lesser number of tone holes arranged to pierce the air column wall at various points along it.

To be successful the design of a wind instrument must achieve several relationships between the air column and its flow control device: the two must be able to work together to permit the prompt and stable production of each one of the various notes in the scale, and these must be under good control by the player; the pitches of these notes must lie close to those belonging to the musical scale; and the tone-colour of the generated sounds must conform to aesthetic standards, which may vary from period to period and from nation to nation. The nature of these relationships and the way they may be attained is briefly outlined below.

2. Modes of oscillation of an air column. The sloshing of water in a length of rain gutter is made up of oscillatory motions which provide some insight into analogous motions that take place in the air column of a wind instrument. Fig.45 shows a water-filled trough and the first three modes of oscillatory motion that are possible within it; these modes are those having the lowest frequencies of oscillation. Observation of the motion of the water in such a trough makes it quickly apparent that the vertical motion of the water level is very different from the water's back-and-forth flowing motion: points of small horizontal motion lie at points of maximum vertical motion; conversely, the vertical motion displays its nodes at those points where the horizontal motion is large. Vertical and horizontal motions are inextricably coupled to one another by the fact that the only way to change the water level at some point is to have water flowing towards or away from it.



45. Three modes of oscillatory motion possible within a water-filled trough

There are important differences between the sloshing motion of water in a gutter and the oscillatory flow of air in a musical wind instrument: the first is a wave on the surface of an incompressible liquid, while the second is a longitudinal wave in a compressible gas. Nevertheless, a useful analogy can be drawn between the two types of wave motion. The vertical motion of the water (a consequence of a localized inflow or outflow of water) is the cognate of the rise and fall of air pressure at some point within the duct; obviously such changes in air pressure arise from the flow of air. Because woodwind reeds and brass players' lips are ultimately controlled by pressure variations acting on them within the mouthpiece, and also because eardrums respond directly to the acoustic pressure variations exerted on them by the surrounding air, it is generally convenient to describe the behaviour of air columns in terms of the pressure aspect of their vibrations.

Every air column, regardless of its shape and the way in which its ends are terminated, has its own characteristic collection of vibration modes; each of these modes has its own pattern of flow and pressure and its own frequency of oscillation. Air columns of different shapes not only have different frequencies for their various modes of oscillation but also different ratios between them. It is a straightforward (though sometimes tedious) business to calculate the frequencies of an air column regardless of its shape, or, conversely, to calculate the shape needed to give a specified set of frequencies. As discussed in §4 below, there are only a very few basic air column shapes that can be coupled to a flow control device in order to make a useful note generator. It is a fortunate circumstance that these same shapes are also compatible with the requirements for proper tuning.

3. Maintenance of oscillation. A water analogue to a musical instrument can help one to visualize the way a flow control device maintains a steady oscillation. Fig.46 shows a device that could be called a water trumpet, in which a water supply valve is arranged to open or close progressively in response to the rise and fall of the water level at the shallow end of a tapering channel containing water. The end at which the valve is located is analogous to the mouthpiece end of a trumpet, and the valve itself replaces the player's lips. A water valve arranged to open and close in this manner acts as a flow controller worked by variations in water height as it maintains oscillations in the duct. In a similar way, the single and double reeds of orchestral woodwind instruments and the lips of brass players function as flow controllers of the pressure-operated type, in that they open and close under the predominating influence of acoustic pressure oscillations within the mouthpiece cavity of the instrument. The generic name 'reed-valve' will be used for all these pressure-operated controllers, including those associated with brass instruments.

Any acoustic disturbance has a pattern of flows intertwined with a corresponding pattern of pressure variations. If attention is directed to the flow variations in a wind instrument air column, they should suggest the

46. 'Water trumpet' in which the inflow of water is controlled by a valve

possibility of another kind of controller that operates by the flow aspect rather than the pressure aspect of the disturbance within the mouthpiece; this other type is found in the flute family.

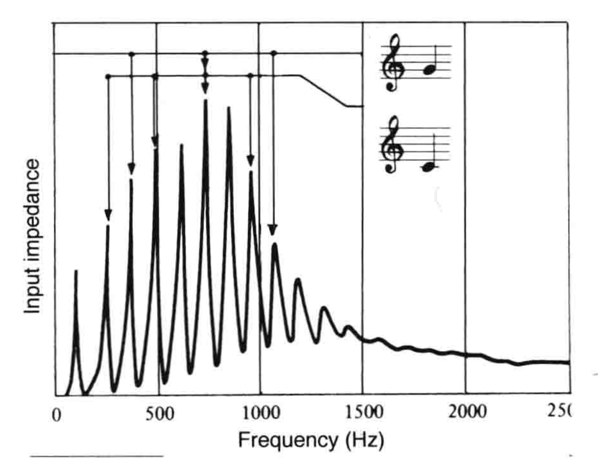
In 1877 Helmholtz presented the simple theory of the maintenance of oscillation by means of a reed-valve, showing that such oscillations tend to occur at one or other of the natural frequencies of the air column to which the reed-valve is attached (see also Backus, 1963). Wilhelm Weber had already in 1830 elucidated the influence of the reed's own elasticity on these natural frequencies (see Bouasse, 1929–30). It remained for Bouasse in the late 1920s to recognize that under certain conditions several modes of air column oscillation can act simultaneously on the reed-valve to facilitate the maintenance of a note. The implications of Bouasse's observations were worked out and given practical application by Worman (1971) and Benade (1973).

The nature of the collaborative effect of several resonances can be summarized in the following terms. The various characteristic air column modes influence one another via the shared excitatory airflow. The valve must therefore come to terms with the oscillatory preferences of these modes to produce a self-consistent oscillation that includes several harmonically related frequency components in setting up what is known as a 'regime of oscillation'. The name is chosen deliberately to draw attention to what can metaphorically be considered as political negotiations taking place between the air column's own set of vibrational tendencies and those of the reed-valve, with the alliances changing as varying musical conditions give dominance to different members of the regime. Oscillation is particularly favoured when the air column has two or more natural frequencies arranged to coincide with the harmonics of the note being produced.

The operation of the reed-valve depends crucially on the fact that the relationship between the pressure on the downstream side of the valve and the rate at which air flows through it is non-linear (that is, a change in pressure does not simply produce a proportional change in air flow). It is this non-linearity which allows an initially unidirectional flow of air from the player's mouth to destabilize the reed, resulting in the development of a periodic oscillation of the coupled system of reed and air column. The non-linearity is also an essential ingredient in the locking together of different air column modes into an oscillation regime with stable phase relationships. In recent years the theory of non-linear dynamics has been fruitfully employed to investigate such issues as the minimum blowing pressure necessary to make a wind instrument sound, and the changes in pitch, loudness and timbre which take place as the blowing pressure is increased beyond this threshold (see McIntyre and others, 1983; Fletcher, 1992; Kergomard, 1995; and Grand and others, 1996).

4. Musically useful air column shapes. We have seen that a stable regime of oscillation is more easily achieved in a wind instrument if it has a set of air column modes whose frequencies are in a harmonic relationship. No real wind instrument air column has exactly harmonic mode frequencies, but a conical tube complete almost to the apex comes quite close to this ideal. For this reason many woodwind instruments have approximately conical tubes: the oboe, bassoon and saxophone come into this category.

A cylindrical tube open at both ends also has a set of modes whose frequencies are, to a good approximation, members of a complete harmonic series. This is the acoustical basis of the flute, which has an effectively open embouchure hole at its upper end. A cylindrical tube closed at one end and open at the other has a set of harmonically related modes, but the even members of the series are missing. This is the case with the clarinet, which has a cylindrical tube effectively closed at the upper end by a cane reed.



In the brass instrument family, the player's lips form a reed-type control valve which effectively closes the upper end of the tube. The bugle and the Swiss alphorn can be classed as conical instruments; so can the flugelhorn, saxhorn and many types of tuba, at least when the valves are not depressed. A trumpet or trombone, on the other hand, has cylindrical tubing over a substantial fraction of its length, with a final section which flares more and more rapidly into a pronounced bell. If a trombone consisted only of the cylindrical slide-section, it would have an odd-member-only harmonic series of modes, like the clarinet. The addition of the flaring section, together with the cup-shaped mouthpiece at the entrance, not only lowers all the mode frequencies but also reduces the pitch intervals between the modes. On a well-designed trombone or trumpet, the modes from the second upwards have frequencies close to a complete harmonic series, although the first mode frequency is much too low to fit the series.

Extending the slide on a trombone, or depressing valves on a trumpet or horn, increases the length of cylindrical tubing in the instrument. This lowers all the mode frequencies, but also increases the pitch intervals between the modes. It is thus impossible to achieve an ideal

harmonic mode relationship for all slide positions or valve combinations. Similarly, opening side holes on a woodwind instrument does not merely shorten the effective length of the tube; it also changes the pitch intervals between the modes of the air column. There is thus no simple solution to the problem of designing a successful wind instrument with a large chromatic compass. Fortunately the non-linear coupling between air column and control valve can provide a strong oscillation regime even when only two or three modes have an approximately harmonic relationship, so the problems are less severe than they might at first appear.

5. BRASS INSTRUMENTS. The vibration of a brass player's lips is controlled by the oscillatory pressure present in the mouthpiece: this pressure is an aspect of the air column's own oscillation. It is convenient to characterize the air column itself with the help of measurements carried out with an electronically operated pump (a special type of miniature loudspeaker) that produces a sinusoidally varying flow of air in and out of the mouthpiece cavity at any desired frequency. A tiny microphone placed inside the mouthpiece measures the amplitude of the resulting pressure variations. This microphone gives the desired air column response information, which can be displayed on a graph as a function of the pump driving frequency (see Benade, 1973). Such a graph will be called a 'pressure response curve'; formally it is known to acousticians as an input impedance curve. Fig.47 shows an example of such a curve for a modern B♭ trumpet; its general nature is typical of the pressure response curves of all brass instruments. Each of the peaks on this curve indicates a large pressure variation within the mouthpiece cavity, and each peak corresponds to excitation at the frequency of one of the modes of the air column.

As an illustration of the usefulness of a pressure response curve, consider what fig.47 shows for the playing of the written note *c′*. The figure indicates that a regime of oscillation is set up for this note involving response peaks 2, 4, 6 and 8 of the air column, which collaborate with the player's lips to generate a steady oscillation containing many harmonically related partials. The lowest four of these partials get their major sustenance from the peaks named. When the trumpeter plays very softly, peak 2 dominates the oscillation and, because it is not very tall

47. Pressure response curve for a modern B♭ trumpet sounding the notes c′ and g′

(i.e. the given excitation produces only a mild oscillation in this mode), the note is not well stabilized. As the musician plays louder the other peaks become influential and the note is steadier and better defined. The regime of oscillation for the written note *g′* is dominated by peak 3 with the cooperation of peaks 6 and 9. Since peak 3 is taller than peak 2, at *pianissimo* playing levels *g′* will be steadier than *c′*. During a crescendo the tall sixth peak enters the regime for *g′* and greatly stabilizes the oscillation, which gains some help also from peak 9. These are the acoustical reasons why *g′* is one of the easiest notes to play on a trumpet.

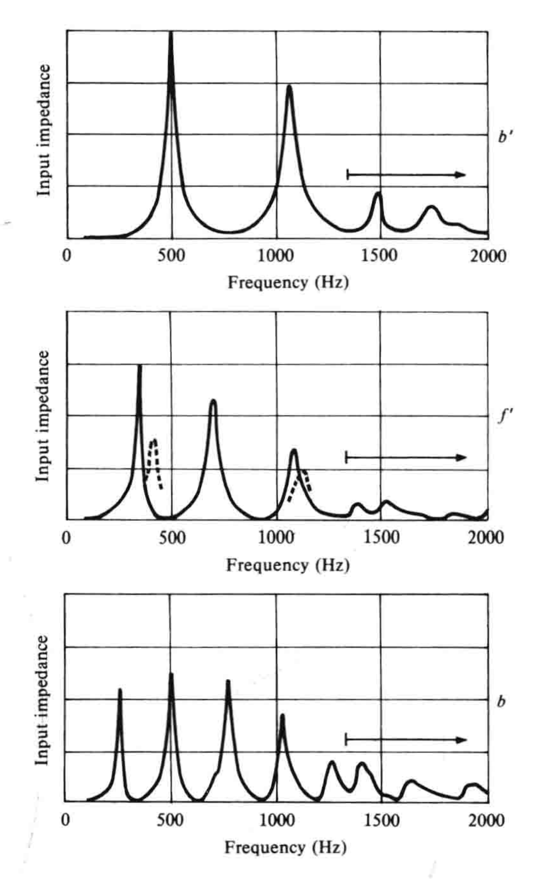
Further examination of fig.47 shows why the notes become increasingly hard to play as one moves up the scale. For example, *g″* is still fairly easy to play softly because it is fed by the tall sixth peak; but during a crescendo it becomes progressively more 'stuffy', because the increasing dissipation of acoustic energy via the generation of higher partials in the note is inadequately offset by the contributions made by the small 12th peak. The note *c‴* is difficult at all levels, since it is sustained only by the eighth peak, which is not particularly tall and which, moreover, has no assisting peak in the neighbourhood of its second harmonic (near 1864 Hz).

In every case described above, the tuning of each note is determined not only by the resonance peak closest to the nominal frequency of the note, but also by any other peaks that lie near whole-number multiples of this frequency. If errors in the shape of the air column lead to resonance peaks that are not exactly in harmonic relationship, not only is the steadiness and clarity of the note spoiled by the less than perfect cooperation at *forte* levels, but also the player must compensate for pitch shifts that take place during crescendos and diminuendos as the misplaced resonances gain or lose their votes in the regime. The fact that misplaced resonances lead to changes of playing pitch during a crescendo provides the basis for an extremely sensitive technique for the adjustment of the proportions of brass instruments.

It has already been shown that the positions of the various resonance peaks are crucial to the proper speech of a wind instrument, and there have been hints that their frequencies may systematically be adjusted by suitable modifications of the air column shape. For example, if a mouthpiece is to work properly on any given brass instrument, there is a certain critical relationship that must be maintained between its total volume (cup plus backbore) and its 'popping frequency', which is the frequency of the sound made by slapping the rim closed against the heel of the hand. Similar adjustments can be made at the other end of the instrument. Skilled horn players develop great sensitivity in moving their right hand as they go from note to note. The placement of the hand in the bell ekes out the last bit of perfection in the alignment of the resonances of the instrument. On other brass instruments it is left to the maker to carry out similar but fixed adjustments of the bells.

In an air column's resonance curve, the positions and alignment of the peaks are important, but so also are their heights. For example, the mouthpiece of a brass instrument has an acoustical duty beyond the simple one of helping to achieve suitable frequency relationships between the peaks: it is responsible also for the increased height of the middle four or five peaks relative to their low- and high-frequency neighbours, the maximum peak

height lying roughly in the region of the mouthpiece popping frequency itself. Without this area of added height in the response peaks, even a perfectly aligned brass instrument tends to be difficult to play.



The bell also plays an important role in influencing the height of the resonance peaks, in that it causes the disappearance of the peaks above a certain frequency, determined by its rate of flare. The presence of the horn player's hand in the bell raises the frequency above which there are no resonances, which allows the pressure response curve to have half a dozen additional resonance peaks. If these additional peaks are properly aligned, they will join with the other peaks to stabilize various regimes of oscillation and will also raise the upper limit of the player's range. Much of the confusion surrounding the phenomenon of handstopping is resolved when proper account is taken not only of the fact that moving the hand rearranges the peaks which collaborate in producing the note, but also of the fact that handstopping makes additional peaks available to the collaboration.

6. Reed instruments. It was mentioned in §4 above that many reed woodwind instruments are based on the conical air column shape. In such instruments the apical segment of the prototypical cone is replaced by a reed cavity (or mouthpiece) with a staple, neck or bocal, while the lower, large end of the active bore extends down to the first of a row of open tone holes. It is important to recognize that the presence of closed tone holes on the bore significantly alters its acoustical behaviour.

Fig.48 shows the pressure response curves measured on an oboe for the air columns (including staple and reed cavity) used in playing the low-register notes *b′*, *f′* and *b* (the curves for intermediate notes follow the trend implied in the figure). These curves are closely similar to those found for notes having similar fingering on the other conical woodwind instruments.

In reed instruments each low-register note is produced by a regime of oscillation involving the first (lowest-frequency) resonance peak, along with one or more other peaks whose frequencies match those of the next higher partials of the note being played. For the note *b′* there are only two peaks that participate in the regime, the higher-frequency peaks being much less tall besides being inharmonically positioned. On a good instrument *f′* is a much more stable note, being based on a negotiated agreement between three accurately positioned resonance peaks. Once again it is notable that above about 1300 Hz the peaks are not very tall, and they are irregular in their placement. The note *b* near the bottom of the oboe's scale is produced by a regime of oscillation involving four accurately harmonic and fairly tall peaks, with one less tall peak whose position is a little below the frequency of the tone's fifth partial. The size, spacing and chimney length of the tone holes determine the frequency above which the air column resonance peaks become less tall and more irregular in their position. The behaviour is reminiscent of the manner in which the bell of a brass instrument puts an upper limit on the number of resonance peaks. This explains why the bell of a woodwind instrument (even that of an english horn) can be replaced by an extension of the main bore, if this is provided with a suitably designed set of additional tone holes.

The second register of a conical woodwind instrument's playing range is produced by regimes of oscillation involving response peak 2, along with peak 4 if it exists.

48. Pressure response curves measured on an oboe for the air columns used in sounding the notes b′, f′ and b

The question arises as to how the reed can be persuaded to operate in such a regime. As a general principle, when one plays *pianissimo* on a reed instrument, oscillation is favoured at the frequency of the tallest air column response peak, and intermode cooperative effects are relatively unimportant. Fig.48 shows that the fingerings for *b′* and *f′* give air columns that favour low-register playing under these conditions, whereas *pianissimo* playing using the *b* fingering favours sound production an octave higher at *b′* because of the deficient height of the first peak (a deficiency characteristic of all nearly complete conical air columns). The tendency of the lowest notes to jump an octave in soft playing plagues every saxophonist, and also causes problems of harshness and instability for the player of double-reed instruments. When the *b* fingering is used to play loudly, the reed prefers the low-register regime, based on all four peaks, to the two-part regime, based on peaks 2 and 4. The different behaviour of the regimes under loud and soft playing conditions explains the functioning of the register hole of a woodwind instrument. This hole must produce two changes: it must cause peak 1 to become less tall than peak 2 in order to assure second-register playing at a *pianissimo* level; and it must shift the frequency of peak 1, giving it an inharmonic relationship with the other peaks (an inharmonicity chosen to produce the maximum possible disruption of any cooperative effects) in order to assure second-register playing at the *forte* level. The dotted curves in the middle segment of fig.48 show how

opening a register hole alters the heights and positions of peaks 1 and 3 for the *f′* fingering, leaving peak 2 unscathed and able to cooperate in the production of the note *f″* at all dynamic levels.

As in the case of brass instrument mouthpieces, there is a fixed relationship between the proportions of the air column of a conical instrument and the reed cavity and neck or bocal with which it can function. The active volume of the reed cavity (under playing conditions), with that of the associated tube, must closely approximate the volume of the missing apical segment of the basic cone. Furthermore, the playing frequency of the reed with its cavity and neck must (when sounded using a normal embouchure) agree with that of a doubly open cylindrical pipe whose length is that of the missing part of the cone. Systematic methods are available for the mutual adjustment of the air column, tone holes, reed cavity and neck of conical woodwind instruments. These can be as helpful in the fitting of a proper reed to an ancient instrument as they are in the construction of a modern one. The best instruments of all eras show great consistency with the principles outlined above.

The clarinet family (which uses a basically cylindrical air column) has properties remarkably similar to those of the conical woodwind instruments described above. The fingering used to produce the clarinettist's *e′* is analogous to that used for *b′* on the oboe. Once again it gives an air column with only two response peaks, while the lower notes of the scale are played using air columns with an increasing number of active peaks, exactly as before. As discussed in §4, the replacement of the conical air column by a cylindrical one has the effect of shifting the natural frequency ratios from the 1:2:3 etc. harmonic series to a sequence of the type 1:3:5 etc. made up of the odd members of a harmonic series. This has two noteworthy musical consequences. First the clarinet has an enormously large and easily controlled dynamic range in the low register. As one goes from *pianissimo* playing (peak 1 alone being active) to a *mezzo-piano* level, the nascent second harmonic partial in the note occurs at a dip in the resonance curve, preventing a tendency for an abrupt growth of tone which would otherwise result from its entry into the regime of oscillation (e.g. as tends to happen on the saxophone). Harder blowing progressively brings in the influence of the third harmonic partial as it cooperates now with response peak 2. The successive entry of cooperative and anticooperative influences as the odd and even partials become important is what makes a crescendo so easily manageable on a clarinet. The second consequence is that the notes of the clarinet's second register sound a 12th above the corresponding low-register notes, rather than an octave above as among the conical instruments.

7. Flute. As remarked in §2 above the airstream from a flute player's lips is steered alternately into and out of the instrument's embouchure hole under the influence of the flow aspect of the air column's oscillation. It is worthwhile to maintain the analogy with the reed instruments, referring to the controlled airstream informally as an 'air-reed' to distinguish it from the aerodynamicist's 'edge tone', with whose action it is often confused. It will suffice to note that an air-reed sets up regimes of oscillation in conjunction with the dips rather than the peaks of the air column response curves. Apart from this the behaviour is strictly analogous to that of reed instruments.

There are three basic shapes of air column that provide adequate cooperation with an air-reed by giving harmonically related response dips: the cylindrical pipe, the contracting cone and the expanding cone. Only the first two shapes are in common use. Certain subtleties of the cooperative action of an air-reed require a contraction of the bore near the blowing end as compared with the trend of the main bore. Thus a cylindrical tube requires a contracted headjoint, as exemplified by the Boehm flute, while the Baroque flute has its conical taper contracted into a cylinder in the headjoint. In both cases the volume of the small cavity existing between the cork and the embouchure hole can be adjusted to match the proportions of the hole itself to the rest of the instrument and to its player.

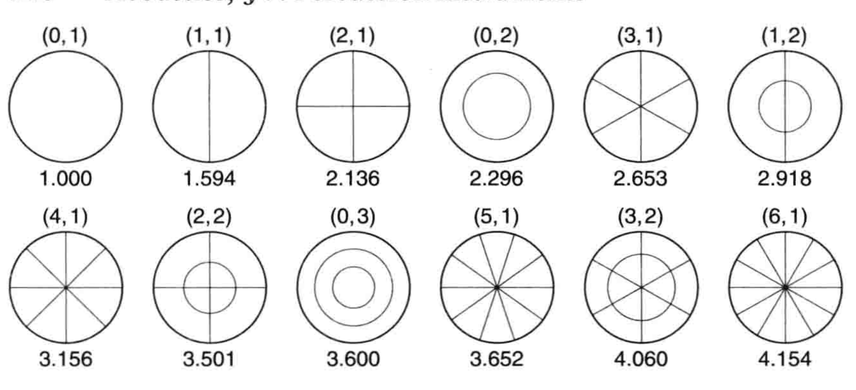
8. Wind instrument tone-colour. There are four significant influences on the tone-colour of a wind instrument. First, varying the profile of the reed tip and the mouthpiece tip on single-reed instruments changes the relation between the shapes of the puffs of air that come through the reed and the acoustic stimulus (in the mouthpiece) that controls them, thus causing modifications in the strengths of the generated partials. Similar behaviour is observed in brass instruments, flutes and organ pipes. Second, the number of cooperating peaks in the regime of oscillation and their height directly influence the strengths of the partials of a note generated within the instrument. Partials that are directly sustained by the cooperating peaks have strengths roughly proportional to the height of the peaks. The higher partials, lying at frequencies where the peaks are irregular or nonexistent, are weak because they are by-products of the main oscillation. Third, the transmission of sound out of an instrument into the room via the bell of a brass instrument or via the set of open woodwind tone holes also affects the tone-colour. This transmission is small for the lower partials of the internally generated note, rising steadily to a maximum value at the frequency at which the resonance peaks disappear. The resulting 'treble boost', characteristic of the emission process, partially offsets the progressively weaker generation of the higher partials. One hears the aggregate result of both effects. Experiment shows that a rise of only 2–3% in the frequency beyond which there are no resonance peaks makes an easily perceived brightening of the tone-colour on any wind instrument. Fourth, misalignments in the resonances will make many changes in the whole sound, but the acceptability of such misalignments is limited by the accompanying deterioration in the responsiveness of the instrument.

In the family of trumpets and trombones, a further factor comes into play which is responsible for a dramatic increase in brightness of timbre in very loud playing. The adjectives frequently used to describe this tone quality – 'brassy' or 'metallic' (*cuivré* in French) – reflect a common misconception that the effect arises from vibration of the metal bell of the instrument. In 1996 Hirschberg and his co-workers showed that the cause is in fact the development of shock waves in the cylindrical section of the air column. At the point in the vibration cycle at which the player's lips open, a large pressure jump is created in the mouthpiece. This pressure rise becomes steeper and steeper as it travels down the tube; by the time it reaches the bell it has become an extremely short and powerful

pulse. The form of this shock wave is similar to that created by the passage of a supersonic aircraft, and the sound of a *fortissimo g′* on a trombone has been graphically described as 'four hundred sonic bangs per second' (Gilbert and Petiot, 1997).

9. Early wind instruments. The last quarter of the 20th century saw a remarkable growth of interest in the performance of music on instruments typical of the period in which the music was composed. Acoustical studies of surviving original instruments have helped to clarify some of the important differences between early and modern instruments, and have provided useful guidance to makers engaged in manufacturing reproductions (see Drinker and Bowsher, 1993; Benade, 1994; Campbell, 1994, 1996; Myers, 1995; and Escalas and others, 1998).

Some instruments have undergone a continuous and relatively subtle evolution. The trombone, which appeared after the mid-15th century, remained a very similar instrument acoustically during the following four centuries. In the 20th century the bore diameter of the typical orchestral trombone increased significantly, as did the diameter of the bell. These changes, together with modifications of the mouthpiece, increased the acoustic power of the instrument, and also tended to reduce the brightness of timbre, especially in loud playing.



The most dramatic change in the acoustics of trumpets and horns occurred in the early 19th century, with the invention of the valve. Before this time the air column length of a trumpet or horn was fixed, and the playing technique relied heavily on natural tones corresponding to the frequencies of the air column modes. On the horn the technique of hand-stopping was used to modify the mode frequencies to provide additional notes, although the changes in pitch were inevitably accompanied by some changes in timbre. Natural trumpet technique relied on the ability of the player to alter the pitches of certain natural notes by changes of embouchure, a technique described as 'lipping'. It has been noted that the pressure response curves of Baroque natural trumpets have less sharply peaked resonances than do those of modern trumpets, making it easier to lip notes on the older instruments (Smithers and others, 1986).

Some wind instruments of the medieval and Renaissance periods fell completely out of use in the 18th and 19th centuries. Although an evolutionary line can be traced from the conical-bored double-reed shawms to the modern oboe and bassoon, the present-day orchestra contains no descendants of the crumhorn or the racket, which were double reed instruments with narrow-bored cylindrical air columns. Nor can modern equivalents be found for the cornett and the serpent, which were conical tubes with side finger holes, normally fitted with cup mouthpieces and sounded by the lips. The 17th-century serpent, although an instrument of great charm, suffered from serious acoustical problems related to the small size and irregular spacing of the fingerholes. These acoustical difficulties were largely overcome in the fully keyed ophicleide, which enjoyed considerable popularity in the 19th century. The cornett had developed an acoustically satisfactory form by the 16th century; its combination of lip excitation, short tube length and side hole fingering gave it a high degree of flexibility and agility. The cornett became the supreme wind instrument of the early Baroque period and has been successfully revived in the late 20th century by a new generation of virtuoso performers.

49. First 12 modes of an ideal membrane: the mode designation (m, n) is given above each figure and the relative frequency below

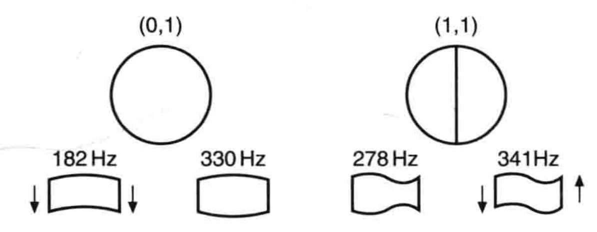
V. Percussion instruments

Percussion instruments generally use one or more of the following basic types of vibrators: bars, membranes, plates, air columns or air chambers. Except for air columns, the frequencies of the modes of vibrations in these components are not related harmonically; therefore percussion instruments are characterized by inharmonic partials in their sound. Another characteristic is the constant change in amplitude of their sounds, rising rapidly at the onset and immediately beginning to die away without reaching a steady state, as do the sounds of most string and wind instruments.

1. Drums. 2. Mallet instruments. 3. Cymbals and gongs. 4. Steel drums. 5. Bells.

1. DRUMS. Drums are probably our oldest musical instruments (with the exception of the human voice). The sounds of some drums, such as kettledrums, *tablā* and boobams, convey a strong sense of pitch but others do not; in the latter category are the bass drum, snare drum, tenor drum, tom-toms, bongos, congas and many drums of African and East Asian origin. As vibrating systems, drums can be divided into three categories: those consisting of a single membrane coupled to an enclosed air cavity (such as kettledrums), those consisting of a single membrane open to the air on both sides (such as some tom-toms and congas), and those consisting of two membranes coupled by an enclosed air cavity (such as bass drums and snare drums).

The first 12 vibrational modes of an ideal membrane are shown in fig.49. Their frequencies depend upon the radius, the tension and the mass per unit area. The normal mode frequencies of real membranes in a drum may be quite different from those of an ideal membrane, however. The principal effects acting to change the mode frequencies are air mass loading, membrane stiffness and the pressure of air enclosed within the drum, if any. In general air loading lowers the modal frequencies, while the other two effects tend to raise them. In thin membranes air loading is usually the dominant effect.



Although the modes of vibration of an ideal membrane are not harmonically related, a carefully tuned kettledrum is known to sound a strong principal note with two or more harmonic overtones. In the 19th century the physicist Lord Rayleigh recognized the principal note as coming from the (1,1) mode (at frequency f_1) and identified overtones about a perfect 5th ($f/f_1 = 1{\cdot}50$), a major 7th ($f/f_1 = 1{\cdot}88$) and an octave ($f/f_1 = 2{\cdot}00$) above the principal tone. He correctly identified these overtones as originating from the (2,1), (3,1) and (1,2) modes respectively, which in an ideal membrane should have frequencies of 1·34, 1·6 and 1·83 times the frequency of the (1,1) mode. Modern experiments have verified Rayleigh's results (see Rossing, 1982).

Air mass loading, which lowers the low-frequency modes more than those of higher frequency, is mainly responsible for establishing the harmonic relationship of kettledrum modes. Other effects, such as membrane stiffness and the size and shape of the kettle, merely fine-tune the frequencies, although they may have considerable effect on the rate of decay of the sound.

Harmonic mode tuning on Indian drums, such as the *tablā* and *mṛdaṅgam*, takes place in a different way than in the kettledrum. In these drums, with their small membranes, the effect of air mass loading is quite small, and so many layers of black paste are skilfully applied to load the drumheads by the required amount.

The physicist C.V. Raman studied the acoustical properties of *tablā* and correctly identified five harmonic partials as originating from nine normal modes of vibration, several of which have the same frequencies. The fundamental tone is from the (0,1) mode; the 2nd harmonic is from the (1,1) mode; the (2,1) and (0,2) modes provide the 3rd harmonic; the (3,1) and (1,2) modes supply the 4th harmonic; and the (4,1), (0,3) and (2,2) modes contribute to the 5th harmonic (see Raman, 1934).

In double-headed drums, such as the snare drum and the bass drum, there is considerable coupling between the two heads as they vibrate, especially at low frequency. This coupling, which takes place mechanically through the drum shell and acoustically through the enclosed air, leads to the formation of mode pairs. In fig.50, mode pairs in a freely suspended snare drum based on the (0,1) and (1,1) modes of each membrane are shown. When the drum is placed on a stand, further mechanical coupling on the modes of the support structure occur (see Rossing, 1992).

50. Four lowest vibrational modes of a snare drum: the modal designations (m, n) refer to the membrane modes shown in fig.49; mode frequencies shown are for a typical snare drum

2. Mallet instruments. Marimbas, xylophones, vibraphones and glockenspiels employ tuned bars of wood, metal or synthetic material. These bars can vibrate by bending (transverse modes), twisting (torsional modes) or elongating (longitudinal modes). Although longitudinal and torsional modes in bars or beams of uniform cross section have nearly harmonic frequencies, transverse modes are quite inharmonic. Since transverse modes are mainly used in mallet percussion instruments, harmonic tuning must be accomplished by shaping the bars appropriately.

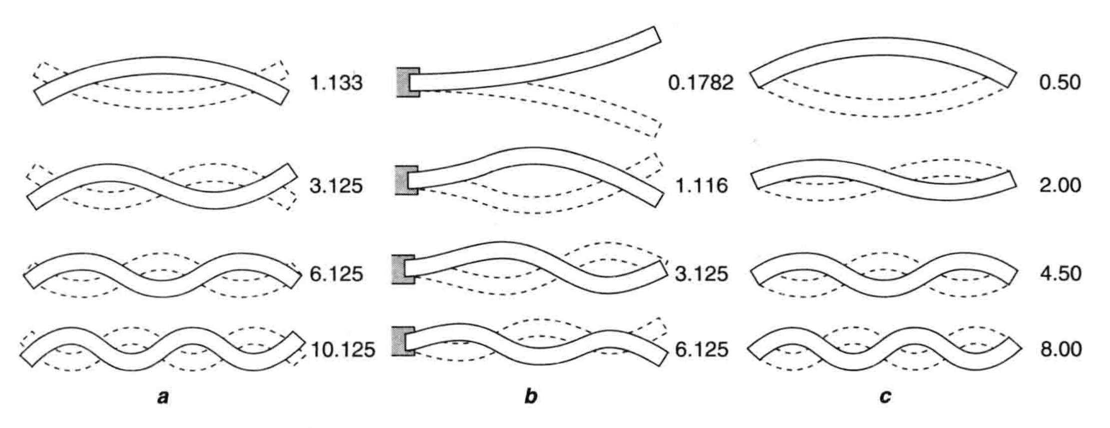
The modes of transverse vibration in a bar or rod depend upon the end conditions. Three different end conditions are commonly considered: free, simply supported (hinged) and clamped. There are six different combinations of these end conditions, each leading to a different set of vibrational modes. Three of the more common combinations are shown in fig.51.

A deep arch is cut in the underside of marimba bars, particularly in the low register. This arch serves two purposes: it reduces the length of the bar required to reach the low pitches, and it allows tuning of the overtones (the 1st overtone is normally tuned two octaves above the fundamental). Marimba resonators are cylindrical pipes tuned to the fundamental mode of the corresponding bars. A pipe with one closed end and one open end resonates when its acoustical length is a fourth of a wavelength of the sound. The purpose of the tubular resonators is to emphasize the fundamental and also to increase the loudness, which is done at the expense of shortening the decay time of the sound.

Xylophone bars are also cut with an arch on the underside, but the arch is not as deep as that of the marimba, since the first overtone is tuned to a 12th above the fundamental (that is, three times the frequency of the fundamental). Since a pipe closed at one end can also resonate at three times its fundamental resonance frequency, a xylophone resonator reinforces the 12th as well as the fundamental. This overtone boost, plus the hard mallets used to play it, give the xylophone a much crisper, brighter sound than the marimba.

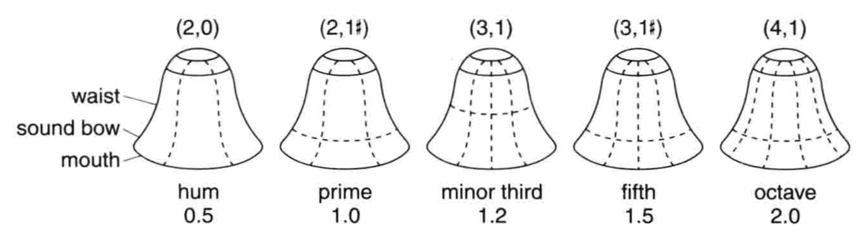
Vibraphones or vibraharps have deeply arched bars, so that the first overtone is two octaves above the fundamental, as in the marimba. The aluminium bars tend to have a much longer decay time than the wood or synthetic bars of the marimba or xylophone, so 'vibes' are equipped with pedal-operated dampers. The most distinctive feature of vibe sound is the vibrato introduced by motor-driven discs, known as 'vanes', at the top of the resonators, which alternately open and close the tubes. The vibrato produced by these rotating vanes consists of rather substantial fluctuations in amplitude (intensity vibrato) and a barely detectable change in frequency (pitch vibrato).

Chimes, or tubular bells, are usually fabricated from lengths of brass tubing 3–4 cm in diameter. Although they are tubular, the modes of vibration excited by striking with a mallet are essentially those of a beam or bar with two free ends. An interesting acoustical property of chimes is that there is no mode of vibration with a frequency at, or even near, the pitch of the strike tone one hears. Modes 4, 5 and 6 appear to determine the strike tone. These modes are nearly in the ratio 2:3:4, so the ear considers them as overtones of a missing fundamental an octave below mode 4.



3. Cymbals and gongs. The vibrational modes of a circular plate are similar in shape to those of the circular membrane shown in fig.49, although the frequencies are quite different. Using holographic interferometry, more than 100 plate modes have been observed in an orchestral cymbal.

The level below about 700 Hz shows a rather rapid decrease during the first 0·2 second after striking; this is apparently due to conversion of energy into modes of higher frequency. Sound energy in the range of 3–5 kHz, which gives the cymbal its 'shimmer' or aftersound, peaks about 0·05–0·1 seconds after striking, and may become the most prominent feature in the sound spectrum of a cymbal (see Rossing and Shepherd, 1983).



Gongs play a very important role in East Asian as well as Western music. Gongs used in symphony orchestras are usually 0·5–1 metre in diameter, cast of bronze with a deep rim and a protruding dome. When they are struck near the centre with a massive soft mallet, the sound builds up relatively slowly and continues for a long time.

Tam-tams are similar to gongs in appearance, but they do not have the dome of the gong, their rim is not as deep and their metal is thinner. Tam-tams a sound much less definite pitch than do gongs; their sound may be characterized as somewhere between the sounds of a gong and a cymbal.

4. Steel drums. Steel drums or pans are fabricated from 55-gallon oil drums. The first step in making a steel

51. Bending vibrations: (a) a bar with two free ends; (b) a bar with one clamped end and one free end; (c) a bar with two supported (hinged) ends; the numbers are relative frequencies for a thin bar

52. First five vibrational modes of a tuned church bell or carillon bell (nodes indicated by dashed lines); frequencies (Hz) relative to the prime and names of the corresponding partials are given below each diagram

drum is to hammer the end of the oil barrel to the shape of a shallow basin; then a pattern of grooves is cut with a nail punch to define the individual note areas, which may range from 28 in a single tenor to only three in a bass pan. Modern steel bands span five octaves, from around *G′* to *g‴*. A skilled pan maker tunes at least one mode of vibration in each note to a harmonic of the fundamental (usually the octave) and, if possible, another mode to the 3rd or 4th harmonic. Additional harmonics in the sound spectrums of steel drum notes result from sympathetic vibration of nearby note areas and from non-sinusoidal motion of the note area itself.

5. BELLS. When struck by its clapper a bell vibrates in a complex way, which can be described in terms of vibrational modes resembling those of a circular plate, with the nodal diameters replaced by nodal meridians. The first five modes of a church bell or carillon bell are shown in fig.52. Dashed lines indicate the locations of the nodes. The numbers (m, n) indicate the numbers of complete nodal meridians extending over the top of the bell (half the number of nodes observed at the mouth) and the numbers of nodal rings respectively. Since there are two modes with m=2 and n=1, one with a nodal ring at the waist and one with a nodal ring near the mouth, we denote the second one as (2,1#); likewise for (3,1#).

Handbells are much thinner and lighter than church bells and carillon bells. They have no thickened soundbow, and they employ relatively soft clappers to give a delicate sound. In recent years handbell choirs have become popular in schools and churches; there are an estimated 40,000 handbell choirs in the USA alone.

Generally the first and second vibrational modes of a handbell are tuned to a 3:1 frequency ratio. Each of these modes radiates a double-frequency partial as well, however, so the sound spectrum of a handbell includes a fundamental, a second harmonic, a third harmonic and a sixth harmonic (see Rossing and Sathoff, 1980).

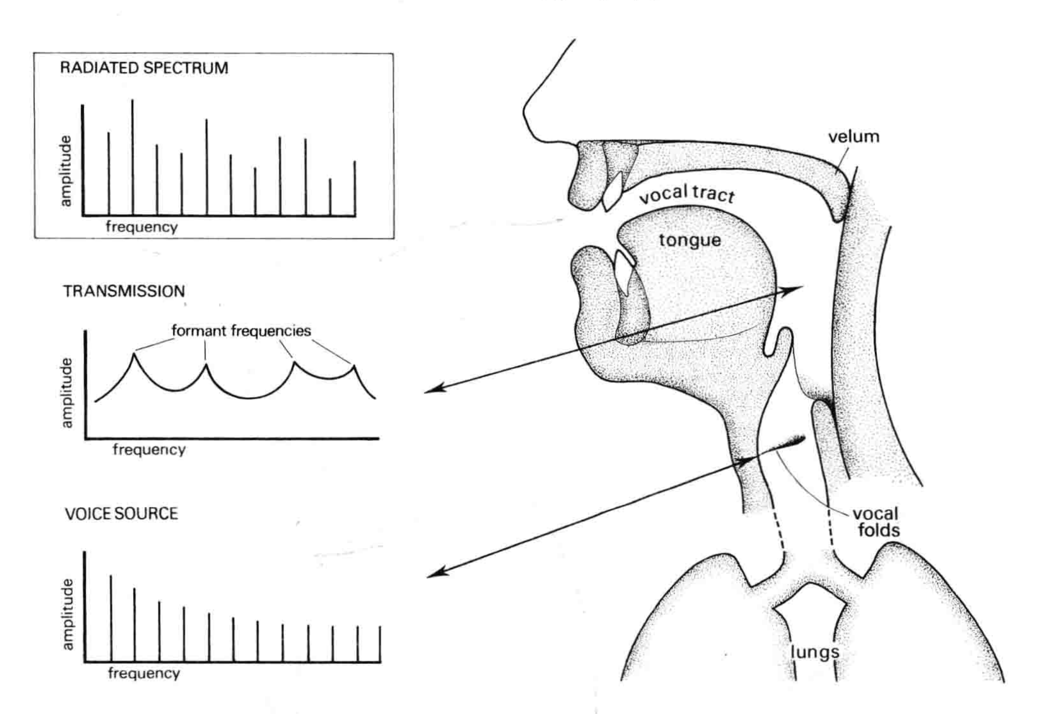
VI. The voice



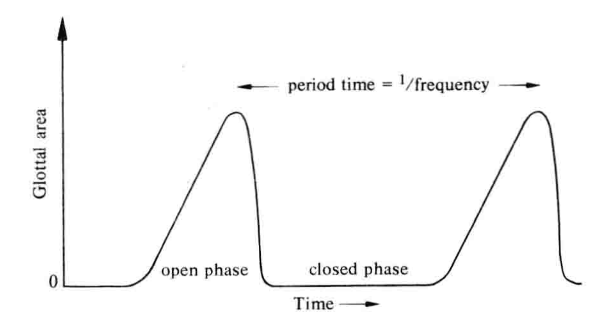
1. Introduction. 2. Air pressure supply. 3. Oscillator: (i) Voiced sounds (ii) Voiceless sounds. 4. Resonator. 5. The singing voice: (i) Breathing (ii) Vibrato (iii) Register (iv) Singer's formant (v) High-pitched singing (vi) Voice categories (vii) Overtone singing.

1. INTRODUCTION. The voice organ can be regarded as a wind instrument consisting of an air pressure supply driving an oscillator, the output signal of which is fed into a resonator from which the sound is radiated to the air outside the instrument (see fig.53). The air pressure supply is the respiratory system (i.e. the lungs and the respiratory muscles). In the case of voiced sounds, the oscillator is the set of vocal folds (earlier also called cords); they convert the airstream from the lungs into a complex sound built up by harmonic partials. For voiceless sounds the oscillator is a narrow slit through which the airstream is forced; the laminar airstream is then converted into a turbulent airstream which generates noise. The sound generated by the oscillator is called the 'voice source'. It propagates through the resonator constituted by the cavities separating the oscillator from the free air outside the instrument. In resonators the ability to transmit sound varies considerably with the frequency of the transmitted sound. At certain frequencies (the resonance frequencies), this ability reaches maximum. Thus in the case of the voice, those voice source partials that lie closest to a resonance are radiated with higher amplitudes than other partials. In this way the spectral form of the radiated sound mirrors the properties of the resonator. The resonances and the resonance frequencies of the vocal tract are called 'formants' and 'formant frequencies' respectively.

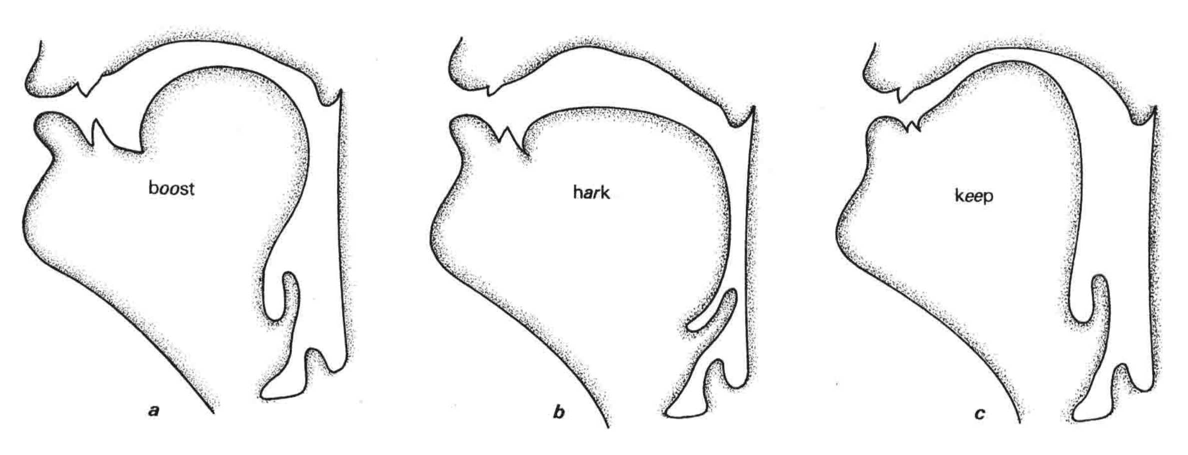
2. AIR PRESSURE SUPPLY. In singing, the air pressure is much more carefully regulated than in normal speech, by a skilled control of the inspiratory and expiratory muscles. The air pressure provided by the respiratory system in singing varies with pitch and vocal effort, generally between 5 and 40 cm of water. The resulting air flow depends also on the glottal conditions. Air flow rates of 0.1–0.3 litres per second have been observed in singers. These air pressure and air flow ranges do not appear to deviate appreciably from values observed in untrained speakers.

3. OSCILLATOR.

(i) Voiced sounds. The vocal folds originate at the angle of the thyroid cartilage, course horizontally backwards and are inserted into each of the arytenoid cartilages. By adduction (i.e. drawing these cartilages towards each other), the slit between the folds, called the 'glottis', is



53. Schematic representation of the generation of voiced sounds: the vibrations of the vocal folds generate a complex tone, the voice source, which has a uniform spectrum envelope tilt; voice source partials with frequencies corresponding to formant frequencies (such as the 2nd and 5th partials in the figure) are radiated with higher amplitudes than others



narrowed, and an airstream can set the folds into vibration. A vibration cycle can be described as follows. When the glottis is slightly open an airstream from the lungs can pass through it. This airstream throws the vocal folds apart and at the same time generates a negative pressure along the edges of the folds. The sucking effect of this negative pressure along with the elasticity and other mechanical properties of the folds closes the glottis again. Then the air pressure difference across the glottis throws the folds apart, thus starting the next vibratory cycle. The frequency of a vibration is determined by the transglottal air pressure difference and the mechanical properties of the folds. A high pressure difference or tense and thin vocal folds, or both, give a high vibration frequency; converse states give a low frequency. The mechanical properties of the folds are regulated by a series of muscles that vary the length and stiffness of the folds by manipulating the positions of the laryngeal cartilages. Thus these muscles are used to regulate the vibration frequency. As the vibration frequency determines the pitch perceived, these muscles are often referred to as the 'pitch regulating muscles'. An increase of the subglottal pressure raises the amplitude of the sound produced and also increases the vibration frequency, raising the pitch. Thus, in order to perform a crescendo at a constant pitch a singer has to raise the subglottal pressure and simultaneously compensate for the pitch increase by adjusting the pitch-regulating muscles.

By vibrating, the vocal folds repeatedly interrupt the airstream from the respiratory system. Thus they act as a valve oscillating between open and closed positions: the result is a chopped airstream corresponding to a complex sound, the fundamental frequency of which is equal to the vibration frequency of the folds. The glottis is schematically shown as a function of time in fig.54. The horizontal portion of the curve corresponds to the closed phase of the glottal vibration cycle, and the triangular portion is the open phase. As the air flow generally increases more slowly than it decreases, the triangular part of the curve is asymmetrical in the figure. In trained voices the glottal closure is often observed to be more efficient than in untrained voices. Also, the vibration pattern appears to vary considerably less with pitch and vocal intensity in trained voices than in untrained ones (see Sundberg, Andersson and Hultqvist, 1999).

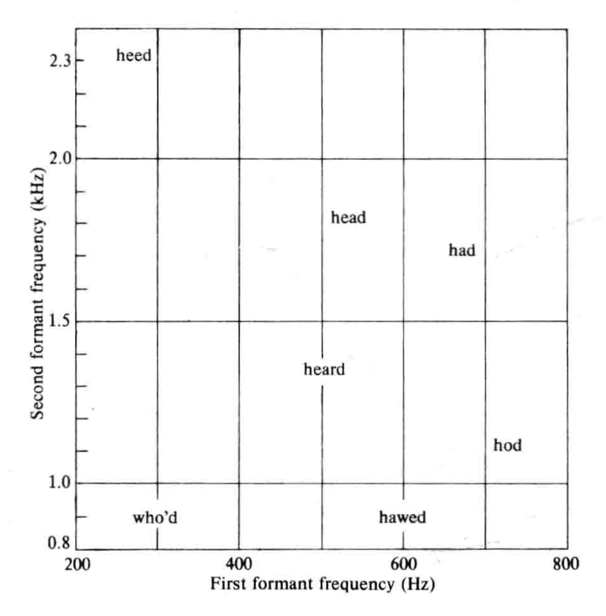
The sound generated by the chopped transglottal airstream is built up by a great number of harmonic partials whose amplitudes generally decrease monotonically with frequency, roughly by 12 dB per octave at neutral loudness. It is noteworthy that this holds as an approximation for all voiced sounds. Partials of measurable amplitude in the source spectrum are generally found up to 4–6 kHz. This means that a tone with a fundamental

54. Diagram showing how the transglottal air flow varies with time in voiced sounds (the pitch perceived corresponds with the fundamental frequency, which is the inverse of the period time)

55. Tracings from X-ray pictures of the midsagittal contours of the vocal tract for the vowels indicated

frequency of 100 Hz may contain between 40 and 60 partials of appreciable amplitude. However, the amplitudes of the source spectrum partials vary with pitch and vocal intensity (see Sundberg, Andersson and Hultqvist, 1999).

(ii) Voiceless sounds. The sound source in this case is noise generated by a turbulent airstream. The narrow slit required for the noise generation can be formed at various places along the vocal tract, the lowest position being at the glottis itself, which can be kept wide enough to prevent the folds from vibrating and narrow enough to make the airstream turbulent. This is the oscillator used in the 'h' sound. Another place used in some languages is the velar region, which can be constricted by the tongue hump. The resulting sound is used as the voice source in the German 'ach' sound. In most remaining unvoiced sounds the tongue tip constricts the vocal tract in the palatal, alveolar or dental regions as in the initial phonemes of 'sheep', 'cheap' and 'sip'. In the 'f' sound the upper incisors and the lower lip provide the slit.



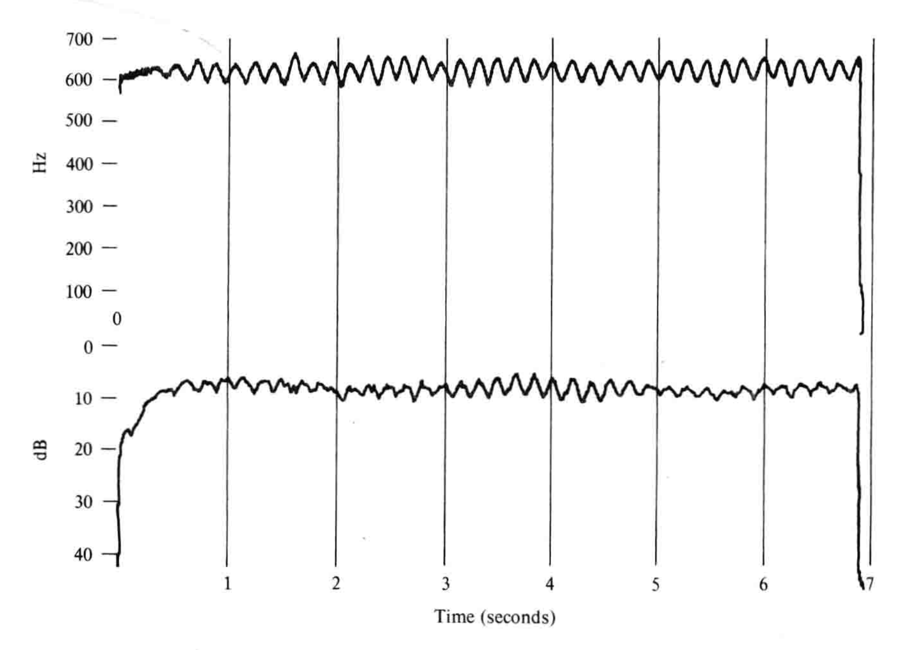
4. Resonator. The frequencies of the formants are determined by the shape of the resonator. In the case of non-nasalized sounds the resonator consists of the pharynx and mouth cavities. In vowels these cavities constitute a tube resonator which may be regarded as closed at the glottal end and open at the lip end. The average vocal tract length for males is generally considered to be 17·5 cm. A tube of that length and having a uniform cross-sectional area would display a series of resonances falling close to the odd multiples of 500 Hz. However, as the cross-sectional area of the vocal tract is not constant, the formants deviate from these frequencies. The vocal tract shape is determined by the positions of the articulators (i.e. the lips, the jaw, the tongue, the velum and the larynx). The positions of these articulators are continuously varied in singing and in speech, so that the formants are tuned to various target frequencies. Thus each vowel sound corresponds to a certain pattern of articulator positions.

The dependence of the formant frequencies on the articulatory configuration is rather complex. Only a few factors have the same type of effect on all formant frequencies; for instance, all formants drop in frequency more or less when the vocal tract length is increased, by protrusion of the lips or lowering of the larynx or both, and when the lip opening area is decreased. Moreover, certain formants are more dependent on the position of a specific articulator than are others. The first formant frequency is particularly sensitive to the jaw opening: the wider the jaw opening, the higher the first formant frequency. The second and third formant frequencies are especially sensitive to the position of the tongue body and tongue tip respectively. The highest frequencies of the second formant (2–3 kHz) are obtained when the tongue body constricts the vocal tract in the palatal region, as in the vowel of 'keep'. The lowest values of the third formant (around 1500 Hz) are associated with a tongue tip lifted in a retroflex direction. Fig.55 provides examples of articulatory configurations associated with some vowels.

These guidelines apply to oral sounds; in nasalized sounds the dependence of the formants on the articulator positioning becomes considerably more complex. The nasal tract introduces minima in the sound transfer of the vocal tract resonator. The acoustical effect of nasalization varies between vowels, but a general feature is that the lowest partials are emphasized.

For both oral and nasalized sounds the two lowest formant frequencies are generally decisive in the vowel quality perceived. Frequencies typical of male speakers are given in fig.56. Females have shorter vocal tracts and therefore higher formant frequencies. On average for vowels, the three lowest formant frequencies of female voices are 12, 17 and 18% higher, respectively, than those of male voices. Children, having still shorter vocal tracts, possess formant frequencies that are 35–40% higher than those of males (see Fant, 1973).

The amplitudes of the partials emitted from the lip opening depend on the sound transfer ability of the vocal tract. This ability depends not only on the partials' frequency distance from the closest formant, but also on the frequency distance between formants. Thus a halving of the frequency distance between two formants increases the sound transfer ability by 6 dB at the formant frequencies and by 12 dB midway between the formant frequencies, other things being equal. Another factor important to the amplitudes of the radiated partials is the sound radiation properties of the lip opening, which boosts the entire spectrum envelope by 6 dB per octave. For this reason, the amplitudes of all spectrum partials tend to increase with the pitch even when there is no change in vocal effort.



56. Idealized representations of the frequencies of the two lowest frequencies for American-English vowels spoken by male adults according to measurements by G.E. Peterson and H.L. Barney (1952)

5. THE SINGING VOICE. Basically the voice organ seems to be used in the same way in singing as in speech. In both cases the sound produced is entirely determined by the properties of the sound source and the vocal tract resonances. In other words, there seems to be no reason to assume that in non-nasalized vowels, resonance outside the vocal tract, such as in the maxillary sinuses or the lungs, contributes to the acoustic output to any appreciable extent. In singing, however, the possibilities inherent in the normal voice organ are used in quite special ways.

(i) Breathing. The demands on the breathing apparatus differ significantly between speech and singing. There are two main reasons for this. Firstly, phrases in neutral speech are generally short, typically using no more than 15–20% of lung capacity. In singing, on the other hand, phrases tend to be considerably longer, using twice as much and occasionally nearly 100% of lung capacity. As the recoil forces of the respiratory apparatus vary with lung volume, a singer needs to supply different degrees of respiratory muscle force depending on lung volume. Secondly, the mean over-pressure of air in the lungs, which controls the loudness of phonation, is basically constant in neutral speech, although it is raised for emphasized syllables. In singing, as higher pitches require higher pressures, this air pressure needs to be varied with pitch. As lung pressure affects pitch, failures to reach target pressures result in singing off the pitch. Singers generally use the diaphragm muscle for inhalation, which is reflected in an expansion of the abdominal wall. However, the strategy used for achieving the necessary control of the respiratory apparatus differs between singers. Some contract the abdominal wall, thus raising the level of the diaphragm in the trunk before phonation, while others keep the abdominal wall expanded and thus the diaphragm low in the trunk at the initiation of a phrase. Some even contract both abdominal wall muscles and diaphragm during singing. It is frequently assumed that these different strategies affect the function of the vocal folds and hence the voice timbre (see Thomasson and Sundberg, 1997).

(ii) Vibrato. One of the typical peculiarities of opera and concert singing is vibrato. In Western operatic singing its acoustical correlate is an undulation of the frequencies and amplitudes of the partials (fig.57). The undulation is almost sinusoidal and has a rate of about 5–7 Hz in good voices. The rate is generally constant within a singer, although it tends to slow down with advanced age. The

57. Variations in the fundamental frequency in Hz (upper curve) and in the overall amplitude in dB (lower curve) in a vowel sung by a female singer; note that a rise in frequency is not necessarily accompanied by a rise in amplitude

magnitude of the frequency excursions is of the order of ±70 cents, but greater variation occurs for expressive purposes and at advanced age. Vibrato tends to increase in regularity as voice training proceeds successfully. The frequency and amplitude undulations are synchronous but not necessarily in phase, depending on the frequency distance between the strongest spectrum partial and the nearest formant. If the strongest partial is slightly below the strongest formant, an increase in frequency will cause the amplitude to increase, so that frequency and overall amplitude will vary in phase. The opposite occurs if the partial is slightly higher than the frequency of the strongest formant.

The physiological origin of vibrato is not well understood. EMG (electromyographic) measurements in laryngeal muscles have revealed rhythmical contractions, synchronous with the vibrato undulations, of the pitch-raising cricothyroid muscle. This suggests that the laryngeal muscles produce the vibrato. The neural origin of these rhythmical contractions is unknown. Possibly as a consequence of this, the transglottal air flow varies with the frequency variations, and the resulting vibrato notes tend to consume more air than vibrato-free notes (see Large and Iwata, 1971). In popular singing subglottal pressure seems to be the vibrato-generating mechanism. In some singers the variations in the muscle activity affect the larynx height and even other parts of the voice organ. Pitch seems to be perceived with comparable accuracy regardless of the presence of vibrato for a single note. The perceived pitch agrees within a few cents with the pitch of a vibrato-free note with a fundamental frequency equal to the average frequency of the vibrato note.

(iii) Register. The term 'register' is used for groups of adjacent notes that sound similarly and are felt to be produced in a similar way. However, there are a great number of conflicting terms and definitions in common use. In untrained voices in particular a change from one register to another may be accompanied not only by a marked shift in tone quality but also by a 'register break', a sudden jump in pitch. In both male and female adults register shifts typically occur in the range of approximately 300–450 Hz. The register above this shift is mostly referred to as 'falsetto' in male voices and 'middle register' in female voices, while the register below the shift is known as 'chest register' or 'modal register'. A further shift occurs below 100 Hz; this register is called 'vocal fry'. Registers are associated with certain vocal fold configurations. Thus, in chest/modal register the folds are thick while in falsetto they are thinner. Acoustically, the lowest spectrum partial, other things being equal, has been found to be more dominating in falsetto than in chest/modal register. Also, the 'heavy' register in male and female voices has been reported typically to contain stronger high partials than the 'light' register. The physiological origin of register is confined to the voice source. According to some experts, a difference between the falsetto and the normal voice in males is that the vocal folds never reach full contact with each other during the vibration cycle in falsetto. Transitions between registers have been found to be accompanied by changes in the EMG signals from laryngeal muscles, and by changes in transglottal air flow. There is reasonable agreement on the importance of the laryngeal muscles to registers, though it has been suggested that a purely acoustical interaction between the glottal oscillator and the resonator is a contributory factor.

(iv) Singer's formant. The 'singer's formant' is a peak in the spectrum envelope typically appearing near 3 kHz in all voiced sounds as sung by Western operatic singers except sopranos. It corresponds acoustically to a high spectrum envelope peak which is present in all vowels and generally centred at a frequency of 2500–3500 Hz. In vocal pedagogy it is often referred to as 'singing in the mask', 'focussing' etc. Mainly a resonatory phenomenon, the singer's formant is achieved by clustering formants 3, 4 and 5 into a rather narrow frequency band. This seems to explain why sopranos lack a singer's formant: they mostly sing at high fundamental frequencies, i.e. the frequency distance between adjacent partials is typically quite wide, equalling the frequency of the fundamental. This means that a partial would fall into the frequency band of the formant cluster producing the singer's formant only for certain pitches, causing a salient timbre difference between different pitches. If the pharynx is wide enough, the larynx tube can act as a separate resonator, the resonance frequency of which is rather independent of the rest of the vocal tract; it may be tuned to a frequency lying between those of the third and fourth formants in normal speech. The condition of a widening of the pharynx seems to be met when the larynx is lowered, a gesture occurring typically in male professional Western operatic singing. At high pitches the demands on a wide pharynx are increased, and extreme lowering of the larynx is frequently observed when males sing high-pitched notes. In such cases the term 'covering' is sometimes used. The widening of the pharynx and the lowering of the larynx affect the frequencies not only of the higher formants, but also those of the lower formants. As an acoustical consequence of such articulatory modifications, the frequency of the second formant drops in front vowels. This alters the vowel quality to some extent, so that, for instance, the vowel in 'sheep' is 'coloured' towards the German 'ü' sound.

The perceptual function of the 'singer's formant' seems to be to make the voice easier to hear above a loud orchestral accompaniment. It has also been suggested that it helps the singer to be more audible in large auditoriums.

(v) High-pitched singing. Vowel quality is associated with specific combinations of the two lowest formant frequencies, and these frequencies are maintained regardless of the fundamental frequency. Normally the fundamental frequency is lower than the frequency of the first formant, which varies between about 250 Hz (close to *c'*) and 1000 Hz, depending on the vowel. When the fundamental frequency is higher than the normal frequency value of the first formant, singers tend to increase the latter so that it remains higher in frequency than the fundamental. This partial is the strongest in the source spectrum, and, if it coincides with the first formant frequency, its amplitude will be maximized without raising extreme demands on vocal effort. The degrees of tongue constriction and, in particular, of jaw opening represent important articulatory tools for achieving the necessary increases of the first formant frequency. Though this increase affects vowel quality, this disadvantage is limited since in high-pitched singing the vowel quality cannot be maintained even with correct formant frequencies owing to the great frequency distance between the

partials as compared with the number of formants (see Sundberg and Skoog, 1997).

(vi) Voice categories. Male and female voices tend to differ significantly with regard to their formant frequencies as well as pitch range, and this factor seems also to be significant in differentiating tenors, baritones and basses. Thus when singing the same pitch, voices of these types can be distinguished by their vowel formant frequencies. In most vowels a bass is likely to show the lowest formant frequencies and a tenor the highest; and all formants, not only the two lowest, are relevant. The formant frequency differences between male and female voices resemble closely those observed between bass and tenor voices, which suggests that the dimensions of the resonating system are of major importance. In addition, the centre frequency of the singer's formant seems to be typically higher in voices with a high pitch range than in voices with a lower pitch range. Thus, centre frequencies at about 2400 and 3000 Hz tend to give a bass-baritone-like and a tenor-like voice quality respectively.

(vii) Overtone singing. In some Inner Asian cultures the voice is used in a rather special manner, in that the tones produced are perceived as possessing two different pitches. This can be explained as follows. If the frequency of a formant coincides with that of a partial, this partial is likely to be much stronger than the adjacent spectrum partials, other things being equal. If two formants are tuned to the near vicinity of a partial, the effect can be greatly enhanced, so that the partial is perceived as a second pitch of the tone along with the fundamental. This strategy of tuning two formants to a partial is applied in overtone singing. The second and third formants (sometimes the first and second) are tuned to closely spaced frequencies, thus enhancing a specific partial. The fundamental frequency is either low, <100 Hz, produced with a growl or vocal fry quality, or is higher, often with a pressed quality. By these means the amplitude of the fundamental is reduced, and hence the dominance of the amplified overtone is enhanced. In tuning formants the lip opening, the position and elevation of the tongue tip and, in some cases, nasalization seem to play important roles (see Bloothooft and others, 1992; *see* OVERTONE SINGING).

Acquaviva d'Aragona, Andrea Matteo, Duke of Atri (*b* Atri, 1458; *d* Conversano, 19 Jan 1529). Italian humanist, patron and theorist. He was a member of the Accademia Pontaniana in Naples and initiated a long-standing tradition of musical culture in the family of the dukes of Atri, who were important patrons; his son Giovanni Antonio Donato was also a lira player. Acquaviva d'Aragona financed the Neapolitan printer Antonio de Frizis and housed the press in his palace in Naples. One of the earliest examples of music printing in the kingdom of Naples was the *Motetti libro primo* printed by De Frizis in 1519 (it is no longer extant, but a copy was owned by FERNANDO COLÓN). In 1526 De Frizis printed Acquaviva d'Aragona's Latin translation of Plutarch's *De virtute morali*, which was followed by an extensive Latin commentary including a 76-page treatise *De musica* (the whole was reprinted in Frankfurt in 1609). Notable for its wealth of illustrations and for its incorporation into a broader context addressed to humanists in general rather than to a specialized musical readership, the treatise is largely based on the writings of Boethius and Gaffurius, and takes as its point of departure Plutarch's observations on music's power of suggestion. The *Duo dialoghi della musica* by Luigi Dentice (Naples, 1552/*R*) are in a number of places simply an Italian translation of Acquaviva d'Aragona's *De musica*.

MARCO DELLA SCIUCCA

Act (Fr. *acte*; Ger. *Aufzug*; It. *atto*). One of the main divisions of a drama, opera or ballet, usually completing a definite part of the action and often having a climax of its own. Although ancient Greek drama was not divided thus except by the periodic intervention of the chorus, and the division into acts of the plays of Roman authors such as Plautus is the work of later hands, Horace (*Epistle to the Pisos*) recommended five acts as the proper manner of dividing a play. In attempting to recreate the ancient drama this structure was adopted in early operas and was usually preserved in serious French opera of the 17th and 18th centuries even when the three-act form had become established in other types of opera. Rousseau (*Dictionnaire de musique*, 1768) insisted that the unities of time and place should be observed in each act even in the

'genre merveilleux'. But there were already many exceptions (e.g. Rameau's *Hippolyte et Aricie*, 1733, in which the fifth act embraces two tableaux), and the development of stage techniques that afforded ways of presenting transformation scenes, together with the relaxation of the unities and the more fluid requirements in the representation of time and place in Romantic opera, meant that Rousseau's principles were soon discarded. From the late 18th century, operas were written in anything from one to five acts and, particularly in works for the popular theatre, little attempt was made to observe the unities of time and place (e.g. Mozart's *Die Zauberflöte* has two acts and a total of 13 scenes, most of which have different settings). Wagner's ideal music drama was to consist of three acts. He regularly adopted this division in his mature works, but other composers and librettists have remained unconvinced of the need for so restrictive a practice.

Most oratorios are divided into parts rather than acts, but Handel, whose works in this genre were conceived in theatrical terms, used the latter expression. It was also employed in England during the 18th and early 19th centuries for the various subdivisions of a concert.

MICHAEL TILMOUTH

Acte de ballet (Fr.). A French 18th-century stage work in one act, akin to the *opéra-ballet* and performed at the Académie Royale de Musique (the Opéra). Like the *opéra-ballet*, an *acte de ballet* includes *airs*, duets, choruses (particularly *choeurs dansés*) and sometimes other vocal music as well as instrumental dances. Being in a single act, it had a continuous, though slight, dramatic action: the plot was often designed to provide maximum opportunity for colourful scenic displays. Under the title 'Fragments', an evening's performance at the Opéra might be made up of several *actes de ballet* by different authors or one with other short works; popular entrées from *opéras-ballets* were taken out of their original context and given as *actes de ballet*.

The earliest example is *Zélindor, roi des silphes* by François Rebel and François Francoeur (1745), termed a 'divertissement'. As a designation in scores and librettos, *acte de ballet* is most frequently found in the works of Rameau: *Pigmalion* (1748) and *La guirlande* (1751) are two examples. J.B. Cardonne's *Ovide et Julie* (1773) was one of the last specifically so called.

The heyday of the *acte de ballet* was the third quarter of the 18th century. The practice of giving several different works on the same programme continued at the Opéra, but in the late 18th century and the early 19th the short *ballet d'action* or opera was combined with a longer work. Later in the 19th century (particularly in the 1830s) extracts from favourite repertory items were another option.

See BALLET (iii), §1, and OPÉRA-BALLET.

M. ELIZABETH C. BARTLET

Action (Fr. *méchanique*; Ger. *Mechanik*, *Mechanismus*; It. *meccanica*). (1) The linkage between the fingers (or feet) and the sound-producing parts of an instrument. Hence, the mechanism by means of which the strings or pipes of a keyboard instrument are sounded when a key is depressed, e.g. tracker action, pneumatic action, electric action, etc. in organs (*see* ORGAN, §II); English single, double or grand actions, Viennese action (*Prellmechanik*), etc. in pianos (*see* PIANOFORTE). Similarly, the mechanism by means of which the pedals of a harp change the pitches of its strings. Descriptions of various types of action are given in articles on individual instruments.

(2) By extension, the term is also used to describe the height of the strings above the fingerboard on plucked and bowed string instruments.

(3) (Ger. *Spielart*) The way in which an instrument 'speaks'. In this context, 'action' signifies the 'touch' of keyboard instruments (*see* TOUCH (i)).

EDWIN M. RIPIN/PETER WALLS

Action musicale (Fr.). A translation of Wagner's 'Handlung für Musik', his designation of the *Lohengrin* libretto, used by French Wagnerians (e.g. d'Indy, on the title-pages of his *Fervaal* and *L'étranger*) to suggest something more elevated than a mere opera.

ANDREW PORTER

Act music (i). Instrumental (rarely vocal) music performed before and during the intervals of late 17th- and early 18th-century English plays and semi-operas. A full suite of act music comprises nine pieces: two pieces each of 'first music' and 'second music', played to entertain the audience waiting for the play to begin; an overture, usually in the French style, sounded after the prologue was spoken and just before the curtain was raised; and four 'act tunes' played immediately at the end of each act of a five-act play or semi-opera (except the last).

The earliest known suites of act music were composed by Matthew Locke in the 1660s for various unidentified productions of the Duke's Company, London; the earliest surviving suite for an identifiable play is John Banister's for *The Indian Queen* (1664). The first set to be published was Locke's for the 1674 'operatic' production of Dryden and Davenant's *The Tempest*, which includes the remarkable overture or 'curtain tune' in imitation of a storm. The full score includes indications of expression and dynamics ('lowder by degrees', 'violent', 'soft and slow by degrees'). After *The Tempest*, act music was designed increasingly to reflect the dramatic content of the play for which it was commissioned, and act tunes in particular, besides signalling the ends of acts (as the curtain was not lowered until the end of the play), attempted to capture the mood of the scene they immediately followed. An act tune might therefore repeat the melody of a song in the preceding act or comment on the action in some obvious way, such as Gottfried Finger's punning 'Cuckoo' tune in *The Husband his own Cuckold* (1696) by John Dryden the younger.

The most important collection of act music is that by Henry Purcell published posthumously in *Ayres for the Theatre* (1697), which includes orchestral music for 13 plays and semi-operas. Apart from a few rondeaux and pieces on ground basses, most act tunes are in simple binary form, with two repeated strains of eight to 16 bars each. The overtures are all of the French type, with stately or grave introductions and brisk, quasi-contrapuntal canzonas; a few have conclusions recalling the style of the opening section. Purcell's act music is distinguished from that of his contemporaries by its depth and range of expression and attention to the inner parts.

In 1701 John Walsh (i) began a huge periodical collection of act music under the general title *Harmonia Anglicana, or The Musick of the English Stage*, which includes more than 60 sets composed up to 1710. Among the last suites of act music to be published was that for a 1710 production of Jonson's *The Alchemist* composed by 'an Italian master'. This was in fact the overture and

instrumental music from Handel's *Rodrigo* (1707); the composer himself did not arrive in England until late 1710. After that, no new act music is known to have been commissioned; instead, theatre managers used popular pieces, including Corelli sonatas and concertos, as the preliminary music and act tunes, and this kind of music ceased to have an explicitly dramatic function.

CURTIS PRICE

Act music (ii). Music specially written for the celebration of the Act at the University of Oxford in the late 17th and early 18th centuries. The Act, held originally in July, was a traditional function at which candidates for degrees gave public evidence of their fitness. In 1669 it was held for the first time in the newly opened Sheldonian Theatre (having previously been held at the university church of St Mary) and was incorporated in the ceremony of the *Encaenia* (the dedication of the building). Composers who contributed music for the Act, which flourished particularly in the period 1699–1710, included Locke and Blow. The Act ceased to be held after 1733, but the *Encaenia* continued as a ceremony for the commemoration of founders and benfactors and for the conferment of honorary degrees. The 1733 Act was celebrated with music composed and performed by Handel, and in 1791 Haydn's Symphony no.92 (the 'Oxford') was performed at the Sheldonian Theatre when he was awarded the harmony DMus. The only music performed now is an organ recital before the ceremony.

See also OXFORD, §4.

JACK WESTRUP/R

Acton, Carlo [Charles] (*b* Naples, 25 Aug 1829; *d* Portici, nr Naples, 2 Feb 1909). Italian composer and pianist. He studied the piano and composition in his native town, where he spent his entire life. His prolific output of fluently written, light and brilliant pieces (more than 400 works) won great success with the conventional middle class in Naples, which was culturally behind the times and inclined towards the flimsy, often frivolous genre of salon pieces: Acton's works became an indispensable part of the piano repertory of all daughters 'of good family' in Bourbon Naples. An amiable figure but of little distinction, he had no following of his own as a teacher, unlike his Neapolitan colleagues Costantino Palumbo and Alfonso Rendano.

WORKS

Operettas, incl. Una cena in convitto (farce, Acton)
Sacred works, incl. Le ultime sette parole di Nostro Signore sulla croce, 3vv, org; Oratio S Bernardi memorare, chorus; O sacrum convivium, 2 solo vv, chorus; Prima della SS Comunione, chorus; Resurrexit, female vv; Tantum ergo, 3vv
Partsongs; solo songs
Numerous instrumental pieces: vc, pf; 1–2 mand, pf; pf 4 hands; pf solo; org/hmn

FRANCESCO BUSSI

Act tune. A piece of music played, in English semi-operas and plays of the late 17th and early 18th centuries, at the end of each act (except the last). See ACT MUSIC (i).

Actus musicus. A term used from the mid-17th century to the early 18th in Protestant Germany, particularly in the areas of Saxony and Thuringia, for sacred dramatic compositions based on biblical stories. The *actus musicus* is similar in function and general structure to the Lutheran *historia*, that is, both were performed within the context of the liturgy and both are musical and textual elaborations of a biblical story. The *actus musicus* differs from the *historia* in its greater use of non-biblical interpolations and its greater emphasis on the dramatic element. While both genres are important as antecedents of the oratorio of Protestant Germany, the *actus musicus* is related more closely to the oratorio and less closely to the liturgy than is the *historia*. *See* ORATORIO, §7.

HOWARD E. SMITHER

Acuff, Roy (Claxton) (*b* Maynardville, TN, 15 Sept 1903; *d* Nashville, TN, 23 Nov 1992). American country singer-songwriter and publisher. He was first influenced by traditional music heard at home, much of it British, and by music at the church where his father was the pastor. His Southern Baptist heritage became evident in the mournful, wailing style of his vocals. A keen sportsman, he was denied a professional athletic career through ill-health, but learnt to play his father's fiddle. His early career was in so-called medicine shows, and radio appearances with local musicians led to the formation of his first group, the Tennessee Crackerjacks. His first record followed in 1937, and he made his début on 'The Grand Old Opry' radio show, subsequently becoming a regular contributor as Roy Acuff and the Smoky Mountain Boys. His recording of the Carter family classic *Wabash Cannonball* earned him a gold disc and led to nationwide tours as well as work in Hollywood.

In 1943 with Fred Rose he established Rose-Acuff, the first country music publishing house in the USA. The firm became a cornerstone of Nashville's country music establishment, and its catalogue now includes work by such writers as Marty Robbins and Felice and Boudleaux Bryant. In 1949 Acuff was part of the Opry company's first European tour and was an early international ambassador for a music that was derided in the northern states of the USA. He was the first living performer to be elected to the Country Music Hall of Fame (1962), and was a key figure in the development of the new Opryland complex. He continued to perform until his death, regularly entertained the US military and played an active role in state politics. The sincerity shown in all his work explains his enduring success as a performer.

ACUM [Société d'Auteurs, Compositeurs et Editeurs de Musique en Israel]. *See* COPYRIGHT, §VII (under Israel).

Adagietto (It., diminutive of *adagio*). A tempo designation suggesting something more lighthearted than ADAGIO as

in Poulenc's *Les biches* and Stravinsky's Piano Sonata (1924). But its most famous use is in Mahler's Fifth Symphony, where the fourth movement, for strings and harp, has the title Adagietto and the tempo designation *sehr langsam*; there it is used to mean a relatively brief slow movement with a fairly light texture. Unlike *adagio*, the term is current only in musical contexts.

See also TEMPO AND EXPRESSION MARKS, §3.

DAVID FALLOWS

Adagio (It.: 'at ease', 'leisurely'). A tempo designation whose meaning has changed substantially over the years. Early forms of the word in musical scores include *adaggio* (Monteverdi, 1610; Cavalli, *L'Elena*, 1659) and *adasio* (Frescobaldi, 1635; Erasmus Kindermann, 1639). In the 18th and 19th centuries it was often abbreviated to *ad°* and adag°. The form *ad agio* is also found, though not in musical contexts.

Praetorius (*Syntagma musicum*, iii, 2/1619/*R*) equated it with *largo* and *lento*, translating all three as *langsam*; in the preface to his *Sonnata's of III Parts* (1683) Purcell said that it and *grave* 'import nothing but a very slow movement'. Monteverdi seems to have used the word in this sense in the six-voice *Magnificat* of his 1610 collection, where he gave the organist the instruction 'Et si suona Adaggio, perchè li soprano cantano di croma' ('play slowly because the sopranos sing quavers'). Banchieri was probably the first to use it specifically as a tempo designation, rather than just part of an elaborate explanatory sentence, in 'La battaglia' from *L'organo suonarino* (1611). For him, as for many other early users of *adagio*, including Domenico Mazzocchi (1626, 1638) and Carlo Farina (1627), it was the slowest tempo.

But it is likely that Frescobaldi meant *adagio* in its literal sense of 'at ease' or even 'as you wish', both in the prefaces to his two 1615 volumes and in the music of his 1635 *Fiori musicali*: the musical context suggests that a freer, less metrical style of playing was expected for the sections so marked. And something of the kind was also implied by Brossard (*Dictionaire*, 1703), who translated it as 'comfortable, at one's ease, without hurrying', but added that it usually meant 'slowly, dragging the beat a little'. As late as 1732 J.G. Walther (*Musicalisches Lexikon*) implied the same (*see* COMODO).

The ambiguity of the word lies in its position as one of the first words in music to mean 'slow' and its equally widely accepted position as the second of the five main degrees of movement in music (as described, for instance, by Rousseau, *Dictionnaire*, 1768), lying between *largo*, the slowest, and *andante*: Rousseau (article 'Mouvement') translated *adagio* as *modéré*. Throughout the 18th century there was an unvoiced disagreement among the theorists as to whether *adagio*, *largo* or *grave* was the slowest tempo; in his own copy (now in *GB-Lbl*) of Grassineau's *Musical Dictionary* (1740), Burney corrected the definition of *adagio* as 'the slowest of any except *grave*' to 'the slowest of any'. Broadly speaking, Italian writers and composers seem to have regarded it as the slowest tempo, whereas French musicians saw it as being faster than *largo*.

But by the 19th century *adagio* was generally agreed to be the slowest tempo, while *largo* was used to suggest something more grand, and *grave* became more serious but was rarely slower as well. Only *adagissimo* (or *adagiosissimo*) was slower: it had been used by Bach at the end of his D minor Toccata and of the chorale prelude *O Mensch, bewein*; and it replaced the earlier *adagio adagio*, which appears in works by Martino Pesenti (1639, 1647) and was equated with *largo* by Brossard (1703), who translated it as *très lentement* (although he translated *largo* as *fort lentement*).

Adagio was also used as a noun, perhaps more frequently than any other tempo designation except *allegro*. It meant any slow movement: Bruckner, for instance, gave it as the title for the slow movement in most of his symphonies, but gave something else entirely as the tempo designation (*sehr feierlich*, *sehr langsam* etc.); and Haydn, in the autograph of his Symphony no.96, wrote at the end of the first movement *segue adagio*, though the next movement is in fact marked *andante*.

Also in the same sense, *adagio* meant for Baroque composers any slow movement that would normally be embellished. Quantz (*Versuch*, 1752) devoted an entire chapter to the subject 'Von der Art das Adagio zu spielen', and included the comment:

> The *adagio* may be viewed in two ways with respect to the manner in which it should be played and embellished; that is, it may be viewed in accordance with the French or the Italian style. The first requires a clean and sustained execution of the air, and embellishment with the essential graces, such as appoggiaturas, whole and half-shakes, mordents, turns, *battemens*, *flattemens* etc., but no extensive passage-work or significant addition of extempore embellishments. ... In the second manner, that is, the Italian, extensive artificial graces that accord with the harmony are introduced in the *adagio* in addition to the little French embellishments. ... If the plain air of this example is played with the addition of only the essential graces already frequently named, we have another illustration of the French manner of playing. You will also notice, however, that this manner is inadequate for an *adagio* composed in this fashion.

But customs change, and Leopold Mozart (1756) had the following to say:

> Some people think they are bringing something wonderful to the world when they thoroughly distort an *adagio cantabile* and turn a single note into a few dozen. These music-butchers thereby manifest their poor judgment and tremble when they must hold out a long note or play even a few notes cantabile without mixing in their accustomed, nonsensical and laughable doodling [*fick fack*].

A similar feeling is expressed more ironically in Joseph Riepel's *Grundregeln der Tonordnung* (1755, chap.2, p.110):

> Pupil: Now tell me quickly whether a little piece like this can be used any more or not at all?
>
> Teacher: Why not? Just write the word 'Solo' on top and mark it *adagio*. A violinist will decorate it with embellishments; in fact it will be a thousand times preferable to him than if a composer should cobble together a solo for him without understanding the violin.

As late as 1802 Koch, in his *Musikalisches Lexikon* (article 'Manieren'), implied that the practice was still common by expressing the opinion that adagios were embellished only to cover up the weaknesses of a performer who was not able to sustain a line so slowly. But already in 1789 Burney could write in the third volume of his *History*:

> It was formerly more easy to compose than to play an Adagio, which generally consisted of a few notes that were left to the taste and abilities of the performer; but as the composer seldom found his ideas fulfilled by the player, adagios are now more *chantant* and interesting in themselves, and the performer is less put to the torture for embellishments.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Adalbert of Prague [Vojtěch; Wojciech] (*b* ?Libice, Bohemia, *c*956; *d* nr Danzig [now Gdańsk], 23 April 997). Czech bishop, missionary, martyr and saint. He belonged to the powerful Slavník family and was baptized Vojtěch, taking the name Adalbert at his confirmation. Educated at Magdeburg, he was consecrated Bishop of Prague in 983. Owing to opposition he twice resigned the see and travelled to Rome, returning each time to Prague. In Italy he became a Benedictine (989) and visited Monte Cassino; he founded the first Benedictine houses in Bohemia (Břevnov, 993) and Poland (Międzyrzecz, *c*996), and visited Hungary as a missionary. He was canonized in 999 and venerated particularly in Bohemia, Poland, Hungary and Prussia; for a list of Offices, hymns and sequences connected with his cult, see Morawski.

The early biographies (ed. in MGH *Scriptores*, iv, 1841/*R*, pp.574-620; xv/2, 1888/*R*, pp.705-8, 1177) offer no conclusive evidence that Adalbert was a musician. He has been credited, nevertheless, with the earliest vernacular religious songs of both Bohemia (*Hospodine, pomiluj ny*) and Poland (*Bogurodzica*). Both songs are invocations ending with 'Kyrie eleison' or an equivalent and were sung at state occasions in the late Middle Ages; the ascriptions are, however, doubtful.

An *Exposicio cantici sancti Adalberti* (*CZ-Pu* III D 17, dated 1397) by a monk of Břevnov, often but uncertainly attributed to John of Holešov, contains the earliest surviving version of the melody of *Hospodine, pomiluj ny*, claimed to be more authentic than other surviving versions and ascribed to Adalbert, the founder. The text also survives in a version of 1380, and the song may be meant in a 13th-century reference to a 'hymnus a sancto Adalberto editus'. In the 17th century the song was used within public devotions by Czech 'literati' brotherhoods (*see* CANTIONAL, §I); Bolelucký in 1668 defended its use and Adalbert's cult, as he did the Catholic orthodoxy of the brotherhoods, and printed the 1397 treatise (including the original melody) as well as the early biographies.

The earliest known version of *Bogurodzica* dates from 1407; its text contains Bohemian expressions but resembles other early Polish vernacular material in this respect. Feicht has suggested that the melody dates from the 13th century. It was ascribed to Adalbert by the 16th century. Bolelucký, who repeated the ascription, provided a source for Gerbert, on whom Sowiński drew to project Adalbert as the first Polish composer; Sowiński also composed a patriotic oratorio in Paris, *Saint-Adalbert martyr* (?1847), in which the *Bogurodzica* melody and text feature prominently.

GEOFFREY CHEW

Adalid y Gamero, Manuel de (*b* Danlí, 1872; *d* Tegucigalpa, 1947). Honduran composer and concert bandleader. He studied at the Honduran National Conservatory and was active as an organist in Guatemala City and in Danlí. Trained also as a civil engineer, he invented an organ of bamboo pipes he named the *orquestrofono*. In 1895 he formed a municipal band and orchestra in Danlí, from whose success he was promoted to supervise all military bands, the salient performance ensembles of classical music at the time. Under his leadership, the band of the Supremos Poderes achieved regional prominence. His output of polkas, waltzes, mazurkas and marches all scored for concert band reflects the musical environment of the Honduran middle class in the first decades of the 20th century. Two of his major compositions received international exposure: *La suita tropical* in Seville, Spain; and *Los funerales de un conejito*, which was performed by the US Service Orchestra in Washington, DC, in 1936. Other works include *La muerte del bardo*, a trio for violin, cello and harp, and the short symphonic poems *Una noche en Honduras* and *Las fantasmas del castillo enbrujado*. His writing in all idioms remained in a highly conservative mould. He was the most important musical educator of his time in Honduras: he directed the national school for bandmasters, and his student, Francisco Ramón Díaz Zelaya (1896–1977), was the first Honduran to write large-scale symphonic works.

T.M. SCRUGGS

Adalid y Gurrea, Marcial del (*b* La Coruña, 24 Aug 1826; *d* Lóngora, nr La Coruña, 16 Oct 1881). Spanish composer. He studied the piano with Moscheles in London from 1840 to 1844, and possibly also had lessons from Chopin in Paris. On his return to Spain he lived in La Coruña and Madrid, where some of his compositions were performed, and then at his palace of Lóngora, where he dedicated himself wholly to composition. The influence of Moscheles and, particularly, Chopin was decisive throughout his creative life. He composed one opera, *Inese e Bianca*, which, in spite of his efforts, was never staged. More important are his piano works and songs, the latter clearly influenced by lieder. In his *Cantares nuevos y viejos de Galicia* (1877) he united the folklore of Galicia with the technique and spirit of Romantic piano music. He also promoted the musical culture of his native province, developing courses and competitions in music.

JOSÉ LÓPEZ-CALO

Adam (*fl* 1420–30). Composer, possibly French. His three rondeaux, *Au temps vendra*, *Au grief hermitage* and *Tout a caup*, were copied into the manuscript *GB-Ob* Can.misc.213 soon after 1430 (all ed. in CMM, xi/2, 1959). He could be identifiable with Adam Fabri, *clerc de*

matines at Notre Dame in Paris in 1415; Adam Meigret, first chaplain to Charles VI of France at the time of the king's death in 1422; Erasmus Adam, mentioned in the motet lamenting the death of King Albrecht II in 1439; Adam Hustini de Ora from Cambrai, who was in the Habsburg chapel in 1442–3; or more likely Adamo Grand (sometimes called Magister Adam), master of the choirboys at the Savoy ducal chapel from 1433 to 1438.

TOM R. WARD/DAVID FALLOWS

Adam, Adolphe (Charles) (*b* Paris, 24 July 1803; *d* Paris, 3 May 1856). French composer. He composed more than 80 stage works, some of which, especially those written for the Paris Opéra-Comique, obtained considerable and lasting success.

1. Life. His father (Jean) Louis Adam (*b* Muttersholtz, Bas-Rhin, 3 Dec 1758; *d* Paris, 8 April 1848) was a pianist, composer and teacher; he taught the piano at the Paris Conservatoire from 1797 to 1842 (his pupils included Frédéric Kalkbrenner and Ferdinand Hérold), composed several keyboard sonatas (many with violin accompaniment) as well as lighter works, and wrote a *Méthode, ou Principe général du doigté pour le forté-piano* and a *Méthode du piano du Conservatoire* that was translated into German and Italian. Adolphe was not encouraged by his father to become a musician, but, influenced by his friendship with Hérold (12 years his senior), he decided at an early age that he wished to compose, and to compose, specifically, theatre music. He first studied the piano with Henry Lemoine, and at 17 entered the Conservatoire, where he studied the organ with Benoist, counterpoint with Reicha and composition with Boieldieu, the chief architect of his musical development. By the age of 20 he was already contributing songs to the Paris vaudeville theatres; he played in the orchestra at the Gymnase, later becoming chorus master there. In 1824 he entered the competition for the Prix de Rome, gaining an honourable mention, and again in 1825, when he won a *second prix*; of more practical use was the opportunity to help Boieldieu with the preparation of *La dame blanche*, produced at the Opéra-Comique on 10 December 1825. Adam's transcriptions for the piano on themes from the opera were published by Janet & Cotelle; on the proceeds he toured the Netherlands, Germany and Switzerland in summer 1826 with a friend and during the trip met Eugène Scribe in Geneva.

Adam had already written music for a one-act vaudeville by Scribe (and Mazères), *L'oncle d'Amérique*, given at the Gymnase on 14 March 1826; now he obtained from the librettist the text of a one-act comic opera, *Le mal du pays, ou La batelière de Brientz*, which was produced at the Gymnase on 28 December 1827. Just over a year later, on 9 February 1829, *Pierre et Catherine*, his first work to be accepted by the Opéra-Comique, was given in a double bill with Auber's *La fiancée* and achieved over 80 performances.

Adam's next piece for the Opéra-Comique, the three-act *Danilowa*, was successfully produced in April 1830, but its run was interrupted by the July Revolution. Meanwhile he continued to write vaudevilles and pasticcios for the Gymnase and the Nouveautés, where his first ballet, the pantomime *La chatte blanche*, composed in collaboration with Casimir Gide, was presented on 26 July. After the Revolution theatrical conditions became difficult in Paris, and Adam went to London, where his brother-in-law, Pierre François Laporte, was manager of the King's Theatre. In 1832 Laporte leased the Theatre Royal, Covent Garden, and on 1 October, as an afterpiece to *The Merchant of Venice*, he presented *His First Campaign*, a 'military spectacle' with music by Adam, which featured the 12-year-old Elizabeth Poole as a drummer boy. *The Dark Diamond*, a historical melodrama in three acts, which followed on 5 November, failed to repeat the success of *His First Campaign*. Adam returned to Paris for the première of Hérold's *Le pré aux clercs* (15 December), and went back briefly to London early in 1833, when his ballet *Faust* was presented by Laporte at the King's Theatre.

Adam then achieved one of his greatest popular successes with *Le chalet*. A one-act *opéra comique* with text, based on Goethe's *Jery und Bätely*, by Scribe and Mélesville, it was first produced on 25 September 1834 and received its 1000th performance at the Opéra-Comique in 1873. Boieldieu, who died 13 days after the première, was present at his pupil's triumph. After considering, but in the end turning down, a text by Planard, *L'éclair* (later set by Halévy), Adam accepted a libretto from de Leuven and Brunswick provisionally entitled *Une voix*. He also composed a ballet, *La fille du Danube*, for Marie Taglioni, which was performed at the Paris Opéra – Adam's first work for that theatre – on 21 September 1836. Meanwhile *Une voix*, now called *Le postillon de Lonjumeau*, was already in rehearsal at the Opéra-Comique, where its successful première took place on 13 October, with the tenor Jean Baptiste Chollet (who also created the title roles of Auber's *Fra diavolo* and Hérold's *Zampa*) as the postilion Chapelou.

Another ballet, *Les mohicans*, for the Opéra, and four more works for the Opéra-Comique followed in quick succession, then in September 1839 Adam left Paris for St Petersburg. *La fille du Danube* was given immediately after his arrival, then his new ballet for Taglioni, *L'écumeur de mer*, was danced before the imperial court on 21 February 1840. Four days later *Le brasseur de Preston*, first heard in Paris in 1838 and dedicated to Tsar Nicholas I, was performed in February 1840 by the German opera company in St Petersburg with Adam conducting. Adam left Russia at the end of March, stopping on the way back to Paris at Berlin, where he wrote and presented an opera-ballet, *Die Hamadryaden*, at the Court Opera (28 April 1840).

Adam's next important work was the composition by which he is now best known – the ballet *Giselle*. He completed the music in three weeks (it had taken Théophile Gautier and his collaborator Saint-Georges three days to write the scenario, based on a legend recounted by Heine in his book *De l'Allemagne*) and *Giselle*, with Carlotta Grisi dancing the title role, began its triumphant career at the Opéra on 28 June 1841. Adam then reorchestrated Grétry's *Richard Coeur-de-lion*, revived for King Louis Philippe at Fontainebleau with its original sets, which survived at the theatre. He also completed the score to *Lambert Simnel*, an opera left unfinished by Hippolyte Monpou. Adam's first 'grand opera', *Richard en Palestine*, was produced at the Opéra in 1844, arousing little interest.

That same year, having quarrelled with Alexandre Basset, the new director of the Opéra-Comique, who vowed never to perform a work by Adam at his theatre, the composer found his main source of income removed. He made plans to open a third opera house in Paris, to be called the Opéra-National. A large amount of money – 250,000 francs down payment on the theatre, 200,000 francs for repairs and alterations and 100,000 francs, of which Adam had already paid half out of his own pocket, for the licence to perform new works – was required, and after some difficulty borrowed. The Opéra-National opened on 15 November 1847 with Aimé Maillart's *Gastibelza*, preceded by *Les premiers pas*, a prologue with music by Adam, Auber, Carafa and Halévy. For a few months the theatre flourished, then in February 1848 revolution again broke out in Paris, and on 26 March the Opéra-National closed down.

Adam was completely ruined. He owed 70,000 francs and when his 89-year-old father died in April, he could not pay the funeral expenses. Assigning all his royalties to pay off the debt, he turned to journalism as a means of earning some money and contributed reviews and articles to *Le Constitutionnel* and the *Assemblée nationale*. He also became a professor of composition at the Conservatoire, a post he held until his death. Meanwhile Basset had left the Opéra-Comique and Adam was able to return to his spiritual home. In July 1850 one of his best works, the opera *Giralda, ou La nouvelle Psyché* (with a text by Scribe, originally intended for Auber) was produced there, with an unknown soprano, Marie Félix-Miolan, in the title role: as Miolan-Carvalho she was to be Gounod's first Marguerite, Mireille and Juliette, all at the Théâtre-Lyrique, the successor to the ill-fated Opéra-National. Adam wrote the successful *Si j'étais roi* for the Théâtre-Lyrique, where it was performed with two different casts on 4–5 September 1852. That year no fewer than six new works of his were produced, and by the end of it his debts were finally cleared.

During the remaining three years of his life Adam composed as prolifically as ever; he arranged Donizetti's *Betly* (on the same subject as his own opera *Le chalet*) for the Opéra (27 December 1853); one of his finest ballets, *Le corsaire*, was presented there on 23 January 1856, after a year's preparation. His final dramatic work, the charming one-act operetta *Les pantins de Violette*, was produced at the Bouffes-Parisiens, where it shared the bill with Offenbach's *Le thé de Polichinelle*, on 29 April 1856. Four nights later Adam died in his sleep.

2. WORKS. Adam was a prolific composer who wrote music with extreme facility, but a large amount of his huge output is of purely ephemeral interest; this includes innumerable piano arrangements, transcriptions and potpourris of favourite operatic arias, the many light songs and ballads, the popular numbers contributed to vaudevilles and comic operas during his apprentice years, even some of the theatre music written in his maturity; but there remain several operas and ballets that are not merely delightful examples of their kind, but are also scores full of genuine inspiration. *Le chalet*, his first significant success, incorporates the music from *Ariane à Naxos*, the cantata written for the 1825 Prix de Rome competition, but the opera is distinguished by its freshness of invention, as indeed are all his best works.

Le chalet was Adam's most popular opera in France throughout the 19th century, but *Le postillon de Lonjumeau* outdistanced it in other European countries, particularly in Germany, where every tenor who could boast the necessary top notes indefatigably performed the title role. But *Le postillon* is more than a vocal showpiece; Madelaine is as well characterized as Chapelou, and the various duets between them, first as young bride and bridegroom, later as 'Madame Latour' and 'Saint Phar' the famous tenor, are aptly differentiated. Above all, the score is imbued with a sense of theatre, the inborn gift that Adam brought so abundantly to all his stage works, even the weakest. In *Le brasseur de Preston* (1838), *Le roi d'Yvetot* (1842) and *Le roi des halles* (1853) Adam and his librettists de Leuven and Brunswick attempted, with only partial success, to repeat the formula of *Le postillon*. The most stylish, tuneful and accomplished of his later operas are *Giralda* and *Si j'étais roi*, the overtures to both pieces being particularly graceful and charming.

Adolphe Adam: engraving by Eugène-André Champollion from Arthur Pougin's 'Adolphe Adam: sa vie, sa carrière, ses mémoires artistiques' (Paris, 1876)

Adam found ballet music even easier and more rewarding to compose than operas – 'On ne travail plus, on s'amuse', he observed; and his ballet scores have a stylistic unity not always found in his operatic works. *Giselle* owes its vividly flourishing existence after 135 years as much to the music as to the subject. Adam, lucky in his interpreters – Taglioni, Grisi, Leroux, Cerrito – gave them eminently danceable music, and *La jolie fille de Gand*, *La filleule des fées* and *Le corsaire* have scores, if not plots, of similar quality to that of *Giselle*. Adam's religious music, on the other hand, is a paler reflection of his theatre music. His journalism, which he continued even when it was no longer a financial necessity, is lively and readable, while his judgments on contemporary composers – Meyerbeer and Verdi for example – are fair

and open-minded; Berlioz, he admitted, he could neither understand nor appreciate.

HUGH MACDONALD

Adam, Claus (*b* Sumatra, 5 Nov 1917; *d* New York, 4 July 1983). American cellist and composer. He spent the first six years of his life in Dutch East Indies (now Indonesia), where his father, Tassilo Adam, worked as an ethnologist; after the family returned to Europe he studied at the Salzburg Mozarteum. In 1929 the family moved to New York, where Adam studied the cello with E. Stoffnegen, D.C. Dounis and (from 1938 to 1940) Feuermann; he also studied conducting with Barzin and composition with Blatt, and was a member of the National Orchestral Association, a training group for young instrumentalists (1935–40). From 1940 to 1943 he was principal cellist of the Minneapolis SO. After serving in the US Air Force during World War II, he studied composition in New York with Wolpe. In 1948 he formed the New Music Quartet, with which he performed until 1955, when he joined the JUILLIARD STRING QUARTET; he left the group in 1974 to devote his full energies to composition. Adam also had an active teaching career, with positions at the Aspen Music Festival (from 1953), the Juilliard School of Music (from 1955) and the Mannes College (from 1974). His compositions include a Piano Sonata (1948), String Trio (1967), String Quartet (1975), Cello Concerto (1973) and Concerto-variations for orchestra (1976). Like his cello playing, they are characterized by robust expressiveness and infectious rhythmic energy.

JAMES WIERZBICKI

Adam, Jean. *See* ADAM, JOHANN.

Ádám, Jenő (*b* Szigetszentmiklós, 12 Dec 1896; *d* Budapest, 15 May 1982). Hungarian composer, conductor and teacher. From 1911 until 1915 he received instruction in organ playing and theory at the Budapest teacher-training college. Then, as a prisoner of war (1916–20), he organized and conducted a men's choir and an orchestra in Russia. He studied composition at the Budapest Academy of Music under Kodály (1921–25) and conducting in Weingartner's masterclass in Basle (1933–5). He conducted the orchestra (1929–39) and the choir (1929–54) of the Budapest Academy where he also taught Hungarian folk music, choral conducting and methodology from 1939 to 1959, and where he directed the singing department from 1942 to 1957.

Ádám began his career as a conductor in Budapest in 1929 with a performance of Haydn's *The Seasons*. From 1929 until 1933 he was deputy conductor of the Budapest Choral and Orchestral Society. With the male choir Budai Dalárda, which he directed from 1933 until 1942, he made concert tours of Yugoslavia, Italy, Germany and Scandinavia. Also, in 1935–6 he was conductor of the Budapest Palestrina Choir. He conducted the first performance in Budapest of Purcell's *Dido and Aeneas* (1941), and he was a champion of Handel's music in Hungary. From 1935, together with Kodály, he worked on a reform of music teaching in lower and middle schools; the tangible results of this work are their joint textbooks on singing. In order to popularize serious music and old Hungarian folk music, he gave several hundred lectures on radio and television, at home and abroad. He was the originator of the programme 'Fifteen Minutes of Folksong' on Hungarian radio. In 1955 he received the

title Merited Artist of the Hungarian People's Republic and in 1957 the Kossuth Prize.

As a composer Ádám gradually freed himself from the stylistic influence of his teacher Kodály and developed his own specifically Hungarian lyrical-romantic musical language. He was one of the first to use Hungarian folktunes in symphonic and stage works, in some ways anticipating Kodály.

WORKS
(*selective list*)

Stage: Magyar karácsony [Hungarian Christmas] (op, 1, K. Tüdős), 1929, Budapest, Royal Opera, 22 Dec 1931; Mária Veronika (mystery, 2, A. Rékai, after M. Bethlen), 1936–7, Budapest, Royal Opera, 27 Oct 1938

FERENC BÓNIS (work-list, bibliography with ANNA DALOS)

Adam, Johann [Jean] (*b* *c*1705; *d* Dresden, 13 Nov 1779). German composer. He was a Jagdpfeifer at the Dresden court (1733–6), then until his death a violist in the Dresden Hofkapelle. He was also 'ballet-compositeur' of the court opera (from *c*1740), and composer and director of music for the elector's French theatre (1763–9). According to Burney and Fürstenau, he added ballet music to operas by J.A. Hasse and made an adaptation of Rameau's *Zoroastre* (Dresden, 1752); the documents of the Hofkapelle in the Dresden State Archives indicate that he also composed new pieces for various *opéras comiques*, and in 1756 he published a *Recueil d'airs à danser executés sur le Théâtre du Roi à Dresde*, arranged for harpsichord. The concertos and chamber works listed under 'Adam' in the Breitkopf catalogues may also be attributed to him. Few of his compositions are extant; apart from his arrangements of works by other composers, the Sächsische Landesbibliothek in Dresden contains only a concerto in G for flute and strings by him.

O. Landmann: *Quellenstudien zum italienischen Intermezzo comico per musicam und zu seiner Geschichte in Dresden* (diss., U. of Rostock, 1973)

ORTRUN LANDMANN

Adam, Theo(dor) (*b* Dresden, 1 Aug 1926). German bass-baritone. As a boy he was a member of the Dresden Kreuzchor, and he studied in the city and at Weimar before making his début at the Dresden Staatsoper in 1949. He joined the Berlin Staatsoper in 1952. That year he made his début in a small role at Bayreuth, graduating to King Henry in 1954 and to Wotan in 1963; his later roles there included the Dutchman, Amfortas and Hans Sachs. At the Salzburg Festival he was heard as Ochs (1969) and Wozzeck (1972), and at the Vienna Staatsoper he sang the title role in a new production of *Don Giovanni* in 1972. Also in Vienna he sang a memorable Pizarro in the Beethoven bicentenary production of *Fidelio* at the Theater an der Wien in 1970, conducted by Bernstein. His other roles included Philip II, King Mark and La Roche (*Capriccio*). He made his débuts at Covent Garden as Wotan in 1967 and at the Metropolitan Opera as Hans Sachs in 1969. Adam was also a notable Bach singer and a fine Elijah. All his interpretations displayed an understanding of dramatic situation allied to an intelligently used, if not always totally ingratiating, voice. His Sachs, Dutchman, Pizarro and, later in his career, Alberich, were all considerable readings; all are preserved on disc, as is his classic Elijah. He wrote two books about his life, work and views on opera, *'Seht, hier ist Tinte, Feder, Papier ...': Aus der Werkstatt eines Sängers* (Berlin, 1980) and *Die hundertste Rolle, oder, Ich mache einen neuen Adam* (Munich, 1987).

ALAN BLYTH

Adamberger, (Josef) Valentin (*b* Rohr, nr Rothenburg, Bavaria, 22 Feb 1740, or Munich, 6 July 1743; *d* Vienna, 24 Aug 1804). German tenor. In 1755 he studied singing with J.E. Walleshauser (Giovanni Valesi) while at the Domus Gregoriana, a Jesuit institution in Munich. In 1760 he joined the Kapelle of Duke Clemens and on Clemens's death in 1770 was taken into the elector's Hofkapelle. After making his début at Munich in 1772 he sang leading tenor roles in *opere serie* at Modena, Venice, Florence, Pisa and Rome (taking the italianized stage name Valentino Adamonti) from 1775 to 1777, then at the King's Theatre in London until 1779. Following appearances at Florence and Milan, he joined the Singspiel company of the National Court Theatre at Vienna, where he made his début on 21 August 1780. In 1781 he married the Viennese actress Marie Anne Jacquet (1753–1804). On the dissolution of the Singspiel company in 1783 Adamberger was kept on for the Italian company that

replaced it. When the Singspiel company was revived in 1785, alongside the Italian, he again became its leading tenor, and when it was disbanded for the second time, in 1789, he returned to the Italian company. He retired from the stage in 1793 but continued as a member of the imperial Hofkapelle and as an eminent singing teacher.

Adamberger's voice was universally admired for its pliancy, agility and precision, although Schubart and Mount Edgcumbe also remarked on its nasal quality in the higher notes. Burney, generally a harsh critic of singers, remarked that 'with a better voice [he] would have been a good singer'. Mozart wrote the part of Belmonte in *Die Entführung* (1782) and Vogelsang in *Der Schauspieldirektor* (1786) for him, as well as several arias (K420 and K431) and the cantata *Die Maurerfreude* (K471).

Before coming to Vienna, Adamberger created leading tenor parts in serious operas by J.C. Bach, Sarti, Pietro Guglielmi, Sacchini, Bertoni and others. The arias they wrote for his voice reveal a fondness for moderate tempos, B♭ major, obbligato clarinets and expressive chromatic inflections. At Vienna Mozart (*Die Entführung*), Umlauf (*Das Irrlicht*) and Dittersdorf (*Doktor und Apotheker*) perpetuated these features, which made Adamberger 'the favourite singer of softer hearts', according to a local journalist (Michtner, p.360).

THOMAS BAUMAN (with PAUL CORNEILSON)

Adam de Givenchi [Givenci, Gevanche, Gievenci] (*fl* 1230–68). Trouvère. His name implies that he was born in the village of Givenchy (Pas de Calais). His activity centred around Arras where he seems to have come in contact with Simon d'Authie, Pierre de Corbie, Guillaume Le Vinier and Jehan Bretel. His name appears first in two charters, dated May and July 1230, in which he is given the title of clerk to the Bishop of Arras. In 1232 an act of procedure named him among the official household and as agent for the same bishop. In 1243 he is listed as priest and chaplain to the bishop and in 1245 as 'doyen de Lens'. Eight surviving poems are commonly attributed to Adam including two jeux-partis in which he is partnered by Jehan Bretel and Guillaume Le Vinier. The latter, *Amis Guillaume, ainc si sage ne vi*, has survived with several melodies. Of the four other songs that have surviving melodies, two are *chansons avec des refrains*; one of them, *Pour li servir*, is completely notated while the other, *Assés plus*, lacks music for the refrains. All the songs are in an *AAB* form with simple melodies.

IAN R. PARKER

Adam de la Bassée (*d* 1286). ?French poet and priest. He was a canon and priest of the collegiate church of St Pierre in Lille, near Arras. About 1280, he wrote a metrical and rhymed paraphrase of the famous poem, *Anticlaudianus*, by the 12th-century theologian, philosopher and poet ALAIN DE LILLE. Its plot concerns Nature's formation of a perfect man to be imbued with the Arts and Virtues, and an ascent to heaven, on which journey the music of the spheres is heard, to request a soul from God. Adam named his new work *Ludus super Anticlaudianum*. It survives today in one manuscript (*F-Lm* 316), thought to be partly autograph. Adam's work retains the plot, the moral and the didactic character of the original, but the forbidding allegory and encyclopedic tone is modified in favour of a simpler style and language so that the work, although in Latin, is almost like a *roman*. Emphasizing a more entertaining but still serious purpose, Adam inserted within the work 38 musical pieces with sacred or semi-sacred texts; 36 are monophonic songs and the remaining two are polyphonic compositions. 20 of these are contrafacta modelled on earlier compositions whose titles are in most cases mentioned in the rubrics. They consist of hymns, sequences, a responsory, an alleluia, a processional antiphon, trouvère songs, dances (a lai-*notula* and a rondeau), a pastourelle and a polyphonic motet. Of the other 18 pieces, one is a two-part Agnus Dei in conductus style. Altogether, the pieces in the *Ludus* form a kind of anthology in which almost every contemporary sacred and secular style is represented.

The insertions are not made arbitrarily but mostly fall into two large sections where the choice of form or style seems to emphasize the action of the poem. In the first section, whose poetry consists of supplications to and praises of the saints, Christ and the Virgin, Adam used contrafacta of secular songs, of hymns and of some unspecified items which have the character of antiphons. Here there is a resemblance to a canonical Office. Later, the newly-formed man, whose creation is the subject of the poem, is endowed with gifts by the Arts and Virtues and finally receives the soul brought from heaven to make him perfect. The series of offerings followed by the descent of the Spirit is symbolized in music by the choice of certain items from the Mass, namely the responsory (analogous to the gradual), alleluia, sequence and finally the motet, which is based on a plainchant for Pentecost. The musical insertions thus have an unusually clear and demonstrable symbolic meaning.

The sources of the contrafacta are either popular and widely distributed compositions of the century, such as songs by Thibaut IV of Navarre and Henri III of Brabant and ecclesiastical tunes such as the sequence *Letabundus*, or are of local importance, like the chants to St Peter and

St Elizabeth. Two contrafacta should be singled out: the motet *O quam sollempnis*/Tenor *Amor*, based on *Et quant iou remir son cors*/Tenor *Amor*, is known in a large number of manuscripts including *I-Fn* 29.1 (F); the *notula* is one of the few examples of this form, which Johannes de Grocheio mentioned in *De musica* (*c*1300). The notation of the *Ludus* is that of contemporary plainchant or of the secular chansonniers.

Adam de la Bassée possibly influenced ADAM DE LA HALLE, who worked in Arras up to 1283 and wrote his *Jeu de Robin et Marion* after this date, thus after the *Ludus*. The slight clues suggesting such influence have not yet been investigated. The effect of Adam on the authors of *romans*, many of whom lived in the area of Lille and Arras, is, however, more probable. The *Ludus*, as a comprehensive musical anthology, may have been a direct predecessor of the *Roman de Fauvel* (1316), a similar anthology with other shared characteristics.

ANDREW HUGHES

Adam de la Halle [Adan de la Hale, Adan le Bossu, Adan le Boscu d'Arras, Adan d'Arras] (*b* Arras, 1245–50; *d* Naples, ?1285–8, or ?England, after 1306). French trouvère. His musical and literary works encompass virtually every genre current in the late 13th century. He is one of the few medieval musicians to be credited with both monophonic and polyphonic music.

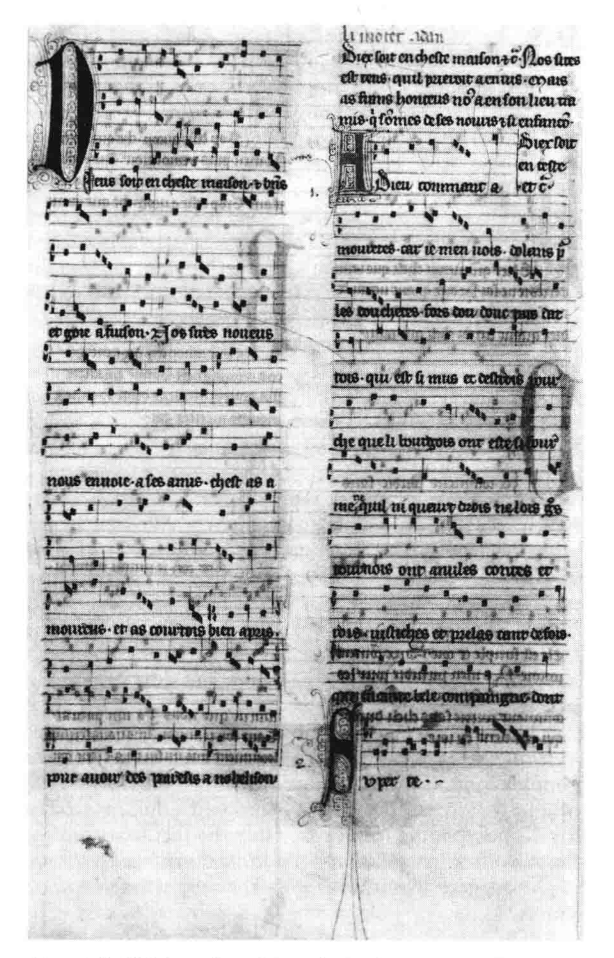
1. LIFE. Apart from his own works, there is little other documentary evidence for a biography of Adam de la Halle. It seems certain that he was born in Arras, as his name sometimes appears as Adam d'Arras, or, in one source, Adam le Boscu d'Arras – forms that were probably used when he was a student in Paris. Tax records show that there was a 'Maison d'Adam d'Arras' there in 1282, although it is unlikely that he was living in it at that time. The most common form of his name is Adan le Bossu (the hunchback), a name which his family apparently adopted to distinguish themselves from the other 'Hale' families in Arras. In the *Roi de Secile* Adam protested that, although he was called 'the hunchback', he was not that at all ('On m'apèle Bochu, mais je ne le sui mie'). The origin of this unusual name is not known, but it may be that some member of the family was indeed a hunchback, and the name thereafter remained.

In the *Jeu d'Adam ou de la feuillie*, it is stated that Adam's wife's name was Maroie and that his father was a Maistre Henri de la Hale. In the *Nécrologe de la Confrérie des jongleurs et de bourgeois d'Arras* there is a Maistre Henri Bochu, whose death was recorded in 1290. In 1282, the death of the wife of Henri de la Hale is likewise recorded. The same *Nécrologe* lists two persons who may have been Adam's wife: in 1274, a Maroie li Hallee is mentioned, and in 1287 Maroie Hale. It would be difficult to choose between these two, although Adam, in the *Jeu d'Adam* apparently written about 1276 (see Cartier, 1971), referred to his wife as still living.

The frequently repeated accounts of Adam's early schooling in Vaucelles and his exile to Douai are based on faulty interpretations of two lines of the *Jeu d'Adam* and of four lines of Baude Fastoul's *congé* respectively. He probably studied in Paris: he is often described in the sources as 'maistre', and in the *Jeu d'Adam* he expressed the desire to return to his studies in Paris. The jeux-partis with other trouvères of Arras indicate that he was a member of the local *puy*. The jeux-partis with Jehan Bretel (*d* 1272) provide the only reliable date from Adam's early life; they were most likely written after his return from Paris which was probably in about 1270. (In *Adan, a moi respondés*, Jehan Bretel referred to Adam as 'bien letrés', thus strengthening the impression that his studies took place before the jeux-partis were written.) His marriage to Maroie must have occurred shortly after this date (see Cartier).

He probably did not remain in Arras for long as both the *Jeu d'Adam* and his *congé* (written *c*1276–7) are 'farewells'. When he expressed the desire in the *Jeu d'Adam* to return to Paris his departure is not pictured as imminent; in his *congé*, however, departure is imminent, although Paris is no longer mentioned. His destination after the *congé* was more likely Italy, where he served Robert II, Count of Artois. Robert made several trips to Italy on behalf of his uncle Charles of Anjou beginning in 1274. In 1283 Robert travelled to Italy again to aid his uncle in his war against the Sicilians. There Adam entered the service of Charles of Anjou, the subject of the fragmentary *chanson de geste, Le roi de Secile*. During this period the *Jeu de Robin et de Marion* was also composed and performed in Naples for Charles and Robert.

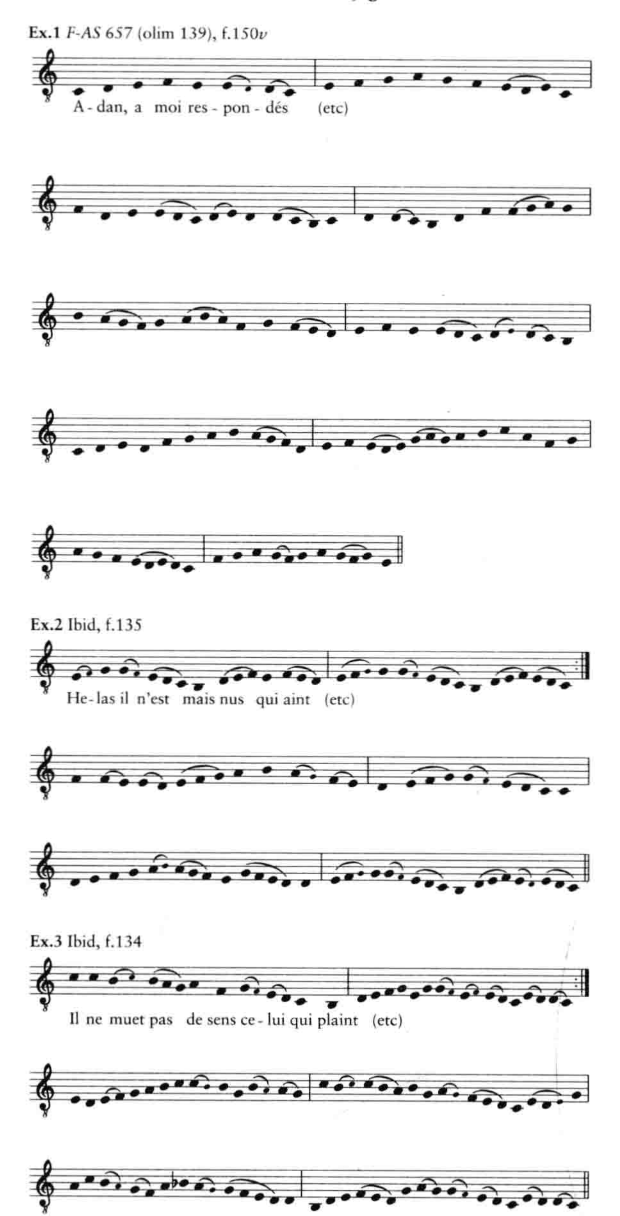
After the death of Charles of Anjou in 1285, two contradictory pieces of evidence concern Adam's further activities and his death. In what is presented as a posthumous tribute written in 1288 by Adam's nephew Jehanes Mados, Adam's departure from Arras and his death are recorded ('ses oncles Adans li Boscus ... laissa Arras, ce fu folie, car il est cremus et amés. Quant il morut, ce fu pitiés': *F-Pn* fr.375, f.119*v*; a person named Mados is mentioned in the *Jeu d'Adam* as well, but it is uncertain whether the two are identical or even related). If this account is reliable, Adam would have been about 50 years old at the time of his death, and his father would have survived him by two to five years. However, an English source from the year 1306 lists a 'maistre Adam le Boscu' among the minstrels engaged for the coronation of Edward II in 1307 (see Gégou). This raises the possibility that Adam did not die in Naples as apparently reported by his nephew. Both the unusual name 'Boscu' and the appellation 'maistre' are distinctive, though it may be that the English Bossu was a younger member of the same family (possibly Adam's son). If this is the composer, his death would have occurred after 1306, when he would have been about 60 years old.



2. WORKS. Adam wrote in a wide variety of genres. In addition to the monophonic chansons, the jeux-partis, the shorter rondeaux and the three plays with musical inserts, he wrote one of the three extant *congés* by Artesian poets (the others are by Baude Fastel and Jehan Bodel) and the incomplete epic poem *Le roi de Secile*. Some critics have even doubted that his poetry could all be the work of a single man. His works comprise not only the continuation of the courtly lyric but also the even older tradition of the *chanson de geste* alongside the modern, bourgeois elements in the *Jeu d'Adam* and in *Robin et*

Marion. The *Jeu d'Adam* has provoked the greatest interest both in the earlier and the more recent Adam criticism; it has been characterized as 'the fusion of courtly lyric, allegory and social criticism ... a tour de force without parallel in any literature, with the exception of such non-dramatic works as the *Canterbury Tales* of Chaucer, the *Decameron*, *Don Quixote* or *Gargantua* and *Pantagruel*' (Cartier, p.181). It is all of these things, and in addition has the distinctly modern characteristics of being autobiographical (Adam himself appears in the play) and strongly individualistic.

His works survive in over two dozen manuscripts, one of which (*F-Pn* fr.25566) is virtually a complete edition arranged by genres (see illustration). In this source the chansons are entered first, followed by the jeux-partis ('parture'), the rondeaux, the motets and finally the dramatic and narrative works. No other source is so complete, but several contain both monophonic and polyphonic works. The motets are transmitted in the principal motet collections of the late 13th century. (See N. Wilkins, CMM, xliv, 1967 for sources of all the musical works.)



Of the 54 monophonic works listed below, 18 are jeux-partis. In 16 of these, Jehan Bretel is the partner, which means that they were written no later than 1272. Since the melody of the jeu-parti was presumably composed by the 'questioner' who sings the first strophe, very few of these can be considered musical works of Adam, who is the 'respondent' in 13 cases. It may be, however, that the early encounter with Bretel was an important influence on the younger man's melodic style in the chansons. Compare, for instance, the melody for *Adan, a moi respondés* in ex.1 with the melody which served for two of Adam's chansons, ex.2. Without postulating any direct relationship between these two works, or even suggesting which was written earlier, there are, nevertheless, similarities that cannot be overlooked. The pieces are virtually identical in range and share a basically 'C major' tonality; both remain in the lower part of the range for the first four phrases, and rise later. The two melodies have few identical turns of phrase, but the 3rds C–E and E–G are important in both. While Bretel's melody is diffuse and loosely organized, however, Adam's is formally clear and melodically sophisticated. The initial repeated pair of phrases is not conceived as a clearly contrasted pair, but as open and closed variants of the same phrase. The second of these appears, again slightly varied, as a musical refrain in the last line. In addition, both the penultimate and antepenultimate phrases recall the cadences found in the first two lines. Similar melodies are found in other jeux-partis and in the chanson *De cuer pensieu*.

While the melody shown in ex.2 gives a distinctly modern – or at least uncourtly – impression, other

Adam de la Halle's rondeau 'Dieus soit en cheste maison' (3vv in score) and motet 'A Dieu commant amouretes/Aucun se sont loé d'amours/Super te' (F-Pn fr.25566, ff.34v–35)

chansons seem closer to the older tradition. *Il ne muet pas de sens celui qui plaint* may represent this tradition (ex.3). Its characteristic combination of falling and rising motion in the first two phrases recalls the oldest and most central tradition of French monophonic song (e.g. Bernart de Ventadorn's *Be m'an perdut lai enves Ventadorn* and the Chastelain de Couci's *Quant li rossignol iolis*). Adam's style tends to exhibit the major tonality, the clear arrangement of the cadences and the formal sophistication already noted in ex.2 in which the last two lines are an exact complement of the first two without being a literal reprise, and the middle lines reflect the contour of the first lines in reverse, at the same time presenting a complete contrast in their cadences both to what precedes and to what follows.

The rondeaux are both interesting and important as early indications of the secular direction which polyphonic music was to take in the 14th century. Although labelled 'Li rondel' in the sources, only 14 of the 16 are actually rondeaux in the later, 'fixed' sense. This is entirely appropriate to the 13th century's understanding of the term 'rondeau' (*see* RONDEAU (i)), which was applied more or less universally to refrain songs which are 'round' by virtue of an initial refrain that recurs periodically. The exceptions to the standard rondeau form are *Fines amouretes ai*, a virelai, and *Dieus soit*, a ballade with an initial refrain. These pieces are set polyphonically in note-against-note style. The scoring in the sources always has the principal melody in the middle voice, even though at times this voice may actually be the lowest sounding part. Adam occasionally introduced variety into the strict rondeau form by varying the added voices when the form demands a repetition in the principal melody. Thus in *Je muir*, a standard eight-line rondeau, the following scheme results:

added voices: *ABcAcdAB*
melody: *ABaAabAB*

In *Dieus soit* a kind of variety is achieved by exchanging the added voices.

Five motets are attributed to Adam with some certainty and six others have been attributed to him by modern editors because they quote material found in the genuine works. All the authentic motets are based on plainchant tenors, two of which are among the most widely used tenors in the 13th century (*Omnes* and *[In] seculum*). These pieces are basically conservative and include refrains from other works of Adam. The remaining motets contrast strikingly with the authentic ones in that four are based on French secular tenors, one of which (*He, resvelle toi, Robin*) also occurs in the *Jeu de Robin et de Marion*. As in the first group, refrains, primarily from the polyphonic rondeaux, are quoted in almost every one of these motets. In general, their style is slightly later than that of the authentic ones. The quoted material in them is the only evidence for Adam's authorship, and it is equally likely that other composers could have quoted Adam's songs. In the case of *Dame bele*, however, the interdependence of motet and rondeau goes somewhat deeper, extending to the melodic construction of the tenor and the triplum. This raises the possibility that the rondeau may have been based on the motet, in which case it would be entirely unnecessary to assume that Adam is the composer of the latter.

Of the three dramatic works containing music only *Robin et Marion* uses music extensively. While it shares with the later *opéra comique* the combination of sung and spoken parts, it is more a parody of the narrative *pastourelle* than a precursor of the later *opéra comique*. Indeed, the early opera did grow at least in part from the same pastoral tradition, but Adam's early precedent was not taken up by the next generation, and thus remains an isolated phenomenon.

It has been argued that much of the music of *Robin et Marion* is not original, but was simply culled from current popular song. Certainly, most of the melodies seem to be of a popular cast, but Adam composed similar melodies for his polyphonic rondeaux. Only the fact that some of the melodies from *Robin et Marion* do occur elsewhere might suggest that they are borrowed, whatever their source.

Adam de la Halle occupies a unique, though somewhat paradoxical, position in the history of music. The largest part of his musical composition was devoted to the

monophonic chanson. This labels him as a composer of the past, a masterly representative of a dying tradition. But he is one of a small number of 13th-century composers who wrote both monophonic chansons and motets. The musical style of the rondeaux is basically conservative, but the idea of polyphonic settings of secular texts and melodies outside the motet tradition does point to the immediate future. It is in the dramatic works that Adam shows himself to be distinctly progressive and, indeed, far ahead of his time. *Robin et Marion* and the *Jeu d'Adam* both set precedents in different ways, but neither was to exercise any direct influence on the generations immediately following. The fact that he directed most of his creative energy into genres which were either on the wane, such as the monophonic chanson, or into the secular drama with music, whose full development lay far in the future, is an accident of history, and not a critical comment on his importance as an author and composer. This accident means, however, that, for the music historian, Adam remains essentially a man of the past. The opinion of the literary critics seems to apply also to his music: he was a versatile and fertile creator in all of the secular genres of the 13th century.

MOTETS

all for 3 voices

A Dieu commant amouretes/Aucun se sont loé d'amours/Super te, C, R, W, T (quotes the refrain, words and music of the rondeau 'A Dieu commant' in the triplum)
De ma dame vient/Diex, comment porroie/Omnes, C, R, W, T (quotes the refrain, with the music transposed, of the rondeau 'Diex, comment porroie' in the duplum; a refrain from 'Le jeu de la feuillie' is quoted in the same voice)
Entre Adan et Hanikiel/Chiès bien séans/Aptatur, C, R, W, T

J'ai adès d'amours chanté/Omnes, C, W
J'os bien a m'amie parler/Je n'os a m'mie aler/Seculum, C, W

authorship uncertain

Bien met amours son pooir/Dame, alegies ma grevance/A Paris, R, W, T (quotes the refrain, words and music, of rondeau 'Hé, Diex, quant verai')
Dame bele e avenant/Fi, mari, de vostre amour/Nus n'iert ja jolis s'il n'aime, C, W (quotes the refrain, words and music, of rondeau 'Fi, maris, de vostre amour' to which tenor and triplum are also related musically)
En mai, quant rosier sont flouri/L'autre jour, par un matin/He, resvelle toi Robin, R, W, T (tenor is a rondeau which appears in the 'Jeu de Robin et de Marion')
Mout me fu grief li departir/Robin m'aime, Robin m'a/Portare, C, R, W, T (duplum is a pastourelle which also appears in the 'Jeu de Robin et de Marion')
Se je sui liés et chantans/Jolietement/Omnes, R, W, T (end of triplum quotes beginning of duplum of motet 'Entre Adan/Chiès bien séans/Aptatur')

ROBERT FALCK

Adami da Bolsena, Andrea ['Il Bolsena'] (*b* Bolsena, 30 Nov 1663; *d* Rome, 22 July 1742). Italian singer, writer and composer of Venetian origin. After early study at Montefiascone he was sent to Rome. Though his admission to the Cappella Giulia was recorded on 1 December 1682, he did not take up a post there until much later. In 1682 (or at the latest 16 September 1686) Adami became a member of the Congregazione dei Musici di S Cecilia, a fact which would confirm his professional activity in the sacred circles of Rome. He was a castrato of obviously unusual talent, but the remarkable success of his career also owed much to the fact that he enjoyed the protection of Cardinal Pietro Ottoboni – the most influential Roman music patron of the day – in whose palace he served as musician-in-residence from 1686 to 1740. On 5 October 1690 he became a member of the Arcadia – the foremost musico-literary academy in Rome – where he was dubbed 'Caricle Piseo'. Aided by Ottoboni's patronage he was admitted as a soprano to the Cappella Sistina at the age of 26 (11 October 1689), and in 1701 he became *maestro di cappella* there, an office that he held until 1714. He had already entered the priesthood and during his period of office at the Vatican was granted a sinecure as archpriest at S Maria Maggiore, Rome. Outside the Cappella Sistina he sang mainly in private courts (papal singers were prohibited from performing on the public stage): two years before he entered the Cappella, on 18 January 1687, he performed the part of Ferindo in the melodrama *Il Figlio delle Selve* (by Cosimo Bani), staged in private at the home of the librettist, Carlo Sigismondo Capeci. During Carnival of 1691 he sang the part of Guascarre in *Il Colombo ovvero L'India scoperta*, a *dramma per musica* on a libretto by Cardinal Pietro Ottoboni, staged at the Teatro Tor di Nona with music probably composed by one of the musicians gravitating around his court at the time. He may also have sung in *La Statira* (libretto by Ottoboni, music by Alessandro Scarlatti), staged again at the Teatro Tor di Nona the following year. Adami must have had special permission from Ottoboni, who was very influential in the papal court, for these public events.

Adami's importance rests on his *Osservazioni per ben regolare il coro de i cantori della Cappella pontificia* (Rome, 1711/*R*). This treatise is important for its history of the papal musical institution, its chronology of the singers and its numerous biographies of leading singers and composers associated with the Vatican establishment such as Palestrina, Gregorio Allegri and G.M. Nanino. It is also valuable for its catalogue of the repertory performed, often accompanied by Adami's observations of musical and aesthetic interest (particularly in connection with the ubiquitous presence of works by Palestrina). In the last decade of his life he also wrote on non-musical subjects. Paradoxically he seems to have written no sacred music at all. His only known compositions are a few secular cantatas, a genre in which he earned a considerable reputation as a singer (one chronicler reported his affecting performance, at a musical occasion promoted by Ottoboni, of a cantata by Stradella); only two survive (in *GB-Lbl* Add.34055). Several volumes of cantatas by other composers survive from his private library, all bearing a coat-of-arms created specially for him; these handsome

volumes (now in *Cfm*, *Lbl*, *US-NH*), as well as two portraits painted by notable Roman artists (see *MGG1*), give substance to the contemporary description of him as 'ricchissimo e fortunatissimo'. Two further drawings of Adami survive by the well-known satirical draughtsman Pier Leone Ghezzi (*I-Rvat* Biblioteca Apostolica Vaticana, Ottob. Lat.3113 c.18 and Ottob. lat.3114 c.120).

OWEN JANDER/GIANCARLO ROSTIROLLA

Adamík, Josef (*b* Křemačov, Czech Republic, 29 June 1947). Czech composer. He studied composition and piano at the Brno Conservatory (1965–9), and composition with Ištvan and Piňos at the Janáček Academy in Brno (1969–74). With the exception of a brief period as a teacher at the conservatory in Kroměříž, he has lived in seclusion as a village music teacher in Valašské Klobouky.

In the early 1970s Adamík was influenced by the collage and montage techniques of his teacher Ištvan, and combined contemporary idioms with historical elements, notably in *Nebeské pastviny* ('Celestial Pastures', 1972). From the mid-1970s he experimented with unusual instrumental resources: in the Wind Quintet (1979) he uses children's toy instruments in place of their conventional counterparts. Each instrumental part, moreover, is also playable singly. Adamík's interest in historical models intensified during the 1980s and is evident in compositions such as the Second Symphony (1983). He attempted to find a fresh starting point for new music in *Tance labilní a nepravděpodobné* ('Unstable and Unlikely Dances', 1984), but after the Third Symphony (1985), which he later disowned, he stopped composing.

PETR KOFROŇ

Adamis, Mihalis (*b* Piraeus, 19 May 1929). Greek composer and musicologist. He graduated in theology from Athens University (1954), in neo-Byzantine music (1955) and harmony (1956) from the Piraeus League Conservatory, and in counterpoint, fugue and composition (1959) from the Hellenic Conservatory, where he studied with Yannis A. Papaïannou. At Brandeis University (1962–5) he studied composition (with Arthur Berger), Byzantine music palaeography and electronic music. In 1950 he revived the boys' choir of the Greek Royal Palace, which he directed until 1967. He also established and conducted the Athens Chamber Chorus (1958–61). Between 1961 and 1963 he taught Byzantine music at the Holy Cross Theological Academy, Boston, Massachusetts. In 1965 he established the first electronic music studio in Athens. He was a founder-member (1965) and later president (1975–85) of both the Hellenic Association for Contemporary Music and the Greek section of the ISCM. In 1968 he was appointed head of the music department and choral director at Pierce College, Athens. As a member of the administrative board of the Ionian University, Corfu (1990–94), he was instrumental in the foundation of its music department.

Adamis is an outstanding yet solitary figure in Greek music after 1960. A considerable part of his earlier output involves the reconciliation of stylistic extremes in the form of neo-Byzantine chant on the one hand, and atonality, serialism and electronic music on the other. The liturgical ethos of works such as *Apokalypsis, ékti sfraghida* ('The Sixth Seal of the Apocalypse', 1967), *Tetélestae* ('It is Accomplished', 1971) and *Photonymon* (1973), lends the combination an unexpectedly dramatic impact; it was certainly perceived as courageous in Greece, where many Orthodox intellectuals still reject Western music as incompatible with their ideals of national identity. In the 1980s, during which he concentrated on instrumental music, Adamis's style underwent a gradual modification. Expanding his research into the modes and rhythms of folksong, he explored a 'polymelodic' counterpoint, in which independent lines combine to produce striking harmonic conflicts, the kaleidoscopic effect heightened by shifting, iridescent tone-colours (*Alloiostrofa*, 1986; *Eptaha*, 1989; *Enestota*, 1991; *Hellenion*, 1996).

DIMITRI CONOMOS/GEORGE LEOTSAKOS

Adam of St Victor (*d* St Victor, Paris, 1146). French writer of sequences. Previously thought to have died late in the 12th century but now known to have been active much earlier in the century, he was a seminal figure in the development of the sequence repertory. The first document with a probable reference to Adam is a charter of 1098 in which a 'Subdeacon Adam' appears among the signatories from Notre Dame Cathedral in Paris. By 1107 he had risen through the ecclesiastical ranks to become Precentor; he signed his name 'Adam Precentor' throughout his life, even after he left the cathedral for the Abbey of St Victor in about 1133. He was a member of the reform party in Paris, who, with the support of the Augustinians at St Victor, attempted to impose the Rule of St Augustine upon the canons of Notre Dame; it was doubtless the failure of this attempted reform that prompted Adam's departure for St Victor. Adam worked with many influential figures: he would have been a colleague of Peter Abelard during his early years as cantor; he certainly knew and probably collaborated with the famous theologian Hugh of St Victor; and he may have taught Albertus Parisiensis, the man who succeeded him as cantor at the cathedral, and who is credited with a role in the development of the polyphonic innovations now attributed to Leoninus and his generation.

As a poet and composer, Adam's greatest contribution lay in sparking the dramatic expansion of the sequence repertory in Paris in the course of the 12th century. Now that he is known to have flourished earlier than was previously thought, he can be credited with perfecting the style of imagistic rhythmic poetry that became the hallmark of the late sequence. Over 100 such pieces were composed in Paris in the 12th century in the two major centres for sequence composition, St Victor and Notre Dame. Because Adam played a role in both institutions, it is not difficult to see how a core repertory of texts evolved that was present in both places, but how later generations came to set these pieces somewhat differently, each institution with its favoured melodic idioms and compositional practices. Close study of both texts and music shows that the Victorines were the first major contributors to the repertory. Not only were the texts written in defence of their theological position; but the Victorines were, probably under Adam's initial guidance, the group that led the art of the contrafactum to its highest level of sophistication in the Middle Ages.

Although attributions are, for the most part, speculative, the following pieces seem likely to be by Adam: *Laudes Crucis attollamus* (the earliest and most contested of this group), *Mundi renovatio*, *O Maria, stella maris* (attributed by Richard of St Victor to 'the most outstanding poet') and *Zyma vetus expurgator* (attributed to Adam in the late 12th century). The texts of all these works reveal imaginative and sophisticated use of biblical imagery, and an exegesis related to the ideals established by Adam's contemporary Hugh of St Victor. The melodies, organized in tightly constructed, modular phrases that interact with the heavily accentual trochaic poetry, function within the first large-scale compositional plans for developed uses of phrases against a rhythmic grid found in Western music.

Adamonti. *See* ADAMBERGER, VALENTIN.

Adams. Dutch manufacturer of percussion instruments. Adams Musical Instruments was established at the end of the 1960s by André Adams at Thorn in the Netherlands. Adams has become one of the leading percussion manufacturers in the world. Its list of products range from lightweight, low-priced pedal timpani designed for schools and bands, through to top of the range professional timpani and concert marimbas. A great deal of thought is given to the adaptability and portability of the instruments, as well as to their quality. For example, playing height of their keyboard instruments is adjustable, and their tubular bells may be adjusted both for height and range. In the contemporary world of percussion these refinements are invaluable for the player. Adams now manufactures timpani, xylophones, marimbas, tubular bells, bell plates, concert bass drums, temple blocks and a range of sticks.

JAMES HOLLAND

Adams, Alton A(ugustus) (*b* St Thomas, VI, 4 Nov 1889; *d* St Thomas, VI, 24 Nov 1987). American bandmaster, composer and educator. He taught himself to play the flute and piccolo, took correspondence courses from several universities, and received the BMus degree from the University Extension Conservatory of Music, Chicago. In 1910 he formed Adams' Juvenile Band, which was incorporated into the US Navy when it assumed the administrative duties of the US Virgin Islands in 1917. He was editor of the band department of *Jacobs' Band Monthly* (1913–17), the Virgin Islands correspondent for the Associated Press, and the author of articles for various music journals, newspapers and magazines. From 1918 to 1931 he supervised the music programme in the Virgin Islands public schools, modelling it after similar programmes on the mainland. After retiring from the navy in 1947 he produced musical radio programmes featuring classical music from his own substantial record collection for 16 years. Although many of his compositions and arrangements for band were destroyed by fire in 1933, his surviving works include the *Virgin Islands March*, the islands' national anthem.

MARGOT LIETH-PHILIPP

Adams, Charles R. (*b* Charlestown, MA, 9 Feb 1834; *d* West Harwich, MA, 4 July 1900). American tenor. He studied singing in Boston and in 1856 was soloist in the Handel and Haydn Society's performance of *The Creation*. In 1861 he made concert and opera appearances in the West Indies and Holland. He studied in Vienna with Carlo Barbieri, was engaged for three years by the Berlin Royal Opera, then for nine (1867–76), except for one year, as principal tenor of the Vienna Imperial Opera. He also sang at La Scala and Covent Garden. In 1877 he returned to the USA and during the 1877–8 season sang the title role in the first American production of Wagner's *Rienzi*. An excellent singer and fine actor, he had a commanding stage presence. Tannhäuser, Lohengrin, Manrico and Rienzi were his most celebrated parts. From 1879 he lived in Boston as a successful singing teacher; Melba and Eames were among his pupils.

H. WILEY HITCHCOCK/JUNE C. OTTENBERG

Adams, James B(lake) (*b* *c*1749; *d* after 1794). English composer, organist and cellist. According to his recommendation by Francis Hackwood to the Society of Musicians, on 1 February 1784 he was 35 years old, married with two children, organist of Brompton Chapel and a competent violinist, viola player and cellist. He performed as a cellist in the Handel commemoration concerts in 1784 and played in the band for the Academy of Ancient Music during the 1787–8 season. He probably also took part as a cellist in the concerts (held annually) at St Paul's Cathedral for the relief of the clergy in 1785, 1789, 1790, 1793 and 1795.

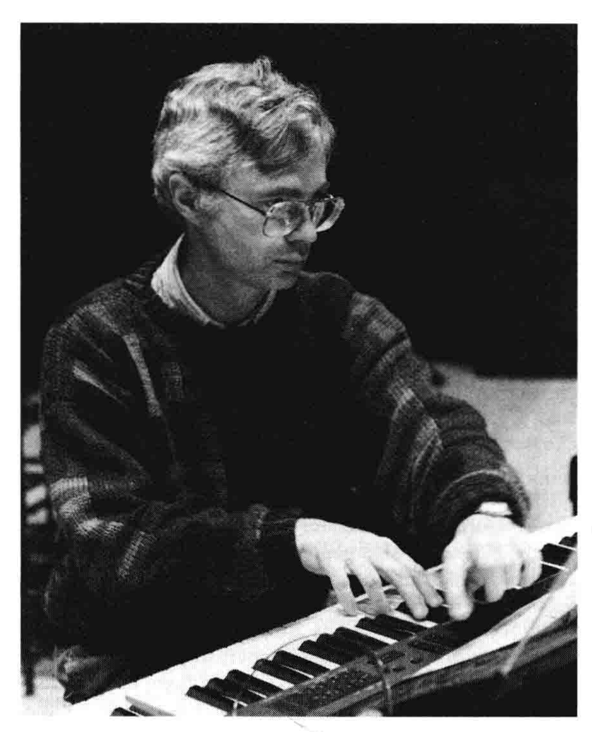
From his extant published works it can be seen that Adams was a competent purveyor of small-scale vocal and instrumental works in the manner of Haigh, Osmond or Reeve. His music shows an awareness of changing styles: the early songs and canzonets accompanied either by harpsichord or orchestra with obbligato instrument are in the manner of Arne, giving way to a symphonic style like that of J.C. Bach or Hook in the three sonatas of op.4 (for piano or harpsichord with violin or flute accompaniment); his late sonata for piano duet shows some grasp of larger forms, and *The Nightingale*, a canzonet in the vein of Haydn or Pinto, has subtle use of the pedal in the onomatopoeic piano writing. Adams also wrote a treatise, *A Familiar Introduction to the First Principles of Music* (London, n.d.). According to Doane's *Musical Directory*, his son James (*b* *c*1771) was an organist at Brompton Chapel and Hampstead Church in 1794; he was also a cellist for the Concerts of Ancient Music. (*BDA*)

ROBIN LANGLEY/R

Adams, John (Coolidge) (*b* Worcester, MA, 15 Feb 1947). American composer and conductor. Known particularly for his operatic works on contemporary subjects, he is considered one of the most frequently performed living composers of concert music.

1. LIFE. He studied the clarinet with his father and with Felix Viscuglia, clarinettist with the Boston SO. At the age of ten he began theory and composition lessons, and at 14 he had his first piece performed by the community orchestra with whom he practised conducting. He also performed with the orchestra alongside his father, often

appearing before an audience of mentally-handicapped patients at the New Hampshire State Hospital. As a student at Harvard University (1965–71, MA 1972) he studied composition with Leon Kirchner, Earl Kim, Roger Sessions, Harold Shapero and David Del Tredici. During this period he performed occasionally as a clarinettist with the Boston SO.



After moving to San Francisco in 1971 Adams taught at the San Francisco Conservatory (1972–82). He quickly became involved in the Bay Area's thriving new music scene and began to forge associations with local composers and musicians. As the conductor of the Conservatory's New Music Ensemble, he commissioned and introduced new works by important experimental composers. In 1978 he became new music advisor to the San Francisco SO. With music director Edo de Waart, he created the Symphony's New and Unusual Music series, introducing major American and European avant-garde composers to San Francisco audiences. His collaboration with the orchestra served as the model for the Meet the Composer residency programme, through which he was appointed the Symphony's composer-in-residence (1982–5). *Harmonium* and *Harmonielehre*, both composed for the orchestra, established his reputation on a national scale.

In 1983 the director Peter Sellars approached Adams about writing an opera on the improbable subject of Richard Nixon's momentous six-day visit to China to meet Mao Zedong in 1972. Given its première by the Houston Grand Opera in October 1987, *Nixon in China* was performed over 70 times in the following few years. The opera was televised by PBS and received both an Emmy and a Grammy award. The Nonesuch recording was named 'one of the ten most important recordings of the decade' by *Time* magazine.

Between 1989 and 1991 Adams and Alice Goodman created a second opera on a contemporary event, the 1985 hijacking of the Italian cruise liner Achille Lauro by a small group of Palestinian terrorists. *The Death of Klinghoffer* received its first performance in Brussels in March 1991 during the Gulf War. The original production, directed by Sellars with choreography by the Mark Morris Company, was also staged in Lyons, Vienna, Brooklyn and San Francisco. The political sensitivity of the subject, however, remained an issue of debate and misunderstanding throughout the run of performances. Although the opera is carefully balanced, with eloquent and profane language given equally to Jews, Palestinians and the Christian hostages, the San Francisco performances were picketed and the work was not staged in the USA after 1992.

Adams' third stage work, *I was Looking at the Ceiling and Then I Saw the Sky*, an 'earthquake/romance' also staged by Sellars, opened in May 1995 in Berkeley, California. The original production completed a five-month tour to Montreal, New York, Edinburgh, Helsinki, Paris and Hamburg.

As a conductor, Adams has also maintained an active schedule. In 1988 he was named creative chair of the St Paul Chamber Orchestra, for which he served as conductor and music advisor until 1990. He has served as artistic director and conductor of the Ojai and Cabrillo Music Festivals in California, and has appeared with the LSO, the London Sinfonietta, the Halle Orchestra, the Oslo PO, the Royal Concertgebouw Orchestra, the Santa Cecilia Orchestra and the Deutsches-Symphonie-Orchester Berlin. He has often programmed his own works alongside those by composers as diverse as Zappa, Sibelius, Stravinsky, Ives, Copland, Reich and Glass. In 1997 he celebrated his 50th birthday with a concert in Amsterdam's Concertgebouw featuring his own music and works for big band by Gil Evans, Miles Davis and Duke Ellington. The same year, Emanuel Ax gave the première of *Century Rolls* (1996) with the Cleveland Orchestra. In 1999 Adams toured Europe with the Ensemble Modern, conducting his *Naive and Sentimental Music* (1997–8) and Ives's Fourth Symphony.

John Adams, 1989

Adams's numerous honours have included the California Governor's Award for Lifetime Achievement in the Arts, the Royal Philharmonic Award (1994) for his Chamber Symphony, the Grawemeyer Award (1995) for his Violin Concerto and the title Composer of the Year by *Musical America* (1997). In 1995 he was made a Chevalier of the Institute of Arts and Letters by the French Ministry of Culture, and in 1997 he was elected to the American Academy and Institute of Arts and Letters.

2. WORKS. At a young age, Adams made a conscious decision to break away from both the European postwar aesthetic and the American academic avant garde of the time. Even before he found his compositional voice, he integrated aspects of popular American culture into his work. His first major compositions, *Phrygian Gates* (1977) and *Shaker Loops* (1978, rev. 1983), are minimalist in their hypnotic pulsation, slowly unfolding modulations and ecstatic levels of energy. Yet of those composers who have been categorized as minimalists, Adams is by far the most anchored in Western classical tradition. Roving tonal centres, fluid tempos and complex formal schemes make his brand of minimalism distinct from that of composers like Reich or Glass. While *Phrygian Gates* is strictly modal, Adams's harmonic language during the

1980s was essentially diatonic with frequent implications of bitonality. In works like *Harmonium* (1980–81) and *Harmonielehre* (1984–5), he fused repetitive motifs with a lush, highly expressive 19th-century symphonic language. Informed by dreams, Jungian analysis, mystical poetry and transcendentalist writings, compositions such as these established his reputation as a composer of 'accessible' scores that provided relief to audiences wary of contemporary music. Tonal and emotional, but still elusively complex, they predated the onslaught of immediately appealing, post-minimalist concert works that appeared in the late 1980s and 90s.

Adams has often remarked on a kind of split personality that emerged in his music during the 1980s. During this period he alternated, with astonishing regularity, between two stylistic polarities: he composed irreverent, almost confrontational 'trickster' works (*Grand Pianola Music*, 1982; *Fearful Symmetries*, 1988); and more sober, introspective compositions (*Harmonielehre*, 1984–5; *The Wound-Dresser*, 1988). Behind the mischief of the 'trickster' pieces is his characteristic celebration of American vernacular music – the fox-trots, marches and big band music of his youth. In this regard, Ives and Copland are his predecessors. Like them, he manages to dissolve boundaries between 'high' and 'low' art by drawing freely on the vast and fertile American tradition.

Adams's gift for setting the intrinsic rhythms of poetry emerged in *Harmonium*, on poems by John Donne and Emily Dickinson, and *The Wound-Dresser*, on words by Walt Whitman. The latter's musical depiction of graphic violence co-existing with disembodied spiritual transcendence was expanded two years later in *The Death of Klinghoffer*. In his operas Adams proved that his sensitivity to language was equal to his talent for individual characterization and drama on an epic scale. The 34-piece orchestra, brightened by saxophones and synthesizers, for which *Nixon in China* is scored, emphasizes the wry humour and poignant intellect of Goodman's rhymed couplets. Full of fantasy sequences, photo opportunities and echoes of big bands, *Nixon in China* depicts an American icon with playful irony. Like many of Adams's works, it functions simultaneously on heroic and banal, comic and tragic levels. *The Death of Klinghoffer*, a musical and choreographic passion play that moves between deep meditation and graphic brutality, shows the influence of Bach's Passions and other sacred works. Chromatically descending scales mingle with repetitive figures and lyrical vocal lines to create a protracted sense of time passing. *I Was Looking at the Ceiling and Then I Saw the Sky*, a story told in 25 pop songs accompanied by an eight-piece rock band, is both a love comedy and a social satire on the lives of seven young Americans of varied ethnicities, all living in Los Angeles at the moment of the devastating Northridge earthquake. With elements of gospel, torch-song ballads, rap and funk, Adams's score captures the clip of Berkeley poet June Jordan's urban speech patterns.

Adams's later compositions have involved more polyphony, chromaticism and virtuosity, while retaining the rhythmically charged motoric propulsion of earlier works. In 1992 he faced the spectre of Schoenberg, a confrontation he has assiduously avoided for two decades, in the Chamber Symphony. The work had its genesis when he was studying the score to Schoenberg's work of the same name while overhearing soundtracks to cartoons his son was watching in another room. From that point on, a 'hyperlyrical' and linear quality informed most of his compositions. In the early 1990s he began to use strict harmonic and melodic modes, which took his music into an expressive realm very different from that of his 1980s minimalist works. Over the decade, his use of modes continued to evolve, especially after he discovered Slonimsky's *Thesaurus of Scales and Melodic Patterns* and developed the 'earbox', a modal transposition technique of his own creation. Although not all of his works from the 1990s are modal (*Century Rolls*, for example, is not), many are at least partly controlled by this technique (Violin Concerto, 1993; *Slonimsky's Earbox*, 1996; the first movement of *Gnarly Buttons*, 1996; the last movement of *Naive and Sentimental Music*, 1997–8).

Dense counterpoint, simultaneously conflicting metres and asymmetrical phrases have remained distinctive elements of Adams's music. These are put to striking use in the Violin Concerto. With its sinuous lines, Adams has described it as 'a study in "hypermelody" – the violin sings almost constantly throughout the full 35 minutes of the piece', while the orchestra provides a muted backdrop. Between its rhapsodic, lyrical first movement, tender chaconne and extroverted toccata, the concerto combines stylistic elements which had hitherto remained fairly separate in Adams's writing: mystical introspection and virtuoso kineticism. *Century Rolls*, a very different kind of concerto, pays tribute to the intricate mechanisms of piano rolls of the 1920s, as well as to Nancarrow's Studies for Player Piano.

The concentration of these recent works, packed with polyrhythms and highly virtuoso writing, makes considerable demands on instrumentalists. This has led Adams to form close relationships with particular groups (Ensemble Modern, the Schoenberg Ensemble, the Kronos Quartet) and soloists (Emanuel Ax, Michael Collins, Gidon Kremer), who are able to meet the challenges presented by these fiendishly difficult scores. Adams's abiding interest in electronic media, apparent in the addition of synthesizers to his operatic scores and large ensemble pieces, reached its pinnacle in *Hoodoo Zephyr* (1992–3).

Considering Adams's penchant for punning titles (*Mongrel Airs*, *Hail Bop*, *Dogjam*), it is not surprising that the title of his orchestral work *Naive and Sentimental Music* refers not only to Schiller's essay, but to the questionable state of contemporary music. The work follows on from his exploration of diatonic melody against a strummed continuum of chords in the Violin Concerto and *Gnarly Buttons*. While restless chromaticism and modal innovation connect *Naive and Sentimental Music* to works from the 1990s, its bold sweeping gestures recall *Harmonium* and *Harmonielehre*.

WORKS

DRAMATIC

Matter of Heart (film score), 1982, unpubd

Nixon in China (op, 3, A. Goodman), 1985–7; Houston, 22 Oct 1987

The Death of Klinghoffer (op, 2, Goodman), 1989–91; Brussels, 19 March 1991

I was Looking at the Ceiling and Then I Saw the Sky (songplay, 2, J. Jordan), 1995; Berkeley, CA, 11 May 1995

ORCHESTRAL

Common Tones in Simple Time, 1979; Harmonium, chorus, orch, 1980–81; Shaker Loops, str orch, 1983 [rev. of chbr work]; Harmonielehre, 1984–5; The Chairman Dances, fox-trot, 1985; Tromba lontana, fanfare, 1985; Short Ride in a Fast Machine,

fanfare, 1986; Fearful Symmetries, 1988; Eros Pf, pf, orch, 1989; El Dorado, 1990; Vn Conc., 1993; Lollapalooza, 1995; Century Rolls, pf, orch, 1996; Slonimsky's Earbox, 1996; Naive and Sentimental Music, 1997–8;

VOCAL

Ktaadn, chorus, osciallators, filters, 1974, unpubd; Harmonium, chorus, orch, 1980–81; Grand Pianola Music, 3 female vv, 2 pf, wind, brass, perc, 1982; The Wound-Dresser (W. Whitman), Bar, orch, 1988; Choruses from the Death of Klinghoffer (Goodman), 1990; The Nixon Tapes, solo vv, chorus, orch, 1998

CHAMBER AND SOLO INSTRUMENTAL

Pf Qnt, 1970, unpubd; American Standard, unspecified ens, 1973, unpubd; Christian Zeal and Activity, unspecified ens, 1973; Grounding, 3 sax, live elecs, 1975, unpubd; China Gates, pf, 1977; Phrygian Gates, pf, 1977; Shaker Loops, 7 str, 1978; Grand Pianola Music, 3 female vv, 2 pf, wind, brass, perc, 1982; Chbr Sym., 15 insts, 1992; John's Book of Alleged Dances, str qt, sampler, 1994; Road Movies, vn, pf, 1995; Gnarly Buttons, cl, ens, 1996; Hallelujah Junction, 2 pf, 1996; Scratchband, amp ens, 1996

ELECTRO-ACOUSTIC

Heavy Metal, 2-channel tape, 1970, unpubd; Grounding, 3 sax, live elecs, 1975, unpubd; Onyx, 4-channel tape, 1976, unpubd; Studebaker Love Music, 2-channel tape, 1976, unpubd; Light Over Water, 2-channel tape, 1983; Hoodoo Zephyr, 1992–3

ARRANGEMENTS AND ORCHESTRATIONS

6 Songs by Charles Ives, 1v, chbr orch, 1989–93; Wiegenlied, 1989 [orch of Liszt]; The Black Gondola, 1989 [orch of Liszt: *La lugubre Gondola*]; Berceuse élégiaque, 1989 [orch of Busoni]; Le livre de Baudelaire, Mez, orch, 1994 [orch of 4 poems from Debussy: 5 poèmes (C. Baudelaire)]; La mufa, tango, 1995 [orch of A. Piazzolla]; Revolucionario, tango, 1996 [orch of Piazzolla]; Todo Buenos Aires, tango, 1996 [orch of Piazzolla]

SARAH CAHILL

Adams, John Luther (*b* Meridian, MS, 23 Jan 1953). American composer. He came to music as a rock drummer, and through a youthful passion for the music of Frank Zappa he became acquainted with the works of Varèse and Feldman. Adams studied with James Tenney and Leonard Stein at the California Institute of the Arts (BFA 1973), and in 1975 he moved to Alaska, serving as timpanist and principal percussionist with the Fairbanks SO and the Arctic Chamber Orchestra (1982–9). In 1994–7 he was composer-in-residence with the Anchorage SO, Anchorage Opera and Alaska Public Radio Network. He teaches composition at the Oberlin College Conservatory and the University of Alaska, Fairbanks. Among his awards and fellowships are those from Meet the Composer, the National Endowment for the Arts, the Rockefeller Foundation, Opera America, the Foundation for Contemporary Performance Arts, the American Music Center and the Alaska State Council on the Arts.

Adams's music is deeply rooted in the Alaskan geography and culture, both through specific references to the musical traditions of indigenous peoples and through its pictorial evocations of the northern landscape. While the influence of Feldman can be discerned in the sense of scale and contemplative spirit of expansive, slow-moving instrumental works such as *Clouds of Forgetting, Clouds of Unknowing* (1991–5) and *Dream in White on White* (1992), Adams combines this with an almost physical depiction of the natural world. His experience as a percussionist can be heard in the rhythmic complexity of his writing and his evocation of Inuit drumming techniques.

WORKS
(*selective list*)

Orch: The Far Country of Sleep, 1988; Clouds of Forgetting, Clouds of Unknowing, chbr orch, 1991–5; Dream in White On White, hp/pf, str qt, str orch, 1992; Sauyatugvik: The Time of Drumming, 1995, arr. 2 pf, timp, 4 perc, 1996; In the White Silence, cel, hp, 2 vib, str qt, str orch, 1998

JOSHUA KOSMAN

Adams, [Harrison] Leslie (*b* Cleveland, 20 Dec 1932). American composer. He attended Oberlin College (BMEd 1955), California State University, Long Beach (MA 1967) and Ohio State University (PhD 1973), and studied privately with Herbert Elwell, Robert Starer, Vittorio Giannini, Leon Dallin, Edward Mattila and Marcel Dick. He has taught at Stillman College (1963–4), Florida A&M University (1968–9) and the University of Kansas (1969–78). His honours include composition awards from the National Association of Negro Women (1963) and the Christian Arts Annual National Competition for Choral Music (1979), fellowships from the Rockefeller Foundation (1979) and Yaddo (1980, 1984), and commissions from the Center for Black Music Research, the Cleveland Orchestra and the Ohio Chamber Orchestra.

Adams writes in a lyrical style that fuses elements of jazz and black folksong with 20th-century compositional techniques. A few of his works, including *Hymn to Freedom* (1989) and *Christmas Lullaby* (1996), have been recorded. An interview with the composer appears in

Y.C. Williams: 'The Making of the Opera *Blake* by Leslie Adams', *New Perspectives on Music*, ed. J. Wright with S.A. Floyd Jr (Warren, MI, 1992), 172–209.

MSS and correspondence in *US-CLp*

JOSEPHINE WRIGHT

Adams, Nathan (*b* Dunstable, NH, 21 Aug 1783; *d* Milford, NH, 16 March 1864). American brass instrument maker. He invented a valve with movable tongues or flaps within the windway. A trumpet in F by Adams with three such valves is displayed on board the *USS Constitution*; it dates from about 1830. A similar instrument, unsigned, with three primitive rotary valves, is in the Essig Collection, Warrensburg, Missouri. Adams is listed as a musical instrument maker in *Longworth's American Almanack, New-York Register, and City Directory* for 1824. For the next four years he was bandmaster on the *USS Constitution*. About 1828 he settled in Lowell, Massachusetts, continuing there as a musical instrument maker until 1835. The latter part of his life was spent as a machinist and repairer of ships' chronometers in Provincetown, Massachusetts. He was the composer of at least one published song, *The Ruins of Troy*, written while on board the *Constitution*.

ROBERT E. ELIASON

Adams, Suzanne (*b* Cambridge, MA, 28 Nov 1872; *d* London, 5 Feb 1953). American soprano. She studied with Mathilde Marchesi and Bouhy in Paris and made her début at the Opéra in 1895 as Juliet; she seems to have studied both Juliet and *Faust*'s Marguerite with Gounod himself, who greatly admired her brilliant yet flexible tone and fine technique. She sang at Covent Garden (1898–1904), where she created Hero in Stanford's *Much Ado about Nothing*, and was also a member of the Metropolitan Opera (1899–1903). Her repertory included Gluck's Eurydice, Donna Elvira, Micaëla (*Carmen*) and Meyerbeer's Marguerite de Valois. She retired in 1904 and then taught singing in London.

HERMAN KLEIN/HAROLD ROSENTHAL

Adams, Thomas (i) (*d* London, 1620). English bookseller and publisher. He was established in London from 1591 and financed several significant musical publications, including John Dowland's *The Third and Last Booke of Songes or Aires*, printed by Peter Short in 1603, and Robert Dowland's *A Musicall Banquet*, printed by Thomas Snodham in 1610. He also had the right to reprint several other titles, but this was disputed by William Barley. Between 1611 and 1620 he traded at 'the Bell in St. Paul's churchyard'. He is thought to have published Orlando Gibbons's *Fantasies of III Parts* in 1620, which bears the imprint 'London. At the Bell in St. Pauls churchyard'. *Humphries-SmithMP*

MIRIAM MILLER

Adams, Thomas (ii) (*b* London, 5 Sept 1785; *d* London, 15 Sept 1858). English organist and composer. At 11 years of age he began to study music under Thomas Busby. He became organist at Carlisle Chapel, Lambeth (1802), at St Paul's, Deptford (1814), and at St George's, Camberwell (1824). On his appointment to the newly rebuilt church of St Dunstan-in-the-West, Fleet Street (1833), he retained the Camberwell post and he continued to hold both until his death. He was one of the most prominent organists of his time, and gave many performances of a kind that would now be termed 'recitals'. He was much in demand at the openings of newly built organs, and from 1817 onwards he supervised and often took part in the periodic evening performances on Flight & Robson's giant 'Apollonican' in St Martin's Lane, London.

Adams was a master of the developing art of imitating orchestral effects on the organ. A typical recital of his, at the opening of the new Exeter Hall organ on 23 January 1840, consisted of one fugue by Bach (from the '48'), three extemporizations, and 12 arrangements of orchestral, vocal and choral music. But, more unusually for his time, he was equally at home in what was called the 'strict' style of organ music, predominantly contrapuntal, and making sectional use of contrasting ranks of pipes based on diapason tone. This was, no doubt, the basis of his extemporizations, and how uncommon it had become may be judged from one of his obituarists: 'In his use of the organ, Mr Adams seems to have regarded it chiefly as a means of displaying his own peculiar style of composition and powers of execution'. His compositions do indeed show a most remarkable divergence from the general musical style of the time. Even in his early sets of piano variations he used an unusually dense texture, strongly marked harmonic progressions, and examples of strict canon and other learned devices (see, for example, his variations on *Cease your Funning*, 1816). In his organ voluntaries, in which a fugue was always the principal movement, he pursued contrapuntal logic with the ruthlessness of Clementi. Like Beethoven and other 19th-century admirers of Bach, he could match the intensity but not the spontaneity of Bach's fugues. His most ambitious works are generally called 'organ pieces' rather than 'voluntaries', and are in several contrasting movements including at least one fugue and one slower movement with an ornate melody played on a solo stop.

Adams carefully indicated registration in his organ music, and extracted great variety from the English organ of his day. Samuel Wesley mentioned Adams's 'great skill

and ability in the management of the Pedals', but this must have been merely relative, for there are only one or two rudimentary pedal passages in all his music. Best told how Adams 'regaled himself by serving up one or two of Bach's "48", adding a droning pedal when his bunions were propitious'.

The statement in the fifth edition of *Grove's Dictionary* that Adams 'published ... many vocal pieces, consisting of short anthems, hymns and sacred songs' confuses him with another Thomas Adams, who was organist of St Alban's, Holborn, in the later 19th century.

NICHOLAS TEMPERLEY

Adam von Fulda (*b* ?Fulda, *c*1445; *d* Wittenberg, 1505). German composer and theorist. Until about 1490 he was at the Benedictine monastery of Vornbach, near Passau, but he had to leave it when he married. In 1490 he entered the service of Frederick the Wise of Saxony, working first as a singer, then as a historiographer (from 1492), finally becoming Kapellmeister by 1498. In 1502 he matriculated at the newly founded University of Wittenberg. Between 1503 and 1504 he wrote his chronicle of Saxon history undertaken at Frederick's suggestion in 1492, and after Adam's death (of the plague) in 1505, it was completed by Johannes Trithemius, Abbot of Würzburg.

In 1490 Adam finished his famous treatise *De musica* (*GerbertS*, iii, 329), in which he described himself as 'Musicus ducalis'. The manuscript was burnt in 1870 but the text had already been printed by Gerbert in 1784. In it he noted that Du Fay's music extended Guido's musical system by three degrees, and upheld Busnoys as a model to be emulated. Adam inveighed against minstrels ('ioculatores') and artless folksingers ('laici vulgares'), for, he said, they had no knowledge of the art of music-making. He was the first theorist to distinguish between vocal and instrumental music in the modern sense. He also wrote some religious verses which were published by Wolff Cyclopius as *Ein sehr andechtig christenlich Buchlein* (Wittemberg, 1512/*R*) with eight woodcuts by Lukas Cranach.

Adam belonged to the early generation of German composers that includes Heinrich Finck. Most of his music consists of settings (usually for four voices) of a chorale melody or secular lied. His sacred music comprises a mass, a *Magnificat*, seven hymns, two antiphons, a cantio and a respond. The structure of the hymns, with a canon in the upper voices, is often somewhat clumsy. The hymn *Nuntius celso*, with a canon in the superius and tenor, has a second text, the sequence *Psallite*, underlaid to the vagans (bass) part voice. Two manuscripts in the monastery of St Gallen name Adam as the composer of three secular songs for four voices published anonymously by Arnt von Aich in his *LXXV. hubscher Lieder* (RISM 1519[5]). *Ach hülf mich leid* was widely known: Glarean published it in his *Dodecachordon* with the Latin text *O vera lux*, and the melody was often used, for example in Poland and Switzerland in the organ tablatures of Lublin and Hör. Schöffer printed the melody with a sacred version of the text in his *Liederbuch* (RISM 1513[2]) and from 1529 to 1673 it was to be found in Protestant sacred songbooks.

KLAUS WOLFGANG NIEMÖLLER/R

Adam Wągrowicensis [Adam of Wągrowiec; Margonius] (*b* Margonin, now Mągrowiec, *c*1600; *d* ?Wągrowiec, 27 Aug 1629). Polish composer and organist. Known only by his monastic forename, he was a member of the Cistercian order at Wągrowiec Abbey, north of Poznań. A manuscript of organ tablatures dated 1618 from the former Jesuit college of Kroże, Samogitia (*LT-V*, ed. I. Bieńkowska and M. Perz, Warsaw; 1999), includes 23 pieces (fantasias, ricercares and liturgical paraphrases) by Adam, and their discovery (see Trilupaitienė) has made it possible to credit Adam with an organ canzona in the Pelplin tablature (*PL-PE*) which bears the monogram P.A.W. (?=Pater Adam Wągrowicensis). Another unattributed canzona (ed. in AMP, viii, 1970, pp.304, 352) shows stylistic similarities. The continuo parts only of two sacred works, *Sancta et immaculata* (S, T, bc) and *Da pacem* (T, T, bc), are in the Biblioteka Jagiellońska (MS 40063, formerly in *D-Bsb*); they were written about 1620, probably at Warmia (Ermland). Based on this source, the composer was wrongly identified in *EitnerQ* as 'Adamus R.'. Adam Wągrowicensis is now recognized as a pioneer of the early Baroque Italian style in Poland.

MIROSŁAW PERZ

Adán, Vicente (*b* Algemesí, province of Valencia; *fl* 1775–87). Spanish composer and theorist. According to early biographers, he was organist at the Madrid royal chapel and the Convento de los Desamparados. He is best known for a small treatise, *Documentos para instrucción de músicos y aficionados que intentan saber el arte de la composición* (Madrid, 1786), whose stated purpose was to compensate for the lack of teaching materials on secular music in Spain. Quite elementary, it consists mostly of examples of counterpoint and free composition, and also gives the instrumental ranges. It was attacked in a satirical *Carta laudatoria a don Vicente Adán* (Madrid, 1786), to which Adán replied in *Respuesta gratulatoria de la carta laudatoria* (Madrid, 1787). Various 18th-century publishers' lists and bibliographies indicate that many volumes of his compositions were printed in Madrid in the 1780s. Most of these were for the psaltery, which experienced a strong revival in the 18th century, although it had been known in Spain since the Moorish occupation. Adán's compositions for this instrument include preludes, sonatas, divertimentos and fandangos as well as an instruction book; there is also evidence that he published organ works and vocal music, both sacred and secular. None of these other publications are extant, although one untitled piece of his for psaltery survives (in *E-Mn* M.2249).

ALMONTE HOWELL

Adaskin, Murray (*b* Toronto, 28 March 1906). Canadian composer, conductor and violinist. He studied the violin with Luigi von Kunits, Kathleen Parlow and Marcel Chailley, and was a member of the Toronto SO (1923–36) and the Toronto Trio (1938–52). He began composition studies with John Weinzweig in Toronto in 1944 and continued with Charles Jones and Darius Milhaud. In 1952 he became head of the music department at the University of Saskatchewan, Saskatoon, where he was appointed composer-in-residence in 1966. His other activities included co-founding the Canadian League of Composers (1951), conducting the Saskatoon SO (1957–60) and serving as a member of the Canada Council (1966–9). His numerous CBC commissions included the *Algonquin Symphony* (1957–8), *Rondino* for nine instruments (1961) and an opera, *Grant, Warden of the Plains* (1967). After his retirement in 1973, he moved to Victoria, where he became involved in community arts activities. He was appointed an Officer of the Order of Canada in 1980. In 1987 the University of Victoria held a festival of concerts and symposiums, and an exhibition of his Canadian art collection in his honour.

Adaskin's admiration for the music of Stravinsky and Milhaud is reflected in his compositional style; his precision with detail, his manipulation of small rhythmic cells, and his strong rhythmic impulses contribute to the clarity of his dissonant contrapuntal textures. The vitality generated through cross-rhythms and off-beat accents contributes a sense of joy and fun to the music, often resulting in a Chaplinesque sense of humour and optimism (as in *The Travelling Musicians*, 1983, rev. 1997), while the juxtaposition of the elegiac and the humorous adds a warmth and sincerity. Though concerned with lyricism, Adaskin has eschewed romantic sentimentalism and gestural exaggeration. His compositional variety is apparent in the nine Divertimentos, written for differing instrumental combinations. The Divertimento no.6 for solo percussion and orchestra is particularly brilliant in its percussion writing.

WILLIAM AIDE/GORDANA LAZAREVICH

Adayevskaya [née Schultz], **Ella Georgiyevna** (*b* St Petersburg, 10/22 Feb 1846; *d* Bonn, 26 July 1926). Russian composer and ethnomusicologist. The name Adayevskaya is a pseudonym derived from the notes of the kettledrum (A, D, A) in Mikhail Glinka's *Ruslan and Lyudmila*. At the age of eight she started piano lessons with Henselt, continued with Rubinstein and Dreyschock and later gave concerts in Russia and Europe. She also studied composition at the conservatory with N.I. Zaremba and A.S. Famintsïn and about 1870 began composing choruses for the Imperial Chapel Choir. Two operas followed, *Nepri'gozhaya* ('The Homely Girl')/*Doch' boyarina* ('The Boyar's Daughter', 1873) and *Zarya svobodï* ('The Dawn of Freedom', 1877), the latter dedicated to Alexander II but rejected by the censor for its scene of peasant uprising. A comic opera *Solomonida Saburova* remained in manuscript. A *Greek Sonata* (1881), for clarinet and piano, using quarter tones, was inspired by Adayevskaya's research into the music of ancient Greece, the Greek church and Slavonic folksong. About 1891 she settled in Venice, then (1911) moved with her friend Baroness von Loë to Germany and joined the circle around the poet Carmen Sylva (Elisabeth, Queen of Romania). Folk music research eventually dominated Adayevskaya's musical pursuits, resulting in a substantial output of publications.

Added sixth chord (Fr. *sixte ajouté*). In functional harmony a subdominant chord with an added major 6th above the bass (e.g. *f–a–c'–d'* in C major, *f–a♭–c'–d'* in C minor); it can also be derived as the first inversion of a 7th chord built on the supertonic. The ambivalent construction of the added 6th chord engenders an ambivalence in the way it resolves, as Rameau observed in the *Génération harmonique* (1737). If the chord is viewed as an embellished subdominant triad, the added 6th must resolve upwards to the 3rd of the tonic (ex.1*a*); if it is interpreted as an inversion of II⁷, on the other hand, the added 6th is itself the root of the chord and remains stationary in a resolution to the dominant (ex.1*b*).

Adderley, Cannonball [Julian Edwin] (*b* Tampa, FL, 15 Sept 1928; *d* Gary, IN, 8 Aug 1975). American jazz alto saxophonist and bandleader. He directed a high-school band in Fort Lauderdale and, after serving in army bands (1950–53), resumed teaching until 1955. He then moved to New York, intending to play with his brother, the cornettist Nat Adderley. Instead, a chance jam session led to his joining Oscar Pettiford's band and signing a recording contract.

The Adderley brothers formed a quintet in 1956, but Adderley replaced Sonny Rollins in the Miles Davis Quintet in October 1957 although he continued to issue recordings as a leader, notably *Somethin' Else* (1958, BN). Among his recordings with Davis were *Milestones* (1958, Col.) and *Kind of Blue* (1959, Col.). He stayed in Davis's famous sextets, along with John Coltrane, until September 1959, when he formed a second quintet with his brother. This group, which played soul jazz and bop, remained intact until 1975; members included the pianists Victor Feldman and Joe Zawinul (who composed their hit tune *Mercy, Mercy, Mercy*). From January 1962 to July 1965 the group expanded to form a sextet with the addition of Yusef Lateef and later Charles Lloyd on reed instruments. Articulate and effective as a teacher, Adderley led the quintet at college workshops in the late 1960s and early 1970s, speaking on the musical and sociological aspects of jazz.

A masterful, confident improviser, Adderley was called 'the new Bird' because his début in 1955 occurred shortly after Charlie Parker's death. This unfortunate label caused resentment among the press and public, and set him unattainable standards. Although he at times imitated Parker (as did all bop alto saxophonists), his first bop recordings reveal more chromatic and continuous lines and a more cutting tone than Parker's; on other early recordings he played and composed in a simple blues- and gospel-orientated style. His approach to improvisation changed significantly while he was with Davis, who taught him to use silence effectively, and again during the mid-1960s when he incorporated elements of free jazz. From 1969 he also performed on soprano saxophone.

BARRY KERNFELD

Addinsell, Richard (Stewart) (*b* London, 13 Jan 1904; *d* Chelsea, London, 14 Nov 1977). English composer. After a brief spell at the RCM (1925–6), he began his career contributing songs to revues and incidental music for stage plays. An early and productive collaboration began in 1928, when he wrote incidental music for *Adam's Opera* by the writer Clemence Dane (1882–1965). He continued to work with her until her death, most notably for the combined version of *Alice in Wonderland* and *Through the Looking Glass*. Other projects included the

play *Moonlight is Silver* (where he met Gertrude Lawrence, who recorded the title song), and *The Saviours*, Dane's cycle of religious plays for radio. By 1936 he had started scoring for feature films and documentaries, his first major success coming with *Goodbye Mr Chips* in 1939. A chance meeting with Joyce Grenfell (1910–79) in 1942 resulted in a close friendship and numerous collaborations on songs which initially appeared in West End revues, such as *Tuppence Coloured* (1947) and *Penny Plain* (1951), and then became an integral part of her one-woman shows. Although he contributed many works to the theatre and films, his *Warsaw Concerto* for the 1941 British film *Dangerous Moonlight* eclipsed all others as far as the public was concerned. With more than 100 recordings, and sales exceeding five million, it remains a perennial favourite in the light music repertory. Following its success, Addinsell's popular piano-concerto style resulted in numerous similar pieces by other composers: Bath's *Cornish Rhapsody*, Williams's *Dream of Olwen* and Rota's *Legend of the Glass Mountain* are three prime examples.

DAVID ADES

Addison, John (i) (*b* London, *c*1766; *d* London, 30 Jan 1844). English double bass player and composer. He was the son of an inventor and at an early age he learnt to play several instruments. In 1791 he married the singer Elizabeth Willems (*c*1785–*c*1840), granddaughter of H.T. Reinhold (who sang for Handel). During his career Addison pursued various professional musical activities, frequently determined by his wife's engagements. In 1791 she sang at Vauxhall Gardens and then at Liverpool, where Addison (hitherto a cellist) deputized for a double bass player and settled on this as his preferred instrument. From Liverpool they went to Dublin, where Addison directed the amateur orchestra of a private theatre partly run by the Earl of Westmeath. In 1792 Mrs Addison sang in the oratorios at Covent Garden and appeared at Vauxhall Gardens; Addison wrote the words of two of her songs, set by James Hook. Later he composed songs for her, and claimed she was his pupil (in 1797 she also studied with Rauzzini). In 1796 she appeared at Covent Garden as Rosetta in *Love in a Village*, followed by roles in other works; Addison probably played in the orchestra. From 1797 to 1800 they performed at Birmingham, in Dublin and then Manchester, where Addison temporarily espoused the cotton trade, incurring considerable financial loss. He joined Michael Kelly's music business in London, and was engaged at the Italian Opera and at the Ancient and Vocal Concerts as a double bass player. A self-taught composer, between 1805 and 1817 he supplied the music for a number of works performed at Drury Lane and the Lyceum theatres. He composed songs, taught singing, and in the 1820s and 1830s produced arrangements of oratorios by Handel and works by other composers. He was also involved in globe-making.

Addison, John (Mervin) (ii) (*b* Chobham, 16 March 1920; *d* Bennington, VT, 7 Dec 1998). English composer. He studied at the RCM with Jacob (composition), Goossens (oboe) and Thurston (clarinet) and was Professor of Composition and Theory there from 1950 to 1956. His first major concert work, which shows a particular aptitude for wind writing, was the Woodwind Sextet (1949) performed at the 1951 ISCM Festival. Addison became well known for his theatre music, such as that for John Osborne's *The Entertainer* (1957) and *Luther* (1961). As a prolific composer for films he favoured small ensembles, associating solo instruments with specific characters as demonstrated by his use of the oboe in *The Girl with Green Eyes* (1964) and of the harpsichord in *Tom Jones* (1963), for which he won an Academy Award, and *Sleuth* (1973). Other notable films are *Pool of London* (1951), *Reach for the Sky* (1956), *A Taste of Honey* (1961), *The Honey Pot* (1967), *The Charge of the Light Brigade* (1968) and *A Bridge Too Far* (1977). His score for Hitchcock's *Torn Curtain* (1966) replaced that originally written by Bernard Herrmann. From 1975 he was based in Los Angeles working mostly for television, including the series *Centennial* (1978) and *Murder, She*

Wrote (1984). Addison also wrote the ballet *Carte blanche* (1953), a trumpet concerto, orchestral and chamber music. In 1994 he donated his correspondence, scores and studio recordings to the Film Music Archives at Brigham Young University, Utah.

CHRISTOPHER PALMER/R

Addison, Joseph (*b* Milston, Wilts., 1 May 1672; *d* Kensington, London, 17 June 1719). English librettist and writer on opera. He studied at Oxford, then held minor political offices and toured on the Continent (1699–1704), hearing performances in the most important operatic centres. He documented his impressions of opera in his *Remarks upon Several Parts of Italy* (London, 1705), commenting perceptively on the differences between the Italian, French and English poetic styles and criticizing the dramatic vacuity of Italian opera librettos. He later wrote a libretto on the story of Rosamond, mistress of Henry II, which was set by Thomas Clayton (1707) and was not successful, partially because of the composer's ineptitude. The libretto, while not Addison's best work, is an elegant attempt to create an opera on a British theme and shows that he had studied the dramatic and technical sides of opera. It was set successfully by T.A. Arne (1733) and, in a revised form and with less success, by Samuel Arnold (1767).

In his contributions to *The Tatler* (1709–11) and *The Spectator* (1711–12) Addison made his most extensive comments on the London opera scene and put forward suggestions for the improvement of British opera. He ridiculed Handel's *Rinaldo* (1711) and the mixing of realistic stage props (such as live sparrows) with unrealistic ones (pasteboard seas, painted dragons etc.). He exhorted British composers to follow Lully's model and create native opera traditions.

Addison's essays had a considerable impact on the development of musical aesthetics and criticism. Mattheson translated and adapted many of them in *Die Vernünftler* (1713–14) and used Addison's arguments to support his advocacy for the creation of a German operatic tradition. Gottsched knew Addison's works, and his wife translated Addison's contributions to *The Spectator* as well as his plays *Cato* and *The Drummer*. J.A. Scheibe mentioned Addison frequently in *Der critische Musicus* (1745). *The Spectator* had many imitators, including the *Discourse der Mahlern* (1721–3) by the Swiss writers Bodmer and Breitinger. Addison's ideas were cited by mid-century operatic reformers, particularly Algarotti, whose pupil Calzabigi also knew Addison's works. Addison's emphasis on naturalness in opera, the need for librettos of high literary quality and for national opera independent of Italian models helped to prepare the way for the operatic revolution of Gluck.

Additional accompaniments. A term used for extra instrumental parts added to the scores of Baroque choral and orchestral works (especially those of Bach and Handel), with or without modification of the original scoring. *See* ARRANGEMENT, §3.

Adé, 'King' Sunny [Adeniyi, Sunday] (*b* Oshogbo, Nigeria, 1946). Nigerian performer. 'King' of JÙJÚ music and born into a royal Yoruba family, Adé first performed as a guitarist with Moses Olaiya and his Rhythm Dandies. In 1964 he shifted from the HIGHLIFE style to *jùjú*, and in 1966 he formed his first *jùjú* group, the Green Spots. Referred to as 'King' by his audiences and 'Chairman' by his musicians, in 1974 he formed his own record label and has released over 40 albums since then. In the early 1980s Adé was promoted by Island Records as the 'African Bob Marley', with the release of *Juju Music* (1982) with his African Beats band, but he was eventually dropped by that label in 1984. His ensemble normally has up to six guitars and can include eight or more drummers, including talking drums. The lyrics of Adé's songs draw on traditional Yoruba praise-singing traditions, proverbs, as well as offering social and political commentary, and he sings with a beautifully flexible voice.

GREGORY F. BARZ

Adelaide. City in Australia. Unlike Australian convict settlements, the city (the capital of South Australia) was founded, in 1836, through planned colonization and subsidized migration. Dependence on a pastoral and mining economy meant that the city's prosperity was subject to the fluctuating seasons, the Victorian goldrush and the commercial interests of rival cities. 19th-century migration added a distinct ethnic mix to the transplanted British society, most notably the German communities who established wine-making regions. European and Asian migration after World War II continued this trend, and national clubs and cultural organizations preserve many diverse music and dance traditions. The Aboriginal population in South Australia (estimated at 12,000 before colonization) was decimated and pushed into arid lands during the 19th century, but extensive research in Aboriginal culture and special initiatives such as the Centre for Aboriginal Studies in Music, founded at the University of Adelaide by ethnomusicologist Catherine J. Ellis in 1975, have resulted in a revitalization of Aboriginal traditions. This cultural mix has resulted in a musical life in which professional state performing arts companies and the international Adelaide Festival of Arts (founded by Professor John Bishop in 1960) are complemented by a world music festival WOMADelaide (1992), the Barossa Music Festival (1992) in the wine-growing region, strong church music traditions (especially Anglican and Lutheran), commitment to music education, vibrant choral

music, brass bands, music theatre, and a lively jazz, folk and rock scene.

Colonial cultural life was that of the educated middle class. The state's library, art gallery, museum, botanic gardens and town hall were established early, as were public education institutions. Music organizations flourished, notably the Adelaide Choral Society (1844), Adelaide Town Band (1848), Adelaide Liedertafel (1858) and Adelaide Philharmonic Society (1862). Early hybrid musical/theatrical entertainments gave way to the lucrative operatic and concert touring circuit during the goldrush. Coppins's English Opera Company (1856), Bianchi's Grand Italian Opera Company (1861) and, from 1865, regular seasons of William Lyster's various English and Italian opera companies, heralded a golden age of operatic performance in the colony. The latest European repertory – including *Carmen*, *Lohengrin*, *Faust* and *Aida* – was performed in the purpose-built Theatre Royal (1868).

Development of chamber and orchestral music through the Adelaide String Quartet Club (1880–85), Adelaide Orchestral Society (1879–80) and Heinecke's (later Adelaide) Grand Orchestra (1891) and its subsequent counterpart the South Australian Orchestra (1920) was assisted by the founding of the first professional music school in Australia, the Adelaide College of Music (1883), established by Immanuel Riemann and later directed by Cecil Sharp. A chair in music at the University of Adelaide (first incumbent Joshua Ives, 1885) was founded through public subscription and secured by a bequest from Thomas Elder in 1897 that created the Elder Conservatorium of Music.

Adelaide attracted numbers of distinguished teachers with German, middle-European and British backgrounds who supplemented the many resident musicians earning a respectable living by teaching, performing and retailing. Local creative output reflects this, with an early domination by German-born composers such as Carl Linger (composer of *Song of Australia*) and Moritz Heuzenroeder, and the English cathedral organists Cecil Sharp and John Dunn. After World War I, during which the German influence was suppressed, a conservative English style reigned, evident in the works of Horace Perkins, Duncan McKie and Jack Peters, although Brewster-Jones promoted interest in a more modern style. The churches played a prominent role in supporting composition and providing employment between 1880 and 1950. The Anglican, Lutheran and Catholic churches were committed to elaborate choral music traditions, hymn production (including those for use in rural missions) and organ building. The Protestant churches, most notably Methodist, supported not only hymnology but also choral singing, especially oratorio.

The vibrant 19th-century practice of choral music, through musical societies, glee clubs, Liedertafel and singing groups, has been maintained to the present day in a mix of professional, semi-professional (e.g. Adelaide Chorus, Corinthian Singers), amateur and church choirs. The Australian Broadcasting Commission (ABC) Adelaide Wireless Chorus (1929) became the Adelaide Singers (1946–76), which after World War II remained Australia's sole professional chamber choir, commissioning for performance and broadcast the work of Australian composers. The ABC's South Australian SO (studio orchestra from 1934, permanent from 1949, renamed Adelaide SO in 1975) gave subscription concerts, open-air popular concerts and broadcasts, and provided accompaniment for local and visiting opera and ballet companies, choirs and soloists. The ABC also promoted jazz, especially through entrepreneur and broadcaster Kim Bonython. In opera, the J.C. Williamson company, notably in partnerships with Nellie Melba (1924 and 1928) and Joan Sutherland (1965), had much success, subsidizing opera with lighter fare. Local opera production periodically flourished at the Elder Conservatorium, and music theatre prospered, especially with support from the new Adelaide Festival Centre (1973). With direct government patronage, the semi-professional Intimate Opera Company (1957) emerged as New Opera South Australia (1973) and finally as the State Opera of South Australia (1976), which in 1998 mounted the first fully produced *Ring* cycle in Australia.

Australian government initiatives, sponsorship and a cultivation of Australian composition from the mid-1960s, as well as a proactive state government under Don Dunstan, benefited South Australian composers. The university's adventurous visiting composer scheme (1962) began with Henk Badings, followed by Anthony Hopkins and Peter Maxwell Davies. P.R. Tahourdin (1969) and Tristram Cary (1974) established an electronic/computer music facility. Richard Meale joined the staff in 1969, teaching several of the next generation of major Australian composers. Professional ensembles, for example the University of Adelaide Wind Quintet (1964) and the Australian String Quartet (1985), as well as new and early music ensembles, have been supported by the university and the state government. The biennial Adelaide Festival of Arts has continued to present some of the world's finest musicians and promoted innovative and culturally diverse national and local productions and events. A comprehensive history of the performing arts in South Australia, edited by the distinguished musicologist Andrew D. McCredie while professor of musicology at the University of Adelaide, is testimony to a century and a half of rich musical endeavour.

ROBYN HOLMES, PETER CAMPBELL

Adelard of Bath (*b c*1080; *d c*1150). Music theorist active in England. He studied in Tours, probably taught in Laon, travelled in Sicily, southern Italy and the Crusader states, but apparently spent much of his life in the south-west of England. He translated Arabic scientific texts into Latin and wrote original works of considerable literary merit, perhaps in his role as a tutor in an episcopal or royal court: one such text was addressed to the future King Henry II. Adelard dealt with music as an integral part of the Quadrivium. In the *De eodem et diverso* he mentioned

studying music with a master (unnamed) in Tours; he himself played the kithara there in the presence of a queen. Speaking of the powers of music and giving examples from his own experience, he maintained that the soul, before entering the body, has already drunk in the celestial harmonies. In his *Questiones naturales* he described the propagation of sound. A gloss in a mid-12th-century manuscript of Boethius's *De institutione musica* (*GB-Otc* 47) refers to Adelard's opinion on how music should be annotated. His transcriptions of Arabic geometrical terms were used to describe the shapes of notes in Anonymus 4.

CHARLES BURNETT

Adelboldus (*d* 1024). North Netherlandish ecclesiastic and treatise writer. He was Bishop of Utrecht under Emperor Henry II. The proximity of two short treatises on the division of the monochord to Adelboldus's treatise on geometry, *De crassitudine sphaerae*, in a 12th-century manuscript from Tegernsee (*D-Mbs* Clm.18914) prompted Gerbert to attribute them to Adelboldus in his *Scriptores* (*GerbertS*, i, 303–12). Other considerations such as calligraphy and foliation, however, refute these attributions, and the works (both depending heavily on Boethius) must now be considered anonymous.

CECIL ADKINS

Adelburg, August [Abranovics, Ritter von August] (*b* Pera, Turkey, 1 Nov 1830; *d* Vienna, 20 Oct 1873). Violinist and composer of Croatian and Italian descent. In his childhood he lived in Constantinople, where his father was in the Austrian diplomatic service; his mother was the Contessa Franchini. From the age of 12 he studied in Vienna, and against his father's will chose an artistic career as a student of Mayseder (violin, 1850–54) and Hoffmann (composition). After 1855 he had a career as an excellent violinist in various cities including Prague, Leipzig and (in 1858) Paris; he married in Pest in 1859. Nevertheless, he always remained close to the spirit of the orient, as is manifested in his literary works (e.g. *Orientalische Musik*). Among his 120 works there were operas composed to his own librettos, including the spectacular but short-lived *Zrinyi* (Pest, 1868, after Körner), *Martinuzzi* (Buda, 1870), choral works (a mass, 1858; a *Te Deum*, 1864, for the coronation of Miksa, emperor of Mexico), the overture *Wallenstein* (Leipzig, 1867), violin concertos, five string quartets (1863–4), sonatas, *L'école de la vélocité* and songs. In his pamphlet *Entgegnung* (Pest, 1859), he attacked Liszt's book on the gypsy origin of Hungarian music. Later he also tried his hand at painting (Vienna exhibition, 1871). (Obituaries: *Athanaeum* [Budapest], 6 Nov 1873; *Figyelő*, 2 Nov 1873; *Reform* [Budapest], 29 Oct 1873)

DEZSŐ LEGÁNY

Adelung, Jakob. *See* ADLUNG, JAKOB.

Adema. Dutch family of organ builders. The firm, active from the mid-19th century onwards, was established by the brothers Carolus Borremeyes (1824–1905) and Petrus Josephus Adema (1828–1919) in Leeuwarden in 1855; they were joined by their brother Johannus Romanus (1834–62). Carolus Borremeyes had trained as an organ builder with the Van Dam and Witte firms, Petrus Josephus with W. Hardoff and H. Loret.

In 1868 P.J. Adema set up an affiliate workshop in Amsterdam, attracted by the renewed market for new organs among the more widespread Catholic community there, boosted by the reinstatement of the Bishopric hierarchy in 1853. He had been contracted to build a three-manual organ for the Catholic Mozes- en Aäronkerk. The French consul and organ expert Charles-Marie Philbert (1826–94), an ardent champion of the modern French organ-building style, acted as consultant. The resulting organ, largely influenced by Cavaillé-Coll, was the first in the Netherlands to employ Barker's pneumatic lever in the main manual of the otherwise mechanical-action instrument. Between 1877 and 1886 Philbert instigated several changes to the organ, the most important being the replacement of all the reeds in 1878 by Henri Zimmermann of Paris, and the addition of Pedal towers by Adema. The instrument was restored in 1988 by the Flentrop firm. Another organ in the French Romantic style with the Barker lever was built for the Spaarnekerk, Haarlem, in 1890 (now in St Jacobskerk, The Hague). In 1903 P.J. Adema built an organ for the Dominicuskerk, Amsterdam; this probably led to the building of a two-manual pneumatic-action organ for the Dominicanenklooster (renamed Rectoraatskerk H. Thomas van Aquino) in Zwolle in 1912, executed in an elaborate neo-Gothic case. P.J. Adema was assisted by his sons Sybrand (1868–1926) and Joseph (1877–1943), after whose death his nephew Hubert Schreurs continued the business, which still exists. They built a good number of organs, including the largest village organ in French Romantic style at that time in Oudkarspel (two manuals, Pedal, 31 stops); the instrument was destroyed by fire in 1969.

The Leeuwarden branch of the business was separated from the Amsterdam firm in 1877. It was continued by C.B. Adema and his sons Sybrandus Johannus (1863–1941) and Lambertus Theodorus (1864–1931). They built a number of organs for Catholic churches in Friesland, e.g. Workum and Harlingen.

ADRI DE GROOT

Adémar de Chabannes (*b* 988/9; *d* Jerusalem, 1034). French monk, composer of liturgical music and scribe. He was associated with the abbey of St Martial in Limoges. Born into a family with strong ties to the

ecclesiastical hierarchy of Limoges, Adémar was pledged as an oblate to the abbey of St Cybard in Angoulême, probably before 1000. By 1010 he was at the monastery of St Martial, where he studied history, computus, liturgy and music under the tutelage of his paternal uncle Roger of Chabannes, later cantor at the abbey. After a failed attempt to become abbot of St Cybard, he returned to St Martial in 1028, where he supported the pilgrims' tales about the apostolicity of Martial and pressed for its official acceptance. As part of his promotion of the idea, Adémar wrote a new liturgy for the saint's feast, consisting of both Office and Mass. Much of the music for the feast is borrowed and adapted from the existing episcopal liturgy, but Adémar also contributed several original compositions, including the Proper chants of the Mass, Proper tropes for the introit, offertory and communion, a Gloria trope, one untexted sequence and several items for the Office. Adémar's music for the feast is preserved in a manuscript (*F-Pn* lat.909; 1025–30, St Martial) written in his own hand, making him the earliest known medieval composer for whom a compositional autograph survives.

The new liturgy for St Martial was first celebrated at the Cathedral of St Etienne in Limoges on 3 August 1029. A Lombard monk, Benedict of Chiusa, immediately denounced it as heretical and criticized the clergy and people of Limoges for endorsing such a manifest fraud. Adémar left for Angoulême the following day, where he spent the rest of his life producing forged documents, including a letter by Pope John XIX, that would affirm the apostolic status of Martial. Before departing on pilgrimage to Jerusalem, where he died in 1034, Adémar deposited his books in the library at the abbey of St Martial. His writings eventually supported a revival of the apostolic cult later in the 11th century, and the saint was venerated as an apostle in Limoges until the end of the 19th century.

In addition to the liturgy for the feast of St Martial, Adémar also composed Offices for the saints Valeria and Austriclinianus (*F-Pn* lat.909), companions of St Martial, and for St Cybard (lat.1978; frag.). His melodies demonstrate a fluency with the prevailing plainchant styles. Many of his compositions, including those for the Mass Propers and responsorial chants for the Office, are clearly influenced by the sequence and its idiosyncratic melodic style; this characteristic distinguishes his music from that of previous generations of plainchant composers. In particular, sweeping passages of conjunct motion across a relatively broad range – a feature typical of the sequence – occur frequently in Adémar's compositions for other genres. This blend of melodic gestures indicates an original synthesis of different compositional styles.

Adémar's work as a music scribe is preserved in a number of manuscripts (*F-Pn* lat.909; lat.1121, ff.58–72; lat.1978, ff.102–3; lat.1118, f.248), which show that he was fully conversant with all the latest developments in the Aquitanian style of notation. He belonged to the first generation of Aquitanian scribes who used heighted neumes to show relative pitch or precise intervallic information. He was also among the first to employ systematically the *custos* to fix the relationship between the last note of one line and the first of the next; when the same note is repeated the custos takes the form of the *littera significativa* 'e', representing *equaliter*. Elsewhere in his manuscripts other *litterae significativae*, including 'alt' (*altius*: 'higher') and 'io' (*iusum*: 'low'), are used to confirm large melodic leaps that are already accurately heighted.

JAMES GRIER

Ademollo, Alessandro (Felice) (*b* Florence, 20 Nov 1826; *d* Florence, 22 June 1891). Italian scholar. From 1845 he wrote political articles for Florentine journals as a liberal moderate. In 1860 he became *consigliere* of the Corte dei Conti (State Audit Board) and moved with the central government to Rome after it became part of the kingdom of Italy in 1870. He carried out research into many aspects of Italian cultural history, particularly of the 17th and 18th centuries, publishing the results from about 1875 in a series of books and numerous articles in Italian periodicals, particularly the *Opinione* and *Fanfulla della Domenica* of Rome and the *Gazzetta musicale di Milano*. Ademollo was a careful and thorough scholar, and much of his work, particularly that on theatrical history, actors and singers, one of his specialities, is of great value, presenting archival material available nowhere else.

DENNIS LIBBY/EMANUELE SENICI

Adeney, Richard (Gilford) (*b* London, 25 Jan 1920). English flautist. He studied at the RCM with Robert Murchie, but was resistant to the English tradition of flute

playing and has always considered himself largely self-taught. In 1938 he made his orchestral début in the *St Matthew Passion* under Vaughan Williams. He joined the LPO in 1941 and remained as principal flute until 1950, returning for a further nine years from 1960. He was a founder member of the Melos Ensemble and also played for many years with the English Chamber Orchestra, notably during the period of its close association with Benjamin Britten and the Aldeburgh Festival. Malcolm Arnold dedicated his Second Flute Concerto (1972) to him. Adeney originally played on a wooden flute, but in the latter part of his career changed to a metal instrument. In tone and style Adeney's playing had much affinity with the expressiveness and refinement of the French school (at the age of 14 he had been greatly impressed by a recording of Marcel Moyse). His own 1961 recording with the Melos Ensemble of chamber works by Ravel, Debussy and Roussel has remained a classic.

EDWARD BLAKEMAN

Adès, Thomas (Joseph Edmund) (*b* London, 1 March 1971). English composer. After early success as a performer, winning second piano prize in the BBC Young Musician of the Year competition in 1989, he read music at Cambridge (1989–92). His rise to prominence as a composer was rapid, with commissions from the Hallé Orchestra, the London Sinfonietta, Almeida Opera and the City of Birmingham SO, combined with various residencies. Adès's connection with the Birmingham Contemporary Music Group led to his appointment as its Music Director, and as well as teaching composition at the RAM he became increasingly active as a conductor. In 1999 he received both the Ernst von Siemens Prize and the Grawemeyer Award, and became joint artistic director of the Aldeburgh Festival.

Adès's compositions showed exceptional assurance of style and technique from the beginning, and his success had much to do with the unmistakable presence of a personal accent in music which blends vividness of detail with a clear sense of compelling overall design: the inexorable build-up in the third section of *Asyla* is a particularly striking example. Employing well-established compositional genres, from chamber opera (*Powder Her Face*) and string quartet (*Arcadiana*) to symphonic form (*Chamber Symphony*, *Asyla*) his music often alludes to specific models while nevertheless keeping its distance from them. In 'O Albion', a movement from *Arcadiana*, there is a clear connection with 'Nimrod' from Elgar's *Enigma Variations*, yet the similarities of mood and motif between the two works serve primarily to set Adès's own very different procedures into relief.

In *Powder Her Face* the central character, the sex-obsessed Duchess, can be seen and heard as a monstrous operatic heroine in the well-established 20th-century tradition of Salome, Turandot and Lulu. Yet the opera's small-scale forces help to distance the Duchess from grand-operatic pretensions, and the character acquires considerable depth as the drama proceeds. Adès's ability to juxtapose genuine pathos with exuberant debunking demonstrates a remarkable expressive range, and this is no less evident in his purely instrumental works.

Adès's use of titles to establish allusions to extra-musical factors is never arbitrary or perfunctory, and in two compositions in particular, *Living Toys* and *Asyla*, the musical response to salient images is exceptionally imaginative. In *Living Toys* the world of a child who dreams of being a hero dancing with angels and bulls before dying in battle is evoked with a startling command of magical and menacing sound-imagery. In *Asyla*, the inherent ambiguity of the title, a metaphor for the 20th century's special blend of extreme comfort and cruelty, stability and instability, inspires a symphonic process in which the functional contrast between clear-cut basic ideas and richly inventive orchestral presentation can be appreciated at first hearing.

Adès's music shows few signs of direct contact with the rigours of 20th-century constructivism, and he avoids the consistent textural fragmentation and formal disjunction of an Expressionist aesthetic. His delight in creating and sustaining tension through the accumulation of distinct, elaborately patterned layers of texture suggests an affinity with Ives, and his keen appreciation of the importance of composers such as Janáček and Szymanowski, who based their innovations on the need to preserve elements of Romantic expression, is complemented by a feeling for the kind of intricate, ebullient sound tapestries found in Nancarrow and Ligeti. Adès is as much at ease in the laid-back, pop-acknowledging world of *Life Story*, *Powder Her Face* and the *Concerto Conciso* as in the poetic musings of *Still Sorrowing*, *Arcadiana* and *Traced Overhead*. If the *Concerto Conciso* encapsulates his sardonic, raucous side, *Traced Overhead* and *Asyla* confirm his ability to combine a high degree of allusiveness with an intense, often tender expressive eloquence in which allusions are set to one side by his own personal voice.

WORKS

Stage: Powder her Face (chbr op, 2, P. Hensher), op.14, 1995, Cheltenham, Everyman Theatre, 1 July 1995

Orch: . . . but all shall be well, op.10, 1993, also version for red. orch; These Premises are Alarmed, op.16, 1996; Asyla, op.17, 1997

Chbr: Chbr Sym., op.2, 15 insts, 1990; Catch, op.4, cl, vn, vc, pf, 1991; Living Toys, op.9, 14 insts, 1993; Sonata da caccia, op.11, ob/baroque ob, hn, hpd, 1993; Arcadiana, op.12, str qt, 1994; The Origin of the Harp, op.13, cl, 2 cl + b cl, perc, 3 va, 3 vc, 1994; Conc. conciso, op.18, pf, 10 insts, 1997

Choral: O thou who didst with pitfall and with gin (O. Khayyam: *Rubaiyat*, trans. E. Fitzgerald), op.3a, male vv, 1990; Gefriolsae me (Ps li), op.3b, male vv, org, 1990; Fool's Rhymes (J. Donne, Eng. 14th- and 16th-cent.), op.5, SATB, hp, prep pf, org, perc, 1992; The Fayrfax Carol (15th-cent. Eng.), SSAATTBB, opt. org, 1997; January Writ (Bible: *Ecclesiastes* vi.6), SSAATTBB, org, 1999

Solo vocal: The Lover in Winter (anon. Eng.), 4 songs, Ct, pf, 1989; Aubade (P. Larkin), S, 1990; 5 Eliot Landscapes, op.1, S, pf, 1990; Life Story (Tennessee Williams), op.8, S, 2 b cl, db, 1993, arr. S, pf as op.8a, 1994; America: a Prophecy (Mayan texts, C. Sawyer-Lauçanno, adapted Adès), S, large orch, opt. chorus, op.19, 1998–9

Kbd: Under Hamelin Hill, op.6, chbr org (1–3 pfmrs), 1992; Still Sorrowing, op.7, pf, 1991–2; Darknesse Visible, pf, 1992; Traced Overhead, op.15, pf, 1995–6

Arrs.: Couperin: Les baricades mystérieuses, cl, b cl, va, vc, db, 1994; Madness: Cardiac Arrest, cl, b cl, pf duet, va, vc, db, 1995

Principal publisher: Faber

Principal recording company: EMI

ARNOLD WHITTALL

Adgate, Andrew (*b* Norwich, CT, 22 March 1762; *d* Philadelphia, *c*30 Sept 1793). American singing teacher, concert organizer and tune book compiler. In 1783 he assisted Andrew Law in a Philadelphia singing school. Later he worked in the city as a wool-card manufacturer and merchant; he was a volunteer in the citizens' committee organized during Philadelphia's yellow-fever

epidemic of 1793, and died of that disease. In 1784 he opened an 'Institution for the Encouragement of Church Music', later reorganizing it as the Uranian Academy. Adgate presented many concerts during the mid- to late 1780s, most notably a 'Grand Concert' on 4 May 1786, at which works by Handel, James Lyon, William Billings, William Tuckey and others were performed by 230 choristers and an orchestra of 50. Adgate's first known compilation is an anthology of sacred texts: *Select Psalms and Hymns for the Use of Mr. Adgate's Pupils* (Philadelphia, 1787), although he probably wrote the *Introductory Lessons, Practised by the Uranian Society* (Philadelphia, 1785). He published an instruction manual, the *Rudiments of Music* (Philadelphia, 1788); with Ishmael Spicer, he also compiled the *Philadelphia Harmony* (Philadelphia, 1789), a tune book made up of popular American and European sacred music. Published in one volume, the two items ran through 12 editions in Philadelphia by 1811. Some authorities have claimed that Adgate was the 'Absalom Aimwell' who compiled *The Philadelphia Songster* (Philadelphia, 1789).

RICHARD CRAWFORD/NYM COOKE

Adhémar de Chabannes. *See* ADÉMAR DE CHABANNES.

Adlam, Derek (Leslie) (*b* Kingston-on-Thames, 30 May 1938). English maker of fortepianos, clavichords and harpsichords. He was educated at the Guildhall School of Music, London, where he studied the piano with Frank Laffitte, the harpsichord with Celia Bizony and the organ with Harold Dexter. After a period as a music teacher, during which he undertook some restorations of early keyboard instruments, he became curator of the Colt Clavier Collection, Bethersden, Kent (1963–73). He produced his first new instrument, a copy of a Ruckers virginal, in 1971 and in November of that year he went into partnership with fortepianist and instrument collector Richard Burnett. The Adlam-Burnett building and restoration workshop was in the grounds of Finchcocks, a large 18th-century house in Goudhurst, Kent which houses an extensive collection of antique keyboard instruments. During the 1970s the workshop undertook restoration work for performers and instrument collections of international standing and built new instruments which were closely modelled on historical prototypes, especially the 18th-century piano and clavichord as well as the more popular French and Flemish harpsichords.

In 1979 Adlam resumed work as an independent craftsman, moving his activities in 1982 to the Welbeck Estate in Nottinghamshire, where the Harley Foundation had offered him workshop space. Since then he has divided his energies between instrument building, performance (specializing in the clavichord), curatorial activities and administrative work in support of the galleries and workshops at Welbeck. Adlam is president of the British Clavichord Society (founded 1994) and a regular participant in the biennial symposia organized by the International Centre for Clavichord Studies, based in Magnano, Italy.

HOWARD SCHOTT/DAVID ALLINSON

Adler, Guido (*b* Eibenschütz [now Ivančice], Moravia, 1 Nov 1855; *d* Vienna, 15 Feb 1941). Austrian musicologist. After the death of his father, the family settled in 1864 in Vienna, where Adler entered the Akademisches Gymnasium. In 1868 he began his studies in theory and composition with Bruckner and Dessoff at the conservatory, but his family wanted him to prepare for a legal career, for which purpose he studied law at the University of Vienna (JurD 1878). While at the university Adler gave a series of lectures on Wagner's *Ring* (1875–6) and with Felix Mottl and others, founded the Akademischer Wagnerverein. After serving briefly on the Vienna Handelsgericht, Adler decided to take up music history, in which his interest had been aroused by the writings of Ambros, Jahn, Spitta and Chrysander. He attended Hanslick's lectures at the university, taking his doctorate in 1880 with a dissertation on music up to 1600; in 1881 he completed his *Habilitation* with a work on the history of harmony. A year later he represented Austria at the International Congress for Liturgy at Arezzo. With Spitta and Chrysander, Adler founded the *Vierteljahrsschrift für Musikwissenschaft* (1884) and the next year became professor of musicology in Prague. In 1888 he advocated the publication of Monumenta Historiae Musices. This project was to become the Denkmäler der Tonkunst in Österreich series, of which Adler was general editor from 1894 to 1938. He was instrumental in getting the Austrian government to acquire the Trent Codices, selections of which he published in DTÖ, and from 1913 to 1938 he edited the *Beihefte der DTÖ (Studien zur Musikwissenschaft)*, to which he and his pupils made substantial contributions. In 1892 Adler organized the music section of the International Music and Theatre Exhibition in Vienna, writing the catalogue and introducing Smetana's *The Bartered Bride* to an international public. His work for the exhibition revealed his gift for organizing large-scale festivals in conjunction with musicological congresses, and he later similarly organized the Vienna centenary festivals of Haydn (1909) and Beethoven (1927). The formation of the IMS in 1927 was largely due to his initiative.

In 1898 Adler succeeded Hanslick at the University of Vienna, where he founded the Musikwissenschaftliches Institut, the model for musicological institutes elsewhere. Adler's lectures attracted a wide circle of students from all Europe, many of whom were later to achieve fame as composers (Webern, Wellesz, Pisk, Grosz and Weigl) or

as musicologists (Orel, Haas, Fischer, Geiringer, Ficker, Kurth, Jeppesen, Smijers and Jachimecki). Adler, who considered musical life and music history indissolubly linked, took great interest in Vienna's musical life and was seen frequently at concerts and the opera. He enjoyed an intimate friendship with Mahler, on whom he published a book, and when in 1912 two concertos by Matthias Georg Monn (1717–50) were published in DTÖ, Adler entrusted the realization of the continuo part of the cello concerto to Schoenberg.

Modern musicology owes a great debt to Adler. Under the influence of his friend, the philosopher Alexius Meinong, Adler strove to make empirical study the basis for musicology. As early as 1885, in a pioneering essay, he laid down the chief principles of the new discipline and was the first to emphasize the importance of style criticism in music research – ideas which he put into practice at his institute. Although he concentrated his own studies on the music history of Austria, notably the Viennese Classics, the systematic investigation of the musical style of other periods and countries was an outstanding feature of Adler's 'Vienna School'. He attempted to free musicology from a preoccupation with aesthetics and was also one of the first musicologists to recognize the sociological aspect of the discipline. The widespread recognition he enjoyed within the academic community was made manifest through his editorship of the *Handbuch der Musikgeschichte*, the work of an international body of scholars, to which he contributed the chapter on Viennese Classicism.

MOSCO CARNER/GABRIELE EDER

Adler, György (*b* Mosonszentjános, 20 April 1789; *d* Buda, 1862). Hungarian composer. From 1800 to 1827 he was a church musician in Győr. In 1827 he went to Pest-Buda, where he became a founding member of the Táborsky String Quartet (playing second violin). In 1838 he became *regens chori* of the Mátyás church in Buda, a post he held until his death. His daughter Adél (1820–99) married Ferenc Erkel and his son Vince (1826–71) became famous as a piano virtuoso in France and Switzerland.

Alder wrote a quantity of vocal and chamber music, much of which was published in his lifetime: a set of variations on a Hungarian theme and a Grande Polonaise for string quartet; a sonata for violin and piano; various piano works, including a sonatina, an 'easy and agreeable' fantasia, a set of variations, and a rondo on a theme from Rossini's *La Cenerentola*; *Libera me Domine* (his only published sacred work); a birthday cantata for Prince Ernst of Schwarzenberg (1826), and a number of lieder (including a setting of Heine's *An Sie*); and Hungarian songs to texts by Pál Kovács, János Garay, József Bajza and Sándor Kisfaludy. Several manuscripts of his sacred and secular vocal pieces, among them choruses for men's voices, have been found recently in the music collections of Győr Cathedral, of the Matthias church in Buda and in the archives of the Balassa family.

MÁRIA ECKHARDT

Adler, Israel (*b* Berlin, 17 Jan 1925). Israeli musicologist of German birth. He settled in Palestine in 1937, and studied music at the Paris Conservatoire (1949–53) and under Corbin at the Ecole Pratique des Hautes Etudes (diploma 1961). He then attended the musicology institute at the Sorbonne, where he studied with Chailley and in 1963 took a doctorat de 3ème cycle with a dissertation on learned musical practice in several Jewish communities in 17th- and 18th-century Europe. Concurrently, he was head of the Hebraica-Judaica section at the Bibliothèque Nationale (1950–63). He returned to Israel to become the director of the music department and national sound archives at the Jewish National and Hebrew University library in Jerusalem (1963–9), and was subsequently director of the library (1969–71). In 1964 he founded the Jewish music research centre at the Hebrew University and was its director (1964–9, 1971–96), after which he became chairman of the academic committee. He was an associate professor of musicology at Tel-Aviv University (1971) and the Hebrew University (1973) and was then appointed professor in 1975, until his retirement when he was made professor emeritus (1994). He also chaired the department of musicology at the Hebrew University (1974–7, 1987–9) and was a guest professor at a variety of universities, including the University of Cincinnati and Hebrew Union College (1979, 1994), the University of São Paulo (1989) and Queens College, Yale University. His main area of research is Jewish music from the medieval period to the 18th century, focussing on notational relics of traditional music and cantillation, with a particular study of the Jewish music collections at the Vernadskya Central Library, Kiev. He has researched art music practices in European communities, music theory and philosophy, the history of rabbinic attitude to music and the musical heritage of the Jews of Djerba. He has chaired the Israel Musicological Society (1967–9, 1976–8) and has also held the positions of president of the provisional council of the International Association of Sound Archives (1968–9), vice president of the Association Internationale des Bibliothèques Musicales (1974–7) and from 1967 has been on the research committee of RISM. He has edited music by Carlo Grossi and Louis Saladin and a volume of ceremonial music for the inauguration of the Siena synagogue in 1786. He has edited *Yuval: Studies of the Jewish Music Research Centre* since its inception in 1968 and the *Yuval monograph series* since 1974, and in 1985 he founded and co-directed YUVAL in France. A Festschrift was planned in his honour in 2000.

WILLIAM Y. ELIAS/R

Adler, Kurt Herbert (*b* Vienna, 2 April 1905; *d* Ross, CA, 9 Feb 1988). American conductor and opera director of Austrian birth. He was educated at the Musikakademie and university in Vienna, and made his début in 1925 as a conductor for the Max Reinhardt theatre, then conducted at the Volksoper and opera houses in Germany, Italy and Czechoslovakia. He assisted Toscanini in Salzburg (1936) and went to the USA in 1938 for an engagement with the Chicago Opera. He worked for the San Francisco Opera from 1943 to 1981, initially as chorus master, then as artistic director in 1953 and general director from 1956. Although he occasionally conducted, most of his time was devoted to administrative duties. During his regime the San Francisco Opera grew increasingly adventurous in repertory, and became noted for the engagement of unproven talent and the implementation of modern staging techniques. By 1972 Adler had lengthened the season from five weeks to ten and he also formed subsidiary organizations in San Francisco to stage experimental works, to perform in schools and other unconventional locales, and to train young singers. He retired in 1981 after conducting a performance of *Carmen* with Teresa Berganza and Placido Domingo. His work received citations from the governments of Italy, Germany, Austria and Russia.

BIBLIOGRAPHY

MARTIN BERNHEIMER

Adler, Larry [Lawrence] (*b* Baltimore, 10 Feb 1914). American harmonica player. He is acknowledged as the first harmonica player to achieve recognition and acceptance in classical musical circles and to have elevated the

instrument to concert status. His ability was recognized by such composers as Vaughan Williams, Milhaud, Gordon Jacob and Malcolm Arnold, all of whom wrote orchestral works with Adler as soloist. He has toured extensively and broadcast frequently on radio and television in many countries, and has taken a keen interest in all aspects of teaching the instrument. Adler has written scores for a number of films, including *Genevieve*. His autobiobraphy, *It Ain't Necessarily So*, was published in London in 1984.

IVOR BEYNON/R

Adler, Marx vom. *See* DALL'AQUILA, MARCO.

Adler, Peter Herman (*b* Jablonec, 2 Dec 1899; *d* Ridgefield, CT, 2 Oct 1990). American conductor. After studying composition and conducting with Zemlinsky at the Prague Conservatory, he became music director of the Bremen Staatsoper (1929–32) and the Ukrainian State Philharmonia, Kiev (1932–7), and also appeared as a guest conductor throughout Europe. He left for the USA in 1939 and made his début with the New York PO in 1940, after which he toured in the USA. From 1949 to 1959 he was music and artistic director of the NBC-TV Opera Company, sharing artistic responsibility with Toscanini. Adler was musical director of the Baltimore SO from 1959 to 1968, and in 1969 became music and artistic director of WNET (National Educational Television). His Metropolitan Opera début was in 1972. He was director of the American Opera Center at the Juilliard School from 1973 to 1981. Adler was a pioneer director of television opera in the USA and commissioned many works for the medium; among them Menotti's *Amahl and the Night Visitors* and *Maria Golovin* (of which he conducted the première at the 1958 Brussels Exposition Universelle), Dello Joio's *The Trial at Rouen* and Martinů's *The Marriage* (all at NBC), and Pasatieri's *The Trial of Mary Lincoln* and Henze's *La cubana* (at WNET).

ELLIOTT W. GALKIN

Adler, Richard (*b* New York, 3 August 1921). American composer and lyricist. Although the son of the distinguished pianist and pedagogue Charles Adler, he received no musical training and instead studied playwriting with Paul Green at the University of North Carolina, graduating in 1943. In 1950, after completing service in the navy (1943–6), he began to compose radio programmes and special material with co-composer and lyricist, Jerry Ross (Jerrold Ross; *b* Bronx, NY, 9 March 1926; *d* New York, 11 Nov 1955). By 1953 Adler and Ross had written a popular song hit, *Rags to Riches*, and contributed songs for the Broadway revue *John Murray Anderson's Almanac*. Over the next two years they composed two critically acclaimed and long-running musicals for Broadway: *The Pajama Game* (1954), a musicalization of labour relations in a pajama factory, and *Damn Yankees* (1955), the Faust legend in a baseball setting. In addition to establishing a distinctive vernacular musical and lyrical voice, both musicals exhibited the strong personal stamp, originality and flair of the veteran director and co-librettist George Abbott, and talented newcomers, the choreographer Bob Fosse and the producers Frederick Brisson, Robert E. Griffith and Harold Prince. Several Adler and Ross songs from these shows became popular standards, including *Hey there* (the opening of which according to Steven Suskin has long been rumoured to be an intentional borrowing from the opening of Mozart's C major piano sonata, K.545) and *Hernando's Hideaway* in *Pajama Game*, *Heart* and *Whatever Lola Wants* in *Damn Yankees*. Both shows won the Tony Award for Best Musical and were soon adapted into successful and reasonably faithful films.

After Ross succumbed to chronic bronchiectasis in 1955 at the age of 29, Adler mastered the craft of musical composition. His remaining work without a collaborator would nevertheless fall far short of the popular success he enjoyed with Ross. A musical based on Somerset Maugham's *Of Human Bondage* remained unproduced in the late 1950s. *Kwamina* (1961), an ambitious musical depicting the conflict between Western and indigenous medical practices in an emerging African nation as well as a then-daring romance between a black man and a white woman, and *Music Is* (1976), a setting of Shakespeare's *Twelfth Night*, had brief Broadway runs. *A Mother's Kisses* (1968) closed before reaching Broadway. Adler also mounted unsuccessful Broadway productions of *Pajama Game* (1973) and Richard Rodgers and Sheldon Harnick's *Rex* (1976). More successfully, he composed the hit song *Everybody loves a lover* (1958) and jingles for Newport cigarettes and Hertz rental cars. He was also the producer and director for various celebrity productions in the Kennedy and Johnson administrations, including Marilyn Monroe's celebrated appearance in Madison Square Garden singing *Happy Birthday* to President Kennedy.

WORKS
(*selective list*)

STAGE

dates are those of first New York performances, unless otherwise stated; musicals, unless otherwise stated; librettists and lyricists are listed in that order in parentheses

John Murray Anderson's Almanac (revue, Adler and J. Ross), 10 Dec 1953 [incl. contribs. by others]
The Pajama Game (2, G. Abbott, R. Bissell, after Bissell: *7 1/2 Cents*), collab. Ross, orchd D. Walker, St James, 13 May 1954 [incl. Hey there, Hernando's Hideaway]; film, 1957
Damn Yankees (2, Abbott, D. Wallop, after Wallop: *The Year the Yankees Lost the Pennant*), collab. Ross, orchd Walker, 46th Street, 5 May 1955 [incl. Heart, Whatever Lola Wants]; film, 1958
Kwamina (R.A. Aurthur), orchd S. Ramin and I. Kostal, 54th Street, 23 Oct 1961
A Mother's Kisses, Schubert, New Haven, CT, 21 Sept 1968
Music Is (Abbott, W. Holt, after W. Shakespeare: *Twelfth Night*), orchd H. Kay, St James, 20 Dec 1976

OTHER WORKS

Television musicals: Little Women, 1957; The Gift of the Magi, 1958; Olympus 7–0000, 1966
Orch: Memory of a Childhood, 1978; Yellowstone, ov., 1978; Retrospection, 1979; Wilderness Suite, 1983; The Lady Remembers (The Statue of Liberty Suite) (1985)

GEOFFREY BLOCK

Adler, Samuel (Hans) (*b* Mannheim, 4 March 1928). American composer and conductor of German birth. Both of his parents were musical, his father being a cantor and composer of Jewish liturgical music. The family came to the USA in 1939 and Adler attended Boston University (BM 1948) and Harvard University (MA 1950). He studied composition with Aaron Copland, Paul Fromm, Paul Hindemith, Hugo Norden, Walter Piston and

Randall Thompson; musicology with Karl Geiringer, A.T. Davison and Paul A. Pisk; and conducting with Sergey Koussevitzky at the Berkshire Music Center. In 1950 he joined the US Army and organized the Seventh Army SO, which he conducted in more than 75 concerts in Germany and Austria; he was awarded the Army Medal of Honor for his musical services. Subsequently he conducted concerts and operas, and lectured extensively throughout Europe and the USA. In 1957 he was appointed professor of composition at North Texas State University, and in 1966 he joined the faculty of the Eastman School of Music, where he served as chair of the composition department (1974–94). Later he taught at the Juilliard School. His honours include grants from the Rockefeller (1965) and Ford (1966–71) foundations, a Koussevitzky Foundation commission (1983), a Guggenheim Fellowship (1984–5), an award from the American Academy and Institute of Arts and Letters (1990), a number of teaching awards and several honorary doctorates. His works have been performed by major symphony orchestras, choral and chamber ensembles throughout the USA, Europe, South America and Israel. His book *A Study of Orchestration* (New York, 1982, 2/1989) received the ASCAP-Deems Taylor award in 1983.

Adler is a prolific composer whose music embraces a wide variety of contemporary styles. His works exhibit great rhythmic vitality, with a predilection for asymmetrical rhythms and metres, and a keen sensitivity to counterpoint. His harmonic materials vary from diatonicism and pan-diatonicism (in the works before 1969) to serial techniques (substantial use beginning with Symphony no.4, 1967) and occasional improvisatory and aleatory elements (e.g. in the Concerto for Wind, Brass and Percussion, 1968, and the Symphony no.5, 1975). Clustered effects and a colourful orchestral palette typify works such as the Concerto for Flute and Orchestra (1977). Adler's vocal compositions range from large-scale pieces reflecting a strong liturgical background to secular miniatures that are often lighthearted and humorous in nature. A number of his works have been recorded and more than 200 have been published.

MARIE ROLF

Adlgasser, Anton Cajetan (*b* Niederachen, nr Inzell, Upper Bavaria, 1 Oct 1729; *d* Salzburg, 22 Dec 1777). German composer and organist. His father, Ulrich Adlgasser (1704–56), was a teacher and organist. On 4 December 1744 he registered in the 'Grammatistae' class at Salzburg University, and in the same year he became a chorister at the Salzburg court chapel. His brothers Joseph (*b* 1732), later organist at Laufen, and Georg (*b* 1736) were also choirboys in Salzburg. While a student he sang and acted in several *Schuldramen*, including seven by J.E. Eberlin. He studied the organ and violin, and probably also received instruction in composition from Eberlin.

Adlgasser became court and cathedral organist in 1750, shortly after Eberlin's promotion to the post of Hofkapellmeister. According to Leopold Mozart's account of the Salzburg musical establishment (in Marpurg's *Historisch-kritische Beyträge*, iii, 1757) Adlgasser's duties also included the accompaniment of court chamber music on the harpsichord and composing for both the court and the cathedral. After 1760 he was organist at both the cathedral and the Dreifaltigkeitskirche in Salzburg; he also gave keyboard lessons at the choir school. In 1764 Archbishop Schrattenbach sent Adlgasser to Italy for a year's study to increase the composer's knowledge of Italian music. During this trip he met Giuseppe Colla and G.B. Martini, who wrote a letter of recommendation on his behalf in May 1764; a letter of December 1764 to Martini from Adlgasser also survives (in *I-Bc*). Adlgasser's only opera, *La Nitteti*, received its première in 1766, the year following his return to Salzburg.

In 1752 Adlgasser married Eberlin's daughter, Maria Josepha (1730–55). Their daughter Maria Victoria Caecilia (1753–1821) became one of Nannerl Mozart's best friends; she is referred to as 'Viktorl' in Nannerl's diaries. Adlgasser's second marriage was to Maria Barbara Schwab in 1756; following her death in 1768, he married Maria Anna Fesemayr, a court singer who had accompanied him to Venice. All three weddings were witnessed by Leopold Mozart. Adlgasser's death, which resulted from an apparent stroke while playing for Vespers at the cathedral, is described in detail by Leopold Mozart (letter of 22 December 1777). He was succeeded as cathedral organist by W.A. Mozart, and Michael Haydn took on his duties at the Dreifaltigkeitskirche.

Adlgasser was active in Salzburg during a period of transition between the older generation of Eberlin and Leopold Mozart and the younger generation of Michael Haydn and W.A. Mozart. His instrumental output includes 10 symphonies, four harpsichord concertos and other harpsichord and organ works. According to Rainer (1963) the five symphonies in manuscript at Regensburg show a close relationship to the contemporary Italian opera symphony, though they are written with the traditional Salzburg instrumentation. Adlgasser was much more prolific as a composer of sacred music, which was widely disseminated during the 18th century. These works are similar in large-scale structure and instrumentation to the church compositions of the Mozarts and Michael Haydn and include movements in the modern Italianate and the 'strict' or contrapuntal styles. Several of these compositions continued to be performed in Salzburg well into the 19th century. His dramatic works, which were performed mainly at the Salzburg Benedictine University or at the residence of the Archbishop, include an Italian opera, oratorios, Latin *Schuldramen*, and *Singspiele* with sacred German texts. Many of the Latin stage works consist of musical dramas within spoken plays, sometimes with additional insertions of comic scenes and pantomimes. During the 1760s and 70s Adlgasser collaborated with Mozart, Michael Haydn and other Salzburg composers on several German oratorios and *geistliche Singspiele*, including *Die Schuldigkeit des ersten Gebotes* (1767); between 1766 and 1772 at least two of his dramatic works were performed in Salzburg annually.

Adlgasser was respected during his time as an accomplished musician and composer. His theoretical treatises, one of which was written in collaboration with Michael Haydn, were used as teaching documents and form part of the Salzburg tradition of organ instruction. Leopold Mozart described him as a good organist and accompanist on the pianoforte, and in a letter to Martini (4 September 1776) Wolfgang Mozart praised him and Michael Haydn as 'bravissimi contrapuntisti'. His mature works, which remain firmly rooted in the Salzburg traditions of the mid-18th century, display solid competence in both contrapuntal technique and soloistic vocal writing.

WORKS

for detailed list with thematic index see de Catanzaro and Rainer (forthcoming)

SACRED

MSS mainly in A-Sd, Sn, Ssp, KR, LA, CH-E, HR-Zha

7 masses (3 inc.); 1 Ky; 3 Requiem (1 inc.); 12 Marian lits; 4 lit movts; 4 other lits; 1 Vespers; 2 vespers movts; 26 motets and offs, 2 ed. in DTÖ, lxxx, Jg.xliii/1 (1936/*R*); 20 Marian ants; 9 Lat. hymns; 1 ps setting; 44 Ger. hymns and sacred songs: excerpts from sacred works ed. in de Catanzaro (1990)

STAGE

all performed in Salzburg; MSS mostly autograph in A-Ssp, librettos mainly in MB, Sca, Su

Lat. orats, Schuldramen: Exhibitio comica, 19 June 1748, lost; Via viri in adolescentia, 22 June 1762, music lost; Israel et Albertus Sueciae reges, 31 Aug 1762, music lost [incl. interludium]; Ochus regnans, 15 June 1763; Bela Hungariae princeps, 30 Aug 1763 [incl. pantomime interludium]; Anysis Aegypti rex, 30 Aug 1765 [incl. pantomime]; Chalcis expugnata, 2 Sept 1766 [incl. pantomime]; Hannibal Capuanae urbis hospes, 28 Aug 1767 [incl. pantomime]; Philemonis cum Baucide felicitas, 10 April 1768, music lost; Clementia Theodosii, 30 Aug 1768, music lost; Synorix et Camma, 1 Sept 1769, music lost [incl. pantomime]; Pietas in Deum, 8 July 1772; Pietas in hospitem, 2 Sept 1772, inc. [with Ger. incid music]; orat, adapted from 1772 Schuldramen; ?Amyrtas, frag.; Comoedia finalis, frag.

Ger. orats, geistliche Singspiele: Christus am Ölberg, completed 31 March 1754; Die wirkende Gnade Gottes (David in der Busse), 1756; ?Esther, *c*1761; Abraham und Isaak, *c*1765–8, only lib and incipit survive; Die Schuldigkeit des ersten Gebotes, pt 3, ? 26 March 1767, collab. W.A. Mozart, M. Haydn, only Mozart's music survives; Der Kampf der Busse und Bekehrung, pt 1, before 2 April 1768, collab. M. Haydn, D. Westermayer, music lost; Kaiser Constantin I, pt 1, 28 Feb 1769, collab. J.G. Scheicher, M. Haydn, music lost; Drey Beispiele wahrhafter Busse: Die gereinigte Magdalena, before 3 April 1770, collab. M. Haydn, J. Krinner, music lost; Die menschliche Wanderschaft: Der laue Christ, before 7 March 1771, collab. M. Haydn, J. Krinner, music lost

Op: La Nitteti (P. Metastasio), 1766, only lib and 1 aria survive

OTHER VOCAL

Der Mensch, die Schwachheit und die Gnade (cant.), *A-Sn*

2 arias, *Ssp, Wgm*

INSTRUMENTAL

CHRISTINE D. DE CATANZARO

Ad libitum (Lat.: 'at the pleasure' [of the performer]). Used in titles, particularly in the later 18th century, to indicate that one or more instruments may be left out, e.g. Tapray: *Simphonie concertante pour le clavecin et le piano-forte avec orchestre ad libitum* (1783), and in scores, as a direction to the player to improvise or ornament. Handel's Organ Concertos op.7 furnish several examples: embellishment of a written line (no.2, Overture), elaboration of a fermata (same movement), continuation of a solo passage (no.1, first movement), improvisation of an adagio on a harmonic skeleton (no.5), and improvisation of a whole movement *ex nihilo* (no.2). The term is also sometimes used to indicate that the performer may depart from strict tempo.

DAVID FULLER

Adlung [Adelung], **Jakob** (*b* Bindersleben, nr Erfurt, 14 Jan 1699; *d* Erfurt, 5 July 1762). German organist and scholar. His father, David, was a teacher and organist, and his mother was Dorothea Elisabetha, born Meuerin, from Tondorf. Adlung's vivid record of his own life is found in the 'Vorrede', part ii of *Musica mechanica organoedi* (1768). His earliest musical training came from his father who, in 1711, sent his son to Erfurt to the St Andreas lower school. In 1713 he matriculated at the Erfurt Gymnasium, while living in the home of Christian Reichardt who taught him the organ and expanded his general musical knowledge. In 1723 he went to the university at Jena, where he pursued a wide range of subjects including philosophy, philology and theology. At the same time he studied the organ with Johann Nikolaus Bach. A friendship developed with Johann Gottfried Walther in Weimar, which enabled Adlung to borrow theoretical works on music. This enthusiasm for music theory led him to write several books on the subject while in Jena, most of which were later lost in a fire that destroyed his home in 1736. He graduated in 1726 and, although planning to become a teacher there, he was recalled to Erfurt in 1727 and became the successor to Johann Heinrich Buttstedt, who until his death had been organist at the Prediger church. Adlung retained this position for the rest of his life. In 1732 he married Elisabeth Ritter, daughter of the mayor of Gross-Wanzleben near Magdeburg. Adlung was a professor of languages at the Erfurt Gymnasium and also taught numerous organ students (he accounts for 218 keyboard pupils and 284 language pupils between 1728 and 1762). He also mastered the craft of building keyboard instruments, completing 16 in his lifetime.

Adlung belongs to a distinguished group of scholar-musicians of the mid-18th century who wrote invaluable, comprehensive studies of their art. Together with Mattheson, Mizler and Walther, three of the most important, Adlung possessed enormous erudition in the theory and aesthetics of music. His publications, *Musica mechanica organoedi* and *Anleitung zu der musikalischen Gelahrtheit*, are major sources about the German Baroque in music. The former, not published until six years after Adlung's death (although he said that it was written as early as 1726), is a unique compilation of data about early 18th-century organs in middle Germany, their construction and tonal characteristics. Adlung prepared in effect an organ builder's encyclopedia, a compendium of material from earlier sources, with details about the case, wind chamber, pipes and registers, and lengthy discussions regarding tuning and temperament, as well as methods of testing new instruments. Not the least significant are his detailed descriptions of more than 80 German organs. The manuscript was edited for publication both by J.L. Albrecht and by J.S. Bach's student J.F. Agricola, whose editorial notes reveal Bach's opinions on organ building and design.

In *Anleitung zu der musikalischen Gelahrtheit* Adlung organized a vast collection of information for both the scholar and amateur. He recorded all the sources of knowledge known to him about a variety of theoretical and practical subjects such as: the history of music, music and mathematics (including problems of tuning), the organ's history, registration, construction and building costs (material plundered from the *Musica mechanica organoedi* manuscript), descriptions of other musical instruments, the art of singing, thoroughbass, the chorale (including a significant description of various kinds of organ chorale preludes), the art of improvisation, the Italian tablature and the art of composition. This accumulation of factual data and the variety of Adlung's own practical observations have as yet to be fully assimilated in modern research. As the testimony of a learned musician, this work offers a dramatic example of the accomplishment of German musical scholarship in the mid-18th century.

GEORGE J. BUELOW/QUENTIN FAULKNER

Admetus de Aureliana (*fl c*1300–30; *d* ? *c*1330). French theorist. He may be identifiable with Amis d'Orléans, a notary in the French royal chancery, 1301–29, who was a contemporary of Gervès du Bus (*see* FAUVEL, ROMAN DE); Amis was appointed king's secretary in 1316, became Archdeacon of Orléans in 1309 and Dean of Notre Dame, Paris, in 1323. Admetus's work is cited in rubric IX (rules 12–14) of Robert de Handlo's *Regule*, which was completed in Paris in May 1326. These passages describe the mensuration of semibreves, and ascribe to singers of Navarre (*cantores de Navernia*) the practice of using stems (respectively vertical ascending and oblique descending) to differentiate *minimae* and *minoratae*. This may perhaps corroborate the remark made by John of Tewkesbury in his *Quatuor principalia* that the *minima* was invented in Navarre ('minima autem in Navarina inventa erat').

ANDREW WATHEY

Admon-Gorokhov, Yedidya (*b* Yekatrinoslav [now Dnepropetrovsk], 5 Dec 1894; *d* Tel-Aviv, 2 April 1982). Israeli composer and singer. He emigrated to Palestine from the Ukraine in 1906. He studied at the Teacher's Seminary in Jerusalem where his teachers included Abraham Zvi Idelsohn. During World War I he moved to Egypt and enlisted in the British Army. After the war he returned to Palestine and, while earning his living as an accountant, took singing lessons with Jehuda Har-Melaḥ. A countertenor with a phenomenal ability to improvise, he travelled to the USA in 1923 to further his singing studies; there he specialized in improvisation and distinctive vibrato singing, similar in style to Arab-Bedouin singing or ululation. Commissioned to write an orchestral accompaniment for songs improvised in a Bedouin style, he enlisted the compositional assistance of Lazar Seminski, who encouraged him to continue to compose. His first songs, *Ya leil* ('Oh night') and *Bein nhar prat* ('Between the River Euphrates [and the R. Tigris]'), were written after 1925. In 1927 he returned to Palestine where he began to support himself as a composer. His works were first published in 1945.

From 1930 to 1939 Admon lived in Paris, having developed a patent for dubbing films from English to French. During these years he took occasional composition lessons with Nadia Boulanger. Between 1950 and 1967 he was chair and general secretary of the Israeli Society of Composers and Authors (AKUM). His book of songs and choral arrangements, *Shedemati* ('My Field'), was published in 1973. He received the Israel Prize for Music in 1974. His output includes theatrical works (including the opera *Moses and Pharaoh's Daughter*, first performed at New York in April 1963), cantatas, oratorios, songs, choral arrangements, instrumental works and music for children.

NATAN SHAHAR

Ad Nonam (Lat.). *See* NONE.

Adolf, R. *See* RZEPKO, ADOLF.

Adolfati, Andrea (*b* Venice, 1721 or 1722; *d* Padua, 28 Oct 1760). Italian composer. After studying with Galuppi, he became *maestro di cappella* of S Maria della Salute in Venice. In 1745 he left this post to serve the Modenese court as *maestro di cappella* to the archduchess, where his *La pace fra la virtù e la bellezza* was performed the following year. Adolfati provided recitatives, choruses and six arias for Hasse's *Lo starnuto d'Ercole* (P.G. Martelli). A printed libretto indicates that it was performed with puppets (*bambocci*) at the Teatro S Girolamo, a very small theatre within the Venetian palace of Angelo Labia, in 1745 and during the carnival of 1746. From 1748 until early 1760 Adolfati was director of music at SS Annunziata del Vastato in Genoa; then he moved to Padua, where he succeeded Rampini as *maestro di cappella* on 30 May.

Adolfati's music did not please Metastasio, who heard his setting for Vienna of *La clemenza di Tito* in 1753. Nonetheless, Metastasio sent polite letters to the composer in Genoa in 1755 and 1757. Although Adolfati's style is in general conventional, he composed an aria in 5/4 time and, as a youth, even attempted to use 7/4.

WORKS

OPERAS

music lost unless otherwise indicated

La pace fra la virtù e la bellezza (divertimento da camera, Liborati, after P. Metastasio), Modena, Ducale, 1 Jan 1746, *I-MOe*
Didone abbandonata (Metastasio), Venice, S Girolamo, carn. 1747 [perf. with puppets]
Il corsaro punito (dg, 3), Pavia, Omodeo, spr. 1750 [pasticcio, with music by Adolfati]
Arianna (P. Pariati), Genoa, Falcone, wint. 1750
La gloria e il piacere (introduzione per musica alla festa da ballo), Genoa, Falcone, carn. 1751, and Modena, Rangone, carn. 1752
Adriano in Siria (Metastasio), Genoa, Falcone, aut. 1751
Il giuoco dei matti (commedia per musica, 3), Genoa, Falcone, aut. 1751 [according to Steiger]
Ifigenia (dramma per musica, 3), Genoa, Falcone, 26 Dec 1751
Ipermestra (Metastasio), Modena, Rangoni, carn. 1752, aria, *Fc*
Vologeso (after A. Zeno: *Lucio Vero*), Genoa, Falcone, carn. 1752, 4 arias, *Gl*
La clemenza di Tito (Metastasio), Vienna, Burg, 15 Oct 1753, *A-Wn*
Sesostri re d'Egitto (Zeno), Genoa, Falcone, carn. 1755, *I-Gl*

SVEN HANSELL/CARLIDA STEFFAN

Adolfson, Adolf Gustaw. *See* SONNENFELD, ADOLF GUSTAW.

Adolphe, Bruce (*b* New York, 31 May 1955). American composer. A graduate of the Juilliard School (1976), he has taught at the New York University Tisch School of the Arts (1983–1993), at Yale University (1984–5) and in the pre-college division of the Juilliard School (1974–93). In 1992 he was appointed education director and music administrator of the Chamber Music Society of Lincoln Center. He was composer-in-residence at the Santa Fe Chamber Music Festival (1989), Music from Angel Fire (1988) and the 92nd Street Y School Concert Series (1988–90). A prolific composer of chamber music, Adolphe has been the recipient of numerous commissions, including those from the Metropolitan Opera Guild (*The Amazing Adventure of Alvin Allegretto*), the Concert Artists Guild (*Whispers of Mortality*) and the Dorian Wind Quintet (*Night Journey*). His brass quintet, *Triskelion*, was commissioned by the Music Library Association in celebration of its 60th anniversary in 1991.

Adolphe's style is characterized by harmonies built on extended tonal chords which relate in non-key-centred progressions. Like Stravinsky, Messiaen and Takemitsu, these progressions often derive from alternative modes. Lyrical melodies in his works are treated both contrapuntally and heterophonically, with the texture remaining transparent over distinct harmonic underpinnings. In his later works (e.g. *Whispers of Mortality*, *In Memories of*, both 1994, and *Body Loops*, 1995) a single rhythmic pattern appears in extremely contrasting speeds while the overall tempo remains constant, resulting in a dizzy, spinning effect. Many of his works, like *Urban Scenes* and *The Bitter, Sour, Salt Suite*, reveal a strong jazz sensibility.

Adolphe has composed several works for the stage. His first opera *The Tell-Tale Heart* (1978), based on the short story by Edgar Allan Poe, interpolates characters other than the sole narrator of the original story. His next two works in the genre, *Mikhoels the Wise* (1982) and *The False Messiah* (1982), investigate aspects of his Jewish heritage. *The Amazing Adventure of Alvin Allegretto* (1994), his only comic opera, focusses on the title character's need to assert his individuality by speaking in the town of Harmony, where everyone sings everything, resulting in child–parent conflict. The work aims to bring together the sometime disparate worlds of traditional opera and popular culture. He is the author of *What to Listen for in the World* (New York, 1996) and *The Mind's Ear* (St Louis, 1991). (*GroveO*)

WORKS
(*selective list*)

STAGE

The Tell-Tale Heart (1, Adolphe, after E.A. Poe), 1978, Boston, Boston and New England Conservatories, 22 Jan 1982
Mikhoels the Wise (2, M. Gordon), 1982, New York, Kaufmann Auditorium, 8 May 1982
The False Messiah (2, Gordon, after G. Scholem: *Life of Shabtai Zvi*), 1982, New York, Kaufmann Auditorium, 9 April 1983
The Amazing Adventure of Alvin Allegretto (1, S. Schlesinger, after Adolphe), 1994, New York, John Jay, 28 Jan 1995

JAMES P. CASSARO

Adorno, Theodor (Ludwig) W(iesengrund) (*b* Frankfurt, 11 Sept 1903; *d* Brig, Switzerland, 6 Aug 1969). German writer on music and philosopher. The son of a businessman of Jewish extraction, Oscar Alexander Wiesengrund, and a professional singer of Catholic Corsican origin, Maria Calvelli-Adorno della Piana, he adopted his mother's name in the 1920s, initially as Weisengrund-Adorno, dispensing with the hyphen in 1938. In 1937–8 he also wrote briefly under the pseudonym Hektor 'Rottweiler'.

Strongly influenced by Ernst Bloch's *Vom Geist der Utopie* and Georg Lukács's *Theorie des Romans* while still at school, and having had a musical upbringing, with piano, violin and composition lessons from an early age, in 1921 he went on to study philosophy (with Hans Cornelius) at the University of Frankfurt with musicology, sociology and psychology as subsidiary subjects, continuing composition studies with Bernhard Sekles and piano with Eduard Jung. During his student years he became friendly with the philosopher Max Horkheimer and the literary critic Walter Benjamin, who both had considerable influence on his development. Three years after starting university he took the doctorate with a dissertation on Husserl (*Die Transzendenz des Dinglichen und Noematischen in Husserls Phänomenologie*, 1924, published 1956). Further composition studies followed in Vienna from 1925 with Berg and piano lessons with Edward Steuermann; he also became acquainted with Schoenberg and Webern and was in contact with Krenek, Hindemith and Bartók. He became editor of the journal *Musikblätter des Anbruch* (after 1929 *Anbruch*), 1928–32, and was a regular contributor of articles and reviews to the contemporary music journals *Pult und Taktstock*, *Die Musik*, *Zeitschrift für Musik* and *Neue Musikzeitung* in the 1920s and early 30s. While his career as a composer was brief and his output small, its significance in the light of Adorno's later theoretical works has been argued (by René Leibowitz). His output included songs, chamber music, orchestral pieces and choral settings. The music is characterized by a close motivic working within a freely atonal idiom. His *Sechs kurze Orchesterstücke* op.4 (1929, published 1968) show the strong influence of Berg and Schoenberg. There are also sketches for an opera on Mark Twain's *Huckleberry Finn*, entitled *Der Schatz des Indianer-Joe* (1932–3). By the early 1940s, however, Adorno had virtually ceased composing as his philosophical interests came to dominate. His compositions were published posthumously in two volumes (ed. Heinz-Klaus Metzger and Rainer Riehn, 1980).

In 1927, again under the supervision of Hans Cornelius, Adorno submitted his *Habilitationsschrift*, a critique of Kantian idealism which showed the increasing influence of Marx and Freud (*Der Begriff des Unbewussten in der transzendentalen Seelenlehre*, 1927, published 1973); it was not accepted. In 1931, now under Paul Tillich, he submitted a second *Habilitationsschrift*, a critique of Kierkegaard's existentialist argument for 'subjective inwardness' (*Kierkegaard: Konstruktion des Ästhetischen*, published 1933). This was successful and he joined the philosophy department of the University of Frankfurt and also became associated with the Institute for Social Research, of which Max Horkheimer had just become director. His first large-scale article on music, 'Zur gesellschaftlichen Lage der Musik, which appeared in 1932 in the first issue of the institute's journal, *Zeitschrift für Sozialforschung*, put forward an extensive sketch for a sociology of music. In the late 1920s and early 30s he

was involved in an intensive correspondence and public debates with Krenek on free atonality and serialism, and on problems of form, genre and material in the music of the early 20th century (*Briefwechsel*, 1974). At the same time he was engaged in developing a theory of musical performance with the violinist Rudolf Kolisch.

When the Nazis came to power in 1933, Adorno's right to teach at the University of Frankfurt was withdrawn. Initially he moved to Berlin to be with his future wife, Gretel Karplus; his circle of acquaintances there included Kurt Weill, Lotte Lenya, Bertolt Brecht, Hanns Eisler, Otto Klemperer, Siegfried Kracauer, Walter Benjamin, Ernst Bloch and Moholy-Nagy. In 1934 he went into exile, first to England, where he began to study for an Oxford DPhil (it was never completed). He continued to concentrate on the aesthetics of music, producing the essay 'Über Jazz' in 1936 and, as an outcome of an intensive correspondence with Benjamin, his long article 'Über den Fetischcharakter in der Musik und die Regression des Hörens' (1938). In 1937 he married Karplus and in 1938, at Horkheimer's invitation, they moved to the USA. There Adorno became a full member of the Institute for Social Research, which had moved to New York. From 1938 to 1941 he collaborated with the sociologist Paul Lazarsfeld on the Princeton Radio Research Project, doing empirically orientated research on radio listeners ('The Radio Symphony', *Radio Research 1941*, 1941), popular music ('On Popular Music', with George Simpson, *Studies in Philosophy and Social Sciences*, 1941), and later, at the New School for Social Research, he collaborated with Eisler on a film music project, *Composing for the Films* (in its original American edition under Eisler's name alone, 1947). In 1941 he moved to Los Angeles, where he worked with Horkheimer on *Dialektik der Aufklärung* (1947). He also collaborated with R. Nevitt Sanford on the Berkeley Public Opinion Study and with Thomas Mann on musical aspects of *Doktor Faustus*. The Frankfurt School in exile in the USA had kept alive aspects of German cultural and intellectual life that Hitler had destroyed in Germany.

Two ambitious projects came to a culmination at the end of Adorno's American years. One was his dialectical study of Schoenberg and Stravinsky as the polarized extremes of the 'New Music', begun in 1941 and completed in 1948, *Philosophie der neuen Musik* (1949), a seminal influence on the post-war Darmstadt avant garde. The other was the large-scale, multi-authored, empirical psychological study of intolerance, prejudice and authoritarianism that he had organized (and to which he contributed), *The Authoritarian Personality*, 1950. The sense of displacement and fragmentation with which the years of exile, the encounter with American mass culture and the effects of the Hitler period marked him are crystallized in what is perhaps his literary masterpiece, *Minima Moralia* (1951), significantly subtitled 'Reflections from Damaged Life'.

In 1949 Adorno was invited to return to Germany to a chair of philosophy at the University of Frankfurt; he also became co-director with Horkheimer of the re-established Institute for Social Research. With this began a new period of influence of the Frankfurt School, and Adorno in particular, on post-war German academic and cultural life. During the 1950s and 60s Adorno was also a regular contributor to the Darmstadt summer courses, where he taught composition and lectured on music criticism and serialism. He influenced the debates surrounding 'New Music' and the avant garde, with the implications this had for the music of Stockhausen, Boulez, Ligeti and Cage. He produced many articles, essays, papers and books on music during these years, many of them appearing either in collections of short pieces, including revisions of pre-war essays, and as larger-scale studies of single composers, including Wagner, Mahler and Berg. His lecture series on philosophy and sociology at the University of Frankfurt continued (his course in winter 1961–2, on the sociology of music, was published as *Einleitung in die Musiksoziologie*, 1962), and he gave occasional talks at the Frankfurt Hochschule für Musik und Darstellende Kunst. Public recognition of his achievements was marked by the award of the Arnold Schoenberg Medal (1956), the Berliner Kritikerpreis and Deutscher Kritikerpreis für Literatur (1959) and the Goethe Prize of the City of Frankfurt (1963). He became visiting professor at the Collège de France in Paris (1961) and chairman of the Deutsche Gesellschaft für Soziologie (1966).

This was a period of intellectual debates and disputes: Adorno's attacks on positivism and empiricism (the so-called 'Positivist Dispute' in German sociology, between Adorno and Habermas on the one side and Karl Popper on the other, published in *Der Positivismusstreit in der deutschen Soziologie*, 1969), and on phenomenology and existentialism (Adorno's critique of Heidegger and Jaspers in *Jargon der Eigentlichkeit*, 1964), as well as a public dispute with the playwright Rolf Hochhuth (1967). His critique of positivism is to be detected in his thinking on music analysis and aesthetics of music, to be seen particularly in the 'Berg and Analysis' section of his book on Berg (1968) and in the late talk 'On the Problem of Musical Analysis' (1969). In the two major philosophical works that occupied him in his last decade, *Negative Dialektik* (1966) and the unfinished *Ästhetische Theorie* (published 1970), Adorno set out to address the twin problems of how to philosophize in the absence of philosophical givens and how to write an aesthetics after the demise of aesthetic norms. During his last 20 years he worked on a substantial book on Beethoven; at his death it remained a collection of disconnected fragments. Sensitively edited by Rolf Tiedemann, this was published as *Beethoven: Philosophie der Musik* (1993).

A product both of the German tradition of Idealist (in particular Hegelian and Nietzschean) philosophy and of the artistic experimentation of the Weimar years, Adorno was well placed to act as the theorist of musical modernism. At the same time he developed an influential theory of mass culture, drawing on Marx, Freud and Max Weber, which formed the other pole of his theory of aesthetic modernism. His work is characterized by an interdisciplinarity of approach, extreme density of formulation, and an antisystematic, fragmented expression. It resists easy categorization and can best be described as a critical sociological aesthetics of music. His aim is to decipher the historical and social content of music from the interior of the musical work. The concept of musical material is central to his thinking, because it is within the material that he sees the mediation of music and society taking place. His theory of musical material, as historically mediated 'second nature', is also a theory of form – a concept that needs to be understood on two levels: the historical 'pre-formation' of the material, as handed-down genres, formal schemata and musical gestures; and

the critical re-formulation of this pre-formed material within the structure of the autonomous work. Furthermore, Adorno's theory of musical material is also a theory of the avant garde, in that the material of music is always taken as that of the present, at the furthest point of convergence of expressive needs and technical means, while music of the past is to be understood from the avant garde's position. Beyond that, it is a theory of mass culture (although Adorno avoided that term, preferring the concept of the 'culture industry') in that it emphasizes the effect of patterns of consumption on musical production. Adorno saw a split in 20th-century music between a progressive, self-reflective and critical music which resists its fate as commodity at the level of its form, while in the process alienating itself from its public, and a regressive, assimilated music that uncritically accepts its commodity character, in the process becoming absorbed by the culture industry as entertainment. Adorno's position has been criticized on the one hand as theoretical mouthpiece for the aesthetics of the Second Viennese School and its heirs, and on the other hand as élitist avant-garde rejection of popular culture. A detailed and critical reading of his work, however, reveals a nuanced and complex theoretical approach of relevance to a wider range of musical contexts.

MAX HALLE PADDISON

Ad Primam (Lat.). *See* PRIME (i).

Adriaenssen [Adriaensen, Adriansen, Hadrianus, Hadrianius], **Emanuel** [Emmanuel] (*b* Antwerp, *c*1554; *d* Antwerp, bur. 27 Feb 1604). Flemish lutenist, teacher and composer. He went to Rome to study in 1574, a visit that probably accounts for the Italian elements in his publications. He was a Protestant, but after the fall of Antwerp in 1585 he was compelled for political reasons to embrace the Catholic faith. With his brother Gysbrecht he opened a school for lutenists at Antwerp, but in 1587 they came into conflict with the musicians' guild because neither of them was a member; later, however, Emanuel must have qualified as a freeman of the guild, for he occasionally assumed the title of master. He was appointed captain of the citizens' watch, which brought him a regular income, and in 1595 he took part in the relief of the nearby town of Lier, which had been occupied by the Dutch. He moved in the highest circles in Antwerp, and the principal families doubtless admired his virtuosity as

a lutenist and engaged him to perform. His publications brought him wider fame, and they were to be found in the libraries of many prominent people, among them Constantijn Huygens, King João IV of Portugal and Cardinal Mazarin. He was mentioned by Adrian Denss (1594), Robert Dowland (1610), G.L. Fuhrmann (1615), J.-B. Besard (1617), W.C. Printz (1690) and E.G. Baron (1727) as a leading composer of lute music, but his music inclines to an excess of ornamentation, and for this reason he cannot quite rank with the greatest of his Italian, French and English contemporaries. As a teacher, however, he is in the front rank, both because of the unique intabulation tables that he published and because he was the founder of an Antwerp lute school that probably included Denss and Joachim van den Hove.

Adriaenssen published *Pratum musicum longe amoenissimum, cuius ... ambitu comprehenduntur ... omnia ad testudinis tabulaturam fideliter redacta ... opus novum* (Antwerp, 1584[12]/*R* 1977, 2/1600[18], *editio nova priori locupletior*) and *Novum pratum musicum ... selectissimi diversorum autorum et idiomatum madrigales, cantiones, et moduli ... opus plane novum, nec hactenus editum* (Antwerp, 1592[22]/*R*1977; music from all three ed. in MMBel, x, 1966, and in Spiessens, 1974–6). Each of these three books is in French lute tablature and consists of five fantasias, some 50 vocal pieces and some 30 dances. The fantasias (all ed. A. Rooley, *21 Renaissance Lute Fantasias*, London, 1980), which are all original pieces, are small-scale embryonic fugues; the counterpoint is neat, and they are forward-looking, almost Baroque, in style and form. The intabulations of vocal music are for the most part virtuoso lute arrangements of madrigals, chansons and motets by prominent Netherlands, French and Italian composers of the 16th century; there are also a number of anonymous *napolitane* and French *airs* of popular origin, set in a simpler manner. To each intabulation two or more vocal parts are added in mensural notation; these pieces can thus be performed vocally or instrumentally or both. The dances are virtuoso variations on anonymous tunes and standard basses, especially passamezzos, galliards, allemandes, courantes, voltas and branles. The *Novum pratum musicum* is particularly interesting for its instructions (printed in Latin) on methods of intabulating polyphonic music: they include tables in which mensural notation is shown alongside the corresponding tablature signs.

GODELIEVE SPIESSENS

Adriani, Francesco (*b* S Severino, nr Ancona, 1539; *d* Rome, 16 Aug 1575). Italian composer. It is uncertain when he went to Rome, but he is listed among the members of the Cappella Sistina from 17 July 1572 until 1573, when he succeeded François Roussel as *maestro di cappella* at S Giovanni in Laterano, a post he retained until his death (E. Celani: 'I cantori della Cappella Pontificia nei secoli XVI–XVIII', *RMI*, xiv (1907), 752–90, esp. 758). As a composer he can be judged only from two madrigals in anthologies published in 1568, since only the bass parts of his own madrigal books remain.

Adriano. *See* WILLAERT, ADRIAN.

Adrien [Andrien l'aîné; La Neuville], **Martin Joseph** (*b* Liège, 26 May 1767; *d* Paris, 19 Nov 1822). Flemish bass, teacher and composer. He learnt music as a chorister at St Lambert's Cathedral, Liège, and later at the Ecole Royal de Chant in Paris. He appeared as a singer at the Concert Spirituel in 1781, and in 1783 sang the role of Calchas in Gluck's *Iphigénie en Aulide* at the Opéra. His last known appearance at the Opéra was as Rosmor in Le Sueur's *Ossian* in 1804. In 1806 he was appointed *chef de chant*, a post he held until his death. In March 1822 he succeeded Laîné as professor of lyric declamation at the Ecole Royale de Musique, but died eight months later. An advocate of the old French system of declamation, he was said to have had a harsh voice and a bad vocal method, but some ability as an actor.

Adrien composed choral settings of Revolutionary texts, including *Invocation à l'Être suprême* (Delaporte) and *L'évacuation du territoire de la république* (Lacombe), both published in 1794, and a *chanson*, *Aux martyrs de la liberté*. According to Fétis he also wrote and arranged the music for *Elodie, ou La vierge du monastère*, a melodrama by Ducanges produced at the Théâtre de l'Ambigu-Comique on 10 January 1822. Five collections of songs were published, but it is not certain whether they are all by Martin Joseph or by his two brothers. One brother, whose forename is unknown (*c*1768–*c*1824), was probably the Adrien identified by Wild as *chef des choeurs* at the Théâtre Feydeau in 1791. According to Fétis, the other, Ferdinand (*c*1770–*c*1830) taught singing in Paris, but Fétis's statement that he was *maître des choeurs* at the Opéra between 1798 and 1801 is not confirmed by Wild. One of the brothers may have written the opera *Le fou ou La Révolution*, produced at the Antwerp opera on 3 December 1829.

Ad Sextam (Lat.). *See* SEXT.

Adson, John (bap. ?Watford, Northants., ?24 Jan 1587; *d* London, 29 June 1640). English wind player and composer. He was perhaps the Johannes Adson baptized at Watford, Northamptonshire, on 24 Jan 1587, though nothing is known of him for certain before 1604, when he is recorded as a cornett player at the court of Charles III of Lorraine in Nancy. Charles died in 1608, and Adson was back in England by the end of 1613, when he joined the Waits of London. He married Jane Lanerie in about February 1614 and settled in the parish of St Giles Cripplegate. At least two of his sons, Islay (or Islip; bap. 30 May 1615) and Roger (bap. 24 June 1621), became musicians. In November 1633 he became a royal wind musician, and on 18 January 1636 he was paid £4 15s. for a treble cornett and a treble recorder, which presumably were the instruments he played at court. In February 1634 he organized the wind players who played in the procession for the second performance of Shirley's masque *The Triumph of Peace*, thereby incurring the displeasure of the Master of the King's Music, Nicholas Lanier. Adson had evidently preferred theatre musicians to members of the Royal Music, and his association with the King's theatre company is confirmed by references to him in plays put on by it in 1634 and 1639–40. He died on 29 June 1640, and was buried at St Giles Cripplegate the next day. He was succeeded at court by William Lanier and in the Waits of London by James Hinton.

Adson is best known for the collection *Courtly Masquing Ayres* (London, 1621; ed. P. Walls, London, 1975–6), which he dedicated to the Duke of Buckingham, a frequent and enthusiastic masquer. It consists of 31 lively dances for 'violins, consorts [mixed ensembles] and cornets', and divides into three sections. The first 18 pieces seem to be genuine masque dances (14 have concordances in masque sources), using the five-part single-soprano scoring associated with violin bands. The next three pieces, also in five parts, are marked 'for cornets and sackbuts', while the remainder are probably intended for the same instruments, since they use the six-part scoring with two sopranos associated with wind bands. It has been generally assumed that the collection is Adson's own work, but he did not have a court appointment when he published it, so the masque dances, at least, are likely to be his versions of pieces originally composed by royal musicians. Only four other pieces by him are known: a six-part air with one part missing (*GB-Cfm* Mu.734), two two-part corants (*US-NH* Filmer 3), and the bass part of another corant (*GB-Ob* Mus. Sch.D.220). In 1636 a book containing music by 'Edsons' was in the collection of William Cavendish, Duke of Newcastle.

A due (It.). An instruction found in scores (also as *a* 2, *à* 2) where two parts are written on one staff to indicate that they should be played either in unison (*all'unisono*) or separately (*divisi*). The ambiguity is resolved by the context. *A due* is also used in descriptions of polyphonic works to denote 'in two voices'; *see* A (i).

Advertising, music in. Though advertisements probably provide the most commonly heard kind of music in contemporary urban society, such music is the least noticed and least studied. Music has been part of advertising since the first STREET CRIES. With the advent of cheap, widespread print media in the 19th century, and of radio and television in the 20th, the possibilities of advertising, and of its associated music, grew enormously.

1. History. 2. Practice.

1. HISTORY. Most of the history of advertisement music survives in art composition. A 13th-century three-voice motet in the Montpellier Codex (no.319) records street cries, as do the madrigals of Janequin, Orlando Gibbons and Berio, and operas ranging from Cherubini's *Les deux journées* to Gershwin's *Porgy and Bess*. Engravings and written documents show that instruments (particularly noisy, attention-grabbing instruments like drums and trumpets) were used in conjunction with the voice, but how they were used is not known. The recorded history of advertisement music begins only when music printing became inexpensive.

During the 19th century the street cry was transmuted into the JINGLE on trade cards and in newspaper and magazine advertisements. Some companies advertised on sheet music and in music collections; others published their own music. In early 20th-century England Beecham's Pills issued a series of portfolios which included popular songs, folksongs, numbers from operettas and other light classical selections, and excerpts from Handel and Mendelssohn oratorios, all interspersed with advertising copy and music specifically intended to promote Beecham's product. Though lacking obvious jingles, the portfolios included dances such as the 'Guinea a Box Polka' (alluding to the price of Beecham's Pills), the 'St Helen's Waltz' (that being where they were manufactured), the 'Beecham's Chimes Galop' and 'Beecham's March to Health'.

While print was becoming the main vehicle for advertisement music, street cries did not die out. They were effective in large cities and the market centres of Europe, while along the rapidly expanding American frontier of the later 19th century the travelling medicine show combined the minstrel show with the street cry to draw an audience. At the same time music as an enticement to purchase was applied in a more genteel fashion in the big department stores of the East Coast and Midwestern cities. These stores organized orchestras and choirs as amusement and education for their employees, and to provide concerts for their customers. The altruistic thinking behind such projects eventually faded, but the

Giuseppe Verdi and his birthplace at Roncole, near Busseto: advertising card for Liebig meat extract, made by Fray Bentos

idea remained that music makes consumers more susceptible to consuming, and by the end of the 1920s live music had given way to recordings. Soon after World War II commercial tapes of continuous, unobtrusive instrumental versions of popular song began to be installed in retail stores throughout the Western world; 'Muzak', the brand name of the most successful company in the field, became the title of the genre. The type of music played in a store is shaped to the clientele: easy listening for grocery shops, loud rock for a fashionable clothes store. In some large department stores the music is accordingly different in each department. On the other hand, Virgin Records has its own radio station, transmitted to all the stores in its chain.

The idea of the medicine show – an entertainment designed to attract an audience in order to pitch them a product – carried over into broadcasting. In the USA companies would purchase time on radio stations, and later television, and fill it with programming which would bring in an appropriate audience. A new dramatic genre, the soap opera, got its name from this practice, as cleaning-product companies favoured melodramatic romantic serials to draw in housewives. Music shows and variety shows, which normally included a great deal of music, were among the most consistently attractive kinds of programmes to advertisers because they appealed to large and varied audiences. As both audiences and advertisers grew more sophisticated in the 1950s, and as broadcast advertising spread throughout the world, sponsored programmes on both radio and television were replaced by advertisements inserted into independently produced programmes.

2. Practice. The most common kind of music used in advertising is the jingle, a short, catchy musical composition set with advertising copy which is typically dense with rhyme, alliteration, assonance and often sexual *double entendres*. Familiar songs are sometimes set with new words to create a jingle (The Beach Boys' *You're givin' me good vibrations* became 'Sunkist's giving me good vibrations'), or they are used because their words are already appropriate to the product (Kodak Film was sold by Cyndi Lauper's *True Colors*, and one of the counting sections from Philip Glass's *Einstein on the Beach* was used by Orange Communications, which charges by the second). A more sophisticated kind of 'subliminal jingle' emerged during the late 1980s, in advertisements which play on the audience's knowledge of the words to songs heard only instrumentally. British Telecom used 'Happy Talk' from Rodgers and Hammerstein's *South Pacific*, in this way, and a Renault commercial, which pushes to the limit the traditional advertising equation of a car with a woman's body, included a wordless version of Marvin Gaye's *Sexual Healing*. Purely instrumental jingles are rare, though Clark Teaberry Gum's *Teaberry Shuffle* hit the pop charts in 1964 as *Mexican Shuffle* for Herb Alpert and the Tijuana Brass, and Robert Palmer's *Johnny and Mary*, stripped of its lyrics, is probably best known in Britain as the Renault theme. Art music is also frequently used. In Britain, the Air from Bach's Suite in D BWV1068 was long associated with Hamlet cigars; the slow movement of Dvořák's 'New World' Symphony is known there as the Hovis Bread theme, but in France it was used to sell – again – Renaults. The Flower Duet from Delibes' *Lakmé* was associated with British Airways from 1983.

Some commercials, particularly those with a dramatic scenario, are underscored like films. Advertising companies can purchase tapes from music libraries, and because they pay by length, this practice is sometimes called 'music by the metre'. Other commercials may be scored to order, and just as the title music of a film will often climax with the name of the director, so the music in such advertisements usually peaks with the product's name. In addition to its traditional musical-dramatic functions, music can be used to build up semiotic richness: a French Femme de Rochas commercial, which focussed on the perfume's hourglass bottle, featured a solo cello, creating an implicit connection of shape linking instrument, vessel and wearer.

Prominent musicians have been involved with advertising products for over a century, among them Patti (Pears soap) and Paderewski (pianolas). The opera singer Félia Litvinne modelled corsets, and Mary Garden lent her image to Rigaud perfume and Désiles wines. From the 1920s to the early 1960s, popular musicians had their radio and television shows sponsored by companies ranging from Texaco to Colgate to Coca-Cola. But the

relationship between advertising and popular music became more difficult with the emergence of rock and roll, which, with roots in black music, was initially unacceptable to most mainstream consumers and therefore to advertisers. Later the strongly anti-establishment attitude of rock did not fit in with advertising. However, as people of the rock generation matured in the 1980s to become both advertising executives and target audience, rock and advertising grew closer.

Music itself was now increasingly marketed, not through the traditional methods of radio airplay and concert tours, but through music videos, modelled on television commercials, which in turn they influenced. At the same time there began a strong association between rock artists and drinks companies. Coca-Cola had George Michael and Robert Plant; Michelob Beer had Eric Clapton, Steve Winwood, Phil Collins and Genesis; Pepsi had the two biggest stars, Madonna and Michael Jackson, and the biggest problems. Madonna's much-vaunted 1987 commercial for them, based on her single *Like a Prayer*, was withdrawn after one showing because the song's video version, introduced the next day, featured religious imagery which Pepsi feared would offend the public (as it did). Jackson's decade-long relationship with Pepsi, often turbulent, was terminated in 1993 after allegations against him of child molestation. Some artists, notably Bryan Ferry and Sting, reaped the benefits of corporate advertising without tainting their 'artistic integrity' by appearing in commercials that would be seen only in Japan, evading the notice of the critical Western audience.

The participation of major rock stars in advertising was part of a new marketing strategy, 'synergy', that emerged in the late 1970s. Sparked by the phenomenally successful cross-promotion between the film *Saturday Night Fever* (1977) and its soundtrack, synergy grew enormously as multi-national entertainment corporations consolidated during the 1980s: for instance, Sony bought out both Coca-Cola and Columbia, already a powerful music-television-film conglomerate. Drinks companies did not just use rock stars' images and music to sell their product, but sponsored concert tours that would promote the rock stars and thereby increase their own sales. Films promoted music by including it on the soundtrack, and conversely a popular song could boost movie-ticket sales, especially if the video version included clips from the film; *Flashdance* (1983) was the first film to exploit the new marketing medium of the music video with success. Additional avenues of cross-promotion opened, and by the mid-1990s any major film was expected to have not only a soundtrack release and accompanying music videos but also a paperback 'novelization' of the screenplay, a home video and a promotion with a major fast-food chain, not to mention toys and even a Saturday morning children's show if appropriate.

Though music is present in almost every commercial on television, advertising agencies tend to know very little about music and therefore to use it conservatively. Against that trend music has increasingly merged with sound design in the creation of evocative soundscapes: a comic advertisement for Atlantis Lynx cologne uses exaggerated party noises, blurring the boundaries between natural sound and music, a technique also used in a number of advertisements for alcoholic beverages. Also, despite the close links between music and advertising, and despite the research that goes into marketing, very little work has been done on the effect of music in selling. Where studies have been done, it is difficult to assess their results because so little detail about the music has been given. Recent scholarly interest has focussed on advertisement music in order to confront musical meaning: since music for advertising is intended to have the most direct musical effect, understanding its messages may help us understand less overt ones.

Aelred of Rievaulx [Ailred, Ethelred] (*b* ? Hexham, *c*1110; *d* York, 1167). English saint, theologian and historian. He was brought up in the household of David I of Scotland, and later became an officer (*dapifer*) there. He was professed a monk of the Cistercian house at Rievaulx in Yorkshire (1134); he became abbot of Revesby (1143), but later returned to Rievaulx as abbot (*c*1147). Early in his career he gained the respect and support of Bernard of Clairvaux. Music forms only a small part of his writings: the *De abusu musice* attributed to him by Vander Straeten (*Grove3*; *GerbertS*, i, 26) cannot be identified as his, but chapter xxiii of the second book of the *Speculum caritatis*, a work inspired by St Bernard, deals with the same topic. He questioned the use of organs and bells in church, unfavourably comparing the noise of the former to the human voice. His chief complaint, however, was against the use of a virtuoso, and indeed histrionic, performance style: 'Why that contraction and effeminacy of the voice? ... Now the voice is reduced, then it is broken, at one time it is forced, at another it is enlarged with a more expansive sound. ... At times the entire body is agitated with gestures worthy of actors; the lips twist, the eyes roll, the shoulders play, the fingers move in response to every note'. He was a proponent of stylistic moderation in the performance of chant. Some of his words have been understood as descriptions of part-singing and hocket: 'One voice joins us, another drops out, another voice enters higher, and yet another divides and cuts short certain intervening notes .... At times you might see a man with an open mouth, as if expiring with suffocated breath, not singing, and with a certain laughable hindering of the voice as if menacing silence'. Some of Aelred's statements resemble those of his contemporary John of Salisbury, and may provide some evidence of the cultivation and performance of complex polyphony in 12th-century England or on the Continent; yet his complaint may have been exaggerated.

One of the miracles associated with Aelred, recorded in the contemporary life by Walter Daniel (ed. and trans. F.M. Powicke, London, 1950/*R*), involved music.

ANDREW HUGHES/RANDALL ROSENFELD

Aeolian (i). The name assigned by Glarean in the *Dodecachordon* (1547) to the authentic mode on A, which uses the diatonic octave species *a–a′*, divided at *e′* and composed of a first species of 5th (tone–tone–semitone–tone) plus a second species of 4th (semitone–tone–tone), thus *a–b–c′–d′–e′* + *e′–f′–g′–a′*. With this octave species identical to that of the natural minor scale on A, the Aeolian mode, together with its plagal counterpart, the HYPOAEOLIAN, closely resembles the descending melodic minor scale.

In the minor mode of tonal music (*see* TONALITY) the dominant lies a 5th above the tonic, or principal scale degree, and the sixth degree is characteristically a semitone above the dominant; for this reason scholars in the last three centuries have tended to think of the minor mode of tonal music as a lineal descendant of Glarean's Aeolian scale. In fact the minor tonalities of tonal music are of heterogeneous origins. Even the key of A minor is indirectly but closely related historically to the old transposed modes 1 and 2 with finals on *a*, and it is at least as nearly descended from polyphonic mode 3 (*e–e′* with strong cadences at *a* and *c′*) and polyphonic psalm tone 3 (*e–e′* with final at *a*) as it is from Glarean's Aeolian (*see* MODE, §III). Other minor tonalities also have multiple historical evolutions, if not always so complex, and the old D modes (Dorian and Hypodorian), with their *cantus mollis* (one-flat) and *cantus fictus* (two-flat) forms on *g* and *c* respectively, are historically more nearly in the direct line of ancestry of the minor tonalities than Glarean's Aeolian–Hypoaeolian group and its Italian and French imitators.

HAROLD S. POWERS

Aeolian (ii). Name associated with a series of American piano, organ and player piano manufacturers.

(1) Aeolian Co. Founded by William B(urton) Tremaine (1840–1907) who had begun as a piano maker with Tremaine Brothers in New York City. He formed the Mechanical Orguinette Co. (1878) and the Aeolian Organ & Music Co. (1887; from 1895 the Aeolian Co.) to manufacture automatic organs that used perforated music rolls; *see* PLAYER ORGAN. E.S. Votey, inventor of the Pianola, the first practical piano player and the most famous name among automatic piano brands, joined the Aeolian Co. in 1897. Henry B. Tremaine (1866–1932), the founder's son, tapped a larger market with an extensive advertising campaign for player pianos in the first three decades of the 20th century. In 1913 Aeolian introduced the Duo-Art REPRODUCING PIANO, a mechanism (fitted in high-quality pianos) that made it possible to record on paper rolls the slightest nuances of dynamics, tempo and phrasing. Many leading pianists were recorded on Duo-Art machines.

At the turn of the century self-playing organs were becoming a status symbol in the homes of the wealthy, a trend that would continue for the ensuing three decades. Aeolian had begun applying player mechanisms to pipe organs as early as 1895, initially in conjunction with the Ferrand & Votey firm, but eventually established its own factory at Garwood, New Jersey, directed after 1916 by Edwin Votey. The application of the Duo-Art technology in this period enhanced the popularity of Aeolian's residential organs, as well as their capability for reproducing the playing of notable organists such as Yon, Shelley, Eddy, Bonnet, Courboin, and Dupré, who were among the many artists who cut player rolls for Aeolian. While the majority of Aeolian residential player-organs were built for North American clients (including the largest, with four manuals, installed in 1929 at 'Longwood', the estate of industrialist Pierre S. DuPont), such instruments were also exported, a significant number going to England; a smaller number went to purchasers in Argentina, Australia, Belguim, France, Germany and Spain. Although Aeolian had always had a few non-residential clients, during the late 1920s the firm made a conscious effort to branch out into the field of larger church and concert-hall organs, usually without self-players. However, their major stock-in-trade was still residential organs, a market devastated by the stock market crash of 1929; such a large market loss could not be sustained, and following the completion of the large four-manual organ for Duke University Chapel in 1930, Aeolian closed its organ-building operation, selling its assets the following year to the competing firm of the E.M. Skinner firm of Boston, which then became known as the AEOLIAN-SKINNER ORGAN CO.

In 1903 Tremaine formed the Aeolian, Weber Piano & Pianola Co., of which the Aeolian Co. was a significant part. It took control of a number of important but failing American firms, such as George Steck & Co., Stroud Piano Co. and Weber Piano Co.; some significant reed organ and automatic organ companies, such as Vocalion and Votey Organ Co.; and overseas companies such as Choralian Co. of Germany and Austria, Orchestrelle Co. of Britain and Pianola Company Proprietary Ltd of Australia. In addition to pianos and the Duo-Art mechanism, the company developed and aggressively promoted such self-playing mechanical instruments as the Aeriole, the Aeolian Orchestrelle Pianola and reed organ, the Metrostyle Pianola and Aeolian pipe organs. The firm maintained the Aeolian Concert Hall in New York essentially as a showroom for its instruments, although many noted musicians performed there. In 1932 the Aeolian, Weber Piano & Pianola Co. merged with the American Piano Corporation to form the Aeolian American Corporation.

(2) American Piano Co. Incorporated in June 1908, it consolidated such earlier American piano companies as Chickering & Sons of Boston and Knabe & Co. of Baltimore with companies owned by the Foster-Armstrong Co. Foster-Armstrong, founded in 1894 in Rochester, New York, by George G. Foster and W.B. Armstrong, had bought the Marshall & Wendell Piano Co. of Albany, New York, in 1899. After the construction of a new factory in East Rochester, New York, in 1906, the

company acquired other piano makers and incorporated with a capital of $12 million.

Formed to manufacture pianos ranging from concert grands to mass-produced commercial uprights, the American Piano Co. established a player piano department in 1909. Its Ampico reproducing system, invented in 1913 by Charles Fuller Stoddard, dominated the American automatic piano market along with Aeolian's Duo-Art and the German Welte-Mignon mechanism. The company acquired the Mason & Hamlin Piano Co. in 1922 and sold it to the Aeolian Co. in the early 1930s. Becoming the American Piano Corporation in 1930, it merged with its primary competitor, the Aeolian Co., on 1 September 1932 to form the Aeolian American Corporation in an effort to survive the crises of the Depression and the new technologies of radio and phonograph as rivals to the piano.

(3) **Aeolian Corporation.** The name of the successor to the Aeolian Co. and the American Piano Co. It was called the Aeolian American Corporation from 1932 until 1959. In May of that year Winter & Co. purchased the assets of the corporation, renaming the company the Aeolian Corporation, but retaining the name Aeolian American Corporation for the East Rochester, New York, division until 1971, when it was changed to the Aeolian American Division of the Aeolian Corporation.

The company owned the assets of many earlier American piano manufacturers and made pianos in Toronto, East Rochester and Memphis under the following trade names: Mason & Risch; Mason & Hamlin; Chickering & Sons; Knabe & Co.; Cable; Winter; Hardman, Peck; Kranich & Bach; J. & C. Fischer; George Steck; Vose & Sons; Henry F. Miller; Ivers & Pond; Melodigrand; Duo-Art; Musette; and Pianola Player Piano.

Peter Perez, former president of Steinway & Sons, bought the Aeolian Corporation in 1983 and operated it until 1985, when the firm declared bankruptcy and closed the East Rochester factory. Its assets were distributed among Sohmer & Co., Wurlitzer Piano Co. and Young Chang. Sohmer controlled the names of Mason & Hamlin, Knabe and George Steck, but later transactions brought these names under control of the owners of Music Systems Research; Wurlitzer bought the Chickering name (later purchased by Baldwin, which bought Wurlitzer in 1988); and Young Chang took over the Weber name.

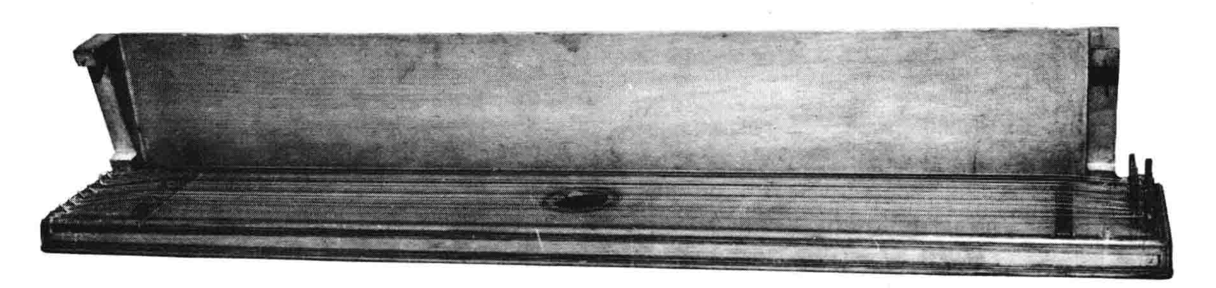
CYNTHIA ADAMS HOOVER/EDWIN M. GOOD, BARBARA OWEN

Aeolian American Corporation. *See* AEOLIAN (ii), (1).

Aeolian Hall. London concert hall opened in 1904. *See* LONDON (i), §VI, 2(iii).

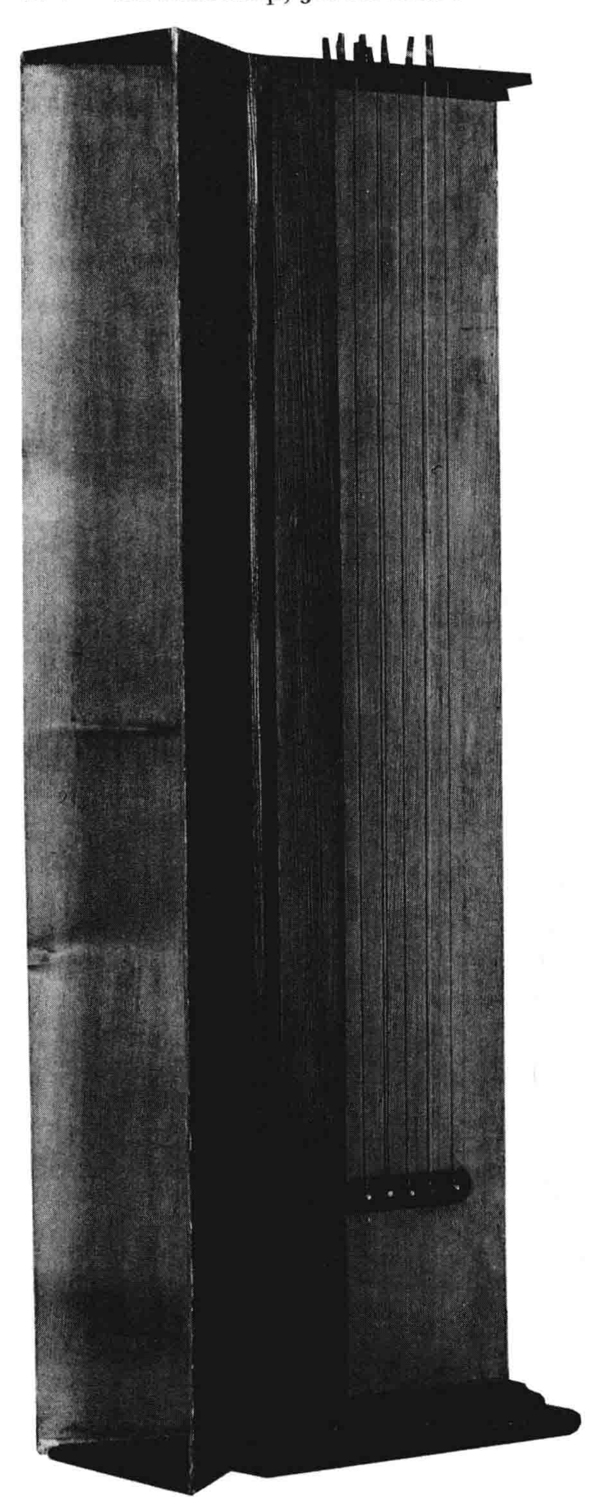
Aeolian harp (Fr. *harpe d'Eole, harpe éolienne*; Ger. *Äolsharfe, Windharfe*; It. *arpa eolia, arpa d'Eolo*). A string instrument (chordophone) sounded by natural wind, interesting as much for its symbolic significance as for its musical importance.

1. Structure. 2. Acoustics. 3. History. 4. Literature



1. STRUCTURE. Normally four to 12 (but sometimes 24 or 48) strings 'of catgut or brass wire, equal in length, unequal in thickness' (*Magasin pittoresque*, 1845) are stretched over one or two hardwood bridges of triangular cross-section, mounted on a thin pine, maple or mahogany box of variable shape – measuring 75–200 cm (normally 85–110 cm) long, 11–35 cm (normally 12–26 cm) wide and 5–17 cm (normally 5–9 cm) deep. The ends of this soundbox may be of beech, for insertion of iron hitch-pins or wooden tuning-pegs. Most instruments have some device such as a slit draught for concentrating the wind on the strings.

Six variants of this structure exist: (1) A rectangular soundbox with a single horizontal row of strings, the most popular model in England, and, until 1803, in Germany; also the simplest type.



(2) A more practical variant developed only in England, with the strings on an inclined fingerboard over which a lid was mounted, whose horizontal top allowed the wind to blow over the strings where the incline was lowest and funnel up the inclined soundboard to the highest point at the back of the instrument (fig.1). This structure ideally fitted sash windows, being mounted on the sill with the frame brought down on top of the lid to hold the instrument in place.

(3) A vertically strung soundbox with wind-funnelling 'wings' used throughout western Europe since its inception by Kircher in 1650 at Rome.

(4) A further development of the vertically strung model (fig.2) with double banks of strings, one on each side of the instrument (always in the same plane as the wind

1. Aeolian harp with 12 strings, English, early 19th century, shown with lid in raised position (E.R. Mickleburgh Collection, Bristol)

2. Vertical Aeolian harp, with five strings on each side, by Nicolas Eugen Simoutre, Basle, 1870–85 (Historisches Museum, Basle)

direction), used by Steudal (from 1803) and J.C. Dietz in Germany.

(5) A model on which the strings were mounted on a semicircular soundbox (so that at least one or two strings would present themselves at the correct angle, whatever the wind direction), developed apparently by the Swiss.

(6) An apparently popular variant in France of this semicircular model consisting of a triangular soundbox mounted with strings on two or three faces.

2. ACOUSTICS. The exact means by which aeolian tones are generated is still not fully understood. Kircher in 1650, noticing that several notes may be heard from one string, suggested that the string was to the wind as a prism to light, separating component sounds from the single energy source. His colleague Daniello Bartoli poured scorn on this theory in *Del suono de' tremori armonici e dell'udito* (Rome, 1679). Since then, no exact theory has been propounded. The Abbot Gattoni of Milan in 1783 and H.C. Koch 18 years later experimented with various string metals, and examined the conditions under which aeolian tones were produced. Their findings were quantified by Pellisov in 1822, but V. Strouhal of Würzburg established empirically that the frequency of any one aeolian tone was not dependent on the material or length of the string, but was equal to the product of the airstream speed some way from the string and a constant (normally 0·185, known as the Strouhal number), divided by the string diameter. But Strouhal's theory depended on the string vibrating in the same plane as the airstream, whereas Rayleigh, characteristically examining through a home-made telescope a string stretched under his chimney, claimed the string vibrated across the airstream. Further researches by E.G. Richardson and in 1956 by Etkin and others in the USA only feebly penetrated the problem. Present theory suggests that it is the eddies creating a vortex pattern behind the string, like the small whirlpools visible when a stick is held in flowing water, that make the aeolian tone, which may occasionally be of the same pitch as one of the string's natural frequencies, thus causing it to vibrate. An exact solution of the creation of these vortices and their resultant three-dimensional pattern, termed 'Kármán Street' (after von Kármán, 1912), appears to be beyond the capability of present mathematical techniques.

3. HISTORY. Legends from 800 BCE (Homer) onwards describe how Hermes invented the lyre by letting the wind blow over dried sinews in a tortoise carapace; in later legends, such as that of David's harp, God-sent wind blows upon and sounds an already invented instrument. Like David, St Dunstan (*d* 988) also had his harp sounded by God; it played the anthem *Gaudent in coelis*, and all nearby marvelled (W. Stubbs, *Memorials of St Dunstan*, London, 1874). Only later and for different reasons was he convicted of sorcery.

Although G.B. della Porta's *Magia naturalis* (Rome, 1540) made reference to aeolian phenomena, the harp's technological development began with Kircher's rediscovery of the Aeolian harp (*Musurgia universalis*, 1650; and *Phonurgia nova*). He called them 'musical autophones'. J.J. Hofmann's *Lexicon universale* (Basle, 1677) appears to be the first source employing the aeolian adjective to describe the wind harp: he called it *Aeolium instrumentum*, and quoted Kircher about its construction and sound effect.

A visit to Kircher's museum inspired an article in the newly founded Breslau University's *Sammlung von Natur* of 1726, but the harp did not become fashionable until the 1780s. Then the accumulation of Alexander Pope's *Commentary of Eusthasius*, James Thomson's aeolian poetry of the 1740s, and the report on the structure of the

Aeolian harp in a letter from 'A.Z.' in the *Gentleman's Magazine* (1754) culminated in an article 'On the Eolian Harp' in W. Jones's *Physiological Disquisitions* (London, 1781). On announcing that he was 'prepared to dispose of them at a reasonable price to such gentlemen as take a pleasure in this agreeable class of experiments', Jones and London instrument makers such as Longman & Broderip, Hintz, and Silber &Fleming set a trend that was to prevail in England until at least the announcement of 48-string instruments in Metzler's catalogue of 1884, and Burkardt and Doebler's 1862 Manchester patent of 'Improvements in the Aeolian Harp'.

But whereas in England the Aeolian harp's place was apparently in the home, on the Continent it was usual to place instruments in grottos, gardens, summer-houses or inhabited châteaux (Pierrefonds, Oise, 1830), or uninhabited châteaux (Baden-Baden, 1853) or even strung between the spires of two churches (by Abbot Gattoni of Milan, 1783). Kastner commented that 'Harps that maintain themselves in decent state in the garden have long been sought after' (*La harpe d'Eole*, p.83). The *Neue Berliner Musikzeitung* (28 June 1854) recommended the Aeolian harp for public parks as well as aristocratic gardens.

Europe's reaction to England's enthusiasm was consequently varied. France cared little for the instrument (although Clementi expressed some interest in those developed by Gustave Lyon for Pleyel, Lyon & Cie.) except in the Alsace district, where Kastner, Frost, Echel, Gaïb and Roth developed a number of ingenious vertical models. Kastner's full study, *La harpe d'Eole*, added an opera as an appendix for good measure. The Italian Gattoni outdid everyone with his 'armonica meterologica' which sounded whenever the Milan weather was about to change (*Opusculi scelti, Milan*, 1785, p.298). The only country besides England to show any lasting interest was Germany: two articles in the *Göttingen Taschenkalendar* of 1789 and 1792 were followed by another by Quandt in the *Lausizische Monatsschrift* for 1795, and by J.F.H. von Dalberg's fairy tale *Die Äolsharfe: ein allegorischer Traum* (Erfurt, 1801), which contained some interesting notes. After the review of this work in the *Allgemeine musikalische Zeitung* (1801) there were further journal articles over the next 50 years, and a lengthy study in H.C. Koch's *Musikalisches Lexicon* (Frankfurt, 1801). In the late 1830s W.P. Melhop of Hamburg developed an Aeolian harp in which the wind was funnelled into a box in which the strings were enclosed. He provided a detailed description and drawings of his instrument in his *Spaziergänge III* (MS, 1835–44, *D-Ha* 622-1: Familie Melhop–A5: see Pilipczuk). Other German makers included Koch, F.T. Kaufmann of Dresden and C.W. Esslinger of Berlin. Towards the end of the 20th century E. Bäuerle and M. Minssen devised an unresonated electroacoustic Aeolian harp, designed to be sounded either indoors by the human breath or outdoors by strong winds (see Minssen).

The harp's sufficient epitaph, until the late 20th-century revival in England, the USA and Germany, was Troyte's gift of an instrument, with the appropriate 'Enigma' variation painted on one side, to Elgar in 1904. It typified the Aeolian harp's European history as one not so much of increasingly sophisticated technology as of individuals working in self-styled directions: rarely taking much notice of each other's efforts, but often using Kircher as a working basis.

Outside Europe, idiophonic Aeolian harps have been observed in Ethiopia (Begamder tribe), Java, China (*feng zheng*, *yao pian* and *yao qin* kites, shaped like fish or dragons – noted even by Kircher in 1650 – flown each spring, the Chinese words meaning 'abundance' and 'water fertility' respectively), and Guyana, where the Macoosis and Warrau tribes use the leafstalk of the Itah palm (*Mauritia flexuosa*) stuck in the ground or on house tops.

4. Literature. Poetry about the Aeolian harp began in England in the 1740s, with James Thomson in his 1748 *Castle of Indolence* hymning 'Wild-warbling Nature all above the reach of Art'. 50 years later the poet Robert Bloomfield was writing in much the same vein, and it took Coleridge in his *The Eolian Harp* (1795) and *Dejection* (1802) to think less of the Aeolian harp as the man-made medium through which Nature speaks to Man than as the tragic reflection of his own life-experience, an 'Actor, perfect in all tragic sounds!'. Goethe and Mörike (*An eine Äolsharfe*, 1867), and Thoreau and Melville in the USA, preferred this interpretation, bearing out M. Abrams's statement that 'Not until the nineteenth century did the wind-harp become an analogy for the poetic mind as well as a subject for poetic description' (*The Mirror and the Lamp*, New York, 1953, p.51). But with the decline of the harp itself, the imagery changed to mockery, culminating in a derisive reference in R.L. Stevenson's *The Beach of Falesà* (1892), such that 'The music of the spheres died of shame' (Bonner and Davies, iii, p.90).

For a discussion of further applications of the aeolian harp principle, *see* Sound sculpture, §2(i).

STEPHEN BONNER/R

Aeolian Quartet. English string quartet. It was founded in 1926 as the Stratton Quartet by George Stratton, William Manuel, Lawrence Leonard and John Moore, and developed from the Wood Smith Quartet, in which Stratton and Moore played. It found fame after Carl Taylor and Watson Forbes took over the inner parts in 1932 and it was chosen to record Elgar's Quartet and Piano Quintet (with Harriet Cohen). The records were a great solace to the composer in his last illness. Moore remained with the ensemble until 1956 and Forbes until 1962; but Taylor was killed in the war and in all the quartet had 11 second violinists. The leadership also changed hands a few times after Stratton withdrew in 1944 and the title Aeolian Quartet was adopted. The later incumbents, all highly distinguished, were Max Salpeter (1944–6), Alfred Cave (1946–52), Sydney Humphreys (1952–70) and Emanuel Hurwitz. Many of the various formations were perpetuated on records. In particular the line-up of Humphreys, Trevor Williams, Forbes and Derek Simpson made

beautiful recordings of Mozart's 'Dissonance' and Beethoven's last quartet in 1960; and Humphreys, Raymond Keenlyside, Margaret Major and Simpson recorded a memorable Schubert C major Quintet in 1966 with Bruno Schrecker as guest. The final formation, with Hurwitz replacing Humphreys, was the first group to record all the Haydn quartets. New scholarly editions were used and the performances, full of fire, humour and accumulated wisdom, have been reissued on compact discs to further acclaim. In 1975 the group performed the late Beethoven quartets on BBC television. Its 1978 recordings of these works were among the first since those of the Busch Quartet to measure up to the stature of the music. The Aeolian Quartet toured widely and taught at a number of summer schools, notably at Monterosso in northern Italy. It was closely linked to a number of British universities, especially that of Newcastle upon Tyne, which awarded its members honorary MA degrees in 1970. The ensemble was dissolved in 1981.

TULLY POTTER

Aeolian-Skinner Organ Co. American organ building firm. It was formed in 1931 when the firm of ERNEST M. SKINNER & Co. acquired the organ department of the Aeolian Co., which had made its reputation building organs with self-playing mechanisms for private houses, changing its name to Aeolian-Skinner. In 1933 there was a reorganization in which G. DONALD HARRISON, who had joined Skinner in 1927, became technical director and Skinner's activities were curtailed. In the same year Skinner, after increasing disagreement with Harrison over tonal matters, began a new company in Methuen, Massachusetts, with his son, Richmond, who had purchased the former Methuen Organ Co. factory and Serlo Hall the previous year.

During the 1930s the Aeolian-Skinner Co. continued to rise in popularity, and in 1940 Harrison became president, succeeding Arthur Hudson Marks (1874–1939), a wealthy businessman who had become its owner and president in 1919. Under Harrison the firm became a leader in the trend away from orchestral tonal practices and towards a more classical sound. It was Harrison who coined the term 'American Classic' to refer to this more eclectic type of tonal design. On his death, Joseph S. Whiteford (1929–78), a lawyer and majority stockholder, became president. Although he had some experience of organ building, he did not possess Skinner's or Harrison's background, and under him a slow decline began. In the early 1960s he withdrew his interest, and Donald M. Gillett, the head voicer, became president. In 1968 Robert L. Sipe (*b* 1940), who for ten years had been building organs in Dallas, joined the company; he became vice-president and tonal director in 1970. A year earlier the firm had moved to new premises in Randolph, Massachusetts. The move did not improve the firm's financial standing, which continued to worsen in spite of drastic cutbacks. Nevertheless, in 1970 Aeolian-Skinner built its first mechanical-action organ for Zumbro Lutheran Church, Rochester, Minnesota. However, by 1972 the firm was forced to leave its new quarters and reorganize. Gillett left to become tonal director for M.P. Möller, Sipe returned to Texas and his own business, and Emil David Knutson, chairman of the board, became president. Less than a year later the firm's few remaining assets were sold and it ceased to exist.

At the peak of its career Aeolian-Skinner built many organs for notable churches, halls and colleges, including Grace Cathedral, San Francisco (1934), Symphony Hall, Boston (1950), the Mother Church, Boston (1952), Riverside Church, New York (1955), Lincoln Center, New York (1962, later moved), and Kennedy Center, Washington, DC (1969).

Aeolina [Aeoline] (i). A free-reed keyboard instrument. Bernhard Eschenbach and his cousin J.C. Schlimbach built their Aeoline about 1810; later developments include Voit's Aeolikon (patented 1820) and Charles Wheatstone's Aeolina (patented 1828). *See* REED ORGAN, §1.

Aeolina (ii). *See under* ORGAN STOP.

Aeoliphone. *See* WIND MACHINE.

Aeolodikon [Aeolodicon] (i). A free-reed keyboard instrument, patented by one Voit in 1820. *See* REED ORGAN, §1.

Aeolodikon (ii). *See* ORGAN STOP (*Aeolina*).

AEPI [Société Anonyme Hellénique pour la Protection de la Propriété Intellectuelle]. *See* COPYRIGHT, §VI (under Greece).

Aerophon. *See* AEROPHOR.

Aerophone. General term for musical instruments that produce their sound by setting up vibrations in a body of air. Aerophones form one of the original four classes of instruments (along with idiophones, membranophones and chordophones) in the hierarchical classification devised by E.M. von Hornbostel and C. Sachs and published by them in *Zeitschrift für Ethnologie* in 1914 (Eng. trans. in *GSJ*, xiv, 1961, pp.3–29, repro. in *Ethnomusicology: an Introduction*, ed. H. Myers, London, 1992, pp.444–61). Their system, which draws on that devised by Victor-Charles Mahillon for the Royal Conservatory in Brussels and is widely used today, divides instruments into groups which employ air, strings, membranes or sonorous materials to produce sounds. Various scholars, including Galpin (*Textbook of European Instruments*, London, 1937) and Sachs (*History of Musical Instruments*, New York, 1940), have suggested adding electrophones to the system, but it has not yet been formally extended.

Aerophones are subdivided into 'free aerophones' (e.g. the bullroarer), in which vibrations are set up in a body of air unconfined by the structure of the instrument, and wind instruments where the air is enclosed inside a tube or vessel. The latter group includes those instruments where sound is produced by directing a stream of air

against an edge (flutes and duct flutes), by the vibration of a reed, or by the vibration of the player's lips. Each category is further subdivided according to the more detailed characteristics of an instrument. A numeric code, similar to the class marks of the Dewey decimal library classification system, indicates the structure and physical function of the instrument. The Hornbostel-Sachs classification (from the *GSJ* translation, with minor alterations) follows as an appendix to this article.

For further information on the classification of instruments in general *see* INSTRUMENTS, CLASSIFICATION OF.

APPENDIX

4 *Aerophones*: the air itself is the vibrator in the primary sense
41 *Free aerophones*: the vibrating air is not confined by the instrument
411 *Displacement free aerophones*: the airstream meets a sharp edge, or a sharp edge is moved through the air. In either case a periodic displacement of air occurs to alternate flanks of the edge (whip, sword-blade)
412 *Interruptive free aerophones*: the airstream is interrupted periodically
412.1 *Idiophonic interruptive aerophones or reeds*: the airstream is directed against a lamella, setting it in periodic vibration to interrupt the stream intermittently. In this group also belong reeds with a 'cover', i.e. a tube in which the air vibrates only in a secondary sense, not producing the sound but simply adding roundness and timbre to the sound made by the reed's vibration: generally recognizable by the absence of finger-holes (organ reed stops)
412.11 *Concussion reeds*: two lamellae make a gap which closes periodically during their vibration (a split grass-blade)
412.12 *Percussion reeds*: a single lamella strikes against a frame
412.121 *Individual percussion reeds*: found in British Columbia
412.122 *Sets of percussion reeds* (the earlier reed stops of organs)
412.13 *Free reeds*: the lamella vibrates through a closely fitting slot
412.131 *(Individual) free reeds* (single-note motor horn)
412.132 *Sets of free reeds*: NB in instruments like the Chinese *sheng* the finger-holes do not serve to modify the pitch and are therefore not equivalent to the finger-holes of other pipes (reed organ, mouth organ, accordion)
412.14 *Ribbon reeds*: the airstream is directed against the edge of a stretched band or ribbon. The acoustics of this process has not yet been studied – found in British Columbia
412.2 *Non-idiophonic interruptive instruments*: the interruptive agent is not a reed
412.21 *Rotating aerophones*: the interruptive agent rotates in its own plane (sirens)
412.22 *Whirling aerophones*: the interruptive agent turns on its axis (bullroarer, whirring disc, ventilating fan)
413 *Plosive aerophones*: the air is made to vibrate by a single density stimulus condensation shock (pop guns)
42 *Wind instruments proper*: the vibrating air is confined within the instrument itself
421 *Edge instruments or flutes*: a narrow stream of air is directed against an edge
421.1 *Flutes without duct*: the player creates a ribbon-shaped stream of air with his lips
421.11 *End-blown flutes*: the player blows against the sharp rim at the upper open end of a tube
421.111 *(Single) end-blown flutes*
421.111.1 *Open single end-blown flutes*: the lower end of the flute is open
421.111.11 *Without finger-holes*: found in Bengal
421.111.12 *With finger-holes*: found almost worldwide
421.111.2 *Stopped single end-blown flutes*: the lower end of the flute is closed
421.111.21 *Without finger-holes* (the bore of a key)
421.111.22 *With finger-holes*: found especially in New Guinea
421.112 *Sets of end-blown flutes or panpipes*: several end-blown flutes of different pitch are combined to form a single instrument
421.112.1 *Open panpipes*
421.112.11 *Open (raft) panpipes*: the pipes are tied together in the form of a board, or made by drilling tubes in a board – found in China
421.112.2 *Open bundle (pan)pipes*: the pipes are tied together in a round bundle – found in the Solomon Islands, New Britain, New Ireland and the Admiralty Islands
421.112.21 *Stopped panpipes*: found in Europe and South America
421.112.3 *Mixed open and stopped panpipes*: found in the Solomon Islands and South America
421.12 *Side-blown flutes*: the player blows against the sharp rim of a hole in the side of the tube
421.121 *(Single) side-blown flutes*
421.121.1 *Open side-blown flutes*
421.121.11 *Without finger-holes*: found in south-west Timor
421.121.12 *With finger-holes* (European flute)
421.121.2 *Partly stopped side-blown flutes*: the lower end of the tube is a natural node of the pipe pierced by a small hole – found in north-west Borneo
421.121.3 *Stopped side-blown flutes*
421.121.31 *Without finger-holes*
421.121.311 *With fixed stopped lower end* (apparently non-existent)
421.121 312 *With adjustable stopped lower end* (piston flutes) – found in Malacca [now West Malaysia] and New Guinea
421.121.32 *With finger-holes*: found in east Bengal and Malacca [now West Malaysia]
421.122 *Sets of side-blown flutes*
421.122.1 *Sets of open side-blown flutes* (chamber flute orum)
421.122.2 *Sets of stopped side-blown flutes*: found in north-west Brazil, among the Siusi
421.13 *Vessel flutes (without distinct beak)*: the body of the pipe is not tubular but vessel-shaped – found in Brazil (Karaja) and the Lower Congo (Bafiote)
421.2 *Flutes with duct, or duct flutes*: a narrow duct directs the airstream against the sharp edge of a lateral orifice
421.21 *Flutes with external duct*: the duct is outside the wall of the flute; this group includes flutes with the duct chamfered in the wall under a ring-like sleeve and other similar arrangements
421.211 *(Single) flutes with external duct*
421.211.1 *Open flutes with external duct*
421.211.11 *Without finger-holes*: found in China and Borneo
421.211.12 *With finger-holes*: found in Indonesia
421.211.2 *Partly stopped flutes with external duct*: found in Malacca [now West Malaysia]
421.211.3 *Stopped flutes with external duct*
421.212 *Sets of flutes with external duct*: found in Tibet
421.22 *Flutes with internal duct*: the duct is inside the tube. This group includes flutes with the duct formed by an internal baffle (natural node, block of resin) and an exterior tied-on cover (cane, wood or hide)
421.221 *(Single) flutes with internal duct*
421.221.1 *Open flutes with internal duct*
421.221.11 *Without finger-holes* (European signalling whistle)
421.221.12 *With finger-holes* (recorder)
421.221.2 *Partly stopped flute with internal duct*: found in India and Indonesia
421.221.3 *Stopped flutes with internal duct*
421.221.31 *Without finger-holes*
421.221.311 *With fixed stopped lower end* (European signalling whistle)
421.221.312 *With adjustable stopped lower end* (piston pipes [swanee whistle])
421.221.4 *Vessel flutes with duct*
421.221.41 *Without finger-holes* (zoomorphic pottery whistles) – found in Europe and Asia
421.221.42 *With finger-holes* (ocarina)
421.222 *Sets of flutes with internal duct*
421.222.1 *Sets of open flutes with internal duct*
421.222.11 *Without finger-holes* (open flue stops of the organ)
421.222.12 *With finger-holes* (double flageolet)
421.222.2 *Sets of partly stopped flutes with internal duct* (*Rohrflöte* stops of the organ)
421.222.3 *Sets of stopped flutes with internal duct* (stopped flue stops of the organ)
422 *Reedpipes*: the airstream has, through means of two lamellae placed at the head of the instrument, intermittent access to the column of air which is to be made to vibrate
422.1 *Oboes*: the pipe has a [double] reed of concussion lamellae (usually a flattened stem)
422.11 *(Single) oboes*
422.111 *With cylindrical bore*
422.111.1 *Without finger-holes*: found in British Columbia
422.111.2 *With finger-holes* (aulos, crumhorn)

422.112 *With conical bore* (European oboe)
422.12 *Sets of oboes*
422.121 *With cylindrical bore* (double aulos)
422.122 *With conical bore*: found in India
422.2 *Clarinets*: the pipe has a [single] 'reed' consisting of a percussion lamella
422.21 *(Single) clarinets*
422.211 *With cylindrical bore*
422.211.1 *Without finger-holes*: found in British Columbia
422.211.2 *With finger-holes* (European clarinet)
422.212 *With conical bore* (saxophone)
422.22 *Sets of clarinets*: found in Egypt (*zummara*)
422.3 *Reedpipes with free reeds*: the reed vibrates through [at] a closely fitted frame. There must be finger-holes, otherwise the instrument belongs to the free reeds 412.13 – found in South-east Asia
422.31 *Single pipes with free reeds*
422.32 *Double pipes with free reeds*
423 *Trumpets*: the airstream passes through the player's vibrating lips, so gaining intermittent access to the air column which is to be made to vibrate
423.1 *Natural trumpets*: without extra devices to alter pitch
423.11 *Conches*: a conch shell serves as trumpet
423.111 *End-blown*
423.111.1 *Without mouthpiece*: found in India
423.111.2 *With mouthpiece*: found in Japan
423.112 *Side-blown*: found in Oceania
423.12 *Tubular trumpets*
423.121 *End-blown trumpets*: the mouth-hole faces the axis of the trumpet
423.121.1 *End-blown straight trumpets*: the tube is neither curved nor folded
423.121.11 Without mouthpiece (some alphorns)
423.121.12 *With mouthpiece*: found almost worldwide
423.121.2 *End-blown horns*: the tube is curved or folded
423.121.21 *Without mouthpiece*: found in Asia
423.121.22 *With mouthpiece* (lurs)
423.122 *Side-blown trumpets*: the mouth-hole is in the side of the tube
423.122.1 *Side-blown straight trumpets*: found in South America
423.122.2 *Side-blown horns*: found in Africa
423.2 *Chromatic trumpets*: with extra devices to modify the pitch
423.21 *Trumpets with finger-holes* (cornetti, key bugles)
423.22 *Slide trumpets*: the tube can be lengthened by extending a telescopic section of the instrument (European trombone)
423.23 *Trumpets with valves*: the tube is lengthened or shortened by connecting or disconnecting auxiliary lengths of tube – found in Europe
423.231 *Valve bugles*: the tube is conical throughout
423.232 *Valve horns*: the tube is predominantly conical
423.233 *Valve trumpets*: the tube is predominantly cylindrical

Suffixes for use with any division of this class:
6 with air reservoir
61 with rigid air reservoir
62 with flexible air reservoir
7 with finger-hole stopping
71 with keys
72 with *Bandmechanik* [presumably a perforated roll or ribbon]
8 with keyboard
9 with mechanical drive

Appendix reprinted from Hornbostel and Sachs, 1914 (by permission of Limbach Verlag, Berlin); Eng. trans., 1961/R

HOWARD MAYER BROWN/FRANCES PALMER

Aerophor [Aerophon]. A device invented by the German flautist Bernhard Samuels in 1911. By means of a tube with a mouthpiece, it provides players of wind instruments with air from bellows operated by the foot and thus enables them to sustain notes indefinitely as on the organ. Although Richard Strauss called for it in his *Alpensinfonie* (1911–15) and *Festliches Präludium* (1913), it has never found general acceptance.

□

Aerosmith. American hard rock band. Formed in 1970, the band's best-known line-up was Steven Tyler (Steven Tallerico; *b* New York, 26 March 1948; vocals), Joe Perry (*b* Boston, 10 Sept 1950; guitar), Brad Whitford (*b* Reading, MA, 23 Feb 1952; guitar), Tom Hamilton (*b* Colorado Springs, CO, 31 Dec 1951; bass) and Joey Kramer (*b* New York, 21 June 1950; drums). The band was initially dismissed by critics, who saw them as imitators of the Rolling Stones, in part because of Tyler's physical resemblance to Mick Jagger. However, by 1976 they were major stars and ended up being very influential on subsequent bands in their own right. Although sometimes considered a heavy metal band, their loose rhythmic feel, Perry's blue-style guitar solos and Tyler's diverse lyrical topics separate them from that genre. They have succeeded with riff-oriented rock songs but also power ballads such as *Dream on* (1973); the exceptionally supple voice of Tyler, the lead singer, has performed both sensitive ballads and with a convincing rock swagger. Drug problems derailed Aerosmith for a time, but the band managed an extraordinary comeback in the late 1980s. Many of their songs dealt with such standard topics as rebellion, danger and love, using familiar rock musical techniques, but the collaboration of Tyler and Perry with the rappers Run-D.M.C. on *Walk this way* (1986) helped bring rap music to mainstream attention; a song that frankly and sympathetically addressed the problem of incest, *Janie's got a gun* (1989), won a Grammy award in 1990. Their most critically-celebrated album was *Rocks* (CBS, 1976). (Aerosmith with S. Davis: *Walk This Way: the Autobiography of Aerosmith*, New York, 1997)

Aertssens [Aertsen], **Hendrik** (*b* Antwerp, bap. 22 May 1586; *d* Antwerp, bur. 14 April 1658). Flemish printer, active in Antwerp. He issued his first publication in 1613 and in 1640 his son Hendrik Aertssens (ii) (*b* Antwerp, bap. 17 April 1622; *d* Brussels, 30 Sept 1663) joined the firm. The Aertssens were well known for their publications of sacred vernacular songs, particularly *Het paradys der gheestelycke en kerckelycke lofsanghen* which was reprinted five times. Hendrik Aertssens (iii) (*b* Antwerp, bap. 27 Dec 1661; *d* Antwerp, 16 July 1741) also became a printer, obtaining his patent in 1686. He continued the work of his stepfather Lucas de Potter and his mother. By clever scheming he managed to establish a virtual monopoly of music publishing for the Flemish region; however, his publications, mostly reprints and mainly of Italian music, were criticized by contemporaries, including Sir John Hawkins, for their poor typography.

GODELIEVE SPIESSENS

Aeschylus [Aischylos] (*b* Eleusis [now Elevsina], 525 BCE; *d* Gela [now Terranuova], Sicily, 456 BCE). Greek tragic poet. He wrote about 80 dramas, tragedies and satyr plays, of which eight, all tragedies, have survived.

1. Aeschylus and music. 2. Later treatments.

1. AESCHYLUS AND MUSIC. Probably the earliest of Aeschylus's plays was the *Persians* (472 BCE), which celebrated the Greek victory over vast invading forces led by Xerxes; set at the Persian court, the play is one long lament. With one exception (the singing of a paean by the Greeks, 393), the references to music emphasize the tone of mourning: 'there resounds a song unlike that of victory' (*kelados ou paiōnios*, 605). The hymns of the Persians are directed to the dead (619–20, 625) and their singing is a cry of pain (1043, *iuze melos*). In the remarkably extended sequence of strophic lyrics with which the play closes (852–1076), the chorus speaks of the lamentation of a Mariandynian mourner (939). The scholiast on this line referred to a saying about playing on Mariandynian auloi, famous for the playing of dirges, in the Iastian (or Ionian) mode; the resulting problem of modal ethos remains unresolved.

The *Seven against Thebes* (467 BCE) chronicles the doomed attackers at the city's seven gates and the deaths of two brothers in civil war; hence the women must sing a 'loathsome paean' (870), a paradoxical phrase.

In the *Suppliant Maidens* (?463 BCE) the daughters of Danaus, who have taken refuge in Argos from insistent suitors, form the chorus. Distraught, they speak of themselves (69; cf scholium on *Persians*, 939) as 'fond of grieving in Ionian patterns of melody', high-pitched songs suited to lamentation (112–16), and of Ares as 'without dance, without lyre' (681, *achoron, akitharin*). Once assured of protection, they sing hopefully of a blessed Argos, a place of singers before the altars and of 'song that loves the lyre' (694–7). The *Oresteia* (458 BCE), the only extant trilogy, contains more references: there is a notable long interchange (*kommos*) between the chorus and the frenzied Cassandra in the *Agamemnon*, and the following plays contain two choral passages: the savage invocation of the dead Agamemnon and the 'binding hymn' (*desmios hymnos*) of the Erinyes, who, as benevolent powers, are escorted from the stage in a joyous closing processional. The references are always appropriate in mood to their dramatic context and Aeschylus's chief concern in making them was to establish a contrast or paradox. The celebrated refrain of the opening chorus of the *Agamemnon* is an example: 'Sing sorrow, sorrow: but good win out in the end' (121, 159, trans. R. Lattimore, Chicago, 1953/*R*; on *ailinon*, *see* LINUS). The songs mentioned in the trilogy are almost all sorrowful or give way to laments, until the downward movement is reversed and the *Eumenides* ends with the triumphant singing of the processional.

Throughout the *Oresteia* auloi are unmentioned; the lyra is noted only as having no part in the real or imagined hymn of the Erinyes (*Agamemnon*, 990, *akitharin*; *Eumenides*, 332–3, *aphormingtos*). There are repeated mentions, however, of the ritual forms of song, paean, dirge, *nomos* and hymn; these are not mere repetitions but are enriched and made individual by their contexts.

The treatment of music elsewhere in Aeschylus's work corresponds to that in the *Oresteia*. None of the basic terms for the reed pipes or the lyre (*aulos, kithara, lyra, phorminx*) occurs, and when any of them appears in a compound term or in a phrase, the usual effect is paradoxical or ironical; *philophorminx* (*Suppliant Maidens*, 697, noted above) is an exception.

Nothing is definitely known about performing practice of music in Aeschylus's plays (*see* EURIPIDES).

See also ARISTOPHANES, and GREECE, §I.

2. LATER TREATMENTS. Of the surviving tragedies, the *Seven against Thebes* and the *Persians* have not provided opera texts. Early opera generally avoided the craggy splendour of Aeschylus, perhaps concurring with Quintilian's view that he was uncouth. The *Suppliant Maidens* was used by Metastasio for his libretto *Ipermestra* (1744), set by some 30 composers, and Salieri took a French translation of a Calzabigi text for *Les Danaïdes* (1784). Some doubt has been cast on the authenticity of *Prometheus*, but the play has been the basis for operas by Fauré (1900), Emmanuel (composed 1916–18), Cortese (1951) and Orff (1968). The *Suppliant Maidens* has inspired Emmanuel's *Salamine* (1929), and the three plays of the *Oresteia* have been used by Taneyev (1895) and Weingartner (1902). Cuclin founded his *Agamemnon* (composed 1922) on the trilogy, as did Pizzetti his *Clitennestra* (1965) and J.C. Eaton *The Cry of Clytaemnestra* (1980).

A number of composers have written incidental music for sites notable for their tradition of Greek drama: Evanghelatos (*Persians*), Pallandios (*Oresteia*) and Varvoglis (*Agamemnon* and *Persians*), for Greece itself; Mulè (*Choephori*, 1921) and Pizzetti (*Agamemnon*, 1931), for the open-air theatre at Syracuse, Sicily; Stanford (*Eumenides*, 1885), Parry (*Agamemnon*, 1900), Demuth (*Prometheus*, 1948) and Patrick Hadley (*Agamemnon*, 1953), for Cambridge, England; and C.F.A. Williams (*Agamemnon*) for the English Bradfield College tradition.

Many French composers have turned to incidental music, among them Halévy (*Prométhée enchainé*, 1849), Leroux (*Les Perses*, 1896), Milhaud (*Oresteia*, composed 1913–22), Jacques Chailley (*Les Perses*, 1936, *Agamemnon*, 1947), Sauguet (*Les Perses*, 1940) and Honegger (*Les suppliantes*, 1941, *Prométhée*, 1946). Others producing incidental music to the plays have been Max von Schillings (*Orestie*, 1901), Marion Bauer (*Prometheus Bound*, 1930), Percival Kirby (*Agamemnon*) and Wilfrid Mellers (*Prometheus*, 1947).

Wagner-Régeny called his *Prometheus* (1959) a 'Szenisches Oratorium'; orchestral works include Karl Goldmark's overture *Der gefesselte Prometheus* (1889), the symphonic trilogy *La Orestiada* of Manrique de Lara (1890), a *Eumenides* symphonic prologue by William Wallace (1893), and Luigi Cortese's suite from his opera *Prometeo* (1947).

Aesthetics of music. *See* PHILOSOPHY OF MUSIC.

Aetheria. *See* EGERIA.

Aevia [Aeuia]. A technical pseudo-word formed from the vowels of 'Alleluia' and used in medieval service books as an abbreviation in the same manner as EVOVAE. Steinmeyer has shown that the abbreviation of biblical words and phrases through the use of the vowels alone was not unusual even as early as the second half of the 11th century. *Aevia* and *Evovae*, however, are in a special category since both sprang from a musical rather than a purely scribal necessity, i.e. to show singers the exact underlay of syllables; *Aevia* appears to have been used less frequently than *Evovae*.

Unless little space was available, scribes preparing pages for musical notation generally preferred to write the word 'alleluia' in full. For simple settings, they might use one of the normal scribal abbreviations, such as 'allā'. However, of all the forms of abbreviation *Aevia* was the only one that could show with precision the correct underlay of the text in a florid musical setting.

WILLIAM S. ROCKSTRO/MARY BERRY

Afanassiev, Valery (*b* Moscow, 8 Sept 1947). Russian pianist, conductor, writer and poet. A student of Yakov Zak and Emil Gilels at the Moscow Conservatory (1965–73), he won the 1968 Leipzig Bach Competition, four years later taking the gold medal at the Queen Elisabeth Competition in Brussels. After seeking political asylum in Belgium in 1974, he settled in France in 1980, but since 1989 he has returned regularly to his native country for concerts and recordings. Intent on philosophical truths more than absolutes of pianistic finish, placing emotions of the mind and spirit above 'outward prettiness', Afanassiev is a provocatively inspirational artist, indebted on his own admission to many of the great individualists of the past: Gilels, Gould, Horowitz, Michelangeli, Rachmaninoff and Sofronitsky all receive tribute in his 'Homages & Ecstasies' album (1996). Partial to mono/duographic programming, with a repertory extending from Froberger to Crumb, his extensive discography includes Bach (Book 1 of *Das wohltemperierte Klavier*), Mozart, Beethoven (late works, Sixth Symphony), Schubert (final sonatas, violin works, *Schwanengesang*), Schumann, Brahms and Musorgsky. Since 1974 Afanassiev has written nine novels on the theme of 'human mythology' (seven originally in English, two in French), stories and poems, various essays, and two one-man plays for actor/pianist (himself) inspired by Schumann's *Kreisleriana* and Musorgsky's *Pictures at an Exhibition*. He took Belgian nationality in 1979.

ATEŞ ORGA

Afanas'yev, Nikolay Yakovlevich (*b* Tobol'sk, 31 Dec/12 Jan 1821; *d* St Petersburg, 22 May/3 June 1898). Russian violinist and composer. He received his musical education from his father, the violinist Yakov Ivanovich Afanas'yev, an illegitimate son of the writer and poet Prince Ivan Dolgorukov. In 1836 he made his début as a violinist in Moscow, and two years later was appointed leader of the Bol'shoy Theatre Orchestra. He resigned in 1841 to become conductor of the serf orchestra maintained by the wealthy landowner I.D. Shepelyov at Vïksa, near St Petersburg. In 1846 he decided to pursue a career as a solo violinist and toured the major provincial cities of Russia, settling in St Petersburg in 1851. There he made occasional appearances as a soloist, and also led the orchestra of the Italian Opera, sometimes deputizing for the regular conductor. In 1853 he became a piano teacher at the Smol'nïy Institute and relinquished his orchestral post. He visited western Europe in 1857, performing with some success in Germany, France, England, Switzerland and Italy.

On his return to Russia, Afanas'yev decided to devote himself to composition. He was a prolific composer, at his best in small-scale works; in these there is less evidence of the uneven quality of his technical skill, the result of his very informal musical education. His chamber music was well received: his string quartet *Volga* (*c*1860) was awarded a prize by the Russian Musical Society in 1861. His operas, however, met with little success: *Ammalat-bek* was performed at the Mariinsky Theatre in 1870, but has not been revived. *Sten'ka Razin* was rejected by the censor, and *Vakula-kuznets* ('Vakula the Smith'), composed for the competition which was won by Tchaikovsky in rather suspicious circumstances (1875), was never performed. Other operas, as well as several orchestral works, remain in manuscript. Many of Afanas'yev's more attractive pieces reflect his interest in Russian folk music, making effective use of folksong and rhythms associated with folk dances. In 1866 he published a popular anthology of folksongs arranged for four-part choir. He drew on his experiences as a touring musician to present a fascinating survey of the musical life in mid-19th-century Russia in his memoirs (1890). In 1896 he was made an honorary member of the Russian Musical Society.

WORKS

all unpublished, unless otherwise stated; MSS in RUS-SPk

VOCAL

Taras Bul'ba (op, after N.V. Gogol), 1860s
Vakula-kuznets [Vakula the Smith] (op, after Gogol: *Noch' pered rozhdestvom* [Christman Eve]), 1860s

JENNIFER SPENCER

Afat (*fl* ?*c*1430). Composer, possibly Italian. He may have been active in Brescia, if that is indeed the origin of the manuscript *I-Bu* 2216, which contains his only known work. This is a Sanctus (ed. in MLMI, 3rd ser., Mensurabilia, iii, vol.ii, 1970, pp.86–8), written in major prolation, with two equal high voices in florid style over a tenor.

TOM R. WARD/DAVID FALLOWS

Affects, theory of the (Ger. *Affektenlehre*). In its German form, a term first employed extensively by German musicologists, beginning with Kretzschmar, Goldschmidt and Schering, to describe in Baroque music an aesthetic concept originally derived from Greek and Latin doctrines of rhetoric and oratory. Just as, according to ancient writers such as Aristotle, Cicero and Quintilian, orators employed the rhetorical means to control and direct the emotions of their audiences, so, in the language of classical rhetoric manuals and also Baroque music treatises, must the speaker (i.e. the composer) move the 'affects' (i.e. emotions) of the listener. It was from this rhetorical terminology that music theorists, beginning in the late 16th century, but especially during the 17th and 18th centuries, borrowed the terminology along with many other analogies between rhetoric and music. The affects, then, were rationalized emotional states or passions. After 1600 composers generally sought to express in their vocal music such affects as were related to the texts, for example sadness, anger, hate, joy, love and jealousy. During the 17th and early 18th centuries this meant that most compositions (or, in the case of longer works, individual sections or movements) expressed only a single affect. Composers in general sought a rational unity that was imposed on all the elements of a work by its affect. No single 'theory' of the affects was, however, established by the theorists of the Baroque period. But beginning with Mersenne and Kircher in the mid-17th century, many theorists, among them Werckmeister, Printz, Mattheson, Marpurg, Scheibe and Quantz, gave over large parts of their treatises to categorizing and describing types of affect as well as the affective connotations of scales, dance movements, rhythms, instruments, forms and styles.

The so-called THEORY OF MUSICAL FIGURES was closely related to the compositional craft required for the establishing of affects in Baroque music.

GEORGE J. BUELOW

Affectueusement (Fr.). *See* AFFETTUOSO.

Affekt (Ger; It. *affetto*). *See under* AFFECTS, THEORY OF THE.

Affettuoso (It.: 'affectionate', 'loving'). A word used in musical scores to indicate an affectionate or affect-conscious style of performance, used as a qualification to tempo designations, as a tempo (and mood) designation in its own right, and as a mark of expression. Other related forms include *con affetto*, the noun *affetto*, the adverb *affettuosamente* (all three mentioned in Brossard's *Dictionaire* of 1703), *affetti* (Marini), the French cognate and equivalent *affectueusement* and the commonly encountered misspelling *affetuoso*. Brossard also mentioned the superlative forms *affettuoso affettuoso* and *affettuosissimo*, translating them *fort tendrement*.

As might be imagined, the various forms appear often in 17th-century discussions of music, and indeed of the other arts: Caccini (*Le nuove musiche*, 1601/2/*R*) mentioned *esclamazione affettuosa*; Frescobaldi (preface to *Toccate e partite*, 1615) stated that the runs should be taken *men velocemente et affettuoso*; Francesco Rognoni (1620) mentioned a violin bowing he called *lireggiare affettuoso*; and Monteverdi directed that the lament in his *Lamento della ninfa* (1638) should be performed in 'tempo dell'affetto del animo e non quello de la mano', which presumably implies a fluid and variable beat. But its actual appearances in musical sources are scarce before the 18th century: François Couperin (using *affectueusement*) and Gottlieb Muffat were among the earliest in a series of composers who favoured it as a tempo and expression mark for their slow movements. The theorists were almost unanimous in placing it between *adagio* and *andante* as an independent tempo designation; and as a qualification it appeared most often with *largo*, *adagio* and *larghetto*. Perhaps the most famous use of *affettuoso* is in the second movement of Bach's Fifth Brandenburg Concerto: the formality and delicacy of that movement should be sufficient to explain why the word went out of fashion in the 19th century.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Affilard, Michel l'. *See* L'AFFILARD, MICHEL.

Affinalis [confinalis] (Lat.). In medieval theory, the FINAL of a transposed MODE. Commonly, *a* was the *affinalis* of the Dorian or Hypodorian mode transposed up a 5th and the Phrygian or Hypophrygian mode transposed up a 4th; *b* was the *affinalis* of the Phrygian or Hypophrygian mode transposed up a 5th; and *c′* was the *affinalis* of the Lydian or Hypolydian mode transposed up a 5th.

Affinitas (Lat.). A term first used by GUIDO OF AREZZO for the relationship between certain tones in the medieval gamut, specifically between a modal final and a tone a fifth above or a fourth below (sometimes referred to as the *affinalis*); specifically, each pair of tones, such as *d* and *a*, share a particular pattern of surrounding tones and semitones within the six-note diatonic segments *c–a* and *g–e′*. This concept was recognized earlier, though not as systematically, by Hucbald and the authors of *Musica enchiriadis* and *Scolica enchiriadis* (who used the term *socialitas*) and by the anonymous author of the *Dialogus de musica* (who used *similitudo*). By recognizing this feature of their gamut, theorists were able to reconcile an inherited chant repertory with the eight-mode system. Specifically, it allowed them to preserve chants with aberrant tones by notating them at the position of the *affinalis*, where the same tone–semitone arrangement prevails; for example, a first-mode chant with a B♭ (theoretically non-existent) could be notated at the *a* position where B♭ becomes f. The medieval concept of transposition is essentially tied to the concept of *affinitas*, based on tones sharing a particular core interval pattern, rather than to a scalar concept. *Affinitas* provided the basis for discussions of hexachords and *coniunctae* from the 13th century to the 15th, and continued to be mentioned even after the rise of octave species theory in the early 16th century.

DOLORES PESCE

Affré, Agustarello (*b* St Chinian, 23 Oct 1858; *d* Cagnes-sur-Mer, 27 Dec 1931). French tenor. For 20 years he was a principal lyric-heroic tenor at the Opéra in Paris. Its director, Pierre Gailhard, had heard him in the provinces and arranged for lessons with Victor Duvernoy. Affré's house début as Edgardo in 1890 coincided with Melba's, in *Lucia di Lammermoor*. He developed a large repertory, appearing in Gluck's *Armide* and also in the first performances at the Opéra of *Entführung* and *Pagliacci*. In 1891 he sang in the première of *Le mage* by Massenet, who found his voice 'vibrant as pure crystal'. At Covent Garden in 1909 his roles were Faust and Saint-Saëns's Samson. He went to the USA in 1911, appearing at San Francisco and New Orleans where in 1913 he became director of the Opera. He was a prolific recording artist and sang Romeo in one of the earliest complete operatic recordings (1912), the firmness and power of his tone showing why he was often described as the French Tamagno.

J.B. STEANE

Affrettando (It.: 'hurrying', 'quickening'; gerund of *affrettare*). An instruction to increase the tempo, with the implication of increased nervous energy. The distinction between *affrettando* and *accelerando* or *stringendo* is largely academic but is suggested by Verdi's marking at the end of the 'Lux aeterna' in his Requiem over some woodwind arpeggiated semiquaver figuration, *dolciss. con calma senza affrettare* (in the manuscript, though the published score contains the incorrect reading *affretare*), 'very sweetly, calm and without any hurry'. The past participle *affrettato* ('hurried') is also found and indicates the arrival of a faster tempo, which then remains steady. Both forms occur primarily in Italian music of the later 19th and early 20th centuries.

DAVID FALLOWS

Afghanistan. Country in Central Asia.

I. General. II. Regional styles.

I. General

Musical life in Afghanistan has been severely disrupted by warfare since 1978. By the end of the 20th century the Taliban movement controlled 90% of the country, including all major cities. In the areas under Taliban control no musical instruments are permitted in public or private, and all forms of music save unaccompanied singing are prohibited. In other areas conditions are little better: most former professional musicians are refugees in Iran, Pakistan, Europe and North America. This article describes some aspects of music culture which are currently dormant, but no doubt music will re-emerge in due course, quite possibly not much changed.

1. Ethnic and geographic distribution. 2. Historical considerations. 3. The role of music in Afghan life. 4. Religious singing. 5. Afghan art music. 6. Musical instruments: (i) Chordophones (ii) Aerophones (iii) Membranophones (iv) Idiophones.

1. ETHNIC AND GEOGRAPHIC DISTRIBUTION. Afghanistan is situated at the juncture of three major cultural areas: Central Asia, the Middle East and India. Each area has exercised a strong influence on Afghanistan at various points in history. In its ethnic origin, language and topography, Afghanistan is more clearly related to Central Asia and the Middle East than to India. The present-day boundaries of Afghanistan (fixed *c*1895) enclose extensions of the Iranian Plateau to the west and south, the Turkestani steppe-desert to the north and the foothill boundary region of India to the east. All these areas surround the great central mountain chain, which links up with the Pamir in the far north-east (fig.1).

Afghanistan's peoples embody this mixed background. The majority of the population is 'Iranian', falling into two main groups. Some 50% of the total population are Pashtuns (or Pathans), who speak a western Iranian language, Pashto. Pashtuns are mainly found in the south-east. Tajiks constitute perhaps 30% of the total population, concentrated mainly in a broad band extending from the west (Herat) through the north (Turkestan) to the north-east (Badakhshan). The term 'Tajik' applies to a variety of Persian speakers of different origin and dialects.

1. *Map of Afghanistan*

Afghan Persian is officially known as Dari. The Hazaras of central Afghanistan, a large group, also speak Persian, but are not Tajik. Their origin is not clear but they are sometimes identified as the remnants of Genghis Khan's Mongolian army which conquered this region in the 13th century. The two official languages of Afghanistan are Pashto and Persian; most Afghans can communicate in at least one of these.

Turkic peoples, predominantly the Uzbeks and Turkmens, constitute perhaps 10% of the total population, mainly inhabiting the north. Other minority ethnic groups are Baluch, Turkmen, Aimaq, Nuristani, Pamiri, Pashai, Kirghiz and Kazakh.

2. Historical considerations. In 1747 Afghanistan was established as a nation-state by the Pashtun military leader Ahmad Shah Durrani. It was already a region through which Middle Eastern and Central Asian Islamic culture fed into the Indian subcontinent. There was a reciprocal flow of musical ideas from India: Hindustani music such as the vocal genre Dhrupad must have been performed in Afghanistan when the eastern provinces were part of the Moghul Empire (16th–18th centuries).

The political élite of 19th-century Afghanistan who ruled from the capital, Kabul, were persianized Pashtuns, whose eclectic tastes incorporated Persian classical poetry and North Indian art music. In the 1860s the ruling monarch, Amir Sher Ali Khan, brought a number of court musicians from the Punjab to Kabul, where they and their descendants established a bridgehead for North Indian classical (especially vocal) music in Afghanistan. Court music reached its zenith in the 1920s, in the time of the progressive monarch King Amanullah. Thereafter Afghan court music was strongly orientated towards Hindustani music. Musicians cultivated North Indian styles such as vocal *khayāl* and instrumental renditions of rāgas. They also developed two distinctly Afghan genres of art music (see §5 below).

Radio broadcasting from Kabul became a viable medium in the late 1940s and had a powerful influence on music-making in many parts of the country. Its effect is shown in several ways. Radio encouraged the development of new genres of popular music, usually Persian texts performed in the Pashtun musical style. This created a pan-Afghan national music which was copied in many parts of the country and adapted to local regional styles, leading to a certain homogenization of musical taste, since nomad shepherds and wealthy town-dwellers listened to the same broadcasts. Radio has played an important role in the unification of national musical standards and in the creation of an Afghan national identity. Radio broadcasting also gave music a certain respectability and encouraged the emergence of a new phenomenon: male and female 'star' singers such as Nashenas, Hafīzullah Khyāl, Zaland and Mahwash. Amateur performers also felt encouraged, and a thriving musical culture developed.

During much of the 20th century, music enjoyed great popularity, being indispensable at celebrations and entertainments. Before the recent prohibitions, many cities had small theatres where music, song and dance formed a substantial part of the programme. Music used to be performed in teahouses, especially on market days. It was also an important part of the spring fairs regularly held in many parts of the country (most famously in Mazar, with its 40-day festival), and during *Jeshun*, the annual celebration of Afghan independence. In the 1960s it became customary to hold evening concerts during the holy month of Ramadan in cities such as Kabul and Herat.

From 1978, with the onset of civil war, a new politicization of music occurred. Many musicians became refugees, while the communist government in Kabul sought to promote music as a manifestation of the new secularism. The communists used music as a means of propaganda to support the regime. They set up a network of television stations, and music formed an important part of their output. Outside Afghanistan, refugees rarely used live music as a form of resistance, but in Pakistan

Afghan entrepreneurs produced many audio recordings of songs about the war for sale within the local cassette music industry.

In 1992 the communist regime collapsed. Competing religious-based parties took power, and the public role for music was drastically reduced. Many more musicians left Afghanistan, especially when the musicians' quarter in Kabul was repeatedly rocketed (though perhaps not deliberately targeted). As the Taliban movement seized power, all instrumental music was banned.

3. THE ROLE OF MUSIC IN AFGHAN LIFE. Afghan people make an important conceptual difference between music and song. Music implies musical instruments, either used in instrumental music or to accompany song. Song is in a separate category. Poetry is extremely important in Afghan culture, and music is in some respects just one way of delivering a poetic text.

In Afghan life there is a clear gender distinction of musical role. In most cases women do not play or even handle musical instruments except the frame drum and the jew's harp (the latter is also played by children). Men, on the other hand, may play a variety of lutes and fiddles, and generally shun the women's instruments. Outside the small group of professional women singers (urban and radio), there is scarcely any public performance by women; they perform primarily at domestic festivities such as women's wedding parties, when they sing to the accompaniment of the frame drum, and use it to play rhythms for dancing. Despite their limited access to musical instruments, women constitute by far the largest group of performers.

As in many Muslim countries, music in Afghanistan occupies an ambiguous place in the value system, often considered a trivial pursuit, or even downright sinful. The intensity of these negative attitudes has varied over time, and is currently very strong. However, for many people music has strongly positive connotations, being connected with Sufism (Islamic mysticism). Traditionally music has always been considered indispensable in the celebration of rites of passage, particularly weddings, and circumcision and birth celebrations.

Closely related to the ambiguous status of music is the low standing of the professional musician. Members of hereditary musician families, in particular, tend to be low in the social scale. In many parts of the country, musicians are recruited from endogamous communities of barber-musicians. Until recently Pashtuns would never lower themselves to play music, even as amateurs. Their barber-musicians (Dom) are Pashto speakers, but marginalized and not accepted as Pashtuns. However, the hereditary court musicians of Kabul and their descendants enjoyed a higher status than barber-musicians. Many held the honorific title of *ustād* (master musician).

Afghanistan is notable for having many keen amateur musicians, especially among the educated urban middle classes. There is a well-profiled distinction between amateur (*shauqi*) and professional (*kesbi*) status, which relies on two main criteria: recruitment (ascribed or achieved) and economic dependence. The term *shauqi* implies an individual's predilection for a particularly absorbing hobby (e.g. gun-collecting, kite-flying or partridge-fighting). *Shauqi* musicians emphasized their deep love of music and the fact of being self-taught, for having a teacher was thought of as a sign of professionalism. With the new respectability of music engendered by radio broadcasting, in the 1960s and 70s many amateurs turned to music as a way of making their living, but they still clung to their former *shauqi* status. Even a few educated Pashtuns from wealthy families became well-known radio singers, such as Nashenas and AHMED ZĀHIR, the son of a former prime minister.

4. RELIGIOUS SINGING. Several types of religious singing exist, most of them far removed from any Afghan concept of music. Recitation of the Holy Qur'an (*qirā'at*) is a prime example. It is based on a complex set of precepts embodying phonological principles and the rules of Arabic grammar. The call to prayer (*azān*) is also in Arabic; here rather more ornamentation is acceptable. Other kinds of religious singing are in the languages of Afghanistan.

Afghanistan has significant Shi'a populations, especially in Herat, Kabul and the central region occupied by Hazaras (Hazarajat). The Shi'as have their own special kinds of singing connected with the commemoration of the martyrdom of their saints, Husayn and Hasan. *Rowzekhāni* is a style of sermonizing which recounts their martyrdom in a highly emotional manner which leaves the congregation weeping and wailing. This is followed by *nowhe*, a form of antiphonal singing with a leader and a chorus of men who beat their chests in time with their singing, or flagellate themselves with scourges. These

2. Urban-style professional ensembles focussed around a singer/harmonium-player: (a) Amir Mohammad (centre), singer from Kabul, accompanied by (left to right) Gada Mohammad (14-string dutār), Aziz (tanpura), Fazl Ahmad (tablā) and Mohammad Rahim Khushnawaz (rubāb) at a Ramadan concert, Herat city, 1975; (b) Gol Dasteh (left) accompanied by Urak (tablā) and Shahzadeh (daireh) at an engagement party, Herat city, 1974

3. Ensembles focussed around a male singer playing a long-necked lute: (a) Beltun (centre), singer/tanbur player from Kabul region, accompanied by Fayaz Mohammad (dhol) and Tawakhal Shah (rubāb), photographed in the garden of Radio Afghanistan, Kabul, 1960s; (b) Ahmad (right), singer/14-string dutār player, with other 14-string dutār players and Amin Bache Matari (zirbaghali) at a spring fair in the shrine of Imam Shishnur, Herat province, 1977

commemorations occur at various points in the religious calendar, most notably during the month of mourning, Muharram, and the month which follows it (*see* IRAN, §III, 2(ii)).

In the past, Afghanistan was an important centre of Sufism. Even in the modern era various orders were represented, with numerous local brotherhoods organized around individual *pirs* ('living saints'). The principal Sufi ritual is the *dhikr*, the 'recollection of God', in which the Sufis form a circle and recite together a sequence of religious formulae such as *Allah Hu*, 'God is He'. The recitation is performed with forced breathing and complex rhythmic movements of the body and head, and participants may go into a trance-like state which is experienced as union with God. The ritual is regulated by the *pir*, who stands in the centre of the circle, leading the performance and shouting encouragement to his followers. Otherwise he walks round outside the circle helping those who have gone into trance, and physically correcting those whose movements have become uncoordinated. Also outside the circle are one or more singers of religious songs (*na't*). They perform these with great passion, spurring on the devotees.

The *dhikr* does not involve any musical instruments and is not regarded as music, though it is in many respects highly musical. Other forms of Sufi ritual, however, do involve musical instruments. The Chishtī Sufi order has its place of origin in Afghanistan. Its founder, Mu'inuddin Chishtī (*d* 1236), came from the village of Chisht in western Afghanistan. Chishtī Sufism is widespread in Pakistan and North India, but not in Afghanistan. Its adherents perform or listen to *qawwālī* (*see* INDIA, §VI, 2(ii)(b)), religious texts sung to the accompaniment of harmonium, *tablā* and sometimes other instruments in a spiritual concert known as *samā*. Until recently there were several Chishtī gathering places (*khānaqāh*) in Kabul, including one located near the musicians' quarter. On Thursday evenings musicians came to sing religious songs in the Kabuli *ghazal* and popular music styles. Many Kabuli musicians, especially those from hereditary musician families, considered themselves as Chishtī devotees, espousing an ideology which gave music an exalted place within a Muslim framework of belief (*see* ISLAMIC RELIGIOUS MUSIC, §II, 6).

5. AFGHAN ART MUSIC. In the 1860s numerous professional musicians were brought from the Punjab, and from that period two genres of distinctly Afghan art music were developed at the court of Kabul. These were the Kabuli style of *ghazal* singing and an instrumental genre known as *naghma-ye kashāl*.

The *ghazal* is a principal form in Persian and Pashto poetry, consisting of a series of couplets following a particular rhyme scheme. *Ghazal* singing is well-established as a 'semi-classical' form in Hindustani music, and the Kabuli version is related to the Indian model, but with certain local features (*see* INDIA, §IV, 2; PAKISTAN). The Kabuli *ghazal* generally uses Persian texts, often from great poets such as Hafez, Saadi and Bedil. The music is based on the rāgas (melodic modes) and tālas (metrical cycles) of Hindustani music. The most distinctly Afghan feature of the *ghazal* form is a cyclical rhythmic organization with fast instrumental sections closed by emphatic rhythmic cadences, interpolated between units of text. The use of parallel and serial polyrhythm and strong rhythmic cadences are features linked to Pashtun regional music. The Kabuli art of *ghazal* singing requires skill in the interpolation of apposite couplets from other poems. Such an interpolation is called a *fard*, usually sung in free rhythm. This feature derives from Persian or Tajik music, and may be compared with the folk genre known as *chahārbeiti* (see §II, 2(i) below).

The instrumental genre of Afghan art music is called the *naghma-ye kashāl*, literally 'the extended instrumental piece' or *naghma-ye chahār tuk*, 'the four-part instrumental piece'. It is played at the start of a performance of a set of *ghazals*, and is also favoured as a vehicle for virtuoso solo performance, especially on *rubāb*. In its use of rāgas and tālas, this genre has obvious connections with Hindustani instrumental music, yet remains distinctly Afghan.

These two genres of Afghan art music were developed and perfected at the court of King Amanullah in the 1920s. The principal singer at that time was Ustād QĀSEM, the 'father of Afghan music'. He was a master of *ghazal*

singing who combined a deep knowledge of Persian poetry with a broad training in Hindustani music. He and other singers recorded a considerable number of 78 r.p.m. records in India, and these were very popular with people of Kabul. From around that period it became usual for the *ghazal* singer to accompany himself with the harmonium, backed by a small group including *rubāb*, *tablā*, *sārangi* and *delrubā* (both bowed lutes), and the *tānpurā* drone. Apart from the *rubāb*, all these instruments were adopted from India. Early radio broadcasting in Kabul in the 1920s probably helped consolidate this as an Afghan national music.

In due course, these court genres become more widely disseminated to other cities in Afghanistan, such as Kandahar, Herat and Mazar-e Sharif, where musicians from Kabul would perform and acquire local pupils. In recent times the most famous singer from this court tradition was Ustād SARĀHANG, who was also well known in India as a classical singer in the Patiala style. Ustād MOHAMMED OMAR was considered the best of the *rubāb* players, an expert exponent of the *naghma-ye kashāl*. Ex.1 shows his most celebrated *naghma-ye kashāl* composition, in rāg *Yaman*, with its four principal parts: *āstāi*, *antarā*, *bhog* and *sañcāri*.

6. MUSICAL INSTRUMENTS. Afghanistan has many instruments, being particularly rich in lutes. Some instruments are widespread, others of very limited distribution, and many are shared with surrounding regions.

(i) Chordophones. The Afghan *rubāb* (fig.2), a short-necked fretted lute with sympathetic strings, is the prototype of the Indian *sarod*. Afghans consider it with great pride as their national instrument. It is found in all urban areas, used in ensembles and for playing solo instrumental pieces. It has a special connection with Pashtun regional music.

The term *dutār* (literally 'two strings') applies to several types of long-necked lute. The Herati *dutār*, of western Afghanistan, originally had two strings and a system of fretting which gave certain neutral 2nds. From the 1950s this instrument underwent various modifications (size, number of strings, system of fretting), developing into the three-string and 14-string Herati *dutārs* (the latter having many sympathetic strings). The original two-string *dutār* (with its neutral 2nd intervals) exists in eastern Iran as the Khorasani *dutār* (*see* IRAN, §III, 3). In northern Afghanistan, the Uzbek *dutār* is organologically distinct, mainly found in Uzbekistan. The Turkmen *dutār* has a small distribution in Afghanistan; it is found principally in neighbouring Turkmenistan.

The *tanbur* (fig.3*a*) is distinctly Afghan, a long-necked fretted lute with sympathetic strings beside the melodic strings. It is particularly found around Kabul and Mazar-i Sharif. The *dambura* (fig.4) of the north is a long-necked, two-string unfretted lute played largely by Uzbeks and Tajiks but adopted by numerous other ethnic groups. It is also termed *dombra* (Uzbekistan, Kazakhstan) and *dombrak* (Tajikistan). The 'Pamir *rubāb*', marginally used in Afghanistan, is distinct from the Afghan *rubāb*.

Bowed lutes are also played. The *ghidjack* (*ghichak*) is a two-string spike fiddle with a tin-can resonator, widely used by the Tajiks of Badakhshan and perhaps originating with them. It differs markedly from the Transoxanian *ghidjack*. The Pashtun and Baluch bowed *sarinda* (or *saroz*) is shared with the Pashtun and Baluch populations of Pakistan.

(ii) Aerophones. The *sornā* (fig.5), a type of double-reed shawm found throughout the Muslim world, is widely distributed in Afghanistan. It is played only by barber-musicians and has many negative connotations, sometimes being called 'the penis of Satan'. The hand-pumped Indian harmonium (*armonia*) is widely used for urban music-making in all parts of the country. Block-flutes, side-blown flutes and end-blown flutes occur in a variety of shapes and sizes. Long open end-blown flutes are played by the Turkmens (*tüidük*), Pashtuns and Baluch (*nal*, *ney*), and by some Nuristanis. Flutes can be found among some Hazaras (Bamian area), in Kohistan (north of Kabul) and Badakhshan (north-east). Single-reed pipes are represented only by the Turkmen *dili-tüidük*.

(iii) Membranophones. Four types of drum are used. A large single-headed frame drum (*dāireh*, *doira*, *daria*, *daf*) is widespread as a women's instrument, used to accompany singing and to play rhythms for dancing. Other drums are the domain of men. A large double-headed frame drum called *dohol* (fig.5) is played with sticks and used to accompany the *sornā*. Both instruments are played exclusively by barber-musicians. The goblet-shaped single-headed *zirbaghali* ('under the arm') is usually made of pottery, though wooden specimens can also be found.

4. Players of zirbaghali (goblet drum) and dambura (fretless lute), northern Afghanistan, late 1960s

5. Players of sornā (shawm) and dohol (drum) from Chardi near Kabul: (left to right) Gholam Dastegir, Rahmat Khan, Mohammad Hassan, Majeti, photographed in the garden of Radio Afghanistan, Kabul, 1960s

This drum is of Middle Eastern provenance. The two-headed barrel drum, *dohol* or *doholak*, is closely related to the Indian drum of the same name, and is used mainly for Pashtun music. Very large drums of this kind are also played with the *sornā*. The North Indian *tablā* drum pair is widely used for urban music-making.

(iv) Idiophones. Idiophones are principally represented by the popular metal jew's harp (Persian *chang*, Uzbek *changko'uz*) and, in the north, by the small finger cymbals used by singers to mark the beat (Persian *zang*, *tāl*; Uzbek *tüsak*). A pair of stone castanets, *qairāq*, is rarely found today. Northern lutenists often use the *zang-i kaftar* ('dove bells'), a set of small metal crotals tied around the right hand, to accentuate rhythmic patterns. Dancing boys wear sets of ankle bells (*zang*), the sound of which has strong associations with clandestine parties involving *bachabāzi* ('boy play'). The *duzanga* is a pair of rattles, each with a wooden handle projecting into a wider cylinder of wood, to which are nailed a number of small bells. They are shaken or stamped on the ground to imitate the bells of the dancing boy.

II. Regional styles

1. Pashtun (south and south-east). 2. Tajik (west and north-east): (i) Herat (ii) Badakhshan. 3. Uzbek (north). 4. Hazara (centre). 5. Other minority groups.

1. PASHTUN (SOUTH AND SOUTH-EAST). The Pashtuns (the 'true Afghans') have been politically and culturally dominant in Afghanistan. They are a people divided into two populations by the political border between Afghanistan and Pakistan (established with the Durrand line of 1893). Those on the Afghan side of the border mainly speak the 'soft' dialect (Pashto), while those on the Pakistani side speak the 'hard' dialect (Pakhto). The cultural centre of the former group is the Afghan city of Kandahar; that of the latter, the Pakistani city of Peshawar. The Pashtuns constitute a so-called tribal people, and range in lifestyle from city-dwellers to pastoral nomads.

In the past, before the recent imposition of prohibitions against music, Pashtuns were great patrons of music. Traditionally music performance was relegated to their barber-musicians. The typical Pashtun music group consists of a singer who also plays harmonium, accompanied by *rubāb*, *sarinda* and *dohol* (or *tablā*). Often there are two singers (both playing harmoniums), who alternate verses.

The Pashtun musical style became the national style of Afghanistan, a development much encouraged through radio broadcasting. Pashtun song style shows a regular alternation between verses and short instrumental sections, played at a fast tempo, with heavily emphasized rhythmic cadences, characteristics which were transferred to the Kabuli *ghazal*. The tonal system used in Pashtun music is essentially diatonic, with a simple system of melodic modes corresponding approximately to the Ionian, Dorian and Phrygian modes of the Greek system.

Pashtun vocal music has a number of genres including the *dāstān*, *landai*, *chahārbeita* and *loba*. Urban Pashtuns, particularly those from Kabul, have long adopted Persian in addition to their own language, and have added the repertory of Persian poetry and songs to their own.

The *dāstān* is an epic form, recounting tales from the distant, semi-legendary past, as in the saga of Adam Khan and Durkhana. Equally it could be concerned with historical events such as the Anglo-Afghan wars or, more recently, the holy war (*jihād*) against the Soviet Union.

A folksong genre common to nearly all Pashtuns is the *landai*, defined by the Afghan scholar Saduddin Shpoon as a 'non-rhymed two-lined catalectic verse with five anapestic paeon feet, two in the first line and three in the second, ending in *ma* or *na*'. As with another brief poetic form, the Japanese *haiku*, the *landai* depends on the

opening section to set a scene or mood which is then consolidated in the concluding section. Here are two *landais* on common topics, love and war, transcribed and translated by Shpoon:

Orrai de yakh kavel keter kerr
Pe meni rraghle salaamat ghwarre guloona.

You spent all summer in cool Kabul;
You return in the fall and want your flower intact?

Ke pe maiwand ke shaaid ne shwe
Khudaaygo laalaya be nangi la de saatina.

Young love, if you do not fall in the battle of Maiwand,
By God, someone is saving you for a token of shame.

Most *landais* are apparently composed by women, as they express the woman's point of view; yet they are frequently sung by men. *Landais* are sung to a handful of stock melodies, which vary regionally. In a *landai* performance a group of couplets, usually on a given topic, is strung together by the singer. This creative assembly of free-standing elements is an important principle in much Afghan music-making.

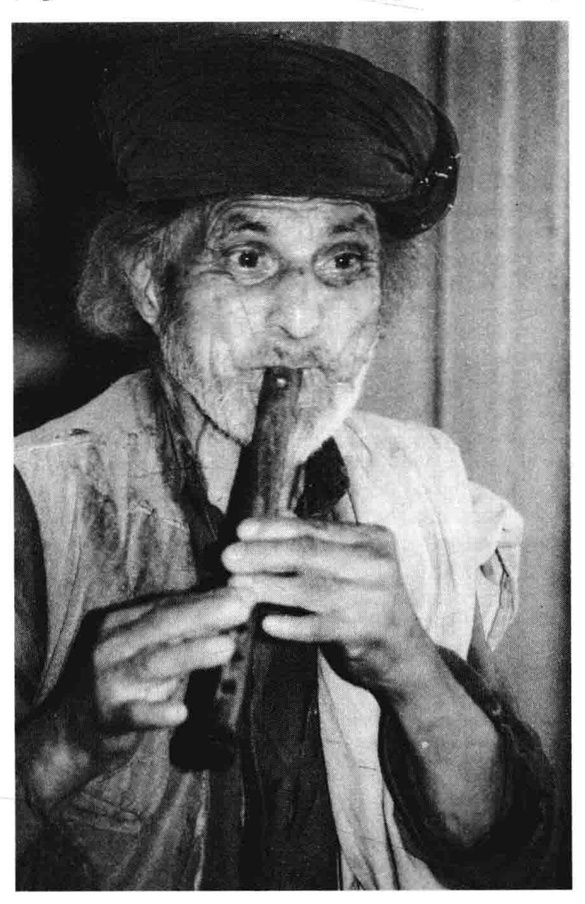
2. TAJIK (WEST AND NORTH-EAST). The term Tajik embraces most of the Persian-speaking populations, though not the Hazaras of central Afghanistan. Tajiks are primarily concentrated in a broad band extending from the west (Herat) to the north-east (Badakhshan). In the north (Turkestan) Tajiks are closely associated with the Uzbeks (see §3 below).

(i) Herat. The Herat oasis lies near the Iranian border in an area that was formerly part of eastern Iran (Khorasan). The city of Herat was an important cultural centre in the past, reaching its apogee under the Timurids in the 15th century. Since 1747 Herat has been part of Afghanistan, though enjoying a great deal of autonomy in the 19th century. In the early part of the 20th century, Herat city was much influenced by the music of Iran. The Iranian *tār* (a plucked lute) was an important instrument, and the *dastgāh* principle of Persian art music was understood and performed (*see* IRAN, §II, 3). From the 1930s Herat fell under the influence of Kabuli classical music, with the North Indian idea of rāga and tāla, the *ghazal* form, and use of harmonium, *tablā* and *rubāb*. Persian modes with microtonal intervals were replaced with a system of modes that ultimately derived from Pashtun music.

The most important local instrument is the Herati *dutār* (long-necked lute), which has developed into two new forms. The three-string *dutār* is played by amateurs to accompany their singing, whereas the larger 14-string *dutār* with sympathetic strings has been adopted within the typical professional urban ensemble.

The most characteristic local music of Herat is the style called *chahārbeiti*. This refers to the singing in free rhythm of quatrains (*chahārbeiti*, also termed *dobeiti*), and has a clear connection with classical *āvāz* and regional singing styles of Iran (*see* IRAN, §II, 4(i)). *Chahārbeiti* may be performed as a vocal or instrumental piece (usually with the *dutār*). There are several standard *chahārbeiti* melodies. The best known is *Chahārbeiti Siāh Mu wa Jalāli*, a sequence of quatrains composed by the folk-poet Jalāli to express his unrequited love for Siāh Mu.

Jalāli 'asheq-e ru-ye Siāh Mu,
Asir-e cheshm-e jādu-ye Siāh Mu.
Konad sujd-e Jalāli az sar-e sedq
Be mehrāb-e du ābru-ye Siāh Mu.



Alas, Jalāli is in love with Siāh Mu,
Captivated by the bewitching eyes of Siāh Mu.
Jalāli sincerely prostrates himself
Before the prayer-niche of Siāh Mu's eyebrow.

(ii) Badakhshan. Badakhshan lies at the juncture of the Hindu Kush and Pamir mountain ranges in a rugged, isolated region shared by Afghanistan and Tajikistan. The music and culture of the Badakhshan Tajiks is nearly identical on both sides of the border. The distinctive 'mountain Tajik' style has influenced the music of the Pamir peoples to the east and that of Turkestan (through the intervening area of Kataghan) to the west.

The principal instruments of Badakhshan are the *dambura* (unfretted two-string lute) and *tula* (wooden flute which tapers towards the lower finger-holes). Others are the *ghidjack* (spike fiddle), *chang* (metal jew's harp) and *daf* (frame drum), the latter two being primarily played by women.

The predominant genre is the *felak* ('firmament', 'fate'), an alternative local term for the *chahārbeiti* quatrain of Afghanistan and Iran. *Felaks* can be solo songs, accompanied songs, or solo instrumental pieces. The basic style uses free rhythm or a 2 + 2 + 3 metre, a narrow tonal range, and extreme prolongation of the tonic (often at the end of the melodic line). The vocal quality tends to be rasping and strained. There is little sub-regional variation (*see* TAJIKISTAN, §II, 1).

3. UZBEK (NORTH). Afghan Uzbek folk music has evolved as an important regional style within Turkestan (a general term for the northern steppe-desert region).

6. Player of tula (flute) and skilled imitator of bird sounds, Balkh province, 1996

This music is strictly local in origin and mainly performed in public teahouses or at large parties. It does not occur in Uzbekistan. Dance tunes from Turkestan are known all over the country, and called *Uzbeki*. The principal instrument of this tradition is the *dambura* (unfretted two-string lute); the *ghidjack* (spike fiddle) is also often played.

The standard Uzbek teahouse ensemble consists of two singers, seated cross-legged face to face with a *dambura* player between them. The singers mark time with a pair of small finger cymbals and alternately sing quatrains in which they compete in wit, often using members of the audience as targets for satire. This practice is reminiscent of the singing contests common throughout Central Asia.

The purely instrumental tunes of the Afghan Uzbeks are usually associated with dance. They consist of repeated strings of small melodic motifs, with very slight variations of rhythm, pitch and accentuation setting off the repetitions. The *dambura* player guides the dancer, the variations indicating different stances, gestures or tempo.

The Persian-speaking Tajiks of Turkestan are closely associated with the Uzbeks and have contributed much towards a joint musical culture containing elements from both ethnic groups. The most widespread instrument, the *dambura*, is mostly made by Tajiks living near Samangan (south-eastern Turkestan). The musicians of Tashqurghan (or Khulm), a town near the juncture of major Uzbek and Tajik populations, have been particularly important in creating a shared Uzbek-Tajik music culture. Tashqurghan has traditionally produced a large number of wandering minstrels who are bilingual in Uzbek and Persian and who have composed and disseminated most of the repertory common to modern Turkestan. Singers might alternate quatrains in Uzbek and Persian or intersperse lines or even single words from one language into the other throughout their performance.

An interesting instrumental form reflects this mixture of cultures: it consists of a series of tunes of diverse origin played on the *dambura*, sometimes with the *ghidjack*. The melodies are taken from four basic sources: Radio Afghanistan, Indian films, local Uzbek and local Tajik music, all of which may be combined in a single piece.

The distinctive Turkestani style has influenced the music of minority groups in the area. Teahouse music is often performed by Turkmens in towns such as Aqchah and Andkhui, and northern Pashtuns can be heard playing Uzbek-Tajik pieces. Turkestani music and musical instruments have also spread to the Hazaras of central Afghanistan and as far south-east into Pashtun territory as Ghazni and Jalalabad.

Distinct from this regional music is the immigrant (Transoxanian) classical style of Uzbek art music (*shash makom*). The two genres are differentiated by their instruments, repertory and audience. Classical Uzbek music is largely performed in homes, and is restricted to immigrant circles in certain northern towns and Kabul. It relies on traditions brought from cities such as Samarkand and Bukhara (*see* UZBEKISTAN). The main instrument used is the Uzbek *dutār*. The town of Andkhui is considered the centre of the classical style.

4. HAZARA (CENTRE). The Hazaras, who number perhaps a million, live mostly in the folds of the massive Koh-e Baba and Hindu Kush ranges of central Afghanistan. Hazara music is predominantly vocal; the *dambura* lute is occasionally used as an accompanying instrument. The *chang* (jew's harp) is played only by women, as elsewhere in Afghanistan and Central Asia. Women, men and children have separate repertories which include various genres, but the Hazara recognize only two classes of songs as music: lullabies (female) and love songs (male). Lullabies are most often cast in octosyllabic couplets.

Hazara men's songs, which may be termed *beit* ('poetry') or simply *ishqi* (from *ishq*, 'love'), consist of short quatrains (*chahārbeiti* or simply *beit*) connected together. Song texts are basically syllabic: the melodic line follows a combination of everyday speech stress and poetic metre. The following example is a typical Hazara quatrain:

Ma qorbān-a shawom ai duriala
Tanāgak shishta-i zeri nihala
Tanāgak shisht-i aena ba dastat
Sharāra medehat chesma-e mastat.

May I be sacrificed to you 'O Sublime Pearl';
You sit alone under a sapling;
You sit with a mirror in your hand;
Your eyes sparkle intoxicatingly.

Hazara music is most often heard at domestic festivities; there are very few urban centres with teahouses. The main occasions for music-making used to be weddings, Afghan independence celebrations (*Jeshun*) and major Muslim holidays.

5. OTHER MINORITY GROUPS. There are a number of other ethnic groups living in Afghanistan, some very small. They include the Baluch, Turkmen, Aimaq, Nuristani, Pamiri, Pashai, Kirghiz and Kazakh peoples.

The Baluch live in contiguous regions of Afghanistan, Pakistan and Iran, and there is also a small population in Turkmenistan. They are closely associated with Pashtuns and have adopted some Pashtun folk customs. They have three principal musical instruments: the open end-blown *nar* flute (akin to the Pashtun *nal*), the *saroz* fiddle (like the *sārindā*) and the *dambiro* four-string long-necked lute. The chief vocal forms are ballads, sung to the accompaniment of the *dambiro*, and short love songs (*dāstāngāh*) played on the flute. Among both Afghan and Iranian Baluch the flute can produce solo two-part music; the player holds a low fundamental hum while fingering a high-pitched tune.

The Turkmens live mostly in a narrow strip of land extending some 80 km south from the Turkmenistan border. Though Turkmens have lived on Afghan soil for a long time, the majority arrived between 1917 and 1940 from what was then Soviet Turkmenia. They generally live in villages clustered about a local market town, and maintain their own culture. The three main Turkmen instruments are the *tüidük*, a long end-blown flute related both to the Middle Eastern *ney* and Central Asian flutes; the *dili-tüidük*, a small single-reed pipe; and the Turkmen *dutār*, a lute similar in structure to the Uzbek *dutār* but considerably smaller. Turkmen song is highly distinctive. After a long instrumental introduction, the singer begins with an extremely intense, high-pitched passage in parlando rubato, after which the melody gradually descends. The songs are strophic, terminated with a variety of uniquely Turkmen ornaments often based on short, repeated guttural tones (*see* TURKMENISTAN, §2).

The Nuristanis, supposedly the descendants of Alexander the Great's Macedonian army which invaded Afghanistan in the 4th century BCE, inhabit a remote

mountain area in the north-east. They were converted to Islam in 1895. Nuristani music is remarkable for both its instruments and styles. In addition to the rare *vaj*, or *waji*, an arched harp with no nearby counterpart, Nuristanis also play a small leather-covered fiddle and a short end-blown flute. Stylistically, traditional Nuristani music is in part based on a complex stratification of vocal and instrumental lines. A piece may begin with an ostinato figure on the harp underlying two soloists, who are later joined by a chorus holding an interval of a 2nd and, finally, by syncopated hand-clapping.

Melodies constructed over an ostinato figure also occur in pieces for two solo flutes. Here the lower flute may maintain a repeated figure with some melodic and rhythmic variation; the upper flute has its own motif revolving mainly around two notes, occasionally touching on a third. This results in a rhythmically complex stratification similar to that of the larger harp and chorus repertory. Such instrumental counterpoint, like the vocal polyphony, is not found anywhere else in Afghanistan or Central Asia.

JOHN BAILY

Afonso [Affonso], **Alvaro** (*fl* 1440–71). Portuguese court musician. He was a singer in the royal chapel sometime between 1440 and 1446. A letter of 1452 identifies him as *mestre de capela* of Afonso V. At an uncertain date, but certainly before 1461, King Afonso V (ruled 1446–81) sent him to England to obtain the Chapel Ordinance in use at the court of Henry VI, to serve as a model for the Portuguese court; this document, the most detailed surviving account of any medieval royal chapel, is still in the Biblioteca Pública in Évora under the title *Forma siue ordinaçõ capelle illustrissimi et xtianissimi principis Henrici sexti Regis Anglie et ffrancie ac dni hibernie, descripta Serenissimo principi Alfonso Regi Portuigalie illustri, per humilem servitore[m] suu[m], Willi'u Say, Decanu[m] capelle supradicte* (William Say was dean of the royal chapel between 1449 and 1468, but may have taken up the post as early as 1446). It describes various liturgical ceremonies, principally those for the coronation of the king and queen and for royal exequies; a musical appendix (ff.36*v*–41*r*) includes, in typical Sarum notation, the repertory for the coronation ceremony and Mass (described in Ullmann, 47–51). Alvaro Afonso (not Count Alvaro Vaz de Almada, as Ullmann states) is referred to in the preface. A fragmentary poem of his, dating from his time as a singer in the royal chapel, survives in *I-Rvat* lat.4803. . His mixed monophonic-polyphonic Office, composed to commemorate the taking of Arzila (now Asilah, Morocco) by Christians in 1471, was still extant in the 18th century.

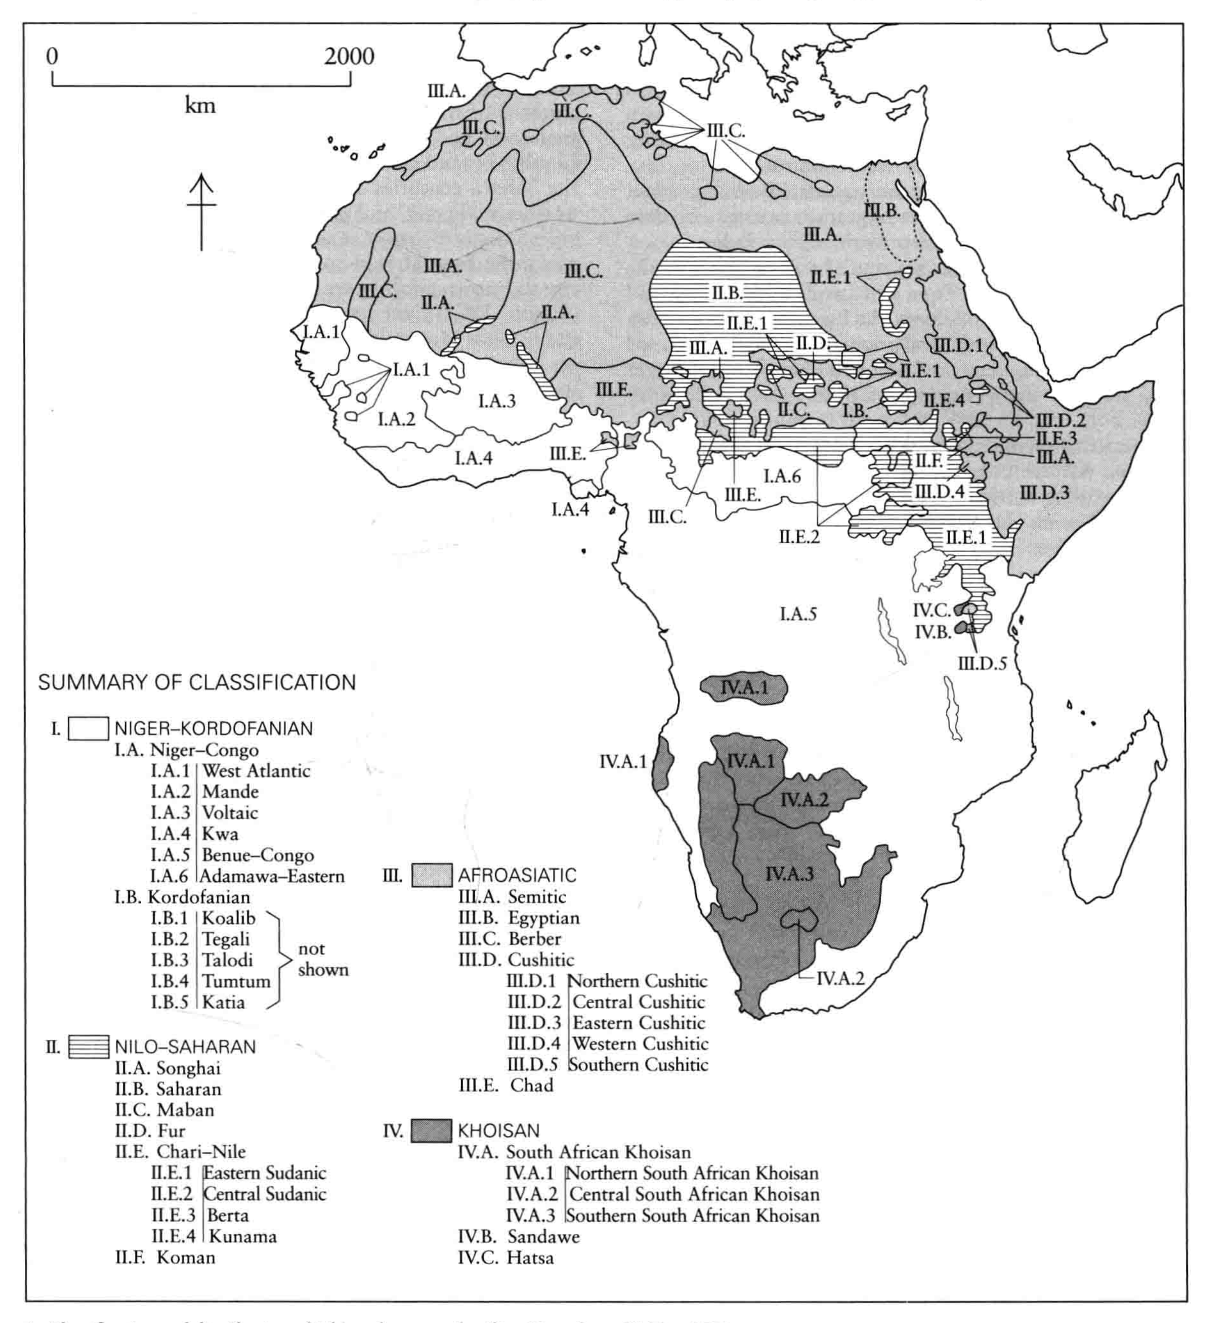
ALBERT T. LUPER/MANUEL PEDRO FERREIRA



Afoxê. *See* CABACA.

Afranio degli Albonesi (*fl* 16th century). Italian ecclesiastic. He invented the PHAGOTUM.

Africa. Continent with several climate zones and a population of over 800 million (2000 estimate). The extremely diversified languages within Africa are as much the result of long-term separation of local communities during the continent's remote history as it is of borrowing and processes of transculturation triggered by trade contact, migration and economic symbiosis. These formative factors have shaped the continent's expressive forms in music, dance, art, games, theatre, and oral and written literature. These forms of expressive culture should be viewed, therefore, within the context of African historicity as configurations that have been continuously changing for thousands of years. Thus, testimony is given to the immense African resources for innovation, invention, re-invention, resilience and adaptation. This dynamic picture of African cultural history clearly makes earlier notions of 'traditional' societies and cultures obsolete (Kubik, *Theory of African Music*, 1994, pp.30–37).

1. Ethnic groups, languages and style areas. 2. Historical sources and research history. 3. Musical structures and cognition: (i) General (ii) Principles of timing (iii) Time-line patterns (iv) Tonal systems (v) Multipart singing, instrumental polyphony and illusory effects. 4. Music and society. 5. Modern developments.

1. ETHNIC GROUPS, LANGUAGES AND STYLE AREAS. Music and dance in Africa exist within an interdependent relationship with other forms of expressive culture. Ruth Stone has stressed that African song, language, oral literature, instrumental music, theatre arts and dance are all a 'conceptual package' that most Africans conceive of as unitary (Stone, *GEWM*, ii, p.7). The relationship between language and music, especially in sub-Saharan Africa, has been stressed by many authors, including Kwabena Nketia (1972). Christopher Ehret (1981) has confirmed that boundaries between musical styles in Africa tend to coincide with the boundaries among the four principal families of African languages isolated by Joseph Greenberg (1966): Niger-Kordofanian, Nilo-Saharan, Afroasiatic and Khoisan (see fig.1).

1. Classification and distribution of African language families (Greenberg, 1966, p.177)

Owing to considerable differences in the spelling of African languages, ethnic groups, names and terms, variant spellings have been included throughout this dictionary to aid the reader when consulting related articles and material. In addition, although there is a growing preference to adopt phonetic orthography for African names and terms, these forms, unfortunately, cannot be searched on in the electronic format in which this edition of the dictionary is being simultaneously published; conventional roman spellings have thus been used in running text, with the relevant phonetic spelling – when provided by the contributor – included in parentheses on the first mention.

There have been comparative studies of music and dance in the Sudan, among the Dinka, Nuer, Shilluk, Berta and Ingassana peoples and others (Simon, 1975; 1989; Tucker, 'Children's Games' and *Tribal Music*, 1933; Kubik, 1982) and among nomadic Nilotes in Uganda, such as the Karimodjong or Karamojong (Gourlay, 1970). These studies highlight the contrasts with musics of the Guinea Coast and west-central Africa.

Stylistic borders in Africa also often coincide with smaller-scale linguistic divisions. For example, Bantu languages within the Benue-Congo family of languages have been subdivided by Malcolm Guthrie (1948) into zones, and within each zone further division into groups is made. Angola is a clear example. Guthrie's zone K, group 10, which includes Cokwe (Chokwe), Luvale-Lwena, Lucazi (Luchazi), Mbwela, Nkhangala (Nkangala) and Lwimbi (Luimbi), forms a linguistically and

musically homogeneous area covering most of eastern Angola, north-western Zambia and parts of the southern Democratic Republic of the Congo. This south-central African linguistic area contrasts sharply in music with that of the peoples of Bantu-language zone R, covering south-western Angola and northern Namibia.

Other sharp contrasts are due to language-independent influences. For example, the migration of cattle herders from the East African Horn to the Great Lakes region around the 14th century CE gave rise to what became the musical cultures of the Tutsi in Rwanda and Burundi and the Nkore (Hima or Bahima) in Uganda. As migratory populations mixed with local populations they abandoned their original languages and adopted Bantu languages, yet they retained many aspects of their music and dance styles.

The diffusion of cultural traits from South-East Asia to the East African coast began in *c*900 CE via the Indian Ocean trading network. This diffusion was an important process that introduced box-resonated xylophones, flat-bar zithers, one-string fiddles and ostinato-based melodic patterns, especially in the music of northern Mozambique. The most decisive external influences, however, were brought with the Islamic conquests of North Africa after 688 CE, and by Omani-Arab trade along the East African coast between Muqdisho and Sofala (Mozambique) beginning in the 10th century.

Most of the inhabitants of the northern third of Africa originally spoke Afroasiatic languages such as Berber and ancient Egyptian. Berber populations are autochthonous in the area known as the Maghrib, covering Morocco and much of Algeria, Tunisia and Libya. Their pentatonic tonal system dates back far and possibly represents an ancient cultural stratum.

With the Arab conquest of northern Africa in the 7th century, the entire region changed culturally. Transculturation processes in music quickly began between the Arab invaders and the native Berber population. Islam and Arab musical influences spread along trade routes through the Sahara to courts and trading centres along the middle Niger river. In Spain (under Islamic rule for nearly 800 years), an Arab-Andalusian style developed from the court music tradition of the Umayyad dynasty in Damascus and the early Abbasid dynasty in Baghdad. After the reconquest of the Iberian peninsula by Christians, this cultural tradition retreated to Morocco, Algeria and Tunisia. The Andalusian tradition has had a profound impact on musical cultures of the Maghrib. Principal poetic forms include *qaṣida* solo improvisation, *muwashshaḥ* court poetry, *zajal*, a popular poetic form developed in Spain, and *nūbat*, suites of songs in five movements, and praises of Muhammad and divine love. All of these forms have modal structures and vocal phrasing characteristic of Arab cultures (al-Faruqi, 1983–4).

The Muslim call to prayer and highly melismatic recitations of the Qur'an have had a profound impact on musical styles in all parts of Africa with a significant Islamic presence, especially in predominantly Muslim countries such as Egypt, Libya, Tunisia, Algeria, Mauritania, Senegal, The Gambia, Guinea and Somalia, but also in the West African countries of Mali, Niger, Chad and Nigeria, and along the East African coast which was under Omani-Arab influence beginning in 900 CE. Lois Anderson (1971, pp.154–65) noted standard methods of Qur'anic recitation in Morocco, yet in spite of the musical qualities of these recitations, orthodox Muslims do not associate these prayers with music. The Mozabite sect in Algeria, for example, forbids music altogether.

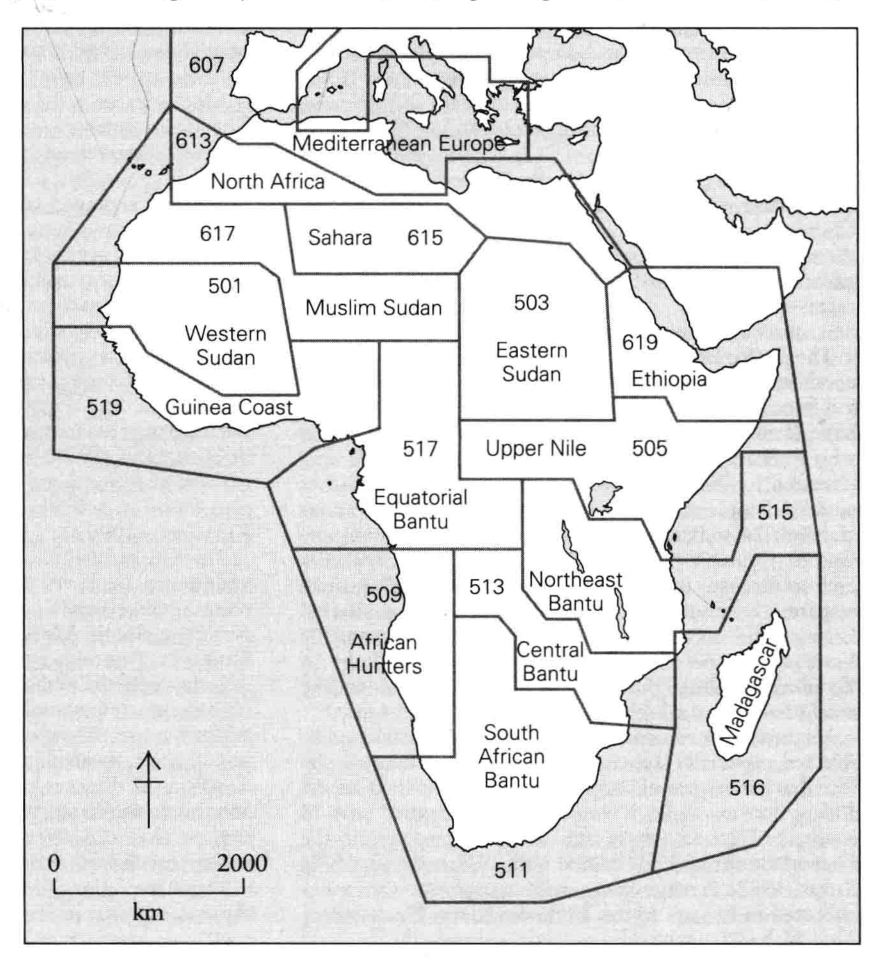
In Morocco, the ceremonial Thursday evening proclamations of the holy day include performances with *nfir* (trumpet) and *ghaita* (oboe). Together with *gangatan* (double-headed cylindrical drums), this tradition crossed the Sahara centuries ago and is still common in Niger, northern Nigeria and northern Cameroon. Associated with Sufi mysticism in many parts of northern Africa and along the East African coast, religious brotherhood and rituals known as *dhikr* are becoming increasingly popular (Simon, 1975; *Ḍikr and Madīḥ*, 1981). Among the Yao of northern Mozambique and Malawi, this tradition, here no longer ritual, is known as *sikiri*. *Dhikr* practices include the use of raspy, guttural sounds. The Tuareg of Niger conduct healing ceremonies (*tende-n-nguma*) with vocal sounds similar to those heard in *dhikr*. However, Islamic connections are denied by the Tuareg.

Patterns of nomadism, village life and urban cultures converge in North Africa. The trading routes to the south, traditionally under the control of the Tuareg, contributed to the rise of West African savanna states, such as the Mali Empire (11th–16th centuries), Songhai (7th–16th centuries) and, later, the Hausa states. Many West African culture traits, especially in music, reached North Africa, notably Morocco. The blend of West African and Arab music is particularly obvious in the bardic traditions of Mauritania (Guignard, 1975; Nikiprowetzky, 1964; *Musique maure*, 1966).

Many other forms of interaction have taken place. Polyphonic music of the so-called pygmies across the rainforests of Central Africa has had a notable effect on neighbouring musics, as is evident from studies among the Batwa (Twa) of the Ituri forest (Tracey, 1953; 1973; Turnbull, 1965), the upper Sangha pygmies in the Central African Republic and Congo (*Musique pygmée*, 1946; Djenda, 'Les pygmées', 1968; Arom, *Ba-Benzélé Pygmies* (n.d.)) and the Bosang (Bøšaŋ) of central Cameroon. In Southern Africa, San speakers transmitted principles of polyphonic form (still prevalent among the !Kung' today) to arriving Bantu populations from the earliest stages of contact, beginning *c*400 CE. These principles determined the rise of specific tonal-harmonic systems among the Shona, Nsenga and other populations in Zimbabwe and Zambia. The result of these broad interactions during the past was the formation of style areas that can be delineated, albeit roughly, with the understanding that boundaries are fuzzy and have changed over time.

During the second half of the 20th century, a vast amount of field data on African music became available. Some of the major collections of field recordings of African music include the collections of the National Sound Archive in the British Library (UK), the International Library of African Music (South Africa), the Musée de l'Homme (France), the Musikethnologische Abteilung, Museum für Völkerkunde (Germany), the Phonogrammarchiv of the Austrian Academy of Sciences (Austria), Archives of Traditional Music, Indiana University (USA), and the Smithsonian Institution (USA).

The data provided in these collections indicate that Africa is not compartmentalized along ethnic divisions. Musical style areas are most often shared by several ethnic groups related by language or other features. Neighbours often form clusters of cultural similarity, as outlined in George Peter Murdock's *Ethnographic Atlas* (1967), sharing a similar social organization, material culture, economy and artistic expression. Occasionally, people are



culturally connected even though they may be settled in areas quite remote from each other. Alan Lomax's song-style areas, based on Murdock's culture areas, divide Africa into 15 large sections with geometrically drawn symbolic boundaries; these song-style areas have long supported an understanding of the musical diversity of this continent (fig.2).

Lomax includes Madagascar in the African style world, although Malagasy is a Malayo-Polynesian language, and musical structures and instruments are clearly non-African. However, the presence of influences from the coast of Mozambique, including the five-stroke, 12-pulse time-line used in women's music for leg xylophones has also made Madagascar a historical African outpost (Schmidhofer, 1991). By contrast, Lomax excludes from the African song-style world not only 'Mediterranean Europe', 'North Africa' and the 'Sahara', but also what he terms 'African Hunters', with which he groups together 'Pygmies' and 'Bushmen', somewhat in the tradition of Yvette Grimaud (1956).

Lomax's statistical computation of single musical characteristics suggest that a sub-Saharan song-style core area can be isolated embracing the 'Guinea Coast' and 'Equatorial Bantu', and from these areas influences radiated to the subcontinent. This reflects the history of the largest known African migration, that of proto-Bantu speakers from the so-called 'Bantu nucleus' in eastern Nigeria and western Cameroon. A series of early migrations eastwards reached the Great Lakes region by 400–300 BCE. It was followed by a second movement from the 'Bantu Nucleus' southwards. A thousand years later, better communication led to further diffusional processes from West Africa into west-central Africa from *c*700 to 1100, introducing to parts of the subcontinent a cultural complex that included secret societies with masks, single and double flange-welded iron bells and asymmetric time-line patterns in music (see map in *GEWM*, ii, p.308).

A characteristic of present-day Africa is the overlapping distribution areas of single cultural traits or trait clusters resulting from millennia of superseding waves of invention, contact, diffusion and migration. Some technologies, musical instruments and stylistic traits have coherent small-scale distribution areas, such as cord-and-peg tension in drums and the Guinea-type double bell; both were concentrated in the broad West African coastal belt from western Nigeria to Côte d'Ivoire. Another example is the polyidiochord stick zither, such as the *mvet*, of which the distribution area is concentrated in southern Cameroon, Gabon and Equatorial Guinea. Coherent distribution patterns often began at a specific time and place, then changed gradually through contacts among neighbours. Sometimes distributional contiguity is indicative of active traditions (Mensah, 1970).

By contrast, log xylophones, bow lutes (*see* PLURIARC) and specific tonal-harmonic patterns present a discontinuous, patchy distribution pattern. Areas that are distinct from each other, for example, may show stunning affinities, often puzzling scholars. There are notable

2. *Song-style areas of Africa, as proposed by Alan Lomax*

similarities between log xylophone playing in northern Mozambique, Liberia and Côte d'Ivoire (especially among the Baule or Baoulé people), particularly in the presence of interlocking techniques and melodic patterns that include the occasional use of canon (Herzog, 1949; Kubik, 'Transcription', 1965; Kubik, *Malawian Music*, 1987). Harmonic multipart singing with tendencies to simultaneous neutral 3rds performed in secret societies link the Cokwe (Chokwe), Luvale, Lucazi (Luchazi) and others in eastern Angola to the Baule (Baoulé) of Côte d'Ivoire. In Namibia, the musical culture of the pastoral Herero is distinct from their neighbours, the Nama ('Hottentots') and the Damara. But there is a compelling similarity between Herero praise-songs and vocal patterns in women's *oucina* songs to vocal music in Nkore, western Uganda, and in Rwanda, Burundi and western Tanzania.

Discontinuous distribution can be due to external forces, internal decay, or voluntary or forced migration. A musical example of diffusion as a result of migration is the adoption of the *mqangala* mouth-resonated stick played by women in south-western Tanzania, specifically in locations where 19th-century Nguni intruders from South Africa settled and intermarried. Discontinuous distribution can also be the result of stops at courts along trade routes, with the areas between these stops remaining unaffected.

Bananas, a crop of south-east Asian origin, were probably established in the Lake Victoria area at the beginning of the later Iron Age, *c*1000–1100. Among the Konjo, Nyoro, Ganda and Soga peoples, stems of banana plantains are used for log xylophones. The same applies to the Nyakyusa, Yao and Makonde peoples of south-western Tanzania and northern Mozambique. Conversely, in the more arid zones of central Tanzania, between these two distribution areas, no log xylophones are found (see Anderson, 1967, for an overview of xylophones in East Africa). On the Tanzanian coast, and inland from Quelimane in Mozambique as far as Lake Chilwa, box-resonated xylophones are played, some of them reminiscent of xylophones played in Indonesian gamelans (Kubik, 1982, pp.110–11). In each of these cases, variation of the East African ecology was a co-determinant of the present-day distribution.

The analogies between log xylophone playing styles in northern Mozambique, Liberia and Côte d'Ivoire require a different explanation. Knowledge of these styles could have been transplanted with slaves from Mozambique who were resettled in Sierra Leone after 1815 after being liberated by the British Navy from slave ships of other nations. People of African descent from the United States and Brazil also began to settle at several points along the Guinea Coast in the late 19th century. Thus, Brazilian architecture was introduced to Lagos, along with musical instruments such as the large box-resonated LAMELLOPHONE that would be called *agidigbo* among the Yoruba, because it became associated with *gidigbo* (a Yoruba wrestling game). It is clearly related to the *marimbula*, a lamellophone found in the Caribbean.

Migrating instrumental traditions can also clash and be rejected, especially if their social functions converge. The distribution pattern of harps and lyres in East and Central Africa, for example, is exclusive, overlapping only in southern Uganda where the attractive power of the Buganda court accommodated both (Wachsmann, 1971; Kubik, 1982). A magnificent eight-string *kimasa* harp was collected in Busoga in the 1950s by Klaus Wachsmann. That such instruments did not gain a significant foothold across the border in Kenya could be due to an already strong lyre tradition (Kubik, 1982; Owuor, 1970; 1983).

2. HISTORICAL SOURCES AND RESEARCH HISTORY. There is an abundance of pictorial, archaeological and other sources of early African music history, although historical reconstructions that reach back the farthest often rely on conjecture. For example, it is thought that the invention of the hunting bow took place in Palaeolithic times. Wachsmann and Peter Cooke stressed that it 'was perhaps the first tool to make use of stored energy, but not necessarily for the sole purpose of shooting an arrow' (*Grove 6*). They suggest evidence for the bow's use as a sound-producing instrument. The implication is that uses of the hunting bow were probably developed simultaneously, making earlier queries about which came first, the hunting bow or musical bow, obsolete. The link between hunting bows and musical bows is preserved today in south-eastern Angola and parts of Namibia, where hunting bows are instantly transformed into musical bows by attaching a tuning noose, using either the mouth as a resonator or a fruitshell (Kubik, 1970; Kubik, 'Das Khoisan-Erbe', 1987; *see* MUSICAL BOW and ANGOLA).

Ancient Egyptian sources have been particularly helpful in understanding the remote past of some contemporary African musical practices. Although it is clear that plucked lutes in North Africa and ancient Egypt are distinct from those of West Africa, the evidence for diffusion is difficult to deny. Since ancient Egypt functioned as a cultural sponge, often absorbing foreign innovations, it is logical to leave the discussion about the directions of diffusion open. For plucked lutes, Eric Charry suggested that paths between ancient Egypt and West Africa are not clear.

Much clearer is the case of arched and angular harps. The Mauritanian *ardin* is found adrift from an otherwise compact distribution area of African harps (Wachsmann, 1964; Wegner, pp.162–3). Organology and performing practice (it is played exclusively by women today) reflect ancient Egyptian settings. The diffusion of harps from ancient Egypt westwards into the Sahara and from the Nile valley upwards is undisputed, although many details regarding the exact routes and timetable of local adaptations remain to be reconstructed. A detailed rock engraving of a blind musician playing an eight-string harp found in a tomb at Saqqara dating from around the 18th century BCE was cited by Wachsmann as particularly relevant for the history of the harp south of the Sahara (see illustration in Hickmann, 1961, pp.82–3). A scene of home music-making showing a performer with an arched harp was also found in a tomb at Saqqara, dating to the Middle Kingdom, *c*2000 BCE.

The oldest known iconographic testimonies to music and dance practices in Africa are provided by rock paintings and engravings, particularly those of the Sahara, Namibia, South Africa, Zimbabwe and some parts of Tanzania. Paintings such as those in the Tassili n'Ajjer, Algeria, originally discovered by Henri Lhote (1973) illuminate a new path for the iconographic study of African music history. The cultural history of Saharan populations, as displayed in the rock art galleries of the Tassili, is of direct relevance to the peoples south of the Sahara during later periods. Linguistic reconstructions suggest that *c*2500 BCE, Nilo-Saharan languages were spoken much further north than today.

Visual depictions of music and dance occur in some of the oldest Saharan frescoes, and some of these mirror certain present-day traditions of sub-Saharan Africa. For

example, a dance scene from the period of the Neolithic hunters, *c*6000-4000 BCE, showing elaborate body decoration (Lhote, 1973, fig.53; Davidson, 1967, pp.50–51), is reminiscent of the *ndlamu* stamping dance of the Zulu of South Africa. The Saharan frescoes also include what could be representations of masks and initiation dances for children.

Perhaps the most important Saharan musical retention south of the Sahara is the use of harps in the Central Africa savanna, from northern Cameroon across the entire Central African Republic. Harps were known in the ancient Sahara and they have survived in such areas as Ennedi. A six-string harp is depicted in a Tassili n'Ajjer rock painting that, while controversial, holds the key to unlocking an aspect of the remote music history of Central Africa north of the equator. Tentatively dated by Basil Davidson to 700 BCE, within the so-called period of the horse (1967, p.187), the painting shows a harp player with a round head and elaborate coiffure sitting on a characteristic small stool such as those found today in some areas of Chad. The player holds a six-string harp towards his body, playing for a second person with a slim face and equally elaborate coiffure and a beard. A second person sits on what could be a throne, holding a lengthy object, possibly a ceremonial stick, in front of him. The harpist could have been performing for a higher authority, suggesting the existence of social divisions in Saharan cultures during this period.

This Saharan rock painting depicts a 'tanged' type of harp (see Wachsmann's classification, 1964). In all, Wachsmann distinguished three types of African harps: the 'spoon-in-the-cup' type found in the Great Lakes region of East Africa (e.g. the *ennanga* of Buganda); the 'tanged' type, which includes harps found in the Central African Republic, Chad, northernmost Cameroon and north-eastern Nigeria; and the 'shelved' type found in a relatively small area, particularly in Gabon and Equatorial Guinea. Bridge-harps, such as the *kora* in Senegal and The Gambia are excluded from this schema because their history seems to be unrelated. They are distinguished from other harps by two major features, according to Charry: their spiked neck pierces through the resonator and their bridges are perpendicular to the resonator ('West African Harps', 1994, p.7). Since there is no known diffusion from foreign sources, the bridge-harp must be a regional, West African development.

No harps are found in Africa south of the equator. (The term 'ground harp' often used to refer to ground bows is a misnomer.) The southernmost areas where harps are used in local cultures include Gabon in west-central Africa and the Lake Victoria area in the east. Contemporary Central African harps of the 'tanged' type, such as the *kundi* of the Azande or Zande (Dampierre, 1991), probably derive from earlier Saharan models.

The 'spoon-in-the-cup' type, on the other hand, once prominent in Buganda and adjacent areas such as Karagwe, Tanzania, has an essentially different history. Relationships between ancient Egypt and the interlacustrine kingdoms of Bunyoro and Buganda have often been proposed, especially with regard to patterns of kingship, but there is a large unaccountable time gap. Even indirect contact between the kingdom of Kush, destroyed in 350 CE, and the Great Lakes region is difficult to prove, but such contact is a persuading argument for the remote history of the *ennanga* and other Buganda and Bunyoro cultural commodities. Traditions can remain dormant for centuries, only to emerge in response to social or political stimuli. Ugandan harps, from the *adungu* of the Alur to other southern types, are quite varied, and there are many local devices, such as buzzing rings of banana fibre sewn into lizard skin, that are then attached to the instrument's neck and positioned close enough to each string so that vibration occurs (e.g. the *ennanga*). The variety of local adaptations suggests a long development of the harp in the Lake Victoria area.

Sources contributing to African music history include iconographic materials, artefacts, items found in collections, written accounts and oral tradition, within which several generations may be spanned. (For the last hundred years there have also been sound recordings, cinematography and, most recently, video). Artefacts informing us about Africa's musics in the past include vast archaeological materials. In western Nigeria, for example, Frank Willet excavated terracotta ritual pots at Ife, dating from 1100–1400, with reliefs depicting musical instruments. The Yoruba instruments depicted include drums of the *gbedu* (*gbẹdù*) type, demonstrating an early presence of the characteristic Guinea method of cord-and-peg tension of a drum skin such as in the *atumpan* of Ghana and other types used in *vodu* religious rites among the Fon (Fõ) of Benin (Dahomey) and Togo. They also include *edon* (*ẹdọn* or horns) and a double-bell of the Guinea type. Willet asserts that during the 10th–14th centuries another ritual Yoruba drum, the *igbin* (*ìgbìn*), was present in Ife. This type of drum is still used today in religious contexts, for example at the shrine for *orișańla* or *obatala*, the creator God. These artefacts demonstrate the relative antiquity of particular Yoruba musical instruments.

Equally conclusive is negative evidence, for example the absence of hourglass drums of the *dundun* (*dùndún*) type, so prominent in Yoruba culture today (Euba, 1977; 1990) and associated with the performance of praise poetry. There is no indication that they were used in Yorubaland during the so-called Ife classical period, corroborating the opinion that they were introduced from Hausa-speaking northern Nigeria during a later period.

The most famous West African artefacts relating to the study of musical instruments and musical practice are the Benin bronze plaques. They give a significant impression of the musical culture at Benin City from the 15th to 17th centuries, particularly in state ceremonies. Philip Dark and Matthew Hill (1971) presented a survey of the Benin bronze's musical contents, including representations of slit-drums, membranophones in great detail, bells, and even a pluriarc still used in Edo (Ẹdo) culture today.

Archaeology has also made contributions to the history of music in Central and south-eastern Africa, notably in Katanga (Democratic Republic of the Congo), Zambia, Zimbabwe and Mozambique. Near Kisale, Congo, artefacts from the 10th to 14th centuries were recovered, including several types of metal bells, one copper aerophone and what could be the iron tongues of a lamellophone. Iron Age technology produced notable musical instrument innovations in Africa, particularly from the 8th to 14th centuries. The history of the single and double flange-welded iron bells in West, west-central and south-east Africa has been largely reconstructed (Walton, 1955; Vansina, 1969; Gansemans and Schmidt-Wrenger, 1986; Kubik, *Westafrika*, 1989). New data have closed gaps in the sequence of diffusion from West Africa, notably from the upper Sangha valley (*GEWM*, ii, pp.308-11). Such iron bells are often associated with chieftainship or kingship. Their distribution across west-central Africa into south-east Africa (Zimbabwe and Mozambique)

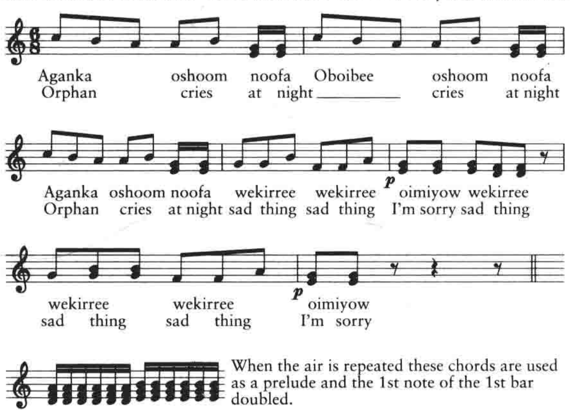
largely coincides with the use of asymmetric time-line patterns in music (see §3 below). Outside the Niger-Congo language family, bells and these particular time-line patterns are characteristically absent, and even within this language area they are absent in East Africa, South Africa and westernmost Africa.

The proliferation of innovative types of lamellophones with iron lamellae in south-east Africa (Zimbabwe and the lower Zambezi valley) began during the Later Iron Age, 1000–1100. A genealogical tree of these types has been reconstructed by Andrew Tracey (1972). Besides single- and double-bells, excavated in the ruins of Great Zimbabwe, iron prongs that could very well be lamellae of a *mbira dza vadzimu* were also found.

Some of the most spectacular remains of the past include lithophones, such as the one that was used by the Dogon of Mali (Rouget, 1965) and rock-gongs. In addition, Bernard Fagg (1956) located multiple rock-gongs in northern Nigeria. In several places across the West African savanna 'ringing rocks' were used in initiation rites. Sometimes their use was connected with mythology. Anne-Maria Schweeger-Hefel (Kubik, 1989, pp.168–9) documented the use of rock-gongs at the site of the presumed origin of the Nyonyozi, a legendary and perhaps mythical people in Burkina Faso.

Various archaeological and ethnographic objects survive in collections. Before the establishment of ethnographic museums in Europe and North America, such collections were found in the private possession of the aristocracy. Michael Praetorius's illustrations of one of these collections (1620) allow a glimpse of 16th- and 17th-century musical instruments from the area of Gabon and Equatorial Guinea, including a seven-string harp of the 'shelved' type, probably collected from the formative Kele ethnic group, a pluriarc (bow lute) and double-bell with bow-grip.

Early historical sources on African music are interrelated with research history. The study of African music began during antiquity. The earliest comparative reference to musical practices in Africa, then called 'Libya', is attributed to Herodotus who wrote about vocal practices of 'Lybian' women in the 5th century BCE. In the 7th century CE the writings of Arab travellers in the western geographical Sudan such as Muhammad ibn Abdullah Battūta (1304–77) and Ibn Khaldun reflect on musical phenomena. European literary and iconographic accounts dominate the available sources beginning in the 16th century. Frei João dos Santos travelled to the Kingdom of Kiteve along the Mozambique-Zimbabwe border in 1586. His are the earliest descriptions of gourd-resonated xylophones in the area, certainly the predecessors of the *timbila* of the Chopi, and the first descriptions of an African lamellophone, which he labelled an 'ambira' (Dias, 1986). Also in Mozambique, Jan Huygen van Linschoten (1596) depicted a player of a braced musical bow, with the bow-stick passed by the lips. Van Linschoten must have seen a player of this bow along the coast near Sofala or on Mozambique Island where his ship had stopped en route to India. This is the first record of the type of mouth bow known today as *chipendani* among the Chopi in the south, *xipendani* among the Tsonga, *chibendance* in Manica Province and *chipindano* in Tete Province (Dias, 1986; Brenner, 1997).



Two independent 17th-century accounts from the kingdoms of Kongo, Ndongo and Matamba (all situated within the borders of contemporary Angola) by Italian Capuchin missionaries Giovanni Antonio Cavazzi (1687) and Girolamo Merolla (1692) form the most accurate picture of music history in the area. The discovery of Cavazzi's original drawings (Bassani, 1977; Gansemans and Schmidt-Wrenger, 1986) has added a hitherto unknown dimension to these valuable sources. François Froger (1698) provided the earliest detailed account and drawing of the gourd-resonated frame xylophone common in the Gambia and Guinea, often called *bala*. The development of the *bala* is specific to westernmost Africa. Two subtypes exist: a small version associated with Mande culture and a larger version among the Lobi and Dagarti in north-eastern Ghana and north-western Côte d'Ivoire (Strumpf, 1970; Yotamu, 1979; Mensah, 1982)

Peter Kolb's detailed description (1719) of dance styles, polyphonic singing and musical instruments such as the *gora* (!gora) and the gourd-resonated musical bow among the now extinct Cape 'Hottentots', opened southern Africa to ethnomusicological research (Mugglestone, 1982; Kubik, 'Das Khoisan-Erbe', 1987, pp.173–4). Thomas Edward Bowdich's brilliant early 19th-century account of Fanti and Asante songs along the Gold Coast (1819), accompanied by bridge-harps playing characteristic patterns of parallel heptatonic harmony, included transcriptions that can be analysed and texts that can be transcribed into modern orthography (see ex.1). The song blames step-parents who mistreat an orphan, after which the child cries all night long for its dead parents. The song is accompanied by the *sanku*, also known as *seperewa*.

Monographs on African music appeared towards the end of the 19th century. Bernhard Ankermann's *Die afrikanischen Musikinstrumente* (1901) remains a primary early source for the study of African music cultures. Systematic research and analysis were greatly enhanced when wax cylinder recordings became available. Among the earliest was the collection of recordings made by Sir Harry Johnston in Uganda and Liberia shortly before the turn of the 20th century. Johnston's exhaustive written accounts provide unique background documentation. Prior to World War I, German missionaries, researchers and members of the military recorded African music in various territories, for example Lieutenant J. von Smend in Togo, Günther Tessmann in Equatorial Guinea, Alfred Schachtzabel in Angola and Karl Weule in Tanganyika. These recordings are being restored as part of a project directed by Susanne Ziegler at the Musikethnologische Abteilung of the Museum für Völkerkunde, Berlin.

In the 1920s and 30s further cylinder recordings were made in the field by Robert Sutherland Rattray in 1927 among the Asante on the Gold Coast, Helen H. Roberts

Ex.1 Thomas Edward Bowditch's notation in 1819 of 'A very old Ashantee Air'

among the Ngoni of Nyasaland, Steytler who recorded 22 cylinders, and there is the famous Laura Boulton collection (Library of Congress, Washington DC).

In the early stages of African musical research there was a clear division between collectors, who actually worked in Africa and recorded the materials, and scholars, who evaluated the recordings from a distance. One such cooperative effort was between Tessmann and Erich Moritz von Hornbostel (1913), who contributed the chapter on music in Tessmann's book *Die Pangwe*, an early work on the culture of the Fang (Faŋ) people in Gabon and Equatorial Guinea. For Hornbostel, this was an opportunity for musicological analysis that led to the introduction of new terms and concepts, such as 'neutral 3rds'; Hornbostel warned against the use of European theoretical concepts in the study of African music, such as the terms major and minor in relation to intervals (1913, p.398). He also studied songs of the Nyamwezi in Tanganyika, the Sukuma and music from Rwanda.

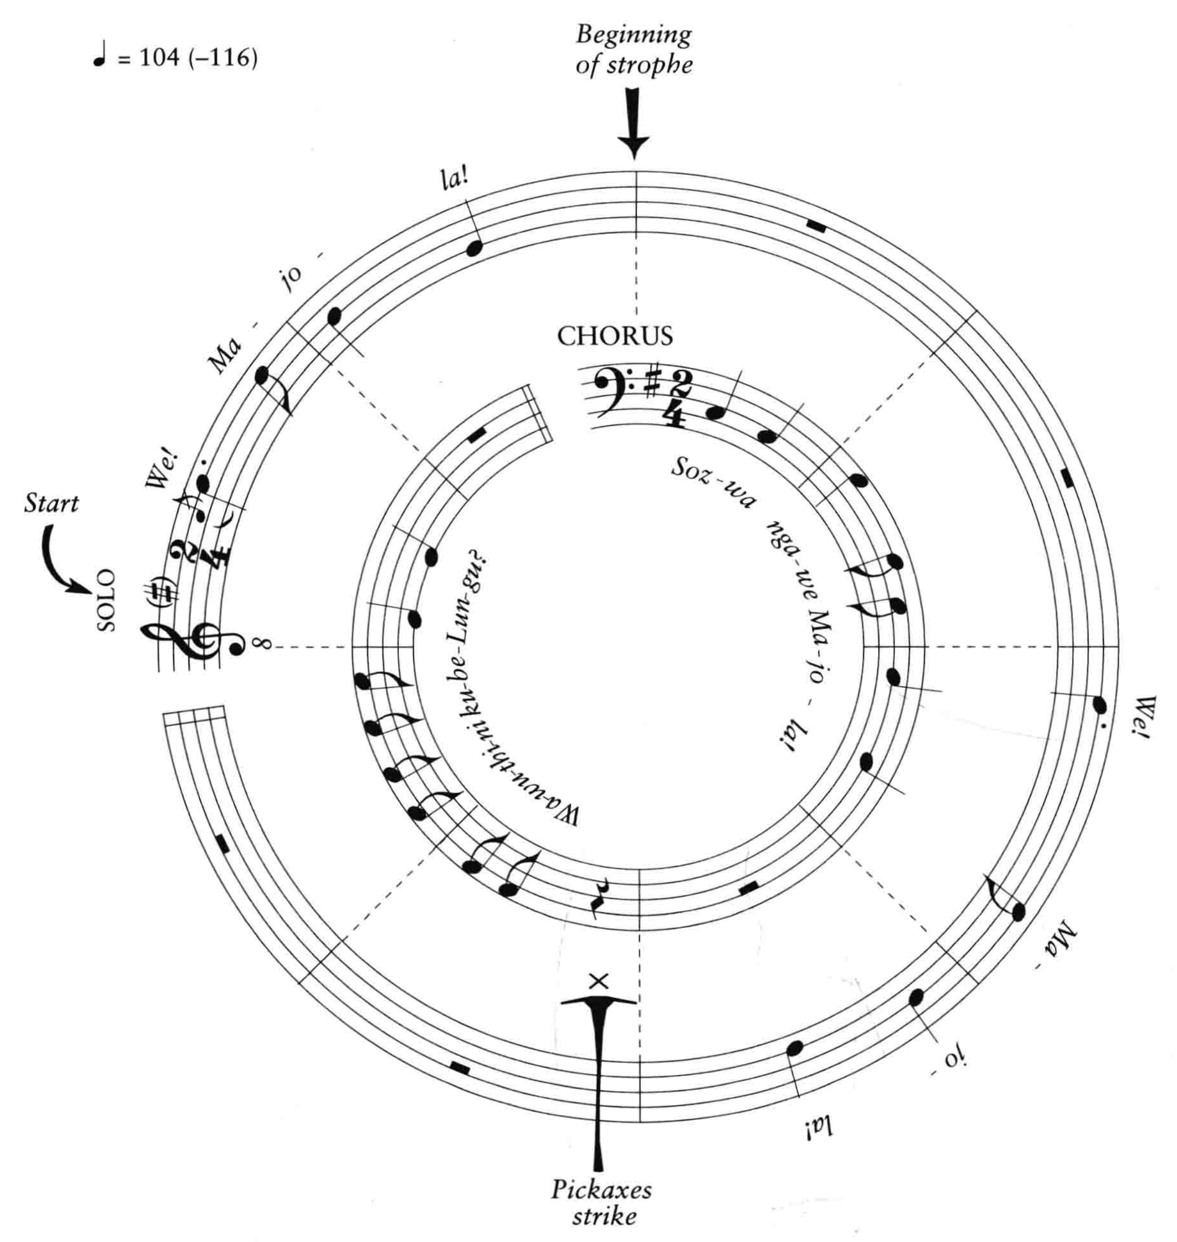
When 78 r.p.m. shellac discs first became available, especially of North American jazz, and African dancers and instrumentalists toured Europe during the 1920s, comparative musicologists approached African music at a more intimate level. Hornbostel's observations of African rhythm resulted in a proposal of an 'accented upbeat' rhythmic conceptualization (1928) that continues to draw comments from researchers. Similarly, in *Geschichte der Mehrstimmigkeit* (1934) Marius Schneider developed a typology for understanding the polyphony of the *Naturvölker*, drawing on earlier research and summarizing it. He also studied connections between music and language, particularly among the Duala of Cameroon and the Ewe of Togo (1952; 1961).

During the 1930s an increase of studies of African music and some breakthroughs occurred. Significant contributions to the knowledge of musical instruments and tonal-harmonic patterns in southern Africa were made by Percival R. Kirby (1930; 1932; 1934; 1961), who was both collector and researcher. Basic notions about rhythmic construction in African music were developed by A.M. Jones in Zambia among the Bemba, in particular concerning the technique of interlocking drumming patterns and the presence of a subjective 'multiple main beat' (1934; 1949; 1954). With the help of a transcription machine that he invented, he was able to identify the exact spacing of strokes within asymmetric time-line patterns.

Another researcher whose studies began in the 1930s was Hugh Tracey. His vast and systematic recording effort led to one of the most valuable recorded collections of African music and the identification of outstanding contemporary musician-composers, such as MWENDA JEAN BOSCO. Tracey was one of the first to transcend the collectivistic idea of 'folk music' and recognize the creative individual. In 1953 he established the Osborn Awards for creative achievement among African composers. *Chopi Musicians* (1948) and numerous articles, for example on the assessment of African scales (1958), quickly established new standards for research.

In 1937 Klaus Wachsmann began meticulous fieldwork on musical traditions and their histories in Uganda. In 1948–57 he was curator of the Uganda Museum which he had established. Wachsmann's recorded collection is preserved in the National Sound Archives (London). In later years, while a professor at the University of California, Los Angeles, and Northwestern University, he became increasingly involved in the work of reconstructing African music history (Wachsmann, 1971).

After World War II, an acceleration of African music studies began. An entire school of ethnomusicologists emerged in Ghana, with J.H. Kwabena Nketia as central personality. Nketia's prolific output is a significant contribution to the study of 20th-century African music. In South Africa, David Rycroft introduced a novel approach to the study of Zulu, Swati and other musics that combined his experiences as both musician and linguist (1954; 1957; 1960; 1971). He introduced a circular form of notation that accounted for cycles and overlapping call-and-response forms (ex.2). Rycroft was also one of the first, besides Hugh Tracey and Kwabena Nketia, to consider both older and newer forms of African music, paying attention to urban developments in southern Africa (Rycroft, 1956; 1958; 1959; 1977; 1991). His was the first scientific analysis of the music of Katanga guitarist Mwenda Jean Bosco (1961–2).



Gilbert Rouget instituted a comprehensive recording programme that began in 1946 in cooperation with the Musée de l'Homme (Paris), in an effort to document the territories then under French administration. The series of recordings produced by Rouget present some of the most important documentation of African music ever made. His intimate knowledge of Gun (Gũ) music in the Republic of Benin and its interdependence with language have provided in-depth accounts of this culture (1964; 1971; 1991). His prizewinning comparative study of music and trance (1985), drawing on his African field data, was one of the major achievements in 20th-century research on that subject.

From the 1960s onwards, there was a dramatic increase in published studies of African music, which can be accounted for adequately only in annotated bibliographies. L.J.P. Gaskin's bibliography (1965) and A.P. Merriam's *African Music on LP* (1970) both served for a long time as the most comprehensive reference works, in addition to the ongoing African bibliography in the journal *Ethnomusicology*. Two bibliographies, one by John Gray (1991) and the other by Carol Lems-Dworkin (1991), have made more recent literature accessible. It is not possible to do justice to all the fascinating new developments in Africanist music studies, yet a contextual account of some contributions is given in the following sections.

3. MUSICAL STRUCTURES AND COGNITION.

(i) General. In some African culture areas elaborate systems of musical theory were developed in pre-colonial times. The ramifications of Arab art music theory in the Maghrib have long attracted the attention of ethnomusicologists and historians (Farmer, 1966; al-Faruqi, 1981), including the composer Béla Bartók (1920) early in the 20th century. An indigenous system of notation was developed in Ethiopia in the liturgical context of the Coptic Church. It consists of approximately 650 signs called *melekket* that indicate short melodies, not individual pitches (Kubik, 1982, pp.11–14).

One of the most researched theoretical systems was developed in the court music tradition of the Kingdom of Buganda in East Africa. The Luganda language embraces an elaborate, specialized terminology referencing music. For example, verbs such as *okunaga*, *okwawula* and *okukoonera* refer to the functional execution of interlocking parts on xylophones and harps, while abstract nouns such as *myanjo* and *emiko* testify to cross-relationships

Ex. 2 Circular representation of call-and-response form in the Zulu work-song *We majola* (Rycroft, 1967, p.91)

between the auditory and the visual. *Omuko* (pl. *emiko*) refers to a system of transposition whereby note rows of a xylophone piece are transposed stepwise without violating the identity of each performer's playing area (Kubik, 1960; Kubik, 'Theorie, Aufführungspraxis', 1991). There are also descriptive terms relating to performing practice, accentuation and melodic patterning. None of the Luganda terms can be translated into English; their semantic field can be delineated only descriptively.

In sub-Saharan Africa, music is generally conceptualized within a theoretical framework. However, while some musicians articulate theory in their languages, others do not embrace theoretical concepts. These concepts must then be elicited indirectly from behaviours. Kenichi Tsukada's analysis of phonaesthetic systems in Ghana and in Zambia (1994; 1997) has focussed on the extent to which association between the phonetics of spoken syllables and sound-units constitute a theoretical code, not only as a teaching device in the sense of an oral notation (Kubik, 1969; 1972), but also as a definite symbolic link between speech sounds and musical sounds that are deeply engrained.

The effectiveness of systems of oral notation was most likely a determinant in the superfluity of a visual notation of music in sub-Saharan Africa. Only recently, with decisive changes in the social settings of musical perform-

ances, has the need for such systems emerged. Evaristo Muyinda experimented with cipher notation in Buganda in 1961–2 precisely when the esoteric court music became moribund, and this system of notation is now widely used for transcription. Some systems of notation have already allowed members of the present generation to relearn older musics. Other recent notational systems in African music, such as the one used by *kora* player Mamadou Kouyaté, reflect the influence of ethnomusicology and Western education (Knight, 1971, p.29). Specific notational systems that have been used by ethnomusicologists for analysis and/or teaching include the Time-Unit-Box-System (TUBS) (Koetting, 1970), tablature based on labanotation (Laban dance notation; Serwadda and Pantaleoni, 1968) and visual representations developed in connection with the transcription of music from cinematographic shots (Kubik, 'Transcription', 1965; Rouget, 1965).

Basic terms and specialized terminologies in African languages rarely conform to common European-language notions of music, art and literature, although they have often been equated. While the concepts are often not comparable, the phenomena are, and if English is used it is therefore legitimate to speak of African music, African art etc. Most African languages have a term translatable as song (e.g. *oluyimbo* in Luganda, *mwaso* in the Ngangela languages of eastern Angola, *orin* in Yoruba and *wimbo* in Kiswahili). These words tend to have a somewhat wider semantic field than the English equivalent, embracing instrumental representations of a song as well. This notion reflects the idea that instrumental melodies 'speak' in many African cultures and that they can be verbalized. Performers and listeners may project verbal patterns, often syllables with no verbal content, into sound structures. From the verbal interpretation of birds' 'speech', as for example in north-western Zambia, to listeners' projection of lines of text into inherent patterns, there is a broad array of verbalization in African music.

Music in Africa is transmitted orally and yet it is normally composed, that is its structures are organized by the 'inventor of a song' prior to performance. The composer trains others in a group to perform specific parts, often assuming the roles that are ascribed to them. Sometimes the composed framework is rigid; at other times it is less rigid, leaving a wide margin to invention. There is always freedom for individual, spontaneous variation to occur. Variation techniques include textual development by a lead singer or soloist, timbre-melodic development in drumming, shifts in accentuation on various instruments and many other techniques.

In the 20th century several Western-educated African composers working in the tradition of European art composition used staff notation as a means of communication. Ghanaian, Nigerian, South African, Tanzanian and Ugandan composers, including Ayo Bankole, Reuben T. Caluza, Lazarus Ekwueme, Akin Euba, Alfred Assegai Kumalo, Joseph Kyagambiddwa, Gideon Mdegella, John Mgandu, Okechukwu Ndubuisi, J.H. Kwabena Nketia, Meki Nzewi and Fela Sowande, have figured among those whose works have become widely known (Euba, 1988; Klein, 1990; Rycroft, 1991; Barz, *The Performance ...*, 1997).

Musical instruments are classified in African languages according to several principles, and often there are no generic terms. According to Ruth Stone (*GEWM*, ii, p.10), among the Kpelle of Liberia, instruments are categorized as either *fee* (blown) or *ngale* (struck). Aerophones belong to the former category and all other instruments to the latter. Earlier, Paul van Thiel (1969) found that in Runyankore (Nyankore), a language of western Uganda, musical instruments are grouped according to sound-producing actions. Most musical instruments, therefore, are referred to with the verb *okuteera* (to hit or strike), including various idiophones, the *egobore* musical bow and *omubanda* and *ensheegu* flutes. Various rattles are referred to with the verb *okugambisa* (to make speak), with the exception of the flat seed-box rattle, which uses the verb *okushungura* (to sift or winnow). The *entimbo* bamboo stamping tube is referred to with the verb *okuhonda*.

A similar system exists in Mpyɛmɔ̃ (Mpyemo or Mpiemo), a Bantu language spoken in south-western Central African Republic (Djenda, 1996, p.18). For the Igbo language spoken in eastern Nigeria, Joy Lo-Bamijoko (1987, p.19) provided a classification system based on five verbs to express the playing of musical instruments:

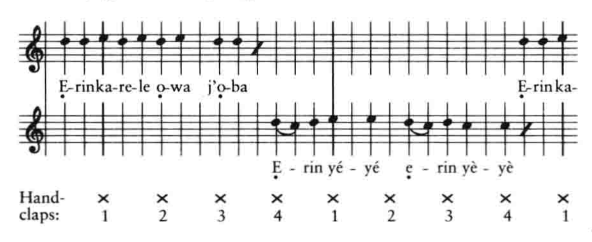
Iyo: to shake, rattle or clap together
Iku: to strike a hard surface with a beater
Iti: to strike a membrane with hand or beater
Ikpo: to pluck or bow
Ifu: to blow

In eastern Angola the verb *kusika* (or *kushika*) expresses the playing of a musical instrument; it is not used for any other type of action. Musical instruments in Africa are not usually 'played'. In Cinyanja (Nyanja) and Chichewa (Chewa), they are 'sung' (*kuyimba*), and accordingly the generic term for instruments is *zoimbaimba* (continuously sounding or singing things). In Kiswahili, the verb *kupiga* is used to express the playing of instruments; its semantic field, however, is much wider than dictionary translations such as 'to beat' or 'to strike'. Accordingly, *kupiga tarumbeta* means to play a trumpet and not to strike it.

The practice of naming instruments and instrumental designations in African languages can be based on tradition, while new designations are often invented. M.A. Malamusi (1991, p.66) has shown how individual drum names in a *samba ng'oma* (drum–chime) performance group had been created by the group's leader, Mário Sabuneti, a Lomwe musician in Malawi, from memories related to experiences he had in various villages. One drum is called *ndeke* (aeroplane), others are *chigalu* and *zengereya* because they were bought in villages of those names.

(ii) Principles of timing. In very few African languages, if any, is music described in terms of time. In two languages extensively researched, Chichewa in Malawi and Lucazi in Angola, concepts of time refer only to tempos and coordination, not to musical structures. For example, one can blame musicians by saying in Cinyanja, '*mukucedwa!*' ('you are getting late!') if they slow down with their rattle beats.

There are some forms of African music that could be placed between song and speech since they are in 'free rhythm', such as Isizulu *izibongo* praise-poetry in South Africa (Rycroft, 1962), or *omuhiva* praise-poetry of the Herero in Namibia. But most African music that is accompanied by bodily movement such as hand-clapping, dance and work is based on an orientation screen that can be described in English as a time concept.



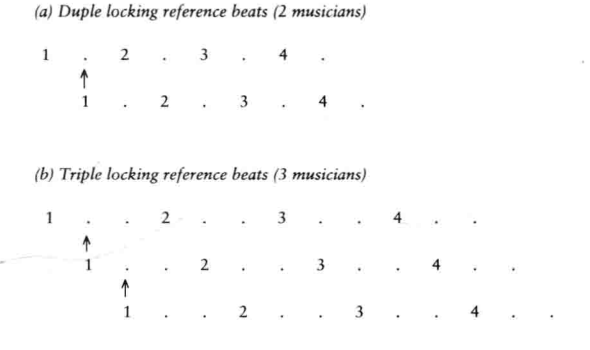
In the music of sub-Saharan Africa, there are three distinct levels of subjective timing that interface to guide musicians and dancers. The first level is the elementary pulsation, consisting of a mental framework of fast infinite series of pulses, the smallest regular units of action in a

musical performance. The elementary pulsation is essentially a non-sonic grid in the mind of performers, singers, dancers, instrumentalists and audiences, serving as a way of orienting time. In most African cultures, music is objectified as a fabric of continuous interweaving action units, e.g. drum strokes by different players. Once learnt, the reference grid remains firmly ingrained to the extent that dancers and audiences instantly recognize the elementary pulsation in a given piece of music, even if it is not objectified. Musical enculturation, especially among speakers of Niger-Congo languages, is critical to the development of this inner orientation screen. Jones (1934; 1949; 1954) speaking of 'smallest units' and Richard A. Waterman (1952) postulating a 'metronome sense' were the first researchers to articulate this concept: the former in terms of structure, the latter in terms of an inner experience. The elementary pulsation is not necessarily identical to the 'smallest rhythmic units' in a piece of African music, although in many cases it is. Yoruba music (religious and non-religious), for example, utilizes an elementary pulse-line that can be further subdivided at specific points by drum strokes. However, such transient subdivisions are merely ornamental and have no orientation function for the performers.

The reference beat is the second level of subjective timing. In many African traditions, there is a unitary dancers' beat that is sometimes referred to (in translation) as the 'dancers' feet'. A central reference beat exists in many forms of African music. However, in contrast with European, Mediterranean and some Arab musics, the beat in sub-Saharan African music, as in North American jazz, is usually conceptualized without pre-accentuation; there are no preconceived strong or weak parts of the metre.

The beat in African music is usually formed by compounds of 3, 4, 6, 8 or 12 elementary pulse-units (more rarely 5 or 9) to constitute a higher level orientation grid. The point of departure of such a compound, i.e. beat unit one, is so ingrained that it needs no special emphasis and does not need to be counted. For this reason, in a four-beat sequence, beat unit one is often acoustically veiled or unsounded. This system allows musicians to generate extreme rhythmic complexity. Unimpeded by concepts of accentuation, melodic accents can fall on or off a beat anywhere along the elementary pulse-line according to phonetic and syllabic text structures. This is a phenomenon for which Richard A. Waterman coined the expression 'off-beat phrasing of melodic accents' (1952). Autonomous phrase structures are then spread out against the pulse-line, as in the seven-pulse motif 'Ẹrin yéyé' in an *alo* (*àlọ̀*) Yoruba story-song (ex.3). In repetition, with different tones, it appears in different relationships to the hand-clap beat.

Ex.3 *Alo* (*àlọ̀*) Yoruba story-song



The system of notation used in ex.3 is a modified form of staff notation now widely used in the transcription of African music. This system allows ethnomusicologists to avoid the 'syncopation' problem in transcription of African music, resulting from conventional durational symbols. Vertical lines represent elementary pulses, and reinforced vertical lines indicate a beat unit within the greater metrical scheme. Individual beats are expressed by hand-claps.

The unitary reference beat in African music is often a regular hand-clap, as in ex.3. In some other African traditions, such as in the *kponingbo* dance of the Azande (Zande), dancers 'lift' their legs, giving emphasis to beat units two and four. Influenced by American jitterbug, a similar phenomenon was observed in South African urban music. In other music and dance styles, such as the *oucina* dance by Herero women in Namibia (*see* NAMIBIA, fig.4) beat units one and three are objectified with gentle movement, while two and four are clapped.

In some musical genres of East, south-eastern and south-central Africa, musicians do not share a unitary reference beat. This was first discovered by Jones in his study of the *ngwayi* dance and drum patterns among the Bemba of Zambia (1934), in which he referred to it as a 'multiple main beat'. In such cases, musicians refer their themes and patterns to a relative reference beat which interlocks with those of their partners. From the viewpoints of individual participants, partners play continuous syncopation (fig.3*a*). Triple interlocking reference beats can also be executed by two performers, with one performer assuming the roles of two with left- and right-hand strokes. Both duple and triple interlocking patterns have visual analogies in textile weaving and mat plaiting patterns.

The concept of the interlocking relative reference beat is a long-transmitted heritage in sub-Saharan Africa, found not only among speakers of Niger-Congo languages (including the so-called pygmies), but also among Khoisan speakers. It regularly appears in group-oriented music, depending on the musical genre. Within the same community, there may be story-songs performed with a unitary hand-clapped beat while log xylophones are played in an interlocking style. Among millet agriculturalists of the West African savanna, an archetypal form of the interlocking relative reference beat survives in women's mortar pounding. Three women, pestles in hand, encircle a mortar and strike alternately, creating a triple interlocking rhythm. In addition, each woman may tap her pestle on the rim of the mortar to create accents. From time to time, the women produce sucking and clicking sounds with their lips, palate and tongue. Each woman integrates her actions to an individual reference beat objectified by the downstrokes of her pestle.

3. *Dominant forms of interlocking reference beats*

Among the !Kung' of south-eastern Angola and northern Namibia, women interlock their hand-clapping in communal singing, relating their short syllabic phrases to an individual clap. Gogo women of central Tanzania performing the *ng'oma* dance interlock their strokes on hourglass drums held between their knees. In southern Uganda, six players, three at each side of a 17-note *akadinda* xylophone, interlock their lines in triple-division style (fig. 3*b*). *Amadinda* and *embaire* xylophone players of the same culture area interlock in duple style.

The cycle, the third level of subjective timing, is created by integrating the elementary pulsation, the beat and the basic theme of a musical piece. A cycle combines a large, regular number of elementary pulses, usually 16, 24, 32, 48 etc., to form repeating units. Most African music is cyclic. Some examples have short cycles, others long cycles; strophic forms also occur in many musical cultures. Irregular cycles are occasionally found, for example in the song *Agenda n'omulungi azaawa* sung in Luganda (Uganda) to a cycle of 70 pulses (Kubik, 'Theorie, Aufführungspraxis', 1991).

Since numbered cycles were first introduced (Kubik, 1960), they have replaced conventional Western time signatures in many transcriptions of African music. Cycles not only express repeated units, such as a theme or a line of text, they also blend together diverse musical materials. Polymeters resolve in cycles of 12, 24, 36 or 48 pulses. Cycles also accommodate different types of melodic or harmonic tonal segmentation. Prior to John Blacking's identification of root progressions in Venda flute music (1959), it was often thought that harmonic progression between steps or degrees did not exist in African music. In fact, the internal organization of most African music, unless based on a persistent drone (often due to Arab or Asian historical influences), demands periodic shifts between tonal levels. This applies both to unison and harmonic styles.

Most frequently in African music cultures, there are harmonic progressions through four scale degrees, such as the famous Shona bichord sequence:

G B D E
→ → →
C E G A

Progressing between four and not just three degrees of the scale, as in the European tonic-subdominant-dominant scheme, is so entrenched in several African musical cultures that urban African musicians regularly reinterpret Western chords in terms of local harmonic concepts. Four-part segmentation of various cycles is also the hallmark of *mbaqanga* popular music in southern Africa. The most frequent harmonic ostinato cycle in *mbaqanga*, I–IV–I6/4;–V, has persisted in southern African urban music from *marabi* to *kwela* to *mbaqanga* with stunning tenacity. While on the surface this harmonic cycle seems to reinterpret the three common chords, there are subtle differences. For a Western theoretician I6/4 is an inversion of tonic, but in the musical perception of *mbaqanga*-playing musicians, it is a different harmonic sound cluster, and can, therefore, be understood as a progression through four different chords.

(iii) Time-line patterns. The term time-line was first used by Nketia in the 1950s. Time-line patterns are typically single-pitched, occasionally double-pitched as in the *gangkogui* of the Ewe people (Jones, 1959); they are rhythmic patterns struck on objects such as bells, the bodies of drums, percussion sticks etc. These patterns are characterized by irregular, asymmetric structures presented within regular cycles, and they range from the ubiquitous eight-pulse cycle (3 + 3 + 2), common in musical traditions of the Maghrib, to the most complex asymmetrical patterns such as the 24-pulse pattern struck on a percussion beam in the *moyaya* dance of the Bangombe (Bankombe) pygmies, Central African Republic. Time-line patterns often represent the structural core of a musical piece, a condensed and extremely concentrated representation of the rhythmic possibilities open to the musicians and dancers.

It was Jones who first identified the asymmetric structure of such time-lines, transcribing patterns among the Bemba of Zambia (1954, p.59), then from a Ghanaian Ewe-speaking informant (1959, p.210). African time-line patterns are mathematically determined by (a) the cycle number (the number of constituent elementary pulse units contained in the repeating cycle, usually 8, 12, 16 or 24), (b) the number of strokes distributed across the cycle (5, 6, 7 or 9 strokes) and (c) the asymmetric distribution of the strokes that generates two adjoined sub-patterns (5 + 7, 7 + 9 or 11 + 13). Each asymmetric time-line pattern has both manifest and latent components. The auditory, perceptible part is supplemented by a silent, unvoiced pattern. Perhaps the most famous recorded time-line pattern is the 12-pulse standard pattern (fig.4). In a given musical culture, either of the two patterns given in fig.4, the seven- or five-stroke component, is usually prevalent while its complementary pattern is latent, perhaps silently tapped with a finger. Among the Luvale of eastern Angola and north-western Zambia, both components are struck together with two sticks in left-, right-hand alternation on the body of a drum. This applies also to the 16-pulse standard *kachacha* pattern in Luvale, the most prominent time-line pattern in that culture area (Tsukada, 1990).

The asymmetric time-line patterns are all mathematically interrelated. In a computer simulation, A.M. Dauer determined that if a given number of strokes is systematically distributed in a given cycle, then asymmetric time-line patterns will always be predictable. For example, the five- and seven-pulse standard patterns indicated in fig.4 always appear at a certain point in the permutation series (Dauer, 1988, pp.130–31). Dauer's finding suggests that asymmetric time-line patterns mathematically embody the nearest-to-equidistant distribution of odd-numbered strokes that is possible across an even-numbered cycle, giving us a startling look at ancestral African musician-composers' mathematical discoveries.

Asymmetric time-line patterns are not universal, however, in African music. They are limited to certain genres, and their general distribution today is concentrated among Kwa-language speakers along the Guinea Coast and the western stream of Benue-Congo languages, with a broad corridor into south-east Africa between the Zambezi and Ruvuma valleys. Their invention could well date back to early stages in the formation of the Kwa and Benue-Congo languages in West Africa, from where they spread to other areas of sub-Saharan Africa. A secondary centre for dispersing the nine-stroke, 16-pulse *kachacha* pattern

Seven-stroke (voiced) pattern: 12 x . x . x x . x . x . x
five-stroke (unvoiced) pattern: 12 . x . x . . x . x . x .

4. Voiced and unvoiced aspects of the 12-pulse asymmetric standard pattern

was possibly located in the historical Luba-Lunda culture area in Katanga in the Democratic Republic of the Congo. With the Cokwe (Chokwe)-Ngangela migration from the Lunda empire, *kachacha* spread to eastern Angola (*c*1625), and with the slave trade it spread from Angola to Brazil, where it resurfaced in samba.

Time-line patterns are often transmitted by vocal mnemonics used for teaching. These are either mere syllables or verbal patterns to suggest timbre, durational values and even rhythmic characteristics of the strokes to be executed. Plosive consonantal sounds, for example, usually signify a hard, firm timbre, while liquid sounds and velar fricatives signify strokes requiring less physical effort, with a soft, weak timbre. The 'tʃ' affricate sound, as in '*ch*urch', normally indicates the reference beat, especially if it coincides with rattle strokes (Kubik, 1969; 1972; Tsukada, 1994; 1997).

(iv) Tonal systems. The European tonal system has been imported into most parts of Africa with factory-manufactured instruments, and through religious and school choir teaching. Although it is widely accepted in Africa today, there are still pockets of African cultures with tonal systems that were developed independently.

A preliminary inventory of tonal systems in Africa suggests that three broad families can be distinguished:

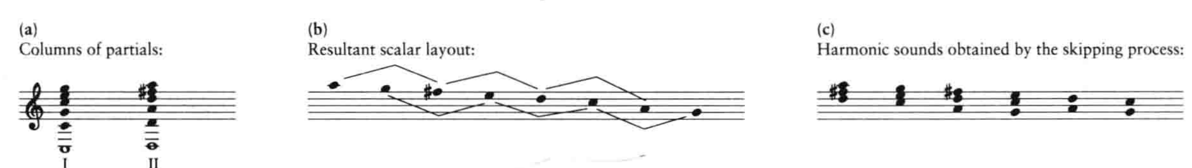
1. Tonal systems derived from the experience of the natural harmonic series either inspired by the formants of human speech or through instrumental experience.
2. Tonal systems extrapolated from speech-tone contrasts in tone languages.
3. Tonal systems derived from the idea of equidistant temperament in instruments, or similar adjustments in vocal performance.

Cross-influences and blends among these three families are known to occur.

Some pentatonic scalar patterns among ethnic groups in the West African savanna and Sahelian regions may have remote origins in the frequencies of vowel and consonant formants of human speech. Characteristically, these scales do not accommodate harmonic counterpoint but are linked to singing in unison and octaves. In other parts of Africa, there are pentatonic systems that also derive from vocal experience, but, by contrast, developed into impressive forms of polyphony. Outstanding examples include the music of the 'pygmies' of Central Africa and the Gogo of central Tanzania. The vocal origin of the Gogo tonal-harmonic system that makes selective use of the 4th–9th partials over a single fundamental was demonstrated by the celebrated Gogo musician Hukwe Zawose to Finnish ethnomusicologist Philip Donner. The Gogo are one of only two ethnic groups in Africa known for practising diphonic or overtone singing, otherwise prominent along the Altai mountain range (in west Mongolia, Tuva, the Altai Republic and Khakassia); the other ethnic group is the Xhosa of Transkei, South Africa (Dargie, 1991).

Tonal systems derived from harmonics produced by musical instruments are found wherever mouth bows or overblown horns were prominent; they are typically concentrated in southern Africa, where the technique of nearly every instrument from musical bows to friction chordophones, variously known as *sekampure* in Namibia or *igongqo* in Transkei, includes strategies for reinforcing partials. The specific results depend on variables, such as whether the tonal system is derived from partials over one or more fundamentals, which section of the harmonic series is used and how high in the series. More than one tonal system has been known to exist within the same community.

The !Kung' of south-eastern Angola derived their tetratonic system from the mouth bow and the selective reinforcement of partials not higher than the 4th harmonic over two fundamentals. !Kung' performers, however, can divide the bow string so that the two sections produce fundamentals at any interval, usually a whole-tone, minor 3rd or major 3rd.



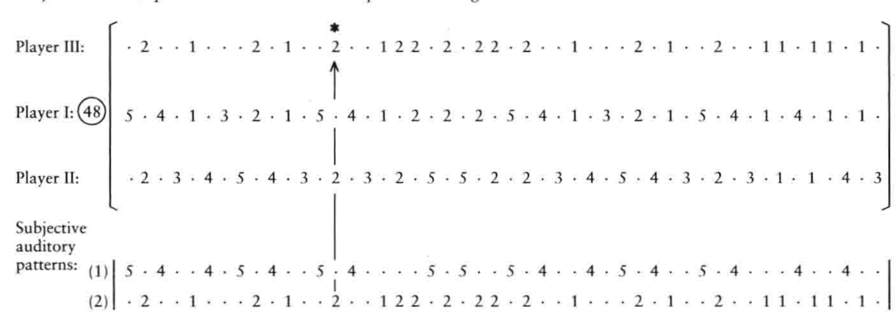
Hexatonic systems based on harmonics up to the 6th partial over two fundamentals a whole tone apart are found in a crescent area beginning in Gabon and Congo, moving down into Angola and South Africa. They are also derived from mouth bow performance. Impressive examples have been recorded among the Fang (Faŋ) of Gabon (Simon, ed., 1983, cassette 1, no.20, *beng* or *beŋ* mouth bow played by Bwiti priest André Mvom). In Angola, aspects of mouth bow performance were transferred to vocal practice at an early stage, generating unique forms of multipart music, such as that of *ekwenje* boys' initiation songs among the Nkhumbi and Handa of south-western Angola (*Humbi en Handa*, 1973). In South Africa, Xhosa music is largely based on a hexatonic system derived from a similar background.

The relationship between languages and tonal systems in Africa, particularly regarding the impact of speech-tones on melody, is an ongoing research topic, despite considerable earlier work (Jones, 1959; Schneider, 1952; 1961; Rouget, 1964) and the continuing work on the Yoruba language and music by Euba (1971; 1977; 1990) and others. Prior to the advent of 19th-century Islam that popularized a strongly melismatic and declamatory vocal style, most Yoruba-speaking peoples, with the exception of the Ijesha and the Ekiti, used an anhemitonic pentatonic scale. Pre-Islamic forms are well preserved, however, such as in the *alo* (*àlọ́*) story-songs.

Present data on the relationship between language and music suggest a connection among the three Yoruba speech-tones in addition to glides, intermediate tones and musical pitches. Tonal variations in language do not always correspond neatly with musical intervals; intervals appearing as 2nds in one performance of a Yoruba song may be rendered as minor 3rds on another occasion. More important than actual intervals is the direction of pitch movement for making text understood. It is likely, therefore, that any African tonal system is derived exclusively from the exigencies of a tone language. There are other, language-independent factors that helped generate the specific anhemitonic pentatonic systems shared by the Yoruba, Fon and others in West Africa.

In some areas of sub-Saharan Africa, musicians have developed tempered instrumental tunings. The major areas for equipentatonic tunings include southern Uganda (Ganda, Soga etc.), the south-western Central African Republic (Gbaya, Mpyemo) and adjacent areas in northern Congo; for equiheptatonic tunings central and southern Mozambique (Sena and Chopi), Mande-speaking areas of Guinea, Mali, The Gambia etc. and parts of Côte d'Ivoire. In some areas, people tune all their musical instruments according to a general system, yet there are other areas within which different tonal systems are used for different genres. In south-western Central African Republic, for example, Mpyemo musicians tune their *kembe* lamellophones equipentatonically, yet *ṣya* story-songs utilize either a hexatonic or heptatonic system with chord clusters shifted at intervals of a semitone.

Ex.4 Simultaneous harmonic sounds produced in Xhosa music (South Africa) and Nkhumbi/Handa (Angola) musics by application of the skipping process to a scale derived from harmonics over two fundamentals a whole tone apart



Equidistant tunings rely on pitch abstraction and comparison. Musicians who tune different instruments together usually employ one as a model, as Evaristo Muyinda from Uganda did in Berlin in 1983, using an *enderre* (flute) for tuning a new *amadinda* xylophone. For this reason, analyses of spectrograms for determining equidistant tuning as an auditory psychological phenomenon are inconclusive. Musicians who tune their xylophones, lamellophones or zithers by ear do not achieve pitch accuracy to the degree of decimal values. Deviations from the equidistant mean-values by -20/+20 cents are expected. Therefore, all Stroboconn measurements that appear to be accurate can, in fact, be misleading, hence Wachsmann's proposition of the term pen-equidistance (1967). Recent research in Uganda by Cooke (1992) and in south-east Africa by Andrew Tracey (1991) has reconfirmed the existence of margins of tolerance. In addition, deliberate attempts are made by musicians to tune their instruments in friction octaves, that is octaves tuned on purpose sharp or flat to reduce the fusion effect of melodic lines played in parallel octaves. This is common practice, for example, in the tunings of xylophones and other instruments in southern Uganda. Hornbostel (1911), Kunst (1936) and Jones (1964) postulated that historic instrumental temperament was imported from south-east Asia with instruments such as xylophones. Other researchers posit the possibility of intracultural motivations, such as the need for shifting melodic patterns across the keys of a xylophone without risking the loss of the melodies' identities (Tracey, 1991, pp.87–8).

(v) Multipart singing, instrumental polyphony and illusory effects. Singing in unison and octaves is widespread in Africa, especially among pastoralist peoples such as the Karimodjong (Gourlay, 1970), the Hima (van Thiel, 1971), the Tutsi (Tracey, 1973) who came under their influence in the Great Lakes region of East Africa. It is the hallmark of Herero music in Namibia and characterizes both the pastoral and urbanized FulBe (Fulbe or Fulani) people in the West African savanna. Unison singing is also a characteristic of Berber music and the vocal styles of Semitic and Cushitic speakers of north-east Africa. For many areas north of the equator, the Arab-Islamic invasion that began in the 7th century brought a reinforcement of unison singing, supplemented by declamatory song-styles with strong, often microtonal ornamentation. Hausa singing and music in northern Nigeria demonstrates how some of these influences were processed. However, Islamic influence cannot be associated with the overall promotion of unison singing styles. There are notable exceptions to the rule, such as along the East African coast where singing in parallel 3rds has been noted in the recitation of Swahili poetry and Qur'anic recitation. Many Eastern-influenced traditions are characterized by the presence of a centralized reference tone that often takes the form of a drone. A drone-like sound can be produced by a sustained open string on chordophones such as the West African *goge* (or *gojé*) or the *ngoli* and *takare* one-string fiddles used by itinerant Yao, Shirima and other musicians across northern Mozambique. In the latter area the drone also appears in combination with explicit harmonic principles. In performance on log xylophones, called *mangwilo*, *dimbila* or *mangolongondo* in the Nyasa-Ruvuma region, two players sitting opposite each other produce a drone on one slat through interlocking strokes (Kubik, 'Transcription', 1970; *Opeka Nyimbo*, 1989). This drone often represents the 2nd or 3rd partial in the natural harmonic series, which is used up to the 11th partial, sometimes even the 13th partial, to form melodic patterns.

African multipart musical traditions make use of call-and-response as a universal principle, operating in both vocal and purely instrumental settings. Simha Arom pursued an integrative approach, not discriminating artificially between vocal and instrumental polyphony (1985). Richard A. Waterman suggested that along the Guinea Coast call-and-response phrases often overlap with leaders anticipating their next lines before the chorus ends their response (1952). In some traditions, there are duets between leaders, such as among the Makonde of northern Mozambique. In his study of cantometrics, Lomax speculated that vocal organization might reflect social structure. He pointed out that the call-and-response form tends to be found in societies with a strong tradition of leadership, but that 'the African emphasis on overlap, with its essentially egalitarian structure, is more understandable' (1968, p.161).

Musical cultures that employ unison and octaves exclusively are not necessarily devoid of polyphony. Among the Ganda, Nyoro and Soga peoples of southern Uganda, for example, instrumental textures are polyphonic, and yet no simultaneous sounds other than unison and octaves occur. But many forms of polyphony in Africa are indeed interconnected with harmonic styles. Impressed by elaborate harmonic part-singing along the Guinea Coast, Richard A. Waterman postulated that sub-Saharan Africa and Europe once formed a harmonic 'block' that was later bisected by Arab-influenced North Africa (1952). In 1930, Kirby suggested a functional interdependence between the tonal systems and harmonic sounds in African and African American vocal music (1930; 1961). Kirby's theory was the earliest formulation of what was later termed the 'skipping process' (Kubik, 1968; 1994), a structural principle referring to a specific way singers derive their vocal lines from the vocal lines of their partners by skipping one note in their common scale and duplicating the vocal line of the first singer at a different level. The results vary considerably according to the tonal system of the performers (ex.4; cf. Gogo harmonic patterns, Kubik, 1994, pp.176–9).

African multipart harmonic forms and patterns can be broadly classified as heterophonic, homophonic or polyphonic. Homophony and polyphony have special meanings in African contexts. Homophonic multipart singing in Africa implies that individuals within a group sing

↑ entry point for player II

* entry point for player III who picks the lowest subjective auditory pattern duplicating it two octaves higher

6. Subjective inherent patterns in the amadinda composition 'Kalagala e Bembe'. The tuning of an amadinda is equipentatonic and the numbers 1–5 indicate the five xylophone keys; players I and II strike their keys in parallel octaves and player III strikes only the top two keys of the 12-note amadinda

together with identical rhythms and texts, but at different pitch levels. The singers often move in parallel motion, such as in parallel 3rds or 4ths. This is usually the case in areas where semantic and grammatical tone are important for a language, such as in the Kwa-language family along the Guinea Coast. But there are other musical cultures, notably in eastern Angola and north-western Zambia, that accommodate contrary and oblique motion between voices (*Mukanda na Makisi*, 1981; Tsukada, 1990; *The Songs of Mukanda*, 1997). Homophonic multipart singing styles are common throughout sub-Saharan Africa, and they are usually associated with a leader/chorus structure in call-and-response form. After a leader's solo call, a chorus responds in tight harmony. In *kukuwa* songs within the *mukanda* circumcision school in eastern Angola and adjacent areas, long periods of solo singing alternate with choral responses that tend to be strophic in form.

African multipart styles often include functional polyphony performed on instruments, e.g. three drums, with each assuming a specific role. Such styles are built on interlocking patterns, and they have been compared to the hocket technique (Nketia, 1962). Polyphonic multipart singing in Africa involves two or more singers who combine melodic material different in rhythm and texts (even if the text consists only of vocables); melodic lines may be of varying lengths and have differing starting points. This interweaving style is prominent among the 'pygmies' of Central Africa and the 'Bushmen' of south-western Africa. It is also found in other parts of Africa, notably in the Zambezi valley. A.M. Jones transcribed a polyphonic Manyika story-song with four interlocking lines of text (1949), and Hugh Tracey noted polyphonic threshing songs performed in a similar style among the Shona during the 1930s.

Among polyphonic compositional techniques there are also indirect methods that generate auditory illusions that draw on the human auditory perceptual apparatus. At some point in the remote past, African solo players of instruments such as zithers or lamellophones discovered the boundaries to which the human ear can process sound. When that boundary is crossed, human auditory perception reacts by splitting the complex melodic input into separate pitch layers, an effect that has been called an auditory stream segregation by cognitive psychologists. African instrumentalists discovered this phenomenon independently and utilized their knowledge in their compositional techniques. This first came to light in the study of the court music of Buganda (Kyagambiddwa, 1955, p.106; Kubik, 1960, p.12). The phenomenon is now generally known as the I.P. (inherent pattern) effect, and the auditory illusory patterns emerging from such compositions are referred to as inherent or subjective patterns (Kubik, 1960).

In *Kalagala e Bembe*, an *amadinda* log xylophone piece recorded by Hugh Tracey in the Kabaka's (king's) compound in Kampala, Uganda, in 1950 (Tracey, 1973), it is easy to experience how human auditory perception splits the fast-running combination of note rows into at least two distinct pitch levels by isolating neighbouring notes to form independent pitch lines. In this case, one subjective auditory line is made up of all notes four and five, another of all notes one and two (fig.5). The task of player III in fig.5 is to identify by ear the lowest of the inherent patterns and duplicate it two octaves higher. In Buganda and elsewhere, the I.P. effect helps musicians, harp players for example, create text-lines since inherent patterns often suggest words (Kubik, 1994, pp.228–9, 313).

Cornelia Fales recently identified other illusory percepts while researching *inanga chuchotée* music in Burundi (*GEWM*, ii). Independent of compositional techniques, illusory patterns in African music are often the result of specific instrumental designs that generate oscillating timbre qualities. Lamellophones may have snail shells attached to their resonators or a central hole covered with a spider's web mirliton; beads or metal rings may be attached to some of the lamellae. Such sympathetic vibration devices generate timbral and melodic patterns of chance that permeate the music. Thus, in addition to composed melodic and rhythmic structures, there are oscillating timbre sequences that are controlled only indirectly by the performer. The emerging chance images have a stimulating effect. In the auditory experience of players, it is as if another person, perhaps a spirit, plays or hums with them. This can be observed in the interaction between the singing and playing of one of Zimbabwe's most accomplished *mbira dza vadzimu* lamellophone players, Beauler Dyoko (*b* 1945; cf. *Kuzanga*, no.26 on the CD accompanying Kubik, 1994).

Conforming with linguistic and cultural backgrounds, performers continuously verbalize and interpret auditory images. Many texts and text variations have their primary inspiration in instrumental patterns that are constructed in such a way as to create oscillating auditory images.

4. Music and society. The social dimension of music and dance in Africa became increasingly important to researchers after World War II due in part to the impact of the theory and practice in British social anthropology. Outstanding works published during the 1950s and 60s

include Nketia's *Drumming in Akan Communities of Ghana* (1963), Clyde Mitchell's *The Kalela Dance* (1956), a study of music on the Zambian Copperbelt, Audrey Richards's *Chisungu: a Girls' Initiation Ceremony among the Bemba of Zambia* (1956) and John Blacking's 'Songs, Dances, Mimes and Symbolism of Venda Girls' Initiation Schools' (1969). During this period Alan P. Merriam's *The Anthropology of Music* (1964) set a new tone among ethnomusicologists by advocating a more anthropologically oriented approach for the study of African music.

In 1958 Herbert Pepper published an *Anthologie de la vie africaine* on disc with music from Gabon and Congo. Blacking provided an elaborate table of communal music of the Venda people of South Africa covering a full year (1965, p.30). D.W. Ames and A.V. King wrote a glossary of Hausa music and its social contexts (1971), and Jos Gansemans published a study of music in the social and ritual life of the Luba people in Congo (1978). Somewhat earlier, Hugo Zemp struck a balance between contemporary trends (1971). In cooperation with linguist Thomas Bearth, Zemp presented a model study of musical concepts among the Dan (Dã) of Côte d'Ivoire, while also analysing sociocultural contexts of Dan music and various professional and non-professional roles of Dan musicians. Blacking also gave ethnomusicology a new twist by emphasizing 'cultural processes and products that are externalizations and extensions and manifestations of the body in varying contexts of social interaction' (*Process and Product*, 1969). His *Anthropology of the Body* (1977) details this philosophy (see Baily, 1985 and 1990 for further developments). Blacking also recommended a closer look at African musicians as individuals, and shortly before his death he questioned the existence of so-called 'ethnic' music (1989).

Musical practices flourish within sociocultural contexts; Africa is no exception to this rule. But its music and dance practices are no more or less determined by sociocultural contexts than the musical practice in other regions of the world. The researcher's goal, therefore, can be to discern only the specific contexts of music and dance genres and the roles of their carriers, not engage in a cross-cultural measurement of contextual quantities. To say that music in Africa is more functional than in the West and more rigidly bound to social occasions is highly misleading. Social contexts vary according to the cultural profile of a society. In societies where male and/or female puberty initiation is practised, specific types of music are linked to initiation ceremonies, such as *ekwenje* and *efuko* initiation songs for boys and girls respectively in south-western Angola, or the *nyimbo za chinamwali* (girls' initiation songs) in Chichewa- and Cinyanja-speaking communities of Malawi, Zambia and central Mozambique (Kubik, *Malawian Music*, 1987). Some instruments used in initiation ceremonies are secret, such as *ndumba mwelela* (bullroarer) among the Luvale in Angola and Zambia. The same applies to secret societies (*Mukanda na Makisi*, 1981). Where no initiation ceremonies exist, these manifestations are absent.

In socially stratified societies, musical professionalism by *jalolu* (*see* GRIOT) or by specialized court musicians, as among the Hausa and FulBe, is omnipresent. In urban cultures with traditions of 'ballroom' dancing, the participants often represent age-sets, such as in the *rebita* dance clubs of Luanda, Angola (Kubik, 'Muxima Ngola', 1991), or concert and dance music of South Africa during the 1930s (Ballantine, 1993). Class differences also selectively determine participation in particular aspects of a music culture, such as the class-determined community that frequented palmwine taverns in West Africa during the HIGHLIFE era (Nketia, 1957; Schmidt, 1994).

Oral literature and music are intimately connected in most parts of Africa and are often impossible to separate (Arom and Cloarec-Heiss, 1976; Malamusi, 1990; Rycroft, 1962; 1975–6; Stone, 1982). The social roles of the so-called talking drums of West and Central Africa, such as the *atumpam* in Ghana (Aning, 1977), the *chenepri* among the Anyi of the Côte d'Ivoire (Yotamu, 1979), the *dundun* set among the Yoruba (Laoye I, 1959; Euba, 1977; 1990), and various slit-drums in Cameroon and the Democratic Republic of the Congo (Carrington, 1949) demonstrate this intimate link.

Songs are often integrated into story-telling. Such *chantefables* display remarkable, unitary behavioural patterns across sub-Saharan Africa, from West Africa to areas of primarily Bantu-language speakers. It is not by chance, therefore, that some word roots for 'story' in Bantu languages recur in comparable forms in often distant areas: *simo* in Kigogo (Gogo or Chigogo) of Tanzania and *visimo* in the Ngangela (Nkangala) languages of Angola or *ntano* or *ngano* in several languages of eastern and southern Africa and as far west as northern Namibia and Angola.

African music in religious contexts has been well documented. Victor Turner's seminal work, *The Drums of Affliction* (1968), focussed on religious processes among the Ndembu of Zambia, while Euba (1977) studied drumming for the Yoruba *orisa* (*orịsa*) transcendental being Eshu (Ẹsu). Danhin Amagbenyõ Kofi documented music in the context of *vodu* among the Fon (Fõ) of Togo, while Maurice Djenda focussed on death in Mpyemo society ('Ein Todesfall', 1968). Robert Garfias wrote about dreams and spirit possession among the Shona (1979–80), Nketia on funeral dirges among the Akan (1955) and Rouget on trance in several societies (1985). Ideas about shapes and uses of musical instruments are often related to religious contexts (Brincard, 1989); anthropomorphic or zoomorphic shapes are frequently found. Instruments are often conceptualized as having a front, back, head etc. The *ngombi* harp in *Bwiti* cult music of Gabon is considered by priests to house a female divinity.

Several works have dealt with the use of music in psychotherapy (see Simon's work on *dhikr* in northern Sudan, 1975; Berliner, 1975–6; Friedson, 1996; Malamusi, 1999). In healing sessions that function as group therapy, desired effects are achieved indirectly with the help of a medium. Interaction between musicians, the medium and the sick person follows culturally determined patterns. The goal of many healing sessions is to liberate the individual from affliction by a dissatisfied spirit, as in *mahamba* sessions in Angola, or the effects of witchcraft, as in the *mangu* (witchcraft) denunciation among the Azande. There are accepted, intracultural reasons given to explain why the healing dance is beneficial to *vimbuza* patients of the Tumbuka of northern Malawi (Chilivumbo, 1972; Soko, 1984). The objective of the dance is to provide relief for the person suffering from *vimbuza*. The term *vimbuza* may cover a wide range of ailments from simple wounds to paralysis, hiccups, back pains and bad dreams.

Music and dance therapy in Africa accommodate both the individual and the group. The collective level is manifest in work-songs and in music and dance used in rituals responding to life-crises. At an individual level,

autotherapy occurs within performance of musical instruments in solitude, for example while walking on a long journey. The *nkangala* mouth-resonated stick is played by women in Malawi for relief from sadness and feelings of loneliness in the absence of a husband or friend. Outsiders would not hear much, but for the performer the psychotherapeutic effect is generated by the amplification experience inside the skull, due to the performer's use of the mouth as a variable resonator. S. Passarge suggested psychological effects for mouth bow playing among the Bushmen of the Okavango basin in Botswana (1905, p.684). The use of the *likembe* box-resonated lamellophone in Central Africa is well documented among travellers of long distances during the first half of the 20th century, as an instrument of self-pleasure and autotherapy. The constant motion of walking allows travellers a positive management of walks of up to 30 km per day. Surplus energy is available to the walking performer, by streamlining motion.

5. MODERN DEVELOPMENTS. Dramatic changes in African musical practices during the 20th century were triggered by the progressive integration of Africa into global trading and communication networks. These changes are primarily due to the catalyst effects of two particular socio-economic developments that gradually gained momentum.

First, the physical opening up of Africa created opportunities for people to travel via new forms of transportation (i.e. steamers, motor vehicles, air travel etc.). Areas that historically had little contact with each other, except via the 18th- to 19th-century caravan trade routes, were suddenly neighbours. This opening up of the continent created new pathways of dislocation, thus facilitating the emergence of urban, industrial and mining centres, and thereby promoting labour migration, inter-ethnic and inter-language contact, and agglomerations of townships.

Second, the rise of mass media, marked by the availability of wireless sets and hand-cranked gramophones from the 1920s on, meant that songs could spread to remote villages without human carriers. In the late 19th century, musical instruments such as the *zeze* (flat-bar zither) had reached Kisangani on the Congo river with porters travelling from Bagamoyo (Tanzania) along a caravan trade route. But by the 1940s, new songs began to spread by radio signals and shellac discs through the Belgian Congo, and original performers were rarely seen.

One result of the revolution in communications and the extreme power held by those in control was the rise of stylistic super-regions of popular music. By 1964 it was already possible to map out a zone of HIGHLIFE and JÙJÚ along the West African coast, a zone of Congo guitar music in Central Africa overlapping into East Africa, with subdivisions into western Congolese and *Katanga* guitar styles, and a *kwela* and *sabasaba*-based style area in southern Africa, which included countries to the north of South Africa, such as the Federation of Rhodesia and Nyasaland (now Zimbabwe, Zambia and Malawi). Influences from the south were also felt to a certain extent in the Copperbelt.

Stylistic super-regions all developed within a decade and included significant pockets of divergent styles, such as Luo guitar music based on lyre traditions in Kenya (Low, 'A History', 1982). From the late 1960s onwards, boundaries became increasingly blurred, because the mass media began to cover the entire continent. Congo dance-band music with electric guitars became increasingly popular not only in Central and East Africa but also in West Africa, notably in francophone areas. New pockets with divergent styles, often based on older musics, emerged in subsequent decades, such as *chimurenga* music in Zimbabwe during the 1980s, based on Shona harmonic patterns and the legacy of the *mbira*, and newer Mande guitar traditions in the western Sahel and savanna belt.

New African popular traditions have absorbed and processed a variety of African diasporic styles, from Cuban *son* and Dominican *merengue* in Central Africa to calypso in West Africa, swing jazz in South Africa, and up to the more recent influences of soul, reggae and rap. A significant increase in ethnomusicological literature, focussing on recent musical developments began in the early 1970s. John Gray's bibliography lists 1763 titles on African popular music (1991). Ronnie Graham's discography (1988) is an indispensable guide. There are also several overviews, such as Wolfgang Bender's *Sweet Mother* (1991), Peter Manuel's *Popular Musics of the Non-Western World* (1988) and a great number of regional studies such as those by David Coplan (1985), Erlmann (1989; 1990; 1991; 1994), Ballantine (1993), Nollene Davies (1994) and others for South Africa; John Collins (1985) and Christopher Waterman (1990) for West Africa; several articles by Kazadi wa Mukuna (1979–80; 1992; 1994; 1998) and a booklet by John Low (*Shaba Diary*, 1982) for Congo-Zaïre; Stephen Martin (1982; 1991), Gregory F. Barz ('Kwayas, Kandas, Kiosks', 1997), Low ('A History of Kenyan Guitar Music', 1982) and Janet Topp Fargion (1992) on Kenya and Tanzania. Erlmann edited a reader in 1991 on popular music in Africa, including studies of TAARAB music along the Kenya-Tanzania coast and on Zanzibar, and 20th-century developments in Angola. In 1994, the journal *World of Music* devoted an entire issue to 'The Guitar in Africa: the 1950s–1990s'.

African music in the second half of the 20th century was greatly affected by changing colonial or post-colonial values. What is widely considered 'modern' African music is almost exclusively performed on imported, factory-made instruments, particularly electric guitars. The use of synthesizers in studios is now so common that in an interview with Cynthia Schmidt, John Collins complained about the 'disappearance of live music' in the large cities of Ghana (1994, p.146). In recording studios, drum machines have replaced drummers and synthesizers have replaced horn sections.

In spite of the increasing cost of new equipment and the disproportionate burden on African economies, popular opinion in Africa seems to consider the use of Western industrial products an asset. Since the 1960s the broad public has been impressed by nothing short of the latest amplifiers, and popular evaluation not only contributed to eliminate acoustic guitar styles in most areas by the 1980s, but also forced groups unable to afford the costs of performing with modern equipment out of business. The trinity of lead, rhythm and bass guitars has been the model for nearly 40 years; sometimes locally manufactured instruments are added to this combination to lend an indigenous or national flavour. Clearly, the music business has been monopolized to a great extent, leaving only small margins of operation to dissident individuals among musicians. With only the latest records dominating popular tastes, musical groups, particularly those of lesser fame, have little choice but to change their styles

periodically, following current fashions. Notated African music such as art compositions have an even smaller share of the continental market. For economic reasons, many musicians and composers have migrated to North America or Europe.

Mainstream popular music has decisively influenced the music of village-based dance groups that use locally manufactured instruments. The trend began in the 1960s with groups such as the Richard Band de Zoe Tele near Yaoundé, Cameroon, and the Miami Bar Xylophone Band in Duala, Cameroon, performing Congo-Zaïrean-based popular music on *menjang* (*mendjaŋ*) xylophones, especially an adapted form of *merengue*. Musicologist Pie-Claude Ngumu (1975–6) also used these instruments, though for composing indigenous church music in the tradition of new Catholic church music that had been introduced in Cameroon, Congo, Uganda and other places in the 1950s (w'Itunga, 1987; Mbunga, 1959; Kyagambiddwa, 1963; Klein, 1990; Barz, *Performance of Religious and Social Identity*, 1997). Locally made instruments have survived often because musicians perform 'modern' music on them. *Valimba* gourd-resonated xylophones in southern Malawi probably survived into the 1990s due to local musicians learning to copy music first from popular Kenyan records and then from Zimbabwean records.

While ethnomusicologists and commercial record companies worldwide have become interested in the history of 20th-century popular music in Africa, historical consciousness remains low in the general African public. Mid-20th-century styles are quickly dismissed as 'out-of-date' or 'colonial' by young people.

GERHARD KUBIK

African Music Forum. A congress instituted in 1970 by the INTERNATIONAL MUSIC COUNCIL.

African Music Society. The now defunct African Music Society was founded in 1948 by Hugh Tracey and anthropologist Winifred Hoernle, whose principal objective was to encourage research in traditional and popular musics in Africa. The society emphasized the importance of recordings to document the range and character of African indigenous music, much of which has been extremely localized due to barriers of distance and language, and through dependence on oral tradition. The society also encouraged the dissemination of musical styles through education and radio programmes. It developed into the INTERNATIONAL LIBRARY OF AFRICAN MUSIC which issues the journal *African Music* (1954–), and is directed by Hugh Tracey's son, Andrew Tracey.

GREGORY F. BARZ

Afrika Bambaataa [Aasim, Kevin Donovan] (*b* New York, 10 April 1960). American DJ. He grew up in New York's South Bronx, his musical eclecticism matched by his vision of African American social and racial unity. In the mid-1970s he was one of the pioneers of New York's emergent hip hop culture of rapping, DJ mixing and scratching, graffiti and breakdancing. Along with two other Bronx DJs, Grandmaster Flash and Kool Herc, he began playing small percussive sections from obscure and unexpected rock, funk and electro-pop records as a rhythm track for rappers, interspersing the beats with extracts from cartoon melodies and film themes. When hip hop moved from school gymnasium dances to the mainstream world of record contracts, Bambaataa recorded 'Zulu Nation Throwdown' for the Harlem entrepreneur, Paul Winley. Unhappy with Winley, he moved to Tommy Boy Records, where his third contribution to that label, *Planet Rock*, was recorded in collaboration with Tom Silverman, rappers Soul Sonic Force, musician John Robie and engineer Arthur Baker. Incorporating the melodies of Kraftwerk and Ennio Morricone, the record became a huge international hit in 1982 and set a trend for futuristic electronic dance music. Inspired by the British film *Zulu*, Bambaataa had founded a loosely convened organization of hip-hop's cultural luminaries, called the Universal Zulu Nation and subsequent recordings such as *Looking For the Perfect Beat* and 'Renegades of Funk' promoted the ideals of the organization. After touring the southern states of America, Bambaataa also worked under the name of Shango. Described as both a fan and a master of records, Bambaataa achieved one of his lifetime ambitions in 1984 by recording *Unity*, a duet with James Brown. Later releases included collaborations with ex-Sex Pistol John Lydon, reggae artist Yellowman and Culture Club singer Boy George. Although no longer in the forefront of hip hop, his hybridization of dance music has been profoundly influential.

DAVID TOOP

Afrobeat. A style of African popular music. The term was coined in 1967 by FELA KUTI, who was known as 'the king of Afrobeat'. Fela played HIGHLIFE music while studying music at Trinity College of Music, London (1958–63). Upon his return to Nigeria he referred to the style as 'highlife jazz'. Geraldo Pino from Sierra Leone visited Lagos around 1966, playing a style referred to as Afro-soul. Pino's success encouraged Fela to develop an individual style.

Fela toured the USA in 1969 and was exposed to that country's Black Power movement. He also heard free jazz and rhythm and blues. His awareness of the political power of music is reflected in his subsequent development of Afrobeat, a fusion of jazz, soul and African musics with lyrics in Pidgin and Yoruba. He consciously highlighted the Africanness of his own music, claiming that he played African music since jazz was originally an African form of music.

The characteristics of Afrobeat include repetitiveness, pattern-structure, call and response, sudden breaks and solo passages. There is a clear emphasis on the role of percussion, and the highly politicized lyrics are highlighted with powerful horn riffs. At least five (often more) horns are featured on stage along with 15 other musicians and ten dancers. Fela sang and played tenor and alto saxophones and the electric piano.

Reflecting Fela's ideals of panafricanism, the Afrobeat style was adopted by many musicians throughout the continent including Fela's son Femi, who plays a distinct form of Afrobeat. Compositions in Afrobeat style have become a common element of dance music repertories including those of Tabu Ley Rochereau and Hugh Masekela.

After Fela's death in 1997 a revival of his music took place in Europe and the USA. Vinyl reissues of Fela's Afrobeat recordings were produced in Paris and his recordings became fashionable in dance clubs of western Europe in the 1990s, resulting in new dance-mix productions.

WOLFGANG BENDER

Afro-Cuban jazz [Cubop]. A jazz style. It was created from a fusion of bop with traditional Cuban elements, that arose in the 1940s, primarily in the work of Dizzy Gillespie; it is distinguished from the more general LATIN JAZZ by the specific influence of Cuban dance, folk and popular idioms. Although a Latin-American or Caribbean influence (Jelly Roll Morton called it the 'Latin tinge') is discernible in jazz from the late 19th century, the earliest use of Cuban elements is traceable only to Alberto Socarras and Mario Bauzá in the late 1930s. Afro-Cuban jazz became a clearly defined style and acquired an international following only when Gillespie, who had been influenced by Bauzá, began to collaborate with the outstanding Cuban percussionist Chano Pozo. For Gillespie, Bauzá, and others, the main impulse for the Afro-Cuban movements came from their feeling that American jazz of the 1930s and 1940s, being essentially monorhythmic, needed the kind of enrichment that an infusion of Afro-Cuban polyrhythms would provide.

Gillespie's big band made several notable recordings in the late 1940s, including Pozo's compositions *Manteca* (1947, Vic.), *Afro-Cuban Suite* (on the album of the same name, 1948, Swing), and *Guarachi guaro* (1948, Vic.), and George Russell's *Cubana be/Cubana bop* (1947, Vic.); these pieces, which feature Pozo's conga drumming, were the first to integrate authentic Afro-Cuban polyrhythmic concepts with the bop idiom. Soon other big bands began to make recordings in the Afro-Cuban style; Stan Kenton's *Machito* (1947, Cap.), *Peanut Vendor* (1947, Cap.), *Cuban Episode* (1950, Cap.), and *Twenty Three Degrees North, Eighty Two Degrees West* (1952, Cap), and Machito's *Cubop City* (1948, Roost), *Afro Cuban Jazz Suite* (1950, Clef), *Kenya* (1957, Roul.), and 'Afro-jazziac' (on the album *With Flute to Boot*, 1958, Roul.) are noteworthy examples. Smaller groups also contributed significantly to the new genre, in particular those led by Tadd Dameron (*Jahbero*, 1948), Charlie Parker (*My Little Suede Shoes*, 1951, Mer./Clef) and Bud Powell (*Un poco loco, 1951*, BN).

Gillespie's band continued to perform Afro-Cuban jazz throughout the 1950s, and recorded such titles as 'Manteca Suite' (on the album *Afro*, 1954, Norg.) and *Gillespiana* (1960, Verve). A number of prominent Cuban percussionists were active during the same period; among these were Candido Camero, Armando Peraza and Mongo Santamaria, who recorded the albums *Yambu* (1958, Fan.) and *Mongo* (1959, Fan.) with his own band.

While the impact of Afro-Cuban jazz began to wane in jazz circles by the end of the 1950s, Cuban and other Caribbean-oriented musicians, coming under the influence of modern jazz, maintained the fusion of the two genres, but with a slight shift of emphasis towards the Cuban side of the equation. Ray Barretto, Eddie Palmieri, Bobby Paunetto and Santamaria helped further to 'latinize' Afro-Cuban jazz and thereby also to broaden its scope and definition.

Afzelius, Arvid August (*b* Hornborga, Västergötland, 6 May 1785; *d* Enköping, 25 Sept 1871). Swedish pastor and folksong collector. After studying theology, he took a clerical post in Stockholm from 1809 to 1820, and from 1820 was pastor in Enköping. In 1811 he became a member of the Götiska Förbund and was deeply involved in the collecting of early folk tales, poems and melodies. He was an amateur flautist, but had little training in music; his friends helped him notate the melodies he heard.

Afzelius was the first to notate and publish the folksong *Näckens polska*, which he heard sung by a peasant girl in Småland in 1810, and to which he later wrote the poem *Djupt i havet*; the melody and text were printed in the journal *Iduna* in 1812. He collaborated with Erik Gustaf Geijer in the three-volume collection, *Svenska folkvisor* (1814–17), and supplied a number of melodies for Olof Åhlström's anthology, *Traditioner af swenska folk-dansar* (1814–15). He published a German edition of *Volkssagen und Volkslieder aus Schwedens älterer und neuerer Zeit* (Leipzig, 1842), edited a collection of folk poems for *Afsked af swenska folksharpan* (1848), whose melodies were arranged by Erik Drake, and wrote a memoir of Åhlström (1867).

KATHLEEN DALE/AXEL HELMER

Agache, Alexandru (*b* Cluj, 16 Aug 1955). Romanian baritone. After studying in Cluj, he made his début there in 1979 as Silvano (*Ballo in maschera*), followed in 1980 by Sharpless. During the next decade he sang Don Giovanni, Malatesta, Germont, Luna, Posa (*Don Carlos*), the title role of *Nabucco*, and Schaunard at Cluj. He also appeared at Budapest, Dresden, Ankara and the Deutsche Staatsoper, Berlin, with which company he toured Japan in 1987 as Mozart's Almaviva. Agache made a notable Covent Garden début in 1988 as Renato in *Ballo*, later singing Enrico Ashton, Boccanegra, Rigoletto and Amonasro. He made his début at La Scala in 1989 as Belcore in *L'elisir d'amore*. Other roles include Escamillo and Gounod's Méphistophélès. His powerful, flexible voice and imposing stage presence make him an ideal interpreter of Verdi's baritone roles.

ELIZABETH FORBES

Agatea, Mario (*b* 1623–8; *d* Bologna, 1699, before 28 Jan). Italian singer, composer and instrument maker. He was an Augustinian monk who was employed from about 1649 as a soprano castrato at the Este court at Modena. On 13 November 1660 he was appointed to the choir of S Petronio, Bologna, with a stipend of 50 lire a month; he was discharged on 24 April 1662 but rejoined on 25 July

1663. In October 1665 he returned to Modena, where he succeeded Marco Uccellini as choirmaster of the cathedral. He vacated this post in November 1673 and by early 1674 was again living at Bologna. Between 1677 and 1681 he served as a singer in the *cappella* of Duke Francesco II of Modena. In 1685 he was made a member of the Accademia Filarmonica, Bologna, and seems to have spent his last years in or near that city. He wrote to the Duke of Modena in 1689 from the monastery of S Biagio, Bologna, asking the duke to grant him a pension in view of his old age and failing eyesight. In 1692 he wrote twice more to the duke: on 13 January to say that he had become totally blind and on 13 May to say that he had been transferred, on his doctors' advice, from S Biagio to the monastery of S Maria della Misericordia outside Bologna. His death is recorded in the *Registro di bolletta della corte* of Modena for 28 January 1699, where his age is given as 'about 75', which would suggest that he was born about 1623–5; an inscription to an engraved portrait of him dating from 1676, however, gives his age as 48, which would point to a birth date of 1627 or 1628. During his lifetime he seems to have been better known as a singer than as a composer. He is described in the *Atti capitolari* (f.87) of Modena Cathedral as 'a soprano singer of uncommon excellence'; in 1666 (not 1664 as Roncaglia stated) Cazzati dedicated a motet to him, describing him as a 'renowned musician'. A letter to G.P. Colonna reveals that he was also a maker of keyboard instruments. Most of his few surviving vocal compositions are secular, though several are moral in tone. Roncaglia considered him a competent composer with a gift for melodic writing.

JOHN WHENHAM

Agati. Italian family of organ builders. Pietro Agati (*b* Pistoia, 15 Feb 1735; *d* Pistoia, 10 Dec 1806) served apprenticeships in the Tronci workshop in Pistoia, and later with Filippo Gatti in Bologna. He opened his own workshop in Pistoia, where he built his 'secundum opus' for the church of S Vitale (1760) with a case that bears a striking resemblance to that belonging to the organ by WILLEM HERMANS in Spirito Santo, Pistoia (1664). From this Hermans instrument Agati copied the stopped flute 8′, Cornetto, Trombe, Voce umana (or Violoncello – a bass 4′ regal) and Mosetto (treble 8′ regal 8′) to his organ at Vignole di Quarrata (1797). Another outstanding instrument is at Tréppio, Pistoia (1794).

Pietro's son Giosuè (*b* Pistoia, 21 Jan 1770; *d* Pistoia, 10 Dec 1806) built many fine instruments, including those at Serravalle Pistoiese (1821), Carmignano, near Prato (1817), and the Oratorio di SS Trinità, Límite sull'Arno, near Empoli (1821). These organs each have a 50-notes compass, (*C–f‴*, short first octave), and two pedalboards (eight notes each, *C–B*, short octave) of which the upper is coupled to the *Organo grande* and has its own Contrabbassi 16′, and the lower pulls down the *Organo piccolo*. The organ now in Gavinana, Pistoia (1838), has three manuals (62 notes, *C′–f‴*, short first octave), and two pedalboards of which the larger (17 notes, *C–g♯*, short first octave) is permanently coupled to the *Organo grande* and the smaller (eight notes, *C–B*, short octave) pulls down the *Organo piccolo*.

Giosuè's son Nicomede (*b* Pistoia, 8 Apr 1776; *d* Pistoia, 16 May 1885) was the last builder of the family. He built a great number of mostly small instruments, but, having no heirs, he sold the firm to his competitor Filippo TRONCI in 1883, on condition that the new company should be called Agati–Tronci. The Agati family's total output is estimated at about 500 organs, some of which were also exported to France, Egypt and South America.

UMBERTO PINESCHI

Agawu, V(ictor) Kofi (*b* Hohoe, 28 Sept 1956). American musicologist and music theorist, of Ghanaian birth. He studied at Reading University (1974–7) and with Arnold Whittall at King's College, London (1977–8), where he took the MMus in analysis. He took the doctorate under Leonard Ratner at Stanford University (1978–82), with a dissertation on structure and form in 19th-century music. He began his academic career at Haverford College (1982–4), and subsequently taught at Duke University (1984–6), King's College, London (1986–9), Cornell University (1989–95; professor from 1992), and Yale University (professor, 1995–8). In 1998 he was made professor at Princeton University. Agawu's interests cover many areas of musicological research. His theoretical studies include music analysis and theory, semiotics, and post-colonial theory. He has written on the music of the 19th century and particularly on Mahler, and his research on West African music has primarily dealt with the relationship between language and music.

PAULA MORGAN

Agazzari, Agostino (*b* c1580; *d* Siena, Jan 1642). Italian composer and theorist.

1. LIFE. Agazzari's parents were evidently of Sienese origin, and he himself went to Siena as a boy and received his training there, perhaps from Francesco Bianciardi. He was organist at Siena Cathedral from 1597 to 1602, when he left to direct the music at the Collegio Germanico, Rome (1602–3). In 1604 he attended the reopening of the Sienese Accademia degli Intronati. By 1606 he was *maestro di cappella* at the Seminario Romano, but returned to Siena in 1607 after being blacklisted by the Cappella Sistina. In the following years he was organist at Siena Cathedral on three different occasions: in 1609, 1611–17 and 1629–33; he also served for two short periods as music director at S Maria di Provenzano, Siena, 1617–19 and 1620–?1622. Not until February 1641 was he appointed *maestro di cappella* at Siena Cathedral, and failing health forced him to resign the position the following September. He died in January 1642 and was buried in S Niccolò del Carmine.

2. WORKS. Agazzari's first compositions were secular madrigals, conservative but appealing works which show his interest in text expression. His devotional madrigals, contained in the two volumes of *madrigaletti* (1607) and in the *Stille soavi* op.19, are similar in style; op.19 differs from earlier works only in the inclusion of an organ bass. *Eumelio*, one of the first examples of Roman opera, was written for his students at the Seminario Romano. Music for solo voice and continuo predominates, but the liveliest moments occur in the choral scenes interspersed throughout the opera, notably at the end of each act.

Most of Agazzari's compositions are sacred. His adherence to late Renaissance traditions is reflected in his volume of mass settings which, despite the inclusion of an organ bass, feature modal titles, pseudo-imitative textures, a sparing use of triple metre and an emphasis on textual clarity. Of his seven settings of the Litany of Loreto, the first of the eight-voice works from the 1639 collection is the most compelling, offering the greatest variety in colour and scoring. Agazzari's three volumes of Vespers psalms are diverse: the eight-voice works are characterized by stately antiphony, with some brilliant passages in closely spaced dialogue, and the five-voice works exploit textural heterogeneity. Most progressive are the three-voice settings, with their sharp rhythmic profiles, virtuoso lines and concertato scoring; a rubric calling for an instrumental sinfonia precedes the setting of *Laudate Dominum*. The 1609 volume includes four-voice Compline psalms.

The motet occupied most of Agazzari's creative energies. His earliest collections of works for 4–8 voices display his gift for composing attractive melodies, his ability to create excitement through abrupt shifts in harmony, texture, rhythm and metre, and his extensive use of word-painting. Progressive tendencies are clear in his inclusion of an organ continuo, in his exploitation of concertato techniques (especially the 'concertato alla Romana', in which varied scoring sets apart individual movements of a single work) and in his insistence that the music reflect the meaning of the text. He successfully adapted his style to the small-scale idiom in 1606, producing one of the most popular prints of two- and three-voice motets in the early 17th century. Little style change is evident in the collections of 1607, 1611 and 1613, but his later motets exhibit a lack of contrast and rely too much on unmotivated melisma.

Agazzari's interest in the practical problems of performance are shown in his influential and much-cited treatise *Del sonare sopra 'l basso* (1607). He not only furnished a handy guide for the keyboard player realizing the figured bass, but also addressed the other instrumentalists who accompanied the vocal ensemble, giving them specific instructions on how best to contribute, either by providing harmonies or by 'ornamenting' the continuo line. The treatise is fundamental for understanding early Baroque performing practice. Agazzari discussed ornamentation (both vocal and instrumental), tempo and musical style in

the prefaces to several of his collections of music (1603, 1609, 1611 and 1613). In *La musica ecclesiastica* (1638) he reiterated his long-held notion that music should be the handmaiden of the text, but rejected current operatic techniques (including ground basses and dance rhythms) in favour of a grave, dignified style for church compositions.

Agazzari's contributions made him much more than the leading Sienese composer of the 17th century. A champion of the 'new style' of sacred music, he injected fresh vitality into the small-scale motet and spurred its development in Rome. His influence extended beyond the Alps: many of his works appeared in northern anthologies, and his basso continuo treatise served as the basis for Michael Praetorius's discussion of the same subject in the *Syntagma musicum*.

WORKS

DRAMATIC

Eumelio, dramma pastorale (prol., 3, T. de Cuppis and F. Tirletti), Rome, Seminario Romano, carn. 1606 (Venice, 1606)

SACRED

Sacrarum cantionum, 5–8vv, liber primus (Rome, 1602, 2/1605, with org)
Sacrae laudes, 4–8vv, bc (org), insts, liber secundus (Rome, 1603)
Sacrarum cantionum, 5–8vv, bc (org), liber tertius (Rome, 1603)
Sacrae cantiones, 2–3vv, bc (org), liber quartus (Rome, 1606, 2/1606); as Motetti, libro quarto (Milan, 1606)
Sacrarum cantionum, 2–4vv, bc (org), liber II, op.5 (Milan, 1607, 2/1608 with Del sonare sopra 'l basso con tutti li stromenti, 3/1609, 4/1613)
Cantiones, motectae vulgo appellatae, 4–8vv, insts (Frankfurt, 1607); selections from 1602 and 1603 publications
Psalmi sex, 3–4vv, bc (org), op.12 (Venice, 1609)
Psalmi ac magnificat, 5vv, bc (org), op.13 (Venice, 1611)
Sertum roseum ex plantis Hiericho, 1–4vv, bc (org), op.14 (Venice, 1611)
Psalmorum ac magnificat, 8vv, bc (org), op.15 (Venice, 1611)
Dialogici concentus, 6–8vv, bc (org), op.16 (Venice, 1613)
Missae quattuor tam organis, 4–8vv, bc (org), op.17 (Venice, 1614)
Sacrae cantiones, 1–4vv, bc (org), op.18 (Venice, 1615)
Eucaristicum melos, 1–5vv, bc (org), op.20 (Rome, 1625)
Litaniae beatissimae virginis, 4–8vv, bc (org), op.21 (Rome, 1639)
Musicum encomium, 1–5vv, bc (org) (Rome, 1640)

DEVOTIONAL

Il primo libro de' madrigaletti, 3vv (Venice, 1607)
Il secondo libro de' madrigaletti, 3vv (Venice, 1607)
Stille soavi di celeste aurora, 3–5vv, bc, op.19 (Venice, 1620)

COLLEEN REARDON

Ager, Klaus (*b* Salzburg, 10 May 1936). Austrian composer. He studied at the Salzburg Mozarteum (piano, conducting, composition), Salzburg University (musicology) and the Paris Conservatoire (composition), where his teachers included Pierre Schaeffer and Olivier Messiaen. In 1973 he worked with Radio France in Paris and was appointed assistant lecturer at the Salzburg Mozarteum, where he became chair of the department of music analysis in 1979. A co-founder of the Edition 7 self-publishing association, he has also founded and directed (1975–86) the Österreichisches Ensemble für Neue Musik. He has served as chair and artistic director of the Aspekte festival in Salzburg (from 1977) and as professor of composition at the Bregenz Conservatory (1981–6). He was appointed rector of the Salzburg Mozarteum in 1995.

Ager's compositions before 1975 explore new performance techniques and the full sound potential of instruments, interests most obvious in *silences VI* for harp (1973) and *silences VII* for piano four hands (1973). After these experimental works, he wrote using a method he described as 'incoherent process construction', composing simultaneous phrases that cohere in different ways but pursue independent linear courses. The complex works that resulted reached their culmination in *la règle du jeu* (1978). With the Duet for two violins (1980) and *MaMuMis* (1981–4), he re-established more traditional musical semantics. Although in his orchestral work *Fades the light from the sea* (1981) pitches and durations were chosen largely with the aid of a computer program, familiar musical features also appear, allowing the listener to form an interpretation based to some extent on a semantic understanding.

WORKS
(*selective list*)

Inst: es esta la muerte, op.8/2, vn, cl, pf, perc, tape, 1972–6; Reflexions, op.2/2, orch, 1973–6; silences VI, op.5, hp, 1973; silences VII, op.6, pf 4 hands, 1973; HOSHI, op.13, wind qnt, tape, 1974–5; I remember a bird, op.16, cl, trbn, gui, pf, perc, tape, 1976; Metaboles IV, op.21, str qt, 1977; le soleil des espoirs perdus, op.25, fl, cl, vc, pf, 1979; Duet, 2 vn, 1980; Fades the light from the sea, op.33/3, orch, 1981; Lamento, op.33/2, str orch, 1981; MaMuMis, op.32, vn, pf, 1981–4; CLB512, op.39, cl, tape, 1983; Hölderlin-Fragmente, op.50, ob, tape, 1987–9; Serenade, op.60, hammerklavier, chbr orch, 1990; Moarré, op.66, accdn, vib, 1993; MODOS3A, op.68/2, fl, cl, pf trio, 1996

SIGRID WIESMANN

Ager, Milton (*b* Chicago, 6 Oct 1893; *d* Los Angeles, 6 May 1979). American composer. He began his career as a song plugger and arranger for the publishing companies of George M. Cohan and Irving Berlin, and had his first success as a songwriter (in collaboration with the composer George W. Meyer) with *Everything's peaches down in Georgia* (G. Clarke, 1918), introduced by Al Jolson. He wrote many songs to lyrics by Jack Yellen (with whom he founded the publishing firm Ager, Yellen & Bornstein in 1922), including *I wonder what's become of Sally* (1924), *Ain't she sweet?* (1927) and *Happy days are here again* (1930); the last became closely associated with the presidential campaigns of Franklin D. Roosevelt. Other well-known songs by Ager are *I'm nobody's baby* (lyrics by B. Davis; 1921), *Auf Wiedersehen, my dear* (A. Hoffman, E.G. Nelson, A. Goodhart; 1932), and, in collaboration with Jean Schwartz, *Trust in me* (N. Wever; 1936). His contributions to stage scores include songs for *What's in a Name?* (1920, with 'A Young Man's Fancy'), *Rain or Shine* (1928) and *John Murray Anderson's Almanac* (1929). He also wrote music for the films *Honky Tonk* (1929), *Chasing Rainbows* (1930) and *King of Jazz* (1930).

SAMUEL S. BRYLAWSKI

Aggere, Antonius de (*fl* early 16th century). South Netherlandish scribe. He was previously thought to be a theorist and priest at the church of St Martin at Akkergem near Ghent, but was in fact Anthony of St Maartensdijk, a small town on the Dutch island of Tholen. He copied folios 63–206 of the manuscript *B-Gu* 70 which includes treatises by Aegidius Carlierius, Johannes Tinctoris, Dionysius Lewis de Ryckel and a few anonymous treatises on *musica plana*. There is no reason to assume that he was the author of any of these treatises. The dates given in the manuscript (8 November 1503 and 1 April 1504) refer to the time of copying.

ANNA MARIA BUSSE BERGER

Aggházy, Károly (*b* Pest, 30 Oct 1855; *d* Budapest, 8 Oct 1918). Hungarian composer and pianist. He studied at the National Conservatory in Pest (1867–70), at the Vienna Conservatory (1870–73) and at the Academy of Music in Budapest (1875–8), where he was a pupil of Liszt (piano) and Volkmann (composition). With A. Juhász and I. Lépessy, he won the Liszt Scholarship in two successive years, and at the final examination he made a great impression with his Andante and Scherzo for orchestra, first performed in 1878 by the National Theatre orchestra under Sándor Erkel. He and Jenő Hubay established a reputation as a concert duo from the end of 1879 in Paris, which they consolidated the following summer in Austria and during the autumn on an extended tour through Hungary. Their first joint composition, *Fantasia Tziganesque*, for violin and piano (op.7), dates from that time. Between 1880 and 1881 they appeared many times in Paris, London (June–August 1880), Brussels and Luxemburg; concluding their concert tours in Algiers (May 1881), they returned to Hungary, where Aggházy became a professor of the piano at the National Conservatory while Hubay was appointed (February 1882) to the professorship vacated by Wieniawski in Brussels. This put an end to Aggházy's concert activities: thereafter he seldom appeared in public as a pianist, and then only as an accompanist or in chamber music. For a short time in 1882 he edited a musical periodical, *Harmonia*, but he turned more and more to composition and teaching. In 1883, on the recommendation of Liszt, he was appointed professor at the Stern and Kullak conservatories in Berlin, remaining there until 1889 when he returned to the National Conservatory in Budapest.

Aggházy was not a prolific composer, but in the best of his piano music his attempt to unite a genuinely Hungarian idiom, under a French influence, with some stylistic features of the Baroque, represents a transition from Liszt to the new Hungarian music of the early 20th century, in so far as this was possible within the limits of Aggházy's talent and the possibilities of the post-Romantic era. Of about 170 compositions, most of them short, more than 140 were published. He composed two operas, *Maritta, a Korsós Madonna* ('Maritta, the Madonna with Jug', first performed at the Royal Hungarian Opera House on 14 October 1897), which remained in the repertory for only eight weeks; and *Ravennai nász* ('The Wedding in Ravenna', 1908), which was not performed. Aggházy also wrote some incidental music, four orchestral works, a cantata, *Rákóczi* (1905), 18 choral works, 34 songs, some chamber music (e.g. his String Quartet op.25) and more than 100 piano works, among them *Poèmes hongroises* (op.13), *Moments caractéristiques* (op.16), *Suite hongroise* (op.19, four hands), *Ländlerstimmungen* (op.22), *Trois pièces* (op.33), *Vier Klavierstücke* (op.41) and *Soirées hongroises* (i–iii).

DEZSŐ LEGÁNY

Agincourt, François d'. *See* DAGINCOURT, FRANÇOIS.

Agitato (It.: 'agitated', 'restless'; past participle of *agitare*, 'to agitate', 'excite', 'urge forward'). A tempo (and mood) designation found particularly as a qualification of *allegro* or *presto*: Verdi's *Otello* opens *allegro agitato*. It was little used before the 19th century, though Koch (*Musikalisches Lexikon*, 1802) gave it a substantial article, noting its use as an independent designation and as a qualification; he also drew attention to its occasionally being wrongly understood to denote an increase in tempo.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Aglié, Count **Filippo** [Philippe] **d'** (*b* 1604; *d* Turin, 19 July 1667). Italian poet, choreographer and composer. He began a brilliant political and artistic career in the service of Cardinal Maurizio of Savoy. About 1630 he entered the household of Duke Carlo Emanuele I of Savoy, on whose death in 1637 he became chief counsellor and favourite of the Duchess Cristina, accumulating honours and fortune. Except for an enforced sojourn in Paris from 1640 to 1644 his official duties kept him at the Savoy court where he wrote or conceived more than 30 ballets, plays with music, water festivals and carousels to celebrate significant political alliances and Cristina's birthdays. His

first work, *Bacco trionfante dell'India e caccia pastorale*, dates from 1624, his last, *La perla peregrina*, from 1660.

Variety, ingenuity and spectacle characterize all d'Aglié's works, which also include elegant and witty allusions to court personalities (*Il Gridelino*, 1652) or to specific tastes (*Il tabacco*, 1650) as well as using mythological themes to praise political achievements (*Hercole expugnator*, 1635). In greatly expanding the role of choreography, he seems to have been influenced by French practice and can thus be compared with Isaac de Benserade. He also provided more opportunities for musical development. In works such as *L'educatione d'Achille* (1650) solos alternated with duets and massed choirs. While sustained solo vocal roles are rare, ensembles of instruments and voices were frequently used for melodramatic effects, and they were sometimes given interesting representational roles (as in the musical and choreographic dispute that accompanies the entry of King Tugine in *La perla peregrina*, 1660). D'Aglié composed some of the music himself; the music for four of his works is in the manuscript *I-Tn* 9m.11.83–6.

Aglio, Bartolomeo dall'. *See* DALL'AGLIO, BARTOLOMEO.

Aglione, Alessandro (*fl* 1599–1621). Italian composer. A monk, he is described on title-pages as 'of Spoltore, Abruzzo'. Apart from eight motets (in RISM 1627[2]) all his music is either lost or incomplete. Into the latter category fall the *Canzonette spirituali* for three voices (Venice, 1599) and *Il quinto libro dei motetti a 1–4 voci con una messa e vespero* (Venice, 1621). His lost music is known to have included *Giardino di spirituali concenti a 2–4 voci con alcuni motetti a voce sola* op.4 (Venice, 1618).

Agnelli, Lorenzo (*b* 25 March 1610; *d* 1674). Italian composer. The title-page of his *Salmi e Messa* (Venice, 1637) describes him as an Olivetan monk who worked in Bologna. This publication includes vesper psalms and a mass, all for four voices and organ continuo, and places Agnelli among the many north Italian composers of unambitious liturgical music at this period. Although he still used outdated *falsobordone* chanting in some psalm settings, others are interesting for their use of structural devices aimed at unifying long pieces: one has a straightforward chaconne pattern in the continuo part, another is based on a complex variation scheme in the bass in the manner of some of Monteverdi's later psalms. Melodious solos are offset by tuttis with imaginative harmonies. The mass is bound together by a recurring motif in the voice parts, an unusual formal device at this time, and has interesting and varied melodic lines with much syllabic writing. The volume also includes some motets, and Agnelli published his *Secondo libro di mottetti* in Venice in the following year. As well as duets and three-part pieces with continuo, this collection includes four- and five-voice motets with parts for specific instruments, including bassoon and chitarrone. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE/ELIZABETH ROCHE

Agnelli [Agnello], **Salvatore** (*b* Palermo, 1817; *d* Marseilles, 1874). Italian composer. At the age of eight he entered the Palermo Conservatory and in 1830 the conservatory of S Pietro a Majella in Naples, where he studied until 1834 with Furno and Zingarelli (counterpoint) and Donizetti (composition). Donizetti supported his theatrical début in 1838 at the Teatro Nuovo with the *opera buffa I due pedanti*. Agnelli followed this first success with nine other comic operas, performed in Naples and Palermo between 1838 and 1842. In 1846 he moved to Marseilles, where he tried his hand at *opera seria* with *La jacquerie* (1849) and *Léonore de Médicis* (1855) and composed three ballets. He also produced some sacred music and a cantata in honour of Napoleon I, performed with three orchestras in the Jardin des Tuileries in 1856. In 1872 he visited Naples, hoping in vain to arrange a performance there of his opera *Cromwell*. Agnelli was an imitator of Donizetti and Mercadante without great distinction.

WORKS

STAGE

18 operas, incl.: I due pedanti (A. Passaro), Naples, Nuovo, 25 Feb 1838; I due gemelli (G.B. Lorenzi), Palermo, Carolino, 1839; La jacquerie, Marseilles, Grand, 22 April 1849; Léonore des Médicis, Marseilles, Grand, 21 March 1855; Les deux avares (F. de Falbaire), Marseilles, Grand, 22 March 1860; Cromwell (4), unperf.

3 ballets (all for Marseilles): Calisto; Blanche de Naples; La rose

OTHER WORKS

Apothéose de Napoléon I (cant.), 1856; Cantata di Santa Rosalia; 33 songs from Dante's *Commedia*, Bar, pf

Sacred music, incl. 2 masses, 3 lits, 4 Tantum ergo, Stabat mater, Miserere

GIOVANNI CARLI BALLOLA

Agnesi, Maria Teresa (*b* Milan, 17 Oct 1720; *d* Milan, 19 Jan 1795). Italian composer. As a girl she performed in her home while her elder sister Maria Gaetana (1718–99; she became a distinguished mathematician) lectured and debated in Latin. Charles de Brosses, who heard them on 16 July 1739 and was highly impressed, reported that Maria Teresa performed harpsichord pieces by Rameau and sang and played compositions of her own invention. Her first cantata, *Il restauro d'Arcadia*, was written in honour of the Austrian govenor Gian-Luca Pallavicini in Milan in 1747. In the following years, she sent *La Sofonisba* to Vienna for possible performance on Empress Maria Theresa's nameday. At about this time she dedicated collections of her arias and instrumental pieces to the rulers of Saxony and Austria; according to Simonetti the Empress Maria Theresa sang arias that Agnesi had given her. She married Pier Antonio Pinottini on 13 June 1752. Her next opera, *Ciro in Armenia*, was produced at

the Regio Ducale in 1753. In 1766 her *Insubria consolata* was performed in Milan on the engagement of Beatrice d'Este and the Archduke Ferdinand. Her final years were spent in poverty. Her portrait hangs in the museum of La Scala; other depictions are reproduced in the encyclopedia *Storia di Milano* (vols. xii, xiv).

Agnesi's career as a theatrical composer was made possible by the changes in women's status taking place in Austrian Lombardy. Her talents seem to have found a warmer reception in Vienna and Dresden than in her native city, to judge by the elegant copies of *La Sofonisba*, *Il re pastore* and the arias produced for these courts. Stylistically, her operas show a progression from relative simplicity (*Ciro in Armenia*) to more ambitious and virtuoso writing in the later works. *Il re pastore* and *Ulisse* feature lengthy ritornellos and use da capo form almost exclusively; several of the arias in *Il re pastore* and in *La Sofonisba* are miniature two-part scenas. The latter opera includes some of Agnesi's most powerful writing; Sophonisba's last aria before dying, 'Già s'appressa il fatal momento', is a particularly moving and dramatic close to an *opera seria*. Agnesi's keyboard music, less sharply characterized, is sometimes technically challenging, in a generic north Italian style.

WORKS

DRAMATIC

Il restauro d'Arcadia (cant. pastorale, G. Riviera), Milan, Regio Ducale, 1747, lost
La Sofonisba (dramma eroico, 3, G.F. Zanetti), Vienna, ?1747–48, *A-Wgm*, *Wn*
Ciro in Armenia (dramma serio, 3, ? Agnesi), Milan, Regio Ducale, 26 Dec 1753, Act 3 frags. *I-Mc* (not identical with anon. Milanese lib of the opera for carn. 1754 in *Mb*, *US-Wc* etc.)
Il re pastore (dramma serio, 3, P. Metastasio), ?1755, *A-Wn*
L'Insubria consolata (componimento drammatico, 2), Milan, 1766, *F-Pc*, lib *I-Mb*
Nitocri (dramma serio, 3, A. Zeno), Act 2 frags. *Mc*

SVEN HANSELL, ROBERT L. KENDRICK

Agnew, Roy [Robert] **(Ewing)** (*b* Sydney, 23 Aug 1891; *d* Sydney, 12 Nov 1944). Australian composer and pianist. He studied the piano in Sydney with Daisy Miller, Sydney Moss and Emanuel de Beaupuis and composition briefly with Alfred Hill at the NSW Conservatorium. From 1920 Agnew's pieces were performed by several eminent pianists, including Moiseiwitsch, Murdoch and Gieseking. Working in London from 1923 to 1928, Agnew studied composition and orchestration with Gerrard Williams. The *Fantasie Sonata* was given its première there by Murdoch in 1927 and, on his return to Sydney in 1928, the tone poem *The Breaking of the Drought* was conducted by Hill. From 1928 to 1935 Agnew performed and broadcast both in Australia and Britain, while from 1935 onwards he taught the piano, composition and a class entitled 'General Interpretation and the Art of Pedalling' privately in Sydney. For five years from 1938 Agnew presented a weekly radio programme for the ABC in which he introduced a wide spectrum of 20th-century music, including his own. In 1943 Agnew also recorded some 50 of his piano compositions for the ABC. His last large work, the *Sonata Legend* or *Capricornia*, was performed in 1944 by Sverjensky at the New South Wales Conservatorium, where in the same year Agnew had been appointed to the staff.

Agnew was one of the few Australian composers to achieve international recognition in the first half of the 20th century. A composer mostly of piano music, lyrical and romantic in style, his works range from music for children (*Holiday Suite*, *Youthful Fancies*) to miniatures and large-scale concert pieces. The concert works are highly pianistic, full of fantasy and colour, and technically demanding; they incorporate a forward-looking harmonic vocabulary in a musical style that has affinities with Skryabin, Debussy, Scott, Bridge, Bax and Ireland. These include the miniatures *Dance of the Wild Men* and *Deidre's Lament* (dedicated to Moiseiwitsch), the dramatic and Skryabinesque *Fantasie Sonata*, the lyrical and mostly introspective *Sonata Poème*, the intense and dramatic *Sonata Ballade* and the monothematic and concentrated *Sonata Legend*. Soon after his death, except for a few teaching pieces such as *Rabbit Hill* and *Holiday Suite*, Agnew's works faded into obscurity. Since the late 1990s there has been a revival of interest in his work in Australia, with the preparation of a complete edition of his works by The Keys Press.

WORKS

(*selective list*)

Orch: The Breaking of the Drought, 1v, orch, 1928
Pf: Australian Forest Pieces (1913); Dance of the Wild Men, 1919; Deidre's Lament, 1922; Poème Tragique (1922); Fantasie Sonata (1927); Rhapsody (1928); Rabbit Hill (1928); Sonata Poème (1936); Youthful Fancies (1936); Holiday Suite (1937); Sonata Ballade (1939); Sonata Legend (Capricornia) (1949); duets, over 60 other solo pieces
Songs (1v, pf, unless otherwise stated): Beloved stoop down thro' the clinging dark (Z. Cross Smith) (1913); O moonlight deep and tender (Lowell) (1913); Dirge, 1924; Dusk (R. Williams) (1926); Infant Joy (W. Blake) (1926); 2 Songs without Words, 1v, cl (1928); Beauty (J. Masefield) (1935); The flowers of sleep (V. Daley) (1935)

MSS in the Agnew Archive, Mitchell Library, Sydney
Principal publishers: Augener, Curwen, Chester, The Keys Press, E.B. Marks, Musical Association of NSW, Nicholsons, OUP, Paxton, Arthur P. Schmidt

CHRISTINE LOGAN

Agnus Dei. Acclamation of the Latin Mass, sung between the Fraction and the communion antiphon. Since the text does not change from day to day (except for the Mass for the Dead), the Agnus Dei is counted as part of the Ordinary of the Mass. Many chant settings were made between the 11th and 16th centuries. Some of the most widely used were included in the *Liber usualis*.

Apart from the Credo, the Agnus Dei is the most recent of the acclamations of the Latin Mass, and in some respects the least firmly entrenched. It seems to have been added to the Mass as a *confractorium* (or chant to accompany the breaking of the bread) late in the 7th century, perhaps by Pope Sergius I. The text itself is from *John* i.29: 'Behold, the Lamb of God, who takes away the sin of the world!'; but the specific association of the sacrificial lamb with Christ in the Eucharist and on the altar seems to be characteristic of Syrian practice of the early centuries. In any case, the direct address to the Son, found here as well as in 'Christe eleison' and in the christological portion of the Gloria in excelsis, contrasts with the Roman habit of addressing only God the Father in prayers of the Mass. Other rites (Ambrosian, Mozarabic), however, had other *confractoria*.

As long as loaves of leavened bread were used, the Fraction occupied an appreciable space of time, during which the petition, 'O Lamb of God, that takest away the sins of the world, have mercy upon us', was repeated an indefinite number of times (*Ordo romanus I/III*), presumably either antiphonally or with the people responding with the last phrase. With the substitution of small units of unleavened bread, the Fraction occupied only a moment, and the Agnus Dei, after a period of uncertain transition, took on other functions: it was most often associated either with the Kiss of Peace, or with the administration of Communion immediately following. During this same period (10th–12th centuries) the number of petitions gradually established itself at three, and 'dona nobis pacem' was substituted for the third 'miserere nobis', having the same number of syllables and pattern of accents.

The period of liturgical transition happened to coincide with that in which the medieval repertory of Agnus Dei chants, together with their tropes, came into being. Many questions regarding musical practice in this period have still to be settled on the basis of the early documents, especially the tropers. For example, while the latter usually indicate the dovetailing of tropes and Agnus Dei by the cue for 'miserere (nobis)', variously abbreviated, they often omit reference to one or more repetitions of Agnus Dei altogether. Common opinion, and perhaps common sense, ascribes this omission to mere abbreviation and assumes that the 'standard' text of Agnus Dei remains intact, the tropes being added to it (but in ways not yet made clear). Given the instability of the Agnus Dei at that time, however, and given its open-ended litany-like nature earlier, it seems at least possible that the tropers faithfully preserve an actual practice, one in which one or more of the invocations 'Agnus Dei, qui tollis peccata mundi' was actually replaced by a trope, only the 'miserere nobis' remaining as a response – a practice analogous to some Kyrie 'tropes'.

In any case, the picture presented by the manuscript sources for the Agnus Dei chants does not always support the impression given by the *Liber usualis* of a carefully moulded threefold arch form with contrasting middle section. The second and third acclamations may vary in different sources, or be missing entirely, which (together with the hints in the tropers) suggests that a continuing ad libitum repetition might have been practised well into the later Middle Ages. It is true that the threefold form is most often *ABA* (tabulation in Schildbach, p.32), but the form *AAA* is frequently found too, to which may be added variants such as *AA′A*, in which the 'miserere nobis' often remains constant, pointing again to a litany response.

The most popular melodies are generally well represented in the repertory in the *Liber usualis* (but it must be studied only in conjunction with Schildbach's catalogue). Agnus Dei II/Schildbach 226, IX/114, XV/209, XVI/164 and XVII/34 best represent popular medieval practice from the 11th century onwards; of other early melodies, while IV/136 was widely disseminated, VI/89 is more characteristic of German than French sources, while III/161 is known only from a handful of German sources. On the other hand, some fairly well-known early melodies (Schildbach 64 and 78, French; 81, Italian; and 236) were not included in the Vatican edition. As with the Kyrie and Gloria, the simple melody XVIII/101, usually presumed the earliest, has an unconvincing manuscript representation; but it may still reflect an early tradition, mainly because the same melody is found also in the Agnus Dei in the received chant for the Litany of the Saints. In any case, it has little to do with the more elaborate, antiphon-like melodies represented by Agnus Dei II/226. The high degree of moulding within the construction of any single acclamation in Agnus Dei IX/114 or III/161 seems indigenous to chant styles of the 11th century and after, when beautifully shaped phrases tended to prevail over other aspects of composition. Whereas the majority of melodies up to the 12th century are in D- or G-mode, a large proportion of late medieval melodies, particularly from Germany and Eastern Europe, favour the E- and F-modes (tabulation in Schildbach, pp.45–7), with notable emphasis of the 5th and octave as melodic goals. Over a quarter of the later compositions are identical or share material with Sanctus melodies (Schildbach 51–6).

Polyphonic settings are known from the 12th century onwards (editions in Lütolf).

RICHARD L. CROCKER/DAVID HILEY

Agobard of Lyons (*b* Spain, 769; *d* Lyons, 840). Frankish ecclesiastic. He came as a youth to Gaul, taking up residence in the monastery of St Polycarp near Narbonne. He was ordained in 804 and named bishop of Lyons in 816, where he remained for the rest of his life, except for a period of exile in Italy during the years 835–8 because he had sided with the sons of the emperor Louis the Pious against their father; his temporary replacement as administrator of Lyons was his rival AMALARIUS OF METZ.

Agobard was a vigorous controversialist of conservative bent. He was outspoken in his opposition to Frankish folk religious practices, to trial by ordeal, to royal interference in church affairs and to Jewish influence at court. In the liturgical realm he was against the employment of images in worship, the use of non-biblical texts and the allegorical interpretation of the liturgy, the two latter positions being directly contrary to those of Amalarius. After his reinstatement as archbishop of Lyons in 838, he and his deacon Florus sought to undo the liturgical innovations of Amalarius, particularly by revising his Office antiphoner. The principal change was the replacement of non-biblical texts. The opposition of Agobard to non-biblical texts may account for the longstanding absence of hymns and tropes in the liturgy of Lyons.

JAMES W. McKINNON

Agogic. A qualification of EXPRESSION and particularly of ACCENTUATION and ACCENT. The qualification is concerned with variations of duration rather than of dynamic level.

A pause of breath of phrasing (*suspiratio*) is mentioned in a number of organum sources, and in the 16th century the pause (*suspirium*) was recognized as having affective value. Calvisius recommended delaying or accelerating the beat in connection with the harmony and the sung text (1602). Modifications of the basic tempo seem to have become increasingly common during this period; they are clearly described in Frescobaldi's preface to his first book of toccatas, and are also mentioned by Monteverdi.

One of the earliest pieces of evidence for the deliberate use of agogic is Cerone's mention of the practice of hesitation and holding back in singing in such a way that 'part of a note is taken away and given to another' (*El melopeo y maestro: tractado de música theorica y pratica*, 1613, bk 8, chap. 1). Cerone included agogic in the category of 'accents', adding that it should be used sparingly and be barely perceptible. The deliberate abandonment of mechanical regularity in note values (as distinct from actual distortion of the metre) seems to have been less common during the Baroque era in Germany than in Italy. Agricola, Marpurg, Hiller and Türk were clearly less familiar with *tempo rubato* than Cerone, Tosi and other Italian writers. Tosi used 'rubato' in the sense of the syncopated displacement of a quaver in relation to the basic beat. Throughout the 18th century agogic took a syncopated form: the accompaniment kept time while the melodic part employed hesitations which sometimes modified the rhythm considerably. C.P.E. Bach wrote that 'the finest lapses from metre can often be industriously [that is intentionally] produced' when 'one makes an alteration in one's own part alone, running against the organization of the metre, while the main movement of the metre must be observed precisely' (1753, pt i, chap. 3, §8).

Romantic *rubato* is particularly associated with Chopin, notwithstanding the testimony of the pianist Friedericke Streicher that 'he insisted on keeping to the strictest rhythm and hated all lengthening and distortion, ill-applied *rubato* and exaggerated *ritardando* alike' (Chopin, *Briefe und Dokumente*, ed. W. Reich, 4/1985, p.215). Writers of the time warned against the confusion of dynamic diminuendo and agogic ritardando, and theorists in the late 19th century attempted to define terms more precisely. In his commentaries and editions Riemann used the sign ^ to denote a mild lengthening, or 'agogic accent', for instance at moments of culmination. He introduced an oblique stroke as a musical punctuation mark, reminding the performer that the tiny pauses or caesuras serving the construction of musical sense and logic 'must not be subtracted from the last note before the caesura, but must lengthen the duration of the whole' (Karl Grunsky, *Musikästhetik*, 4/1923, p.83). Riemann believed that strong metres should remain perceptible in performance, but that the best method of emphasizing them was 'not dynamic but agogic' (*Musikalisches Wochenblatt*, 1894, p.637). Certain syntactic functions such as musical climaxes, transitions, secondary themes, reminiscences and conclusions become evident only through sufficient agogic, however minimal it may be in physical terms.

Among 20th-century composers, Bartók made especially free use of agogic; in performing his piano piece 'Abend auf dem Lande' he abbreviated or hastened some of the quavers by more than half their notated value, while maintaining a constant inner pulse. Agogic is also a feature of jazz performance; *rubato* melodies performed above a regular unbroken accompaniment were used to particularly good effect by Hoagy Carmichael and Dinah Shore. A developed and differentiated theory of agogic in keyboard and chamber music between Bach and Janáček is that of Uhde and Wieland.

MATTHIAS THIEMEL

Agogo [Agogo bells] (from Afro-Brazilian *agogô*). Percussion instrument. It consists of two conical bells mounted on a sprung steel hoop (it is classified as a percussion idiophone) and is used in samba bands. The player holds the instrument in one hand and strikes the bells with a wooden or metal stick held in the other. A variety of sounds and rhythmic patterns is produced by striking the bells in different spots and squeezing them together. There are also variations on the original, in the form of triple and quattro agogos and a blade agogo, which has a small metal blade between the two bells. There are also wooden agogos: in this case the 'bells' are side by side and not on a sprung steel hoop.

JAMES HOLLAND

Agolli, Lejla (*b* Korça, 4 Oct 1950). Albanian composer. After studying the piano (1956–60) in Durrës, she entered the Tirana Conservatory, where she studied composition and orchestration with Daïja. From 1974 until her retirement in 1994, she taught solfège, harmony and analysis at the Jordan Misja Art Lyceum, Tirana, where she encouraged children's composition with an experimental programme for 12- and 13-year-olds.

Although her output has declined in recent years, Agolli remains an outstanding figure among Albanian composers of her generation. As her Second Violin Concerto (1983) testifies, her music combines original melodic invention with subtle rhythmic differentiations and exhibits a tendency to thwart initial expectations through its elegant and intelligent design.

GEORGE LEOTSAKOS

Agōn (Gk.: 'contest'). In ancient Greece, a general term for any competitive activity or, more specifically, a public festival or a contest within such a festival. These festivals were religious in origin, being celebrations in honour of a specific deity, for example, the Olympian Games in honour of Zeus, the City Dionysia at Athens in honour of Dionysus and the PYTHIAN GAMES in honour of Apollo. The contests were usually athletic, musical or dramatic. Musical contests often included singing to the accompaniment of kithara or aulos, solo playing of these instruments, and choral singing and dancing. Drama featured musical elements such as choral song, procession and dance as well as solo singing by actors. The term was revived in its primary sense, 'contest', as the title of a ballet (1953–7) by Stravinsky.

DENISE DAVIDSON GREAVES

Agopov, Vladimir (*b* Voroshilovgrad, Armenia, 23 Nov 1953). Finnish composer of Armenian birth. He studied composition with Aram Khachaturian and instrumentation with Denisov in Moscow. On moving to Finland in 1978 he continued his studies at the Sibelius Academy, where he began to teach theory in 1982. His first works, which culminated in the Sonata for clarinet and piano (1981), recall the style of his teacher, Paavo Heininen, in their 12-note writing and linear polyphony. In his First String Quartet of the following year the instruments are treated as one; thereafter the texture of his works consists not of individual sounds but of webs characterized primarily by their rhythmic and harmonic density. The development of these webs, themselves sometimes the outcome of aleatory counterpoint, results in lively music within natural forms. Among his most successful works is the Cello Concerto (1984).

MIKKO HEINIÖ

Agostinho da Cruz. *See* CRUZ, AGOSTINHO DA.

Agostini, Agostino (*b* ?Ferrara; *d* Ferrara, 20 Sept 1569). Italian composer and singer. He was a relation (probably uncle) of LODOVICO AGOSTINI. He served as a singer at the ducal court of Ferrara between 1540 and 1545, and then as a beneficed priest and canon at Ferrara Cathedral. In 1563 Pendaglia described him as a priest, singer and practising doctor, and according to Scalabrini he was rector of S Salvatore, Ferrara. His known works comprise two four-voice madrigals published in Lodovico Agostini's *Musica ... libro secondo de madrigali* (RISM 1572[7]), and two pieces to Latin texts, for six and seven voices respectively, in Lodovico's *Canones, et echo* (RISM 1572[13]). His madrigals, *Questa che'l cor m'accende* and *Deh salvator de l'anime smarite*, both demonstrate a discreet understanding of contemporary madrigalian techniques.

IAIN FENLON

Agostini, Lodovico (*b* Ferrara, 1534; *d* Ferrara, 20 Sept 1590). Italian composer and singer. He was a relation (probably nephew) of AGOSTINO AGOSTINI. He came from a family with strong musical traditions, and from an early age studied for a musical and religious career. The appearance of his first known piece in Barré's *Terzo libro delle muse* (Rome, 1562[7]) suggests that he received his early training in Rome, as does the dedication of his first book of six-part madrigals to Tiberio Cerasi, who was also the dedicatee of Marenzio's first book of villanellas. According to Cavicchi (*MGG1*), he was associated from 1572 with the *cappella* of Ferrara Cathedral, where older members of his family had also worked; in 1577 his name first appeared in the payment records of the Ferrarese court of Duke Alfonso II d'Este, in whose service he remained until his death. During the 1580s he served as an informal composition tutor to Duke Guglielmo Gonzaga, with whom he exchanged letters on matters of mutual musical interest. He was associated with many notable poets, among them Tasso and Guarini, and with members of the highest aristocracy. He was a priest, and pursued a distinguished religious career which culminated in his being created a Monsignore and an apostolic prothonotary. Although he composed no liturgical music his writings on religious subjects, *Sermoni alla Santissima ... Communione* (Ferrara, 1589), were extremely popular and were reprinted many times up to 1701. He was buried in Santo Spirito, Ferrara.

The variety of styles in Agostini's music exemplifies the rich musical life of Ferrara and particularly that of the court of Alfonso II. The pieces in the early *Musica ... sopra le rime bizarre*, dedicated to the poet Andrea Calmo, are stylistically close to villottas; the texts abound in dialect jokes, puns and satirical parodies of well-known authors. A similar penchant for the startling, the amusing and the witty informs the *Enigmi musicali* and *L'echo, et enigmi musicali*. The *Nuovo echo*, of 1583, is full of chromatic curiosities, and contains brief instrumental passages. Indeed, Agostini's use of instrumental interludes in a ritornello-like fashion, in a number of his collections, suggests that this may have been the original intended function of some early publications of short instrumental pieces such as those by Salamone Rossi. The madrigals of Agostini's *Musica ... primo libro* (1570), dedicated to Tommaso Zerbinati, the Ferrarese ambassador in Milan, show the composer's continuing interest in text declamation and in chromatic writing: one piece, *Piansi donna per voi*, is labelled 'cromatico'. The third book of six-voice madrigals exploits the virtuoso singing style associated in its early stages with the famous *concerto di donne*; the book may be the first complete publication to reflect the repertory of that ensemble. It contains madrigals dedicated to the singers Laura Peverara and Anna Guarini, and to Luzzaschi, as well as one piece 'sopra il lauro secco' and another praising virtuoso singing in general. Agostini's last publication, *Le lagrime del peccatore*, is a set of spiritual madrigals based on texts by Tansillo.

IAIN FENLON

Agostini, Paolo (*b* Vallerano, nr Viterbo, *c*1583; *d* Rome, 3 Oct 1629). Italian composer and organist. At the age of eight, at the choir school at S Luigi dei Francesi, Rome, he became a pupil of Nanino, whose daughter he later married. He completed his musical studies in 1607 and his first appointment was as organist and *maestro di*

cappella of the Madonna del Ruscello, Vallerano. He later returned to Rome and became organist of S Maria in Trastevere, a post he held for six months from April 1615. He then worked simultaneously as *vicemaestro di cappella* there and as *maestro di cappella* of SS Trinità dei Pellegrini. From 26 May 1618 he was *vicemaestro* of S Lorenzo in Damaso. On 17 February 1626 he succeeded Vincenzo Ugolini as *maestro di cappella* of the Cappella Giulia at S Pietro and held the position until his death.

Agostini's output consists entirely of church music. He was a highly skilled contrapuntist. The five books of masses published in 1627 are written in strict contrapuntal style. In his *Saggio fondamentale pratico di contrappunto* (ii, 1775, 295ff) Padre Martini printed, as a model of canonic writing, the Agnus Dei of the Hexachord Mass in the first book, which is constructed on three canons. The second Agnus Dei of the five-part *Missa 'Si bona suscepimus'* in the third book bears further witness to Agostini's outstanding mastery of the technique of strict canon; by the addition of a sixth part, which forms a canon with the bass, this section of the work can be sung in 14 different ways. The *Spartiture delle messe* of 1627 contain such a diversity of skilfully written canons that for the purposes of exhaustive study of them, Padre Martini prepared a manuscript: *Indice di Canoni che si trovano nella Spartitura delle messe di Paolo Agostini Laus Deo di Vallerano* (*I-Bc* V.39). On occasion even the continuo is incorporated in the canonic writing. The masses present Agostini as one of the major representatives of canonic art in Rome in the years 1620–30, and as an impressive exponent of the *stile alla Palestrina* manner of composition. The *Salmi della Madonna* occupies a unique position in Rome at this period, comprising of three-part psalms for the Marian Vespers, five antiphons for second Vespers and motets. The psalm verses display a number of Agostini's compositional characteristics, including the use of various combinations of voices, solo and duet passages, and frequent changes of metre, all of which show him as a master of the concertante style. In the psalm 'Laudate pueri' (6th tone) the even-numbered verses are set polyphonically, and the very short *soggetti* (which resemble the musical formulae used in the practice of diminution) are either repeated or set in sequence, echo-like, in rapid succession over the bass. In general, the continuo has more than a simple supporting role, participating directly in the concertante structure. 'Cantate domino' is a typical Roman solo motet of the early 17th century; while the melodic writing is reminiscent of late 16th-century polyphonic style, the embellishments, periodic and sequential organization of the melody and contrasts effected by frequent change of metre are attributes of the new style. The four-part motet 'Preparate corda vestra domino' (Rome, 1625^{1}) calls for violin and lute as obbligato instruments but they almost always reinforce the continuo, featuring only sporadically as an ensemble. According to Liberati, Agostini's works for four, six and eight choirs attracted great attention in Rome. In 1628, during second Vespers for the Feasts of S Pietro and S Paolo, one of his 12-choir compositions was performed in the Basilica di S Pietro.

KLAUS FISCHER

Agostini [Augustini], **Pietro Simone** [Piersimone] (*b* Forlì, *c*1635; *d* Parma, 1 Oct 1680). Italian composer. According to Pitoni, he led a swashbuckling and notorious life and had 'a natural inclination to impropriety and baseness'. As a young man he was expelled from his native city because of his involvement in a murder. He went to Ferrara, where he received his basic musical training from Mazzaferrata. Then he abruptly took up a military career and for serving in Crete in the war against the Turks was made a Knight of the Golden Spur. His earliest datable pieces are the new prologue and interludes that he wrote for a performance of *Il Tolomeo* in Venice in 1658. In 1660 he competed unsuccessfully for the post of *maestro di cappella* at Urbino Cathedral.

Apparently by 1664 Agostini had arrived in Genoa. According to Pitoni he once attended a Vespers service there and was so harsh in his criticism of the music that he was invited to compose a service of his own for the same church, which he did with a success that added notably to his local reputation. In Genoa too he was commissioned to write at least two works for the Teatro del Falcone (*Eliogabalo* and *La costanza di Rosmonda*, both 1670). It was probably because of his successes there that he was invited to compose operas for the Teatro Ducale in Milan, since the governor of Milan, P.S. Doria, was a member of important patrician families of Genoa. Not long afterwards, however, Agostini was banned from Genoa because of his involvement with a nun.

Agostini next went to Rome. His first patron there was Cardinal Flavio Chigi, for whom he composed a highly successful opera, *Gl'inganni innocenti* (first performed at the Villa Chigi, Ariccia, in 1673 and produced, with the cardinal's sponsorship, in Siena four years later). He also composed for the Oratorio del Crocifisso. Through the patronage of Cardinal G.B. Pamphili he obtained the prestigious post of director of music at S Agnese in the Piazza Navona. Among the young musicians who studied with him in Rome was G.L. Lulier. In 1675, complaining of ill-health and blaming it on the bad air in Rome, he began to seek employment elsewhere; furthermore, from 1676, when Innocent XI became pope, the future for opera composers in Rome became much less promising. In 1679 he accepted the position of *maestro di cappella* to Ranuccio II Farnese, Duke of Parma. The next year he wrote his last opera, *Il ratto delle Sabine*, for the Teatro S

Giovanni Grisostomo, Venice, which had opened two years earlier. The opera was not well received.

Like those of his contemporaries Agostini's arias are short and numerous; for *Il ratto delle Sabine*, for example, he wrote 48. Da capo format predominates, and arias are usually accompanied by continuo alone. He cultivated a rich interplay between voice and instruments, in which the vocal declamation unfolds freely above a conspicuously independent continuo part, often marked by a modulating ostinato or walking bass. The tensions arising between the vocal and instrumental lines, rather than the tunes themselves, are the source of appeal here. His few surviving sacred works are conservative and lacking in flair. His most inspired music occurs in his secular cantatas, most of which he wrote probably during his late years in Rome. With good reason Tosi mentioned him alongside Stradella as a particular master of the cantata during its early maturity. The two composers were closely linked in the minds of their contemporaries: they had similarly adventurous careers, worked in several of the same cities and enjoyed the patronage of the same families, and not surprisingly three large manuscripts (in *I-Bc*, *Nc* and *A-Wn*) are important sources of cantatas by both of them.

WORKS

lost unless otherwise stated

Il Tolomeo [prol and interludes only], Venice, S Apollinare, 1658

La regina Floridea [Act 3] (dramma musicale, 3, P. Manni), Milan, Ducale, ?1669 [Act 1 by F. Rossi, Act 2 by L. Busca]; as Floridea regina di Cipro, Reggio nell'Emilia, carn. 1677; as Floridea (lib rev. G. Pancieri), Venice, SS Apostoli, aut. 1687, lib (Venice, 1687)

Ippolita reina delle amazzoni [Act 2] (op, 3, C.M. Maggi), Milan, Ducale, 1670, *I-Nc* [Act 1 and arias added to Act 2 by Busca, Act 3 by P.A. Ziani]

Eliogabalo (dramma musicale, A. Aureli), Genoa, Falcone, ded. 28 Jan 1670

La costanza di Rosmonda (melodramma, Aureli), Genoa, Falcone, 1670

Agraffe. A device invented and patented by Sébastien Erard as part of his first repetition action of 1808, which replaced the nut (wrest-plank bridge) and nut-pin (bridge-pin) arrangement of earlier pianos. Érard's early agraffe resembled a small brass staple with a concave top. One agraffe for each note was attached at a vertical angle to the front edge of the wrest plank, and the strings were passed underneath. Agraffes define one end of the strings' speaking length and keep them in place by assuring downward bearing on the strings as the hammers strike. An Érard grand piano of 1812 with agraffes of the original type is now in the Musée de la musique, Paris. Later agraffes have separate holes through which each individual string is passed; each agraffe contains as many holes as there are strings for each unison. Pierre Érard's improvement, the *barre harmonique*, which he patented in 1838, still serves as the model for agraffes on the modern grand piano. The agraffe should not be confused with the *capo tasto* bar.

MARTHA NOVAK CLINKSCALE

Agram (Ger.). *See* ZAGREB.

Agrell, Johan Joachim (*b* Löth, Östergötland, 1 Feb 1701; *d* Nuremberg, 19 Jan 1765). Swedish composer, violinist and harpsichordist. His father was a priest. He went to school in Linköping and studied at Uppsala University from 1721 to 1722 or 1723, where he played in the university orchestra, then led by the *director musices* Eric Burman. Early biographers said that Prince Maximilian of Hesse heard Agrell's violin playing in 1723 and called him to Kassel. Firm evidence of Agrell's activity there is, however, found only from 1734, when F. Chelleri was Kapellmeister. He was still working in Kassel between 1737 and 1742 during the reign of Count Wilhelm VIII and the court long owed him payment for service, as well as 'ale and food money', for the years 1743 to 1746. During his time at Kassel Agrell is reported to have made several journeys, visiting England, France, Italy and elsewhere.

Uncertain economic circumstances seem to have driven Agrell to seek the post of Kapellmeister in Nuremberg, a post which he obtained in 1746 (succeeding M. Zeitler); he combined this with duties as *director musices*, leader of the town musicians and holder of the position of 'chief wedding and funeral inviter', which gave him the right to compose music for weddings and other festivities. One of his duties was to direct music in the town's main churches, in particular the Frauenkirche. Of his work in the *Musikalische Kirchen-Andachten* only the text survives. On 3 September 1749 Agrell married the daughter of an organist, the singer Margaretha Förtsch (*d* 1752).

Practically none of Agrell's output from his youth in Sweden survives, though a polonaise from a collection entitled *En notbok* printed in 1746 (which may actually date from his early years) survived as a reel in the tradition of Swedish fiddlers throughout the 19th century. Another sign of contact with his homeland is the dedication to Adolf Fredrik of Holstein-Gottorp, successor to the Swedish throne, of his *Sei sonate per il cembalo solo*

(1748), in which he referred to his 'dear homeland, Sweden', and remarked that 'fate had so far forced him to live abroad'; in addition, Agrell's published works were sent to the Swedish royal chapel at the request of J.H. Roman and others.

Agrell's works divide into two categories: the vocal music, occasional and commissioned, much appreciated in his day, but now lost; and his many instrumental works, most of which were published during Agrell's lifetime, sometimes on their own, sometimes in anthologies. Among the most important instrumental works are his symphonies, chiefly from the period 1735–50, and his numerous harpsichord concertos from the 1750s and 60s. The symphonies, like the work of his compatriot, Roman, constitute an interesting early experiment in this genre with the beginnings of thematic contrast. The instrumentation is often on a large scale, with brilliant parts for woodwind and brass. Agrell's reputation as one of the leading proponents of the emerging symphony led Antonio Vivaldi to ask him to contribute to a concert of 'modern music' in Amsterdam in 1739. He was evidently influenced from many directions, at first by Chelleri and Roman, among others, later by the more up-to-date Italian composers of his time and by German music of the milieu in which he worked. He had a sound technique, and was fluent in the new forms of his time. His style has clear *galant* tendencies, but even if Agrell (as one might suppose) harboured aesthetic ideals like those of Mattheson, he was not really a gifted melodist, a fact which occasioned Schubart's oft-cited judgment (*Ästhetik der Tonkunst*, Vienna, 1806): 'A true artist, but a cold nature'.

WORKS

printed works published in Nuremberg unless otherwise stated

ORCHESTRAL

Edition: 5 syms. ed. J.M. Sheerin (New York, 1983) [S]

6 sinfonie, D, C [S], A, B♭, G, F, fl/rec ad lib, obs, hns, tpts, str, op.1 (1746), nos.1, 2 with timp [nos.1, 4 in *D-RUl*, no.4 in *S-Uu*]; 4 syms., A, F, B♭, D, *B-Bc*; 9 syms., D [S], F, F, D, G, D, E, G, E [S], *D-DS*; 2 syms., E♭ [S], B♭, *MÜu*; 3 syms., D, E, E, *Rtt*; 4 syms., D, B♭, D, D, *RUl*; 1 sym., A, *GB-Lbl*; 4 syms., D, F, F, B♭ [S], *S-Uu*

3 concs., F, D, A, hpd, str, op.3 (1751) [no.3 in *D-MÜu*]; 4 concs., B♭, D, A, D, hpd, str (also for hpd solo), no.1 without va (1755–61), also pubd singly, nos.2, 3, lost; 2 concs., A, F, hpd, str, *S-Sk*, *D-Bsb*, *MÜu*; 1 [?3] concs., hpd/org, in 6 Concertos ... by Sigr. Graun, op.2 (London, 1762)

3 concs., A, b, G, fl/vn, hpd, str, op.4 (1753), *S-L*; 1 conc., F, fl, str, *MÜu*; 2 concs., G, B♭, vn, str, *S-L*; 1 conc., D, fl, str, *S-L*; 1 conc., G, fl, str, *Rtt*; 1 conc., B♭, ob, str, *S-L*; 1 conc., D, vn, str, *US-Wc*; 1 conc., F, vn, str, *F-Pc*

CHAMBER

Hpd: 6 sonatas, B♭, G, F, e, D, g, op.2 (1748), *D-BFb*, also incl. ariettes, polonaises and minuets [no.3 as conc., *F-Pn*], ed. L. Cerutti (Padua, 1994); [3] sonatas, A, B♭, G (?1751–2), also incl. ariettes, polonaises and minuets; A Collection of Easy Genteel Lessons, bk 2 (London, *c*1767), incl. 1 conc. by Vivaldi arr. hpd; Sonata, capriccio and polonaise, *D-DS*, *S-Uu*; 1 sonata in Oeuvres mélées, partie 1re, lxxi (1755); 1 sonata in 20 sonate, op.2 (Paris, 1760); ?1 piece in Pièces choisies, bk 1 (Amsterdam, *c*1760); pieces in A Collection of Lessons ... by Sigr. Jozzi, bks 1–3 (London, 1761–4), and A Collection of Lessons ... by Sigr. Kunzen (London, 1762)

Other: 1 sonata, A, vn obbl, hpd (*c*1743), *D-Mbs*; [3] Sonate, G, E, –, vn, hpd/vc (1752), no.3 pubd singly and lost; 6 Sonatas, G, G, C, G, G, G, 2 fl/vn, hpd/vc, op.3 (London, *c*1757); 1 sonata in 6 Sonatas or Duets, 2 fl/vn, op.2 (London, 1751); [2] Sonata a due, fl/vn, hpd (1762–5), both also pubd singly (lost); 1 sonata, b, vn, hpd, *US-BEm*; 1 sonata, va d'amore, *S-Uu*

LOST

Pièce(s) in Collection recréative de pièces, fl/vn, hpd, premier couple (1746); various works cited in Brook; many compositions for official celebrations of the City of Nuremberg including 5 serenades, and for the Frauenkirche and Marienkirche, including the Musikalische Kirchen-Andachten, are lost

Agréments (Fr.). *See* EMBELLISHMENT. The word is used both by itself and in the terms *agréments du chant* ('embellishments of the melody') and *agréments de musique* ('embellishments of music'). The alternative spelling 'agrémens' is now obsolete.

Agresta, Agostino (*b* ?Naples, *c*1575–85; *d* after 1617). Italian composer. He may have supported himself much as did his elder brother Giovanni Antonio, who in 1598 was teaching singing to the children of the Prince of Roccella, Fabrizio Carafa. Cerreto mentioned both brothers as excellent composers in *Della prattica musica* (1601), but only works by Agostino have survived. He published a book of six-part madrigals (Naples, 1617); there are also single five-part madrigals by him in two anthologies (RISM 1606[5] and 1609[16]) and in Macedonio di Mutio's second book of five-part madrigals (1606). Between 1600 and 1630 Naples was the most important centre for the composition and printing of the increasingly outmoded polyphonic madrigal without continuo. During this period the only books of six-part madrigals published there were Agresta's and a posthumous collection by Gesualdo (1626); Agresta's reveals what the style of Gesualdo's incompletely preserved book may have been. Like many of his Neapolitan contemporaries influenced by Gesualdo's virtuoso madrigals, Agresta occasionally surpassed him in the degree of contrast between slow chromatic *durezze e ligature* and diatonic, scalar points of imitation in quavers and semiquavers. While the former are less striking and cogent, the latter are usually longer and more lively and intricate than Gesualdo's. A third of all points of imitation in the book combine two different motifs setting the same text, and about two thirds have paired voices in 3rds, 6ths and 10ths, a common feature of the late Neapolitan madrigal. The last madrigal in the book, *Io penso e nel pensiero*, is an intellectual challenge to virtuoso singers; each voice has its own series of such proportions as 2:3, 10:1, 1:10, 3:2 and ¢.

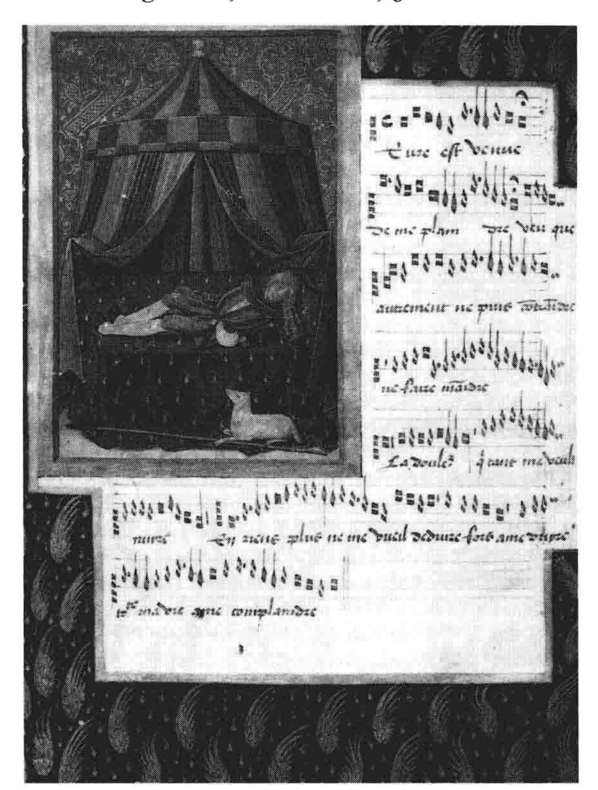
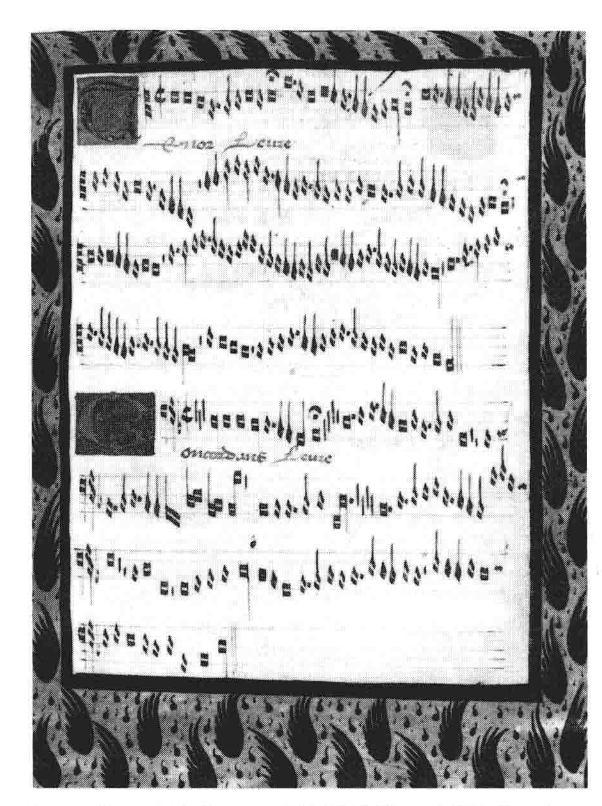
KEITH A. LARSON

Agricola [Ackerman], **Alexander** (*b* Ghent, ?1445/6; *d* Valladolid, 15 August 1506). South Netherlandish composer, active in Italy, France and the Low Countries. He was renowned for his composition in all genres cultivated in his time, and his music was as widely distributed as that of any of his contemporaries.



1. Life. Some biographical information can be gleaned from the text of a musical setting entitled *Epitaphion Alexandri Agricolae symphonistae regis Castiliae*, printed by Georg Rhau in 1538. Here, the composer is called a 'Belgian', who died in 1506 at the age of 60 while travelling through Spain in the service of Philip the Fair. Two more epitaphs have recently been discovered by Bonnie Blackburn; one of these specifies the date of death, and reveals that he was a native of Ghent. Archival documents and musical manuscripts give his surname almost invariably as Agricola, although one payment record from the Burgundian court, written in 1500, identifies the composer as 'Alexander Ackerman'.



Alexander Ackerman and his brother Jan were the illegitimate children of Lijsbette Naps *alias* Quansuijs, an independent businesswoman of not inconsiderable means, who died in 1499, and whose trade activities in Ghent can be traced back as far as the early 1440s. Their father was Heinric Ackerman, a procurator in the household of a wealthy Ghent citizen, Joes Beste (whose illegitimate daughter Salmadrinen he married in 1448). Heinric must have died some time after 1474. While extensive documentation survives on Lijsbette Naps and her business activities, there is hardly anything to shed light on the early musical training of Alexander. It is possible that he served as a chorister or singer in the parish church of St Nicholas, Ghent, to whose musical establishment, the *cotidiane*, Lijsbette made a large donation in 1467; unfortunately, the payment lists of the *cotidiane* of St Nicholas have not survived. Given Agricola's apparent fame as a string player (he had been *clarus vocum manuumque*, according to the *Epitaphion*, and wrote several instrumental pieces), it is also possible that he had been associated, from an early age, with the Ghent guild of soft-instrument players. Very occasionally the composer is identified as 'maistre Alexandre'; it is unclear whether this points to an academic degree or to recognized mastership in an established musical trade.

An Alessandro Alemanno, or Alessandro d'Alemagna, was active as a singer and viola player at various Italian musical centres in the early 1470s, and seems to have operated with a professional companion by the name of Antonio Pons, or Ponzo (likewise a viola player). It has often been assumed that this musician must be identical with the composer, though the latter was not actually German, since the county of Flanders was part of the French kingdom. No document ever gives Alessandro's surname, nor is he identified even once as 'de Fiandra'. The case for identifying him with the composer must be tentative at best, and is weakened by a document from the court of Naples, dated 1456, which refers to a court singer Alessandro Alemanno – surely not the composer, who would have been about 10 years old at the time. (Given the almost complete absence of complete chapel rosters for Naples in the period 1455–80, it cannot be ruled out that he worked there continuously until 1470, when Alessandro Alemanno and Antonio Pons left the court of Naples to accept employment at Milan.) The case is further complicated by a Milanese document from December 1471 in which Alessandro Alemanno is said to have a cousin Pietro da Vienna ex Alemania – a man old enough to have been named as the father of one Sigismund by 1456. Nothing about Agricola's background suggests that he had any connections with Vienna. If documents or contemporary statements refer to the composer's origins at all, they invariably call him a Fleming or a Belgian. Edward Lerner's apparent identification of German chant versions in works by Agricola is problematic, given that he did not include liturgical sources from France and the Low Countries in his research, and that there are no exact matches even with the unique German variants he presented. (To illustrate the problem, Reinhard Strohm has pointed out that one of the works in question, *Ave pulcherrima regina*, is probably not a German piece, since it is based on a cantio of Lower Rhenish or Dutch origin.)

The earliest document to refer to Agricola with certainty comes from Cambrai Cathedral, where he received a payment of four pounds for his services as *petit vicaire* in 1475–6. It is about this time that the earliest surviving source for any of his works was copied: *Gaudent in celis* survives in *D-Mbs* Mus.ms.3154 on paper dated about 1476. So far as we can tell from the surviving sources, however, the international transmission of Agricola's music did not take off until the 1490s. Given the scarcity of French and Netherlandish sources from the 1470s and 80s it cannot be ruled out that his earliest works circulated mainly in those countries. (All we know for certain about the composer before 1491, after all, suggests that he lived and worked in Flanders and France.) Yet neither should we rule out the possibility that Agricola might have been a great deal younger than hitherto assumed. Even if the epitaph printed in 1538 was based on a first-hand report, the possibility remains that a stated age like 60 could have been as inflated – with the best of intentions, of course – as the 'almost 100' once credited to the deceased Ockeghem. (To suggest a possible parallel: when William Billings died in 1800, a Boston newspaper gave his age as 60, even though the family Bible confirms that he was born in 1746.) Ghent documents do not indicate a connection between Agricola's parents until the mid-1450s: in 1455 Lijsbette Naps lent money to Heinric Ackerman's employer, Joes Beste, and two years later Heinric served as surety for Joes's widow (whom he continued to serve as procurator) in a business transaction with Lijsbette.

Agricola is untraceable for at least 10 years after his employment at Cambrai. He is not included in a list of the French royal chapel dated 28 July 1486 (the only such list to survive from that decade), though he must have entered that establishment within the next five years. We know this because he left the French court without permission in 1491, heading first for Mantua and then Florence, where he was appointed at the Cathedral on 1 October at a monthly salary of four florins, and worked as a colleague of Henricus Isaac. (Isaac may be the composer of the *Epitaphion* mentioned earlier, since he wrote the *Nil prosunt lacrimae* that almost certainly constitutes its *tertia pars*.) A letter of Charles VIII of France to Piero de' Medici, dated 25 April (probably 1492), urgently requests the return of 'Alexandre Agricola, chantre de nostre chappelle' as well as an unnamed 'good lute player in his company'. Agricola's employment at Florence Cathedral ended on 1 June 1492. Barely two

Agricola's motet-chanson 'L'heure est venue/Circumdederunt me', from a chansonnier copied in France, c1500 (GB-Lbl Roy.A.XVI, ff.1v–2)

weeks later we find him at the court of Naples. In a letter of 13 June, King Ferrante I of Naples wrote to Charles VIII: 'We have seen [Alexander] happily – as much for his being a servant of your majesty as for his own virtues – and he has stayed with us for a few days. Indeed, we have taken pleasure in his singing and we should have been glad to retain him in our service.'

Agricola returned to France (as Ferrante had been careful to promise Charles VIII), apparently passing through Florence on 28 October, when the SS Annunziata recorded his receipt of twelve gold florins 'for the four months when he was in Rome and Naples'. Several months later, on 11 February 1493, King Ferrante instructed his ambassador at the French court to offer Alexander an annual salary of 300 ducats, 'this being in accord with what he has asked'. (Although there were two Italian currencies called *ducato*, in either case the salary asked by Agricola would have significantly exceeded the 200 ducats demanded by Josquin at Ferrara in 1502.) The composer evidently accepted Ferrante's offer, but the latter was forced to postpone the appointment due to his rapidly worsening political situation in April 1493. By September of that year, he finally instructed his French ambassador to make Agricola 'understand that he should not come'. Five months later, Agricola did come to Naples in the company of Johannes Ghiselin, though not to accept the job offer. A letter from 10 February 1494 (17 days after Ferrante's death) registers the composer's presence at the Neapolitan court, as does another letter of 6 March, though it is apparent from both documents that he was now in the employ of Piero de' Medici. (At exactly this time, the Florentine chapels were being disbanded in response to the preaching of Savonarola; evidently Agricola and Ghiselin had left Florence with permission, but without being formally dismissed.)

Nothing is known about the composer's whereabouts between March 1494 and August 1500, when he accepted employment at the court of Burgundy. It is possible that his mother's death in February 1499 made him return to Ghent: the city accounts record a small tax that he and his brother Jan paid over her inheritance, though Alexander need not have done so in person. In any case, as a Burgundian court singer Agricola did have occasion to return to his birthplace. Philip the Fair and his court were in Ghent on 30 November 1505, and the Burgundian accounts confirm the payment of his salary on that date, along with payments to such composers as Pierre de la Rue, Anthonius Divitis and Marbrianus de Orto. Several months later, the court departed on its ill-fated journey to Castile, reaching Valladolid by 22 July 1506. On that date Agricola received his last known payment. Soon after he must have caught the 'raging fever' (*febris fervens*) that was said to have killed him 'on the land by Valladolid' on 15 August 1506. His remains were buried in the town; it is not known in which church. Burgundian documents indicate that his prebends were located in Gorinchem and Valenciennes (Notre Dame de Salle).

On 15 November 1522, a certain 'cantore Alessandro Agricola' turns up at the court of Mantua, staying there until at least the next year. He may have been the son either of Alexander or more probably (since children were usually named after their godparents) of his brother Jan, who was apparently identical with the singer Johannes Agricola of Ghent (active at 's-Hertogenbosch in 1486–93 and 1496) and the composer Johannes Agricola who left

settings of *Fors seulement* and *Dat ic mijn lijden aldus helen moet*.

2. WORKS. Judged against other composers of his generation, Agricola does not appear to have been especially prolific. His music is remarkable for prolixity rather than economy, and for an eccentric, almost baroque sensibility that was described by one 16th-century observer as 'unusual, crazy, and strange'. Its general syntax is in many ways typical of other composers born in mid-century, notably in its use of sequence, ostinato and the movement of outer voices in parallel tenths. But its originality embodies a paradox, whereby typically short motives and frequent cadences are often subsumed into formal and melodic designs of remarkable breadth and expansiveness. This results in an unpredictability reminiscent of Ockeghem (from whom Agricola appears to have learnt much), but expressed in a more restless, luxuriant idiom. In his general outlook, Agricola has sometimes been portrayed as conservative. This assessment may be reviewed in the light of the revised birthdates proposed for at least two figures, Josquin and Obrecht, who were until recently reckoned among Agricola's exact contemporaries, but are now believed to have been rather younger.

With over 80 songs and instrumental pieces extant, Agricola ranks among the most important composers of secular music of the 15th century. The majority of the songs set texts in *formes fixes* (several textless pieces in Lerner's edition can be shown to be rondeaux, and Litterick has convincingly attributed two anonymous ones, *Pour faire l'arlkymie* and *En effait se ne reprenés*), a few of which are through-composed (e.g. *Si conge prens* and *Royne de flours*). The *forme-fixe* songs achieved a much wider circulation than the freely composed works; the repertory of the Casanatense manuscript (*I-Rc* 2856) suggests that a fair number of them were composed by about 1480. Most are imitative, in three voices with different ranges, and place relatively little emphasis on text-expression. A few (such as the very popular *En attendant*) are predominantly syllabic, but in general they are typical of Agricola's arborescent style. The four-voice *Je n'ay deuil* (with 14 sources his most widely distributed song) is typical of the close juxtaposition of winding melisma with much longer-breathed passages. It also typifies the surprising number of songs that make use of borrowed material, either by incorporating a single line from a previous setting of the same text (such as *Alles regretz*, based on Hayne's tenor, or *Se mieux ne vient* on Convert's discantus) or by using the beginning of a subsidiary voice as a point of imitation for an otherwise free composition: *Je n'ay deuil* uses the contratenor incipit of Ockeghem's song, *Vostre hault bruit* uses that of Du Fay's similarly named *Vostre bruit*, and the tenor incipit of the terce of Ockeghem's *Ma maistresse* opens the terce of *Se je vous eslonge* (which sets the same words).

Borrowed voices also characterize the majority of Agricola's instrumental works. The principal voices of famous songs are used as cantus firmi for brief settings for from two to four parts (Hayne's *De tous biens plaine*, with five settings, and Ockeghem's *D'ung aultre amer*, with four, were especial favourites); and the well-known six-part setting of *Fortuna desperata* adds three new parts to those of the original. These freely composed lines may have the very wide ranges, rapid scalar figurations or rhythmic ostinati strongly suggestive of instrumental performance, though in many cases (e.g. the above-mentioned *Fortuna desperata*) a fully vocal performance is by no means inconceivable, and similar figuration appears even in Agricola's mass music. Most clearly instrumental are the larger-scale pieces with enigmatic or punning titles, *Cecus non iudicat de coloribus* and *Pater meus agricola est*. In these pieces the composer unfolds a kaleidoscopic succession of short, punchy figures, syncopated ostinati and hexachordal excursions. Worth mentioning in this connection is Andrea Lindmayr's hypothesis attributing to Agricola the textless setting of *Ut heremita solus* preserved anonymously in Petrucci *Motetti C* and based upon a pre-existing enigmatic cantus firmus by Ockeghem.

Agricola's sacred music shows endless variety in its formal means and expressive ends. In the motets, he seems to have eschewed the grander commemorative or occasional pieces cultivated by many contemporaries (the bipartite *Transit Anna timor* being the only obvious exception). Most of the works are on a small scale, cast in a single section, and set devotional texts by drawing upon the related plainchant; even so, within these narrow parameters there is considerable flexibility, for example with regard to scoring: the filigree texture of *O crux ave* is scored for two pairs of voices an octave apart, while *Nobis sancti spiritus* alternates brief imitative points and antiphonal exchanges in a very lucid manner. The apparently slight *Si dedero* is the most widely disseminated piece of the entire generation, being found in over thirty sources. It may have been the first of a number of similarly titled compositions by Josquin and Obrecht. At the other end of the expressive spectrum lie the imposing Magnificat and *Salve regina* settings, which find Agricola at his most expansive. Here again, his penchant for introducing borrowed secular materials in unusual contexts is illustrated by *Salve regina* (ii), which combines the appropriate plainchant with a Dorian rendering of the tenor of Walter Frye's famous *Ave regina celorum*. A section of *Salve regina* (i) incorporates canon at the second in inversion between the lower voices (with the rubric 'facie ad faciem'). Of historical interest are the sets of Lamentations published by Petrucci in 1506, along with several settings by other composers.

Of the eight complete extant mass settings, three appear to be freely composed, one paraphrases plainchant, and four are cantus-firmus settings based upon polyphonic songs. No sources are extant before the turn of the 16th century (though these include a book of Masses devoted exclusively to Agricola, published by Petrucci in 1504), raising the possibility that most of the masses date from the latter part of Agricola's life (in which case his periods of employment at the French and Burgundian court chapels are the most plausible occasions). In terms of sophistication and strictness of adherence to the model, the settings on *Le serviteur* and *Je ne demande* are perhaps the most straightforward; even so, both abound with hidden conceits and subtleties, some of which are probably intended as oblique references to the model. In *Je ne demande* Agricola retains the voice ranges of Busnoys' song, so that both tenor and contratenor occupy the same low range. The first Kyrie of *Le serviteur* conceals an ostinato-quotation of the plainchant, Kyrie *Orbis factor* in the bassus; the same voice presents the incipit of Du Fay's tenor on several pitch-levels in the second Agnus (in both cases there may be some allusion to the two-flat

signature associated with Du Fay's song, though the sources for this mass disagree as to flat-signatures). The masses on *Malheur me bat* and *In myne zin* are among the most expansive settings of the period (the latter lasts nearly three quarters of an hour in performance, despite the loss of its Kyrie). In these presumably late settings Agricola reserves complete statements of the tenor for strategic points. In *In myne zin* the only full exposition of the tune is at the second Osanna, which – unusually for this period – seamlessly dovetails out of the preceding Benedictus; elsewhere the degree of licence is such that one might regard the mass as an extended fantasia, even though a few clear markers show that the model is in fact Agricola's own setting of the Dutch popular song. Such markers, clear intimations of parody, recur from movement to movement in both *Malheur me bat* and *In myne zin*. These and other traits bespeak an interest in formal experimentation on a large scale which adds a curious touch of rationality to a mind strikingly regardless of convention in matters of detail.

Modern scholars have often noted a 'nervous' and 'restless' quality about Agricola's melodic invention. This view seems to go back to Ambros, whose influential perception of Agricola is worth quoting in full: 'Among his contemporaries, he is the strangest and the most bizarre, and indulges in the most peculiar flights of fancy – moreover, he tends to write a kind of surly, bad-tempered, dark counterpoint.' This view may be overstated: although Agricola does seem to cultivate an often strangely hyperactive style in his works (including the masses and motets), the effect is best described as one of electrifying musical intensity.

WORKS

Edition: *Alexander Agricola: Opera omnia*, ed. E.R. Lerner, CMM, xxii/1–5 (1961–70) [L]

MASSES AND MASS MOVEMENTS

Missa 'In myne zin', 4vv, L i, 105 (c.f. from his own chanson, In minen zin)
Missa 'Je ne demande', 4vv, L i, 34 (c.f. from Busnoys' chanson)
Missa ' Le serviteur', 4vv, L i, 1 (c.f. from Du Fay's chanson)
Missa 'Malheur me bat', 4vv, L i, 66 (c.f. from chanson by Ockeghem or Martini)
Missa Paschalis, 4vv, L ii, 1 (cantus firmi: German versions of Ky I, Gl I, San XVII, Ag XXII; cf *Graduale pataviense*, Vienna, 1511, ff.184*v*–185*r*, 194*v*)
Missa primi toni, 4vv, L ii, 23
Missa secundi toni, 4vv, L ii, 47
Missa sine nomine, 4vv, L ii, 78 (c.f. in Cr: Cr I)
Credo, Sanctus, 3vv, L ii, 125
Credo, 4vv, L ii, 94 (c.f. from chanson, Je ne vis oncques, by Du Fay or Binchois)
Credo, 4vv, L ii, 103 (c.f. from chanson, Je ne vis oncques, by Du Fay or Binchois)
Credo vilayge, 4vv, L ii, 114 (c.f.: Cr I)

HYMNS, LAMENTATIONS, MAGNIFICAT SETTINGS

A solis ortus cardine, 4vv, L iii, 17 (hymn; c.f. German version of plainsong, cf MMMA, i, 1956, 219)
Ave maris stella, 4vv, L iii, 20 (Marian hymn; c.f. German version of plainsong, cf. *I-MOe* α.X.1.11, f.7*v*)
Lamentations, 3vv, L iii, I (c.f. plainsong)
Lamentations, 4vv, L iii, 8 (c.f. plainsong)
Magnificat primi toni, 4vv, L iii, 23, 34 (c.f. plainsong; 2 versions: one long, one short)
Magnificat secundi toni, 4vv, L iii, 41 (c.f. plainsong)
Magnificat octavi toni, 4vv, L iii, 51 (c.f. plainsong)

MOTETS

Amice ad quid venisti [= Dictes moy toutes], 3vv, L iv, 64 (text from Matthew xxvi)
Arce sedet Bacchus, 2vv, L iv, 65 (probably a contrafactum from a lost mass; c.f. T of Caron's chanson, Le despourveu infortuné)
Ave domina sancta Maria, 4vv, L iv, 1 (to BVM)
Ave pulcherrima regina, 4vv, L iv, 3 (Marian text set to a German tune, see Schmitz)
Ave que sublimaris [= Comme femme], 3vv, L iv, 60
Da pacem, 3vv, L iv, 47 (prayer for peace; c.f. plainsong)
Ergo sancti martyres, 4vv, L iv, 28
Nobis Sancte Spiritus, 4vv, L iv, 36 (text: 1st verse, hymn sung at Horae canonicae de Spiritu Sancto)
O crux ave, 4vv, L iv, 38 (text: 6th verse, hymn, Vexilla regis; c.f. plainsong)
O quam glorifica, 3vv, L iv, 48 (text: 1st stanza Marian hymn; c.f. plainsong)
O virens virginum, 4vv, L iv, 5 (to BVM)
Regina coeli, 4vv, L iv, 7 (Marian ant; c.f. German version of plainsong, cf *Antiffanarium*, Augsburg, 1495)
Salve regina (i), 4vv, L iv, 10 (Marian ant.; c.f. plainsong, cf *Sacerdotale*, Venice, 1564, f.291*v*)
Salve regina (ii), 4vv, L iv, 20 (Marian ant.; cantus firmi: same version of plainsong as above, T of Frye's motet, Ave regina celorum)
Sancte Philippe appostole [= Ergo sancti martyres], 4vv, L iv, 32
Si dedero, 3vv, L iv, 50 (text: verse of the resp In pace in idipsum; c.f. plainsong, cf AS, p.150)
Transit Anna timor, 4vv, L iv, 41 (thanksgiving for Louis XII's recovery from illness)
Virgo sub ethereis [= Comme femme], 3vv, L iv, 62

MOTET–CHANSONS

Belle sur toutes/Tota pulchra es, 3vv, L iv, 52 (rondeau quatrain in S, T; c.f. plainsong in B)
L'heure est venue/Circumdederunt me, 3vv, L iv, 54 (virelai in S, T; text of B int for Septuagesima Sunday)
Revenez tous regretz/Quis det ut veniat, 4vv, L iv, 58 (rondeau cinquain in S, A, T; text of B verse of resp Nonne cognoscit)

SECULAR VOCAL

Adieu m'amour, 3vv, L v, 43
Adieu m'amour, 3vv, L v, 44
A la mignonne de Fortune, 3vv, L v, 3 (virelai)
Allez mon cueur, 3vv, L v, 19 (rondeau quatrain)
Allez, regretz, 3vv, L v, 20 (rondeau cinquain; T from Hayne van Ghizeghem's chanson)
Amor che sospirar, 3vv, L v, 66 (strophic song)
Ay je rien fet, 3vv, L v, 45 (quatrain)
C'est mal cherché, 3vv, L v, 22 (rondeau cinquain; 4th voice ad lib)
C'est trop sur, 3vv, L v, 23 (rondeau quatrain)
C'est ung bon bruit, 3vv, L v, 46
Crions nouel, 3vv, L v, 54 (text lost)
D . . ., 3vv, L v, 55 (text lost)
Dictes moy toutes, 3vv, L v, 24 (rondeau quatrain)
Donne, noi siam dell'olio facitori (L. de' Medici), ?3vv (strophic carnival song; only sup extant)
En actendant, 3vv, L v, 26 (rondeau cinquain)
En dispitant, 3vv, L v, 56 (text lost)
En m'en venant, 3vv, L v, 27 (rondeau quatrain)
Et qui la dira, 3vv, L v, 48 (chanson à refrain on a popular tune, cf *F-Pn* fr.9346)
Fortuna desperata, 6vv, L v, 68 (strophic song; based on chanson by Busnoys or Felice)
Gentil galans, 3vv, L v, 57 (text lost)
Guarde vostre visage, 3vv, L v, 58 (text lost)
Il me fauldra maudire, 3vv, L v, 59 (text lost)
Il n'est vivant, 3vv, L v, 5 (virelai)
In minen zin, 3vv, L v, 63 (sets popular Flemish melody)
J'ay beau huer, 3vv, L v, 28 (rondeau quatrain)
Je n'ay dueil, 4vv, L v, 7 (virelai; related to a motif in B of Ockeghem's chanson)
Je ne puis plus, 3vv, L v, 60 (text lost)
Je ne suis point, 3vv, L v, 30 (rondeau cinquain)
Mauldicte soit, 3vv, L v, 49 (chanson huitaine)
Mijn alderliefste moeschkin, 3vv, L v, 65
Oublier veul, 3vv, L v, 60 (text lost)
Par ung jour de matinee, 3vv, L v, 50 (?chanson sixaine)
Pour voz plaisirs, 3vv, L v, 31 (rondeau quatrain)
Princesse de toute beaulté, 3vv, L v, 62 (text lost)
Royne des flours, 3vv, L v, 11 (virelai on tune in *Pn* fr.9346)
Se je fais bien, 3vv, L v, 35 (rondeau quatrain)
Se je vous eslonge, 3vv, L v, 13 (virelai)

Se mieulx ne vient d'amours, 3vv, L v, 32 (rondeau cinquain; c.f. T from Convert's chanson)
Serviteur soye, 3vv, L v, 15 (virelai)
Sei congé prens, 3vv, L v, 1 (ballade on tune in *Pn* fr.12744)
S'il vous plaist, 3vv, L v, 36 (rondeau quatrain)
Si vous voullez, 3vv, L v, 17 (bergerette)
Soit loing, 3vv, L v, 37 (rondeau quatrain)
Sonnés muses melodieusement, 3vv, L v, 51
Va t'en, regret, 3vv, L v, 39 (rondeau cinquain)
Vostre bouche dist, 3vv, L v, 53 (quatrain)
Vostre hault bruit, 3vv, L v, 41 (rondeau cinquain)

INSTRUMENTAL

Amours, amours, 3vv, L v, 71 (c.f. T of Hayne van Ghizeghem's rondeau)
Cecus non judicat de coloribus, 3vv, L v, 102
Comme femme, 4vv, L v, 72 (arr. of T of rondeau by ?Binchois)
Comme femme, 3vv, L v, 75 (arr. of T of rondeau by ?Binchois)
Comme femme, 2vv, L v, 76 (arr. of T of rondeau by ?Binchois)
De tous biens plaine, 4vv, L v, 78 (arr. of T of Hayne van Ghizeghem's rondeau)
De tous biens plaine, 3vv, L v, 79 (arr. of T of Hayne's rondeau)
De tous biens plaine, 3vv, L v, 81 (arr. of T of Hayne's rondeau)
De tous biens plaine, 3vv, L v, 82 (arr. of T of Hayne's rondeau)
De tous biens plaine, 3vv, L v, 83 (arr. of T of Hayne's rondeau)
D'ung aultre amer, 4vv, L v, 85 (arr. of T of Ockeghem's rondeau)
D'ung aultre amer, 4vv, L v, 86 (arr. of T of Ockeghem's rondeau)
D'ung aultre amer, 3vv, L v, 87 (arr. of T of Ockeghem's rondeau)
D'ung aultre amer, 3vv, L v, 88 (arr. of T of Ockeghem's rondeau)
[Duo], 2vv, L v, 112 (upper voice by Agricola, lower voice by Ghiselin)
Gaudeamus omnes, 2vv, L v, 106 (c.f. plainsong int.)
Jam fulsit, 4vv, L v, 113
L'homme banni, 3vv, L v, 89
O Venus bant, 3vv, L v, 97 (arr. of popular tune)
O Venus bant, 3vv, L v, 98 (arr. of popular tune)
Pater meus agricola est, 3vv, L v, 107
Pourquoy tant/Pour quelque paine, 3vv, L v, 91 (arr. of 2 lines of an anon. 3-voice chanson, see Plamenac)
Tandernaken, 3vv, L v, 99 (arr. of popular tune)
Tout a par moy, 4vv, L, v, 92 (arr. of T of Frye's rondeau)
Tout a par moy, 3vv, L v, 95 (arr. of T of Frye's rondeau)

DOUBTFUL WORKS

Missa sine nomine, 3vv (attrib. Agricola in *E-SE* and Aulen in *D-LEm*, *Rp*, *PL-WRu*; by Aulen)
Credo Tmeisken, 4vv (in some sources incl. in the Missa Paschalis, but in *A-Wn* 1783 attrib. Isaac; probably by Isaac)
Magnificat quarti toni, 4vv, L iii, 60, 71 (c.f. plainsong; 2 versions: the long attrib. Josquin Des Prez; the short attrib. Pierre de La Rue, Agricola, Brumel; probably by Josquin)
Magnificat quarti toni, 4vv, L iii, 77, 88 (c.f. plainsong; 2 versions: the long attrib. Brumel, the short attrib. Agricola)
Que vous madame/In pace in idipsum, 3vv, L v, 128 (c.f. plainsong respond in B; attrib. Josquin Des Prez more often)
Ha qu'il m'ennuye, 3vv, L v, 116 (bergerette; also attrib. Fresneau)
J'ars du desir, 3vv, L v, 118 (rondeau attrib. Agricola, but questionable on stylistic grounds)
La saison en est, 3vv, L v, 119 (rondeau; attrib. Compère more often)
Les grans regretz, 3vv, L, v, 120 (rondeau attrib. Hayne van Ghizeghem more often)
Notres assovemen, 3vv, L v, 122 (text lost; also attrib. Fresneau)
De tous beins plaine, 3vv, L v, 123 (inst; c.f. from Hayne's chanson; also attrib. Bourdon)
Fors seullement, 4vv, L v, 124 (inst; c.f. from chanson by Ockeghem; also attrib. Brumel)
Helas madame, que feraige, 3vv, L v, 125 (inst; ?c.f. from Caron's chanson; also attrib. 'P')

CONJECTURALLY ATTRIBUTED WORKS

Ut heremita solus, 4vv, ed. R. Wexler and D. Plamenac, *Johannes Ockeghem: Collected Works*, iii (Boston, 1992), 18; attrib. in Lindmayr
En effait se ne reprenés, 3vv, ed. in MRM, vii (1983), no.77; attrib. in Litterick
Pour faire l'arlkymie d'amours, 3vv, ed. in MRM, vii (1983), no.100; attrib. in Litterick

ROB C. WEGMAN (1); FABRICE FITCH (2); EDWARD R. LERNER/FABRICE FITCH (work-list)

Agricola [née Molteni], **Benedetta Emilia** (*b* Modena, 1722; *d* Berlin, 1780). Italian soprano, wife of JOHANN FRIEDRICH AGRICOLA. She was the first of the three leading ladies (the other two were Giovanna Astrua and Elisabeth Schmeling Mara) at the Berlin Opera under Frederick the Great. A pupil of Porpora, Hasse and Salimbeni, she made her début as prima donna in C.H. Graun's *Cesare e Cleopatra* (1743). The arrival of Giovanna Astrua in 1748 forced her to take second place, but strengthened her impulse towards oratorio: thus, for example, she sang the leading solo soprano part in Graun's *Tod Jesu* at its première in 1755. Burney (*Present State of Music in Germany*, 1773) wrote of her singing: 'she is now near fifty years of age, and yet sings songs of *bravura*, with amazing rapidity … her compass extends from A in the base, to D in *alt*, and she has a most perfect shake and intonation'. When her husband died in 1774 she was dismissed in spite of Princess Anna Amalia's intercession on her behalf; she died in obscurity.

E. EUGENE HELM

Agricola, Georg Ludwig (*b* Grossfurra, Thuringia, 25 Oct 1643; *d* Gotha, 20 Feb 1676). German composer and writer. After initially going to school in his native town he was sent in 1656 to Eisenach for three years. There he attended the town school, the staff of which included Theodor Schuchardt, a highly respected teacher of music and Latin. From 1659 to 1662 Agricola studied for his

school-leaving examination at the Gymnasium of Gotha; the headmaster there was Andreas Reyher, who was the co-author of the *Gothaer Schulmethodus*, an educational work which set an example for the teaching of music too. In 1662–3 Agricola studied philosophy at Leipzig University and from 1663 to 1668 theology and philosophy at Wittenberg, where he was awarded a master's degree by the faculty of philosophy. His four recorded scholarly essays dating from this period are lost. He had begun to learn the fundamentals of music during his school years, and he may also have been a pupil of the Kantor of the Thomaskirche, Leipzig, Sebastian Knüpfer. He continued his musical training at Wittenberg, completing the study of composition under the guidance of Italian musicians resident there. Returning to his native Thuringia he was able to turn his musical abilities to good use in the Kapelle of the Schwarzburg-Sondershausen court until in 1670 Duke Ernst the Pious of Saxe-Gotha appointed him his court Kapellmeister at Gotha in succession to W.C. Briegel. He held this post very successfully until his death. Very little of his music has survived. His three lost volumes of *Musicalische Nebenstunden* comprised sonatas, preludes, allemandes, courantes and ballettos. His extant vocal works show the influence of Schütz and the tradition of the Saxon Kantors, who, in the early history of the Lutheran cantata, used forms which gained currency in central Germany.

WORKS

printed works lost; published in Gotha unless otherwise stated

Musicalische Nebenstunden, Sonaten, Praeludien, Allemanden, etc., 2 vn, 2 viols, bc (Mühlhausen, 1670)
Musicalische Nebenstunden ander Theil (1671)
Ander und dritter Theil Sonaten, Praeludien ... auf französischer Art (1675)
Buss- und Communionlieder, 5–12vv (1675)
Deutsche geistliche Madrigale, 2–6vv (1675)
Ach siehe da, mein Zeuge ist im Himmel, 4vv, 2 vn, 2 va, vne, bc, *D-Bsb*
Der Herr erhöre dich in deiner Not, 3vv, 2 vn, bn, bc, *D-GOl*
Gott, man lobet dich in der Stille, 4vv, 2vn, cornett, 2 tpt, 3 tbn, bc, *D-Bsb*
Ich will schweigen und meinen Mund nicht auftun, 4vv, 4 viols, bc, *S-Uu*
Was ist der Mensch, dass du sein gedenkest, 4vv, 2 vn, 2 va, vne, bc, *D-Bsb*
56 cants., lost, listed in Schweinfurt; 3 cants., lost, listed in Lüneburg

KARL-ERNST BERGUNDER/PETER WOLLNY

Agricola [Noricus], **Johannes** (*b* Nuremberg, *c*1560–70; *d* ?Erfurt, after 1601). German composer. In 1601, when he published a collection of motets, Agricola was teaching at the Gymnasium Augustinianum at Erfurt; he can scarcely be identified with the Christianus Johannes Agricola who was a discantist in the Kapelle at Weimar in 1594. The surname 'Noricus', used on the title-page and in the dedication, meant 'born at Nuremberg', and a Johannes Agricola baptized on 29 November 1564 at St Sebaldus at Nuremberg could be the composer. Yet another Johann Agricola (*d* 1605), Kantor at St Bartholomäus, Frankfurt, in 1591, was probably not the composer.

As a composer Agricola is known only by *Motetae novae pro praecipuis in anno festis* (Nuremberg, 1601), dedicated to the Erfurt senate; the bass partbook addresses the same dedication to the Mühlhausen senate, so possibly the collection appeared in at least two editions. The preface is a humanistic essay about the importance of music from ancient times to the 16th century. The 26 motets, for four to six, eight and twelve voices, are settings in a freely imitative style characterized by fluent counterpoint. The exact scansion of the Latin texts, which include some on secular subjects, is evidence of Agricola's humanistic education and profession.

LINI HÜBSCH-PFLEGER

Agricola, Johann Friedrich (*b* Dobitschen, Saxe-Altenburg, 4 Jan 1720; *d* Berlin, 2 Dec 1774). German musicographer, composer, organist, singing master and conductor. His father occupied an important post as government agent and jurist in Dobitschen. Burney, who visited the Agricolas in 1772, reported that Johann Friedrich's mother, born Maria Magdalena Manke, 'was a near relation of the late Mr Handel, and in correspondence with him till the time of his death'; but later Handel research has failed to substantiate this claim.

Agricola began his study of music as a young child. In 1738 he entered the University of Leipzig, where he studied law; during this time he was a pupil of J.S. Bach and visited Dresden, where he heard performances of Passion oratorios and Easter music by Hasse. In 1741 he moved to Berlin, became a pupil of Quantz, made the acquaintance of C.P.E. Bach, C.H. Graun and other musicians, and embarked on a career that touched many aspects of Berlin's musical life. He became keenly interested in music criticism and theoretical speculation in Berlin, and his work as a musicographer has proved to be his most lasting accomplishment. In 1749 and 1751 he published, under the pseudonym 'Flavio Anicio Olibrio', pamphlets on French and Italian taste, taking the part of Italian music against F.W. Marpurg's advocacy of French music. As a former pupil of J.S. Bach, he collaborated with C.P.E. Bach in writing the obituary of J.S. Bach that appeared in Mizler's *Musikalische Bibliothek* in 1754 and became a central source for subsequent biographies. He published Tosi's *Opinioni de' cantori antichi e moderni* in German translation in 1757, adding notes and comments which caused the translation to be regarded as a landmark in the teaching of singing. He arbitrated the debate that began in 1760 between Marpurg and G.A. Sorge. He also corresponded with Padre Martini and the dramatist G.E. Lessing and assisted in the preparation for publication of Jakob Adlung's *Musica mechanica organoedi* (1768), drawing particularly on what he had learnt about the construction of organs and other keyboard

instruments from J.S. Bach. From 1765 to 1774 he was a principal contributor of articles about music in C.F. Nicolai's *Allgemeine deutsche Bibliothek*. Most of these reflect a conservatism that might be considered typical of north German music critics; the articles written on Gluck's operas in 1769 and 1771, for example, display a lack of understanding of Gluck's 'reforms'. Agricola's study of melody (1771) remains one of the important writings about a neglected subject; and his biographical sketch of C.H. Graun (1773), like his participation in the Bach obituary, served as a point of departure for later writers on the subject.

Agricola's career as a thoroughly italianized composer of opera was fostered and then blighted by the patronage of Frederick the Great. His first intermezzo, *Il filosofo convinto in amore*, was performed with much success at Potsdam in 1750, and Frederick appointed him a court composer in 1751. In the same year, however, he married Benedetta Emilia Molteni, one of the singers of the Opera, disregarding the king's rule that singers in his employ must remain single. Frederick punished the pair by reducing their joint salary to 1000 thalers (Molteni's single salary had been 1500 thalers). When Graun, Frederick's chief opera composer, died in 1759, Agricola was appointed musical director of the Opera without the title of Kapellmeister. Frederick, who had always been critical of his composers – including Graun himself – was particularly harsh in his censure of Agricola's operas. In October 1767, after hearing the rehearsals of *Amor e Psiche*, he wrote to his attendant Pöllnitz: 'You will tell Agricola that he must change all of Coli's arias – they are worthless – as well as those of Romani, along with the recitatives, which are deplorable from one end to the other'. An effort of 1772 entitled *Oreste e Pilade*, ordered by Frederick as entertainment for a visit by the Queen of Sweden and the Duchess of Brunswick, proved to be so far from what Frederick wanted that the entire opera had to be rewritten and retitled *I greci in Tauride*.

As a performer-teacher, and in aspects of composition not so zealously supervised by his royal patron, Agricola fared better. He sang the tenor part in the première of Graun's *Tod Jesu* in 1755, distinguished himself as a singing teacher throughout his career and carried on the Bach tradition of organ playing; in 1772 Burney wrote that he was 'regarded as the best organ-player in Berlin, and the best singing master in Germany'. Agricola was also active as an organizer of musical performances and by 1754 was directing Das Concert, a series that met every Saturday at his home. This seems to have explored a wider range of music than did other concert series; Marpurg, who mentions it along with the Musikübende Gesellschaft and Die Assemblee, notes that it featured vocal as well as instrumental music.

Agricola was respected by his colleagues as a composer of considerable ability. He was a contributor to most of the lieder collections that formed the 'First Berlin School' of song, and his keyboard pieces were published in anthologies of the 1750s and 60s. His sacred works were in demand during his lifetime; copies of many of them survive in European libraries and archives. They show Agricola to have been an excellent craftsman, schooled in the Bach tradition and acquainted with the *galant* fashions of the mid-century, but prosaic in his treatment of melody.

WORKS

SECULAR DRAMATIC

Il filosofo convinto in amore (int), Potsdam, 1750, *D-Dl*, *DS*
La ricamatrice divenuta dama (int), Berlin, 1 Nov 1751, *DS*
Cleofide (os, 3, P. Metastasio), Berlin, carn. 1754, *Bsb*, *DS*

E. EUGENE HELM/DARRELL BERG

Agricola, Johann Paul (*b* Hilpoltstein, nr Nuremberg, 1638/9; *d* Neuburg an der Donau, bur. 3 May 1697). German composer and organist. He was educated at the Jesuit Gymnasium of St Salvator, Augsburg. In 1660 he wrote the music for a play performed there. On 23 October of the same year he matriculated at the University of Ingolstadt, where he read theology. In 1663 he became a chamber musician and court organist at Neuburg an der Donau to Count Palatine Philipp Wilhelm, who was renowned for his patronage and understanding of the arts. The court Kapellmeister was G.B. Mocchi, who had been a pupil of Carissimi and who in 1675 renounced in Agricola's favour a prebend that Pope Alexander VII had granted him in 1655. Agricola was required to compose a number of large-scale works for weddings in the count's family. When the count's eldest son, Johann Wilhelm, married the Archduchess Maria Anna, sister of Emperor Leopold I, in 1679, two operas and a pastoral by Agricola, and another work, *Freudens-Triumph* (with an equestrian ballet), that was probably by him, were performed; the music is all lost. On the occasion of the wedding of Princess Maria Sophia Elisabeth and King Pedro II of Portugal, which was celebrated lavishly in 1687 at Heidelberg with a performance of Sebastiano Moratelli's opera *La gemma Ceraunia*, Agricola received two ornamental goblets and a present of money 'for his many and varied labours over the comedy and other matters' (no music that he may have written on this occasion can be identified). In the summer of 1689 Philipp Wilhelm commissioned him to set for the impending wedding by proxy of his daughter Maria Anna to King Carlos II of Spain three cantatas to texts by the court poet G.M. Rapparini. In a letter to the prince-elector on 14 July 1689, Philipp Wilhelm described in detail the plan and contents of these works, which again are lost. Records relating to Agricola's funeral state that he was 58 when he died. With the regrettable loss of all of his stage music his only surviving works are three motets for voices and instruments, in the form of the early sacred cantata, which show the influence of the Augsburg school of J.M. Gletle; from catalogues compiled at Ansbach and Freising it appears that other sacred works by him are lost.

WORKS

STAGE WORKS

all lost; librettos D-Mbs

Streit der Schönheit und der Tugend (op), Neuburg, 1679
Freudens-Triumph des Parnassus, Neuburg, 13 Feb 1679 [with equestrian ballet; probably by Agricola]
Die beneidete, jedoch nicht beleidigte Liebe, abgebildet in einem poetischen Sinngedichte von dem Schäfer Damon und der Nymphe Melisse (pastoral) Neuburg, Carnival 1679
Die gesuchte, verlorene, und endlich wiedergefundene Freiheit in der Begebnis zweier Sicilianischer Princessinnen Salibene und Rosimene (op), Neuburg, 1679
Cardio-Sophia . . . das ist Hertzen Schuel (school play), Augsburg, St Salvator Gymnasium, 6 and 9 Sept 1660

3 motets: Accede o anima; Laudate pueri; Miserere mei, Deus, secundum magnam misericordiam: *D-Bsb*
Other sacred works, now lost, listed in J.J. Pez: Catalogus Musicalium (Freising, 1710)

LINI HÜBSCH-PFLEGER

Agricola [Sore], **Martin** (*b* Schwiebus [now Świebodzin, Poland], *c*1486; *d* Magdeburg, 10 June 1556). German music theorist, teacher and composer. According to his own statements, he came from a peasant family and was largely self-taught in music. By 1520 he was in Magdeburg working as a music teacher. He became choirmaster of the Protestant Lateinschule in about 1525 and retained this position until his death.

Agricola was one of the earliest teachers of music to realize Luther's wish to incorporate music as a central component of Protestant education. His foremost aim in educating students and congregation was to present material as clearly as possible and to reach a large audience. It was for this reason that his early treatises were written in German rather than the customary Latin. His translation of the terms *clavis* (as *Schlüssel*), *vox* (as *Stimme* or *Silbe*) and *scala* (as *Leiter*) are still used today. His desire to relate music education to everyday life can be seen in his modernization of old-fashioned rules of harmonic and rhythmic proportions, which he related to commercial arithmetic, in particular the Rule of Three, which formed the most important component of arithmetic instruction in Latin schools. He was the only theorist to consider *musica instrumentalis* of equal importance to *musica plana* and *choralis* to *musica figuralis*. His most popular treatise was *Musica instrumentalis deudsch* of 1529, reprinted in 1530, 1532 and 1542, and entirely revised in 1545. It was modelled on Sebastian Virdung's *Musica getutscht* of 1511, from which many of the woodcuts were copied. In it Agricola gives a description of musical instruments and instruction on how to play them; he advocates for the first time a system of notation, derived from keyboard tablature, which can be applied to all instruments. Most of Agricola's treatises were published by his friend, the Wittenberg music printer Georg Rhau.

Agricola, although primarily a music educator, also left a number of compositions. He wrote over 200 four-part music examples for his treatises. Similarly, his 54 *Instrumentische Gesenge*, published posthumously, were intended for instrumental instruction in Magdeburg's schools and for home performance. His odes or hymns on texts by Aurelius Prudentius and his friend Georg

Fabricius were sung between classes by students of the Lateinschule. Agricola himself assigned a particular hymn to each day of the week; these are for four voices in note-against-note style and strictly follow classical metres. His *Ein Sangbüchlein aller Sonntags Evangelien* of 1541 includes two-and three-voice German chorale settings and is the first collection of chorales arranged according to the church calendar. Its purpose was again didactic, namely to train the congregation in singing. His motets, on Latin scriptural texts (especially the Psalms and Gospels), show the influence of Josquin.

ANNA MARIA BUSSE BERGER

Agricola, Rudolph (*b* Groningen, 1443; *d* Heidelberg, 28 Oct 1485). German humanist and philosopher who was also active as a musician. His early studies took place in Groningen, but in the late 1460s he travelled to Italy for further humanistic training. In 1468 he was at the University of Pavia, where he studied jurisprudence for several years. Later he transferred to Ferrara, where he studied Greek at the *Studio* and in 1476 delivered a Latin oration for the opening of the academic year in the presence of Duke Ercole I d'Este of Ferrara. This oration praised Duke Ercole's musical abilities with more than rhetorical flattery; Ercole was remarkably interested in music, and Agricola was formally engaged in December 1476 as organist of the ducal chapel, one of the largest and most opulent in Europe. Agricola's appointment is confirmed by archival records and by his letters (see Allen); in a letter written at Easter 1476 he stated that he was serving as ducal organist at a stipend of five ducats a month and 'hopes for six'. He served until 1477. His ability as a musician was noted by his biographers and by the German theorist Luscinius (1515).

Agricola is regarded as one of the most important figures in the transmission to northern Europe of Italian humanism. His interest in music and his practical musical ability distinguish him from many of his contemporary humanistic scholars and mark a turning point in the relationship between this broad intellectual movement and music. He was later strongly influential in the development of philosophy and education in Germany, and was greatly admired by Erasmus and Melanchthon.

LEWIS LOCKWOOD/R

Agricola, Wolfgang Christoph (*b* 1600–10; *d* *c*1659). German composer and organist. It is possible that he is the same person as the Christoph Bauer who entered the University of Würzburg in 1625. From 1632 to 1642 he was at Neustadt an der Saale, from 1642 to 1644 at Bodenlauben and Ebenhausen and from 1645 to 1659 at Münnerstadt. In each place he was town clerk and notary; at Neustadt he was organist as well, and at the last three, which are near Würzburg, he was also an official of the Archbishop of Würzburg. He may have been a pupil of

the Würzburg court composer Heinrich Pfendner, on works by whom he based eight eight-part masses (1647). His *Geistliches Waldvöglein* is a large collection of sacred songs in four parts, artless settings of popular, simple, often clumsy verses, in which, however, 'the beginnings of the *Singmesse*' are discernible (see Ursprung).

WORKS

published in Würzburg

Fasciculus musicalis ... liber 1, 2vv (1637)
Fasciculus musicalis octo missarum super octo cantionibus Henrici Pfendneri, 8vv (1647)

HANS-CHRISTIAN MÜLLER

Agthe, Albrecht Wilhelm Johann (*b* Ballenstedt, 13 July 1790; *d* Berlin, 8 Oct 1873). German pianist, music teacher and composer, son of CARL CHRISTIAN AGTHE. He received his musical education from Ebeling in Magdeburg and Seebach in Klosterbergen before studying composition and counterpoint with M.G. Fischer in Erfurt. In 1810 he settled in Leipzig as a music teacher and second violinist in the Gewandhaus Orchestra, and there published his first compositions. He founded a music academy in Dresden with C. Kräger in 1823 which was publicly endorsed by Carl Maria von Weber; J.B. Logier's methods of keyboard instruction were used there. In the next decade he set up similar institutes in Posen (1826), where Theodore and Adolf Kullak were his pupils, in Breslau (1831) and finally in Berlin (1832). He was forced to retire in 1845 because of weak eyesight. His compositions include at least nine opus numbers for piano (some with other instruments) and two manuscript songs in the Stiftung Preussischer Kulturbesitz, Berlin.

DIETER HÄRTWIG

Agthe, Carl Christian (*b* Hettstedt, 16 June 1762; *d* Ballenstedt, 27 Nov 1797). German organist and composer, father of ALBRECHT WILHELM JOHANN AGTHE. He first learnt music with his grandfather Johann Michael Agthe, Kantor at the Rathsschule, and his great-uncle Andreas Agthe, a local organist; he later continued his musical studies as a choirboy and as a member of the local Stadtpfeiferei. From 1776 to 1782 he was director of music with the Hündelberg theatrical company in Reval (now Tallinn), where he composed his first Singspiele. He then moved to Ballenstedt to join the court orchestra of Prince Friedrich Albrecht of Anhalt-Bernburg as an organist and harpsichordist. There he became known as one of the best organists of his time and, after further studies with F.W. Rust, as an active composer of Singspiele, songs and instrumental pieces. His best-known work is a setting of Kotzebue's *Der Spiegelritter* (1795), which was first performed by an amateur society in Ballenstedt and several times revived. Agthe himself undertook the publication of his only extant published works – two volumes of songs and a set of three easy keyboard sonatas.

DIETER HÄRTWIG

Aguado (y Garcia), Dionisio (*b* Madrid, 8 April 1784; *d* Madrid, 29 Dec 1849). Spanish guitarist and composer. 'Padre Basilio' of Madrid, possibly Miguel Garcia, gave him his first instruction in the guitar, an instrument for which tablature notation was still commonly used in Spain. In about 1800 Aguado, like Fernando Sor, was influenced by the Italian Federico Moretti and adopted the conventional staff notation for the guitar; thereafter both Spaniards published their music in the improved manner championed by Moretti, distinguishing the musical parts by the direction of note stems, use of rests, etc. Aguado's artistic career unfolded slowly, owing to the Napoleonic invasion of Spain and its aftermath. He retreated to the village of Fuenlabrada in 1803, teaching and perfecting his technique there until 1824, the year his mother died; his *Colección de estudios para guitarra* appeared in Madrid in 1820. He moved to Paris in 1825 (while Sor was in Russia) and immediately gained an enviable reputation as a virtuoso and teacher; a revised version of his *Escuela de guitarra* (Madrid, 1825) was translated into French by François de Fossa as *Méthode complète pour la guitare* and published in Paris (*c*1826). The last ten years of Aguado's life were apparently spent in Madrid, where he revised his method (as *Nuevo metodo para guitarra*, 1843) and devoted himself to teaching.

In the years before his final departure from Paris (1838), Aguado was in close collaboration with Sor. They gave many concerts together, and Sor dedicated a duet op.41, *Les deux amis*, to his younger colleague. They did not agree on right-hand technique in guitar playing; Aguado recommended the use of fingernails in plucking the strings for the sake of clarity, while Sor advocated using the flesh of the fingertips for a mellower and more powerful tone. But despite their differences, they greatly admired one another, Sor gallantly 'excusing' Aguado's fingernail technique on account of the latter's superb musicianship and skilled execution.

A complete catalogue of Aguado's compositions is not available. According to Prat, he wrote several dozen studies, rondos, dances and fantasias. His guitar method was extremely popular in the 19th century, and was

republished frequently, including a facsimile edition by Minkoff (Geneva, 1980). His subsequent *Nuevo metodo para guitarra* (Madrid, 1843) was issued in English as *New Guitar Method* (London, 1981). Other facsimile editions include *The Selected Works of Dionisio Aguado*, ed. S. Wynberg (Monaco, 1981), and *Selected Concert Works*, ed. B. Jeffery (Heidelberg, 1990). Aguado is also known for the invention of the *tripedisono*, which supported the guitar away from the performer's body.

THOMAS F. HECK

Aguiari [Agujari], **Lucrezia** ['La Bastardina', 'La Bastardella'] (*b* Ferrara, 1743; *d* Parma, 18 May 1783). Italian soprano. Traditions explaining her nickname describe her variously as a foundling raised by Leopoldo Aguiari, his natural daughter or that of Marchese Bentivoglio, while her pronounced limp was supposedly the result of having been partly eaten in infancy by a dog or hog. Her early studies in Ferrara with Brizio Petrucci, *maestro di cappella* at the cathedral, and then with Abbé Lambertini revealed her exceptional talents. After her opera début (1764, Florence) and initial successes (Padua, Lucca and Verona, 1765; Genoa, Lucca and Parma, 1766) she settled in Parma, where she met the composer Giuseppe Colla, the new *maestro*. On 1 January 1768 the court at Parma appointed her *virtuosa di camera*. She became one of Europe's most sought-after sopranos.

In May 1768 Aguiari sang at Naples in Paisiello's *Le nozze di Peleo e Tetide* for the wedding of the king and Maria Carolina. Paisiello, reportedly out of spite, composed for her two extremely difficult arias, which, however, she carried off triumphantly. At Parma in the summer of 1769, after singing in Gluck's *Le feste d'Apollo* commemorating the same wedding, she began her nearly exclusive devotion to the works of Colla, whose pastorale *Licida e Mopso* she also sang then. Their association took them to Venice for his *Vologeso* (1770) and Genoa for his *L'eroe cinese* (1771). At Turin (Carnival 1772 and 1773), Parma (1773) and Milan (Carnival 1774) she always sang at least one work by Colla. After a visit to Paris (July 1774) and Turin (1775) she sang from 1775 to 1777 at the Pantheon concerts in London, where Colla was with her, at least in 1775 (in spring 1776 she went with him to Pavia). She then appeared for four more years in Italy (Florence, autumn 1778, Carnival 1779; Venice, Carnival 1780; Genoa, summer 1782) before leaving the stage. By 1780 she and Colla were married. She died of tuberculosis – not, as rumoured, of slow poisoning by jealous rivals.

Aguiari's voice was an object of wonder to her contemporaries, especially her range of three and a half octaves and her facility in executing the most difficult passage-work. 'I could not believe that she was able to reach C sopra acuto' wrote Leopold Mozart on 24 March 1770, 'but my ears convinced me'. In a postscript Wolfgang notated some bravura passages she had sung. Burney called her 'a truly wonderful performer. The lower part of her voice was full, round, of an excellent quality and its compass ... beyond any one who had then [been] heard ... Her shake was open and perfect, ... her execution marked and rapid; and her style of singing ... grand and majestic'. According to Fanny Burney, Aguiari's voice had 'a mellowness, a sweetness, that are quite vanquishing ... She has the highest taste, with an expression the most pathetic'. As an actress, wrote Sara Goudar, that she 'depicts on the stage any character whatsoever with the greatest realism'.

KATHLEEN KUZMICK HANSELL

Aguilar, Antonia Maria. *See* GIRELLI, ANTONIA MARIA.

Aguilar, Gaspar de (*fl* 1st half of the 16th century). Spanish music theorist. He wrote a treatise *Arte de principios de canto llano* (published between 1530 and 1537/*R*); it is a conventional work following traditional lines, limited to purely technical aspects of liturgical chant. He regarded the B♭ as a necessary accidental for chant based on F to avoid the melodic tritone and gave rules for the use of plicas; he also categorized intervals according to their effect on the senses, and rejected the Pythagorean classification. Aguilar seems to have been familiar with the writings of his contemporaries, citing Juan de Espinosa and Francisco Tover among Spaniards, Nicolò Burzio, Giacomo Fogliano and Gaffurius among Italians. His quotations are more accurate than those of most writers and add considerably to the merit of the work.

F.J. LEÓN TELLO

Aguilar (Ahumada), Miguel (*b* Huara, 12 April 1931). Chilean composer. He studied orchestration in 1945 with the Dutch teacher Fré Focke and composition at the National Conservatory of the University of Chile. From 1963 he studied conducting at the Cologne Musikhochschule with Wolfgang von de Nahmer. He taught in Concepción, first as director of the city's conservatory

and later as director of the arts department of the university (1980–83). He has published musicological articles in the *Revista musical chilena* and *Atenea*, and music criticism in the daily newspapers of Concepción and Santiago. He has won many distinctions, the most prominent of which is the municipal art prize of Concepción (1986).

His works exhibit a marked preference for instrumental writing, especially chamber and piano music, and a profound affinity for serial and 12-tone procedures. His works are generally short, designated by the composer himself as microforms. The strong influence of the writer Franz Kafka and the Chilean poet Vicente Huidobro is evident in his instrumental as well as his vocal music.

LINA BARRIENTOS

Aguilera de Heredia, Sebastián (*b* Zaragoza, ?15 Aug 1561; *d* Zaragoza, 16 Dec 1627). Spanish composer and organist. He probably studied with Melchor Robledo and Juan Oriz at the cathedral of La Seo, Zaragoza. He received holy orders on 19 January 1584 at S Pablo Apóstol, Zaragoza, where he was already in service. On 27 September 1585 he was appointed organist of Huesca Cathedral, where he supervised the construction of a new organ in 1588. Following the death of Juan Oriz, he became first organist of La Seo on 29 September 1603. He remained in that position until his death. By 20 January 1604 he was exempted, because of his eminence, from service at canonical hours except on solemn feasts. Repeatedly over the years the cathedral organ was repaired according to his specifications. In recognition of his *Canticum Beatissimae Virginis deiparae Mariae*, he received gifts from La Seo (100 libras) and Huesca Cathedral (150 reales). In December 1620 he used his influence to ensure the appointment as assistant organist of his pupil José Ximénez, who succeeded him as organist after his death.

Aguilera wrote exclusively for the church, in his organ works as well as his vocal music. His organ works are on the one hand within the traditions established in Spain by Cabezón and Santa Maria, while on the other they include enough that was new to prompt the developments found in the work of men such as Cabanilles, Correa de Arauxo, Rodrigues Coelho and Ximénez. His tientos (sometimes called 'obra', *medio registro*, etc.) are of several types. For three of them he was the first Iberian composer to use – if not the device itself – the term *falsas* to denote compositions in slow tempo with almost continuous use of dissonance, unexpected harmonic progressions, false relations, affective melodic intervals and the like. Five monothematic tientos constitute another group. A single theme may either be used in each of several sections accompanied by differing contrapuntal figuration as in the contemporary fantasia, or it may itself be transformed in a series of sections set off by changes of metre. Historically perhaps the most significant of Aguilera's organ pieces are those employing *medio registro* technique, common in Spain, whereby each half of the keyboard is capable of independent registration. Contrapuntal development of a theme is here secondary to the highlighting of one hand as a solo – always, with Aguilera, the left hand. This means that a phrase of two to four bars recurs systematically with successive transpositions to the dominant or subdominant. Figuration is continuous and often virtuosic, but animation never degenerates into superficial brilliance. Four other compositions are based on hymn melodies popular in Spain. Two settings of *Salve regina* employing only the first four notes of the plainsong are extended contrapuntal works analogous to fugally elaborated chorales. The other two settings, in which the traditional Spanish *Pange lingua* melody is treated as a cantus firmus, were apparently intended to accompany singing of the hymn. Rhythmic vitality and variety are conspicuous features of these pieces, especially when they take the form of repeated asymmetrical patterns such as the two shown in ex.1.

Ex.1

Aguilera was famous for his widely used *Canticum Beatissimae Virginis deiparae Mariae*, a collection of 36 settings of the *Magnificat* – an exceptionally large number for one composer. It consists mainly of four cycles, each containing eight settings, one for each tone; the cycles are for five, six, eight and four voices respectively. Polyphonically composed verses alternate with the chant. Each verse of each five-part work has a canon at an interval corresponding to the number of the tone (canon at the unison for 1st tone, at the second for 2nd tone and so on). Aguilera treated plainsong recitation tones as cantus firmi and occasionally made effective use of sharp dissonances and false relations. The remaining four works are complete settings of the canticle for double chorus in the grand manner of the late works of Victoria. Except that there are no continuo parts, these settings, in which polyphony is skilfully contrasted with massive homophonic sections featuring vigorous speech rhythms, show the direction in which Spanish polychoral music was moving.

BARTON HUDSON

Aguinaldo. A generic term used in Venezuela for both religious and secular Christmas songs, including the VILLANCICO, *alabanza*, *romance*, *décima*, *estribillo* and *canto de adoración*. Melodies are usually in 2/4 or 6/8 metre. Syncopated melodies and vocal harmonizations in either parallel 3rds or contrapuntal style are common. Percussion ensembles featuring the *pandareta* (tambourine), *tambora criolla* (drum), *charrasca* (scraper), *chineco* (rattle) and the *furruco* (friction drum) are characteristic, as are string instruments such as the guitar, *cinco* (small five-string guitar), *tiple* (small 12-string guitar) and, especially, the *cuatro* (small four-string guitar). *Aguinaldo* can be used to mean a 'Christmas gift'. Musical 'cards' are often performed by itinerant musicians or ordinary people, moving from house to house as part of the *parranda*, a tradition where in return for a song a gift may be given.

WILLIAM GRADANTE

Aguirre, Julián (*b* Buenos Aires, 28 Jan 1868; *d* Buenos Aires, 13 Aug 1924). Argentine composer and pianist. He attended the Madrid Conservatory (1882–6), studying composition with Arrieta, harmony with Aranguren and fugue with Cató, and taking first prizes for piano, harmony and counterpoint. While in Spain he impressed Albéniz with his playing, and when he returned to Argentina in 1886 he made a reputation as a pianist. He gave concerts in the interior of the country, staying for a year in Rosario, and then settled in Buenos Aires, where he played a significant part in the musical life of the city. As a composer he followed the national style initiated by Williams, using native folk melodies of the gauchos, particularly *tristes*, in numerous songs. These established him as one of the most highly esteemed Argentine composers of his generation.

Aguirre was secretary and harmony professor at the conservatories founded by Gutiérrez and Williams; and he helped to create the music section of the Buenos Aires Athenaeum (1892) and the Argentine Music School (1916). His compositions are in the main small-scale instrumental and vocal pieces, of which the choral works gave a new impetus to Argentine youth choirs. Juan José Castro, Ansermet and other conductors arranged his instrumental pieces for orchestra. Aguirre could be considered one of the most authentic pioneers of Argentinian nationalism.

SUSANA SALGADO

Aguirre, Sebastián de (*fl* ? late 17th to early 18th century). Mexican music copyist. He may have been related to Juan Rodríguez de Aguirre, a *músico* and *cantor* at the royal chapel in Madrid in the latter part of the 17th century. The only known manuscript copied by him is the *Códice Saldívar no.2* (a tablature in the possession of Gabriel Saldívar y Silva's family, Mexico City), one of the most valuable and fascinating instrumental anthologies to come out of the New World.

The anthology contains over 100 works of Mexican, Caribbean, Central American and Spanish origin. The American pieces are particularly interesting, bearing such engaging titles as *Portorrico*, *Panamá*, *Corrido* and *Tocotín*; most give only a bare harmonic skeleton in block

chords followed by a few bars of melodic improvisation. This is some of the earliest, if not the earliest, notated secular music indigenous to New Spain, while the piece entitled *Portorrico de los negros por 1 y 2 rasgado* is perhaps the earliest notated example of secular music in the New World with an African origin or influence. One section of the manuscript is dedicated to music for the five-course guitar, and there are many traditional Iberian *danzas* and *bailes*. Aguirre also included three beautifully illustrated fold-out pages that describe how to string, tune and intabulate for an unusual instrument that has 12 strings grouped into four courses; this instrument may be related to the *guitarra de son* or *requinto jarrocho*, a folk instrument now used in Veracruz.

CRAIG H. RUSSELL

Agung [ageng, agong, egong, egung, gong]. Suspended bossed gong of Mindanao, Sulu, Palawan, Mindoro, Sarawak, Sabah, Brunei, peninsular Malaysia, Kalimantan and other parts of Indonesia. There are various sizes. Larger gongs measure approximately 60 cm in diameter, with a boss about 8 cm high and a rim about 24 cm wide. The degree to which the rim is turned in also varies, as do the instrument's profile, weight and thickness. The smallest *agung* are those of the Tiruray people of Mindanao; they have a diameter of about 27 cm and rims about 4 cm wide.

Among several cultural groups in insular South-east Asia instruments of the *agung* type are important in rituals of possession. The Magindanaon people of Mindanao and the Modang of east Kalimantan use it in curing ceremonies, and in Palawan island it is played in wine-drinking rituals. The Iban of Sarawak use the *agung* at feasts (*gawai*) related to rice cultivation, at weddings, at the making of a new house and in curing the sick. In east Kalimantan the gong is a semi-sacred object and a symbol of honour and prestige.

What distinguishes the *agung* and related gongs from other types is its sound and its musical function, rather than its physical dimensions. Most *agung* are played on their bosses with a cloth-padded or rubber-bound mallet to produce a long sustained sound which may be damped by the left hand or right knee of the player. The mallet may also strike the face of the instrument and produce a similar sustained effect. The gong may be played alone or as part of two types of ensemble: one with drums, percussion and other suspended gongs, and another with these instruments and a *kulintang* (gong-chime). The inclusion or not of the *kulintang* is significant, for the two types of ensemble exist separately in different language and cultural groups. For a list of *agung* and other suspended gongs played with the *kulintang*, *see* KULINTANG, §2; ensembles of 22 cultural-linguistic groups without the *kulintang* are listed in Table 1.

The absence of the *kulintang* is a common feature of the ensembles listed in Table 1, but the music played by many suspended gongs has its own distinctive quality, characterized more by timbre, rhythm and punctuation than by focussed pitches.

Other ensembles of suspended gongs in the area are distinguished not only from the *kulintang* ensemble but also from each other according to the number and types of instruments used and the performing practices employed. The small sounds of the five Tiruray *agung* (Table 1, 22) contrast with the heavy sounds of larger *agung* typical of the whole area of Mindanao and Borneo.

Other suspended gongs not related semantically to the *agung* nevertheless share its musical function in ensembles in South-east Asia. Some of these are listed in the second column of Table 1; for some others, *see* KULINTANG, Table 1. Although they share the function of the *agung*, they also contribute to the variety among suspended gong ensembles which parallels the linguistic variety of the region.

For illustration *see* PHILIPPINES, fig.10.

For bibliography *see* KULINTANG.

JOSÉ MACEDA

Agurto y Loaysa [Loaysa y Agurto], **Joseph** [José] **de** (*b* ?Mexico City, *c*1625; *d* ?Toluca, ?1695). Mexican composer. He was named as a singer in Mexico City Cathedral on 20 May 1647 with a salary of 100 peso; this was reduced to 90 peso, because of the cathedral's financial difficulties, some time after 1646, but increased to 120 peso on 30 April 1665. In 1676 Agurto was made *maestro de los villancicos*, in 1677 *maestro compositor* and in 1685/6 *maestro de capilla*. On 3 September 1688 he was succeeded by Antonio de Salazar, but he remained active at the cathedral at least until 1695, the probable year of his death. By then he was living in nearby Toluca.

Agurto collaborated with the celebrated Mexican poet Juana Inés de la Cruz, and with other librettists, on several villancico cycles between 1676 and 1686. The music of only one villancico survives (ed. F. Ramírez Ramírez: *Trece obras de la colección J. Sánchez Garza*, Mexico City, 1981, pp.79–87); it is typical of the genre in its compound metre, dotted rhythms and alternation of an *estribillo* with four short *coplas*.

Agurto's other extant works are five sacred Latin compositions, all of which are presented in the archive of Mexico City Cathedral. Two of them, *Creator alme siderum* and *Custodes hominum psalimus angelos*, are *a cappella* motets in triple metre – a rarity in Mexican choral motets of the time.

Agus, Giuseppe [Joseph] (*b* *c*1725; *d* ?April 1803). Italian composer and violinist. By 1748 he was in London, where his orchestral career lasted over half a century. He was

TABLE 1: Agung ensembles of 22 cultural-linguistic groups without the *kulintang*, Philippines

	Cultural group (location)	*Gongs played on the boss*	*Gongs played on the rim*	*Drums*	*Remarks*
1	Ata [Matig-Salog] (Mindanao)	tahunggo (9 gongs, 1 player), agong		gimbal	gimbal and agong have different players
2	Bagobo [Calinan] (Mindanao)	agung (several gongs form a melody)			2 players (melody and ostinato)
3	Batak (Palawan)	1, 2 or 3 agung		gimbal (cylindrical)	includes also a sabagan (percussion beam); 3 players
4	Bilaan (Mindanao)	3 salmagi (high boss, wide rim)			2 players
5	Bukidnon (Mindanao)	agung (high boss, wide rim)			2 dancers, 1 player
6	Hanunoo (Mindoro)	2 small agung (3 players)	(agung)		for merry-making; 1 player uses round sticks on bosses, 2 players use flat sticks on rims
7	Higaonon [Agusan] (Mindanao)	gong			to call people
8	Iban (Sarawak)	3 bandai, 2 tawak, optional engkromong (gong-chime)			plays gendang rayah and other pieces with engkromong
9	Kadazan (Sabah)	6 to 8 pitched agung			used for dancing
10	Kayan (east Kalimantan)	taweq, 1 or 2 agung (high boss, wide rim)			used for rituals
11	Kenyah (east Kalimantan)	1 to 3 tawaq (different profiles)		jatung (long, conical)	used for rituals
12	Magindanaon (Mindanao)	agung		tambul, dabakan (tubular)	used for dancing
13	Mangguangan (Mindanao)	agong		gimbal (cylindrical)	used for dancing and curing
14	Manobo [Agusan] (Mindanao)	agung (high boss, wide rim)		gimbe (2 heads)	used for ritual
15	Mansaka (Mindanao)	agung, bubundi		gimbal (cylindrical)	3 players also dance; used for ritual
16	Modang (east Kalimantan)	selbun, ĕgung, tebhan, mendeq		tewung (conical)	used for rice harvest ceremonies; 1 to 5 players
17	Palawan (Palawan)	1 to 3 agung (different sizes)	2 sanang (2 players)	gimbal (tubular)	used for rice wine ceremonies
18	Subanun (Mindanao)	1 to 3 gaggung	(gaggung)		used for dancing; gaggung may be played on the rim
19	Tagabili (Mindanao)	4 gongs (blowon or sembakung)			2 performers, 1 on 3 gongs, another on 1 gong
20	Tagakaolo (Mindanao)	agung, or 6 agung (2 players for melody and ostinato)			used for solo dance 6 gongs called tanggungu
21	Tagbanwa (Palawan)	2 ĕgung	2 babandil	gimbal (cylindrical)	used during rice wine drinking
22	Tiruray (Mindanao)	5 small agung (suspended from left hand, played by right hand)	(agung)		1 player to each gong; one end of stick plays on rim, other end on boss

particularly in demand as a composer of ballet music for the Italian opera, and by 1758 works by him were included in the anthology known as Hasse's *Comic Tunes*. A selection from the eighth volume is entirely by him, and between 1768 and 1788 he published no fewer than seven further books of opera dances.

In addition to publishing collections of his own vocal and instrumental music, Agus edited *Six Favourite Overtures in 8 Parts* (London, 1762) containing works by Gioacchino Cocchi, Baldassare Galuppi, Niccolò Jommelli and Carl Heinrich Graun. His sonatas and trios are fluent essays in the Tartini idiom, with judicious use of double stopping. However, public taste was best suited by his flair for brief but tuneful dance movements in a variety of styles, the tambourin being especially favoured.

JOHN A. PARKINSON/SIMON McVEIGH

Agus, Joseph (Francis) (*b* 1749, *d* Paris, 1798). Italian violinist and composer. He was probably the son of GIUSEPPE AGUS. Having studied the violin under Nardini in Italy, 'Agus jr' first appeared in London on 26 February 1773 at the Haymarket. In 1778 Blundell published his duets for two violins.

On 19 March 1778 he was found guilty at Kingston assizes of attempted rape upon his 11-year-old godchild, Elizabeth Weichsell, and as a result of this scandal he emigrated to France. He was appointed *maître de solfège* at the Paris Conservatoire in 1795, where he received a grant of 3000 livres from the National Council. He contributed to the collection of solfeggi issued under the Conservatoire's auspices. Two collections of instrumental arrangements of catches and glees were published in England, and a set of trios in Paris, where Barbieri impudently republished his violin duets as Boccherini's op.37.

Many errors in earlier editions of *Grove* and other dictionaries are due to Fétis, who misnamed Agus 'Henri' and confused him with his father.

JOHN A. PARKINSON/SIMON McVEIGH

Aharonián, Coriún (*b* Montevideo, 4 August 1940). Uruguayan composer, musicologist and teacher of Armenian parentage. He studied composition with Tosar (1955–7, 1966–9), the piano with Adela Herrera-Lerena (1945–59), conducting with Jacques Nodmer (1966–9), musicology with Ayestarán (1964–6) and electro-acoustic techniques with Henry Jasa (1961–3). In Buenos Aires he studied at the Instituto Torcuato di Tella with Gandini, Kroepfl and Subotnick (1969), in Venice with Nono (1970), at the Darmstadt summer courses with Ligeti, Aloys Kontarsky, Xenakis, Globokar and Christian Wolff (1970, 1974), and at various of the Latin American Courses for Contemporary Music with Mumma, Rabe and others (1971–89).

Aharonián has been influential as a teacher and as an organizer of activities in music and music education both in Uruguay and abroad. His teaching specializations range from composition, choral conducting and organology to analysis, musical folklore and music and society; he has taught mainly at the Uruguayan National University and the National Institute for Teacher Training, as well as privately. An assiduous participant and lecturer in seminars and workshops in Europe, the Americas and the Philippines, he has been a member of the executive committee of the International Association for the Study of Popular Music and of the presidential council of the ISCM, and the executive secretary of the Latin American Courses for Contemporary Music. He has received numerous awards from Uruguay and other countries for his work as a composer, musicologist and choral conductor, and commissions from Belgium, Sweden and Germany.

His creative orientation asserts a Latin American cultural identity without falling into a facile nationalism. He clearly reveals some affinity with Webernian serialism, and acknowledges the influences of Varèse, Cage, Paz and Revueltas. His basic compositional credo involves the search for a direct language, a maximum economy of means, a deliberate rupture with the discursivity of the European tradition, the exploration of a microtonal perception, a strong interest in popular cultures and the use of modern technology. He is emphatic about the possibility of expressing the ideologies and aesthetics of the Third World in his music. (*KdG*, M. Fürst-Heidtmann)

Aharonyan, Ruben (*b* Riga, 24 May 1947). Armenian violinist and conductor. He began to study the violin in Riga and continued his studies at the Central Music School in Yerevan (1963–6), the Yerevan Conservatory (1966–8) and the Moscow Conservatory (1968–74), where his teachers were Y.I. Yankelevich and Leonid Kogan. From 1971 to 1996 he was professor of violin at the Yerevan Conservatory and from 1983 to 1996 artistic director and principal conductor of the Armenian State Chamber Orchestra. In 1996 he moved to Moscow to become leader of the Borodin String Quartet. He has

appeared as a soloist in festivals throughout Europe and in Japan, specializing in 20th-century repertory, notably concertos by Sibelius, Prokofiev, Stravinsky, Shostakovich, Khachaturian, Bartók and Berg, and works by many Armenian composers. Arutiunyan dedicated his Violin Concerto 'Armenia–88' to Aharonyan. Aharonyan's recordings include the concertos of Brahms, Tchaikovsky and Prokofiev.

SVETLANA SARKISYAN

Ahern, David (Anthony) (*b* Sydney, 2 Nov 1947; *d* Sydney, 31 Jan 1988). Australian composer. He studied with Butterley and Meale, and began composing at a young age, writing many works, the most significant being *After Mallarmé* (1966). Following this came *Music for Nine* and *Ned Kelly Music*, the latter representing a break with European tradition. During the late 1960s and the 1970s Ahern continued to challenge the Sydney music establishment with his unconventional works and uncompromisingly avant-garde ideals.

In 1968 Ahern studied with Stockhausen, gaining a diploma in new music from the Rheinische Musikschule in Cologne and attending the Darmstadt summer course. On returning to Australia, he completed his next work, *Journal* (1969), commissioned for Australia's bicentenary. In 1969 Ahern returned to Germany to work as Stockhausen's assistant. He then travelled to London where he was included in the early concerts of Cardew's newly formed Scratch Orchestra.

After returning to Sydney he formed a concert-giving organization, AZ MUSIC, and a smaller improvisation group, Teletopa. AZ remained at the cutting edge of new music for nearly six years. During this period too, Ahern composed his more avant-garde works such as *Stereo/Mono* (for saxophonist Roger Frampton) and *Cinemusic*, combining film and live performers. After the disbandment of AZ Music late in 1975, Ahern worked as a lecturer in sound for several years before slipping into musical oblivion. He died suddenly at the age of 40.

ERNIE GALLAGHER

Ahle, Johann Georg (*b* Mühlhausen, bap. 12 June 1651; *d* Mühlhausen, 2 Dec 1706). German composer, theorist, organist and poet, son of Johann Rudolf Ahle. He no doubt received his musical education from his father, whom he succeeded at the age of 23 as organist of St Blasius, Mühlhausen. Like his father he held the post until his death, and he was succeeded by the young Bach. Again like his father, he was elected to the town council. He was described on the title-page of his *Sapphisches Ehrenlied* (1680) as a bachelor of law, but it is not known where he studied. His education may well have included training in literary composition, for he distinguished himself as a poet and was made poet laureate by the Emperor Leopold I in 1680. His music, some of which is lost, is almost totally unknown. Much of it is scattered through his series of anecdotal novels, named after the Muses, which themselves deserve closer study. He clearly followed his father in his interest in writing songs, both sacred and secular, and his style in them seems to be even more popular and folklike. He also composed music for the church and for occasions such as weddings, anniversaries, celebrations of political events and ceremonies honouring distinguished visitors to Mühlhausen. Among his theoretical writings is his enlarged and copiously annotated edition of his father's singing manual. Here, as in his own treatises, among which the four *Musikalische Gespräche* are conspicuous, he displayed a comprehensiveness of musical knowledge and a richness of documentation of various theoretical facts that point to an education in the theory and history of music as thorough as that of such notable writers as Printz and Werckmeister (the latter was a personal friend of his). The *Musikalische Gespräche*, although written as fanciful dialogues between friends and the author (writing as 'Helianus', an anagram of 'Ahlenius') as they enjoy the pleasures of nature during the four seasons, are invaluable documents for the history of music theory. The *Frühlings-Gespräche* and *Herbst-Gespräche* consider consonance and dissonance, the *Sommer-Gespräche* treats of cadences, musical-rhetorical figures and the modes, and the *Winter-Gespräche* of intervals and further about the modes.

GEORGE J. BUELOW

Ahle, Johann Rudolf (*b* Mühlhausen, 24 Dec 1625; *d* Mühlhausen, 9 July 1673). German composer, organist, writer on music and poet, father of Johann Georg Ahle. He was a prolific composer of popular sacred music, notably songs, in central Germany a generation before J.S. Bach.

1. LIFE. The date of Ahle's birth derives from a report published in the *Neues Mühlhäusisches Wochenblatt* (1798, no.31; see Wolf). He was educated first at the local Gymnasium and then, from about 1643, at the Gymnasium at Göttingen. In the spring of 1645 he entered Erfurt University as a student of theology. Nothing is known of his musical training, though in 1646, while enrolled at the university, he was appointed Kantor at the elementary school and church of St Andreas, Erfurt, and at this period he became well known for his ability as an organist. He returned to Mühlhausen to marry in 1650, but only at the end of 1654 does he seem to have obtained his first and only position as a musician there, as organist of St Blasius. In addition to this post, in which his fame grew throughout Thuringia and in which his son succeeded him after his death, he held several municipal offices, belonged to the town council and in the year of his death was elected mayor.

2. WORKS. Except for his collection of dances of 1650, Ahle's large output of music consists entirely of sacred vocal works. On the whole it is interesting not because it is original but because it is typical of the music written for the Protestant Church in Thuringia and Saxony during the third quarter of the 17th century. Moreover, since Ahle and his son were the immediate predecessors of the young Bach, who as his first employment held the same position as they did at St Blasius, the state of music under them provides at least a few clues to some of the early influences on Bach's style. Ahle was probably influenced by Michael Altenburg and especially by Hammerschmidt, who, though belonging to the generation of Schütz, wrote simpler and more popular church music: certainly the tendency towards popularization characterizes almost all of Ahle's output. His music exhibits the variety of forms and styles characteristic of the combined heritage of 16th-century German Protestant music, especially chorales, and the infusion in the 17th century of Italian innovations from composers such as the Gabrielis and Monteverdi. There is considerable emphasis on the technique of the vocal concerto, in which the continuo supplies the foundation for the free, dramatic vocal writing for one or more solo voices, up to 24 (as in the 1665 volume of the *Neu-gepflanzter thüringischer Lustgarten*). Ahle often added ritornellos and postludes for small instrumental combinations, which in the concerto style are also integrated within the vocal writing, imitating or emphatically underscoring it. Many of his vocal concertos are on a small scale, but he could create an impressive dramatic structure on a large scale, for example the noble *Misericordias Domini: Ich will singen von der Genade des Herren ewiglich* from the 1665 volume (in DDT, v). It is basically a concerto for two voices, with two violins, founded on an ostinato consisting of a rising C major scale, and he built on these foundations a set of variations of ever-increasing musical drama and fine variety that can bear comparison with the chaconne variations found in Bach's church cantatas. Some works by Ahle are based on varied forms of chorale melodies, though more frequently he retained only the chorale text in his concertos. His monodies and dialogues (as in the 1648 book) continue, like those of Hammerschmidt, the Italian-influenced tradition of such pieces that Schütz developed with such memorable results. Many of his dialogues are settings of the type of over dramatic, rather stereotyped Baroque expression of antithesis found in two obviously contrasted poetic thoughts – for example the words of Mary Magdalene and Jesus at the tomb (set by Ahle, in the second work in DDT, v) – such as is later found in Bach's cantata duets.

Ahle is best remembered for his large corpus of sacred songs (*Arien*) for one to four voices with ritornellos, which, as he directed, can be performed 'with or without the basso continuo'. The texts are either from the Bible or by such well-known poets as Johann Franck, Martin Opitz and Johann Rist and authors from Mühlhausen – Johann Vockerodt (Ahle's predecessor at St Blasius), Ludwig Starck and Ahle himself. These simple, chorale-like tunes were not originally meant for congregational singing but could be performed either by soloists, chorus, or a solo singer with instrumental accompaniment. They were a successful outcome of Ahle's intention to revitalize sacred music. Many of the tunes were incorporated into the Mühlhausen hymnbook in the 18th century, and at least three of them, *Morgenglanz der Ewigkeit*, the well-known *Liebster Jesu, wir sind hier* and *Es ist genug*, are still used in Protestant services; the last has had a long musical life (see Geiringer), including new versions by Bach and Brahms, and was most recently used by Berg (in his Violin Concerto). Ahle also wrote a method for teaching singing to children in the schools of Mühlhausen, of which his son later brought out a revised and greatly expanded edition.

GEORGE J. BUELOW

Ahlefeldt, Countess **Maria Theresia** (*b* Regensburg, 28 Feb 1755; *d* Prague, 20 Dec 1810). German composer, writer and pianist. The daughter of Prince Alexander Ferdinand of Thurn and Taxis and his third wife Maria Henrietta Josepha, princess of Fürstenberg - Stühhugen, and a goddaughter of Empress Maria Theresa, she spent her early years at her father's court in Regensburg. In 1780 she married the Danish diplomat Count Ferdinand von Ahlefeldt-Langeland-Rixingen. In the following decade they lived at the court of the last Margrave of Ansbach, Karl Alexander, where she belonged to the circle of Lady Elizabeth Craven (later margravine) and was active in musical and literary spheres. In 1791, after the dissolution of the Ansbach court, Countess Ahlefeldt moved to Denmark with her husband, who was superintendent of the Royal Theatre in Copenhagen from 1792 to 1794. The couple later moved to Dresden (1798) and Prague (1800). Ahlefeldt came to public notice as a composer in both Ansbach and Copenhagen, having particular success with the four-act opera-ballet *Telemak på Calypsos Øe* (1792) for which she composed orchestral numbers throughout and vocal numbers in Act 2. Based on choreography by Vincenzo Galeotti, the renowned Italian ballet-master, it ran for 37 performances until 1813 in Copenhagen alone. The work is rooted in the period of *galanterie* and sensibility, but owes something to operetta and in places shows expressive qualities and a Classical shape reminiscent of Gluck. Countess Ahlefeldt's works were valued for their well-constructed and sensitive melodies and their skilful orchestration; she was also 'highly thought of and well known as a sensitive virtuoso pianist' (Schilling).

DIETER HÄRTWIG/HILDEGARD SURNER

Ahlersmeyer, Matthieu (*b* Cologne, 29 June 1896; *d* Garmisch-Partenkirchen, 23 July 1979). German baritone. He studied with Karl Niemann in Cologne and made his début at Mönchengladbach in 1929 as Wolfram. He sang at the Kroll Oper, Berlin (1930–31), at the Hamburg Staatsoper (1931–3 and 1946–61), and at the Dresden Staatsoper (1934–44), where he created Schneidebart in *Die schweigsame Frau*. In 1938 he created the title role in Egk's *Peer Gynt* at the Berlin Staatsoper. He appeared at Covent Garden in 1936 with the Dresden Staatsoper as Don Giovanni and Count Almaviva, and at the Edinburgh Festival with the Hamburg Staatsoper in 1952 as Hindemith's Mathis. In 1947 he shared the title role in *Dantons Tod* with Paul Schöffler at the Salzburg Festival, and in 1963 he created Count Almaviva in Klebe's *Figaro lässt sich scheiden* at Hamburg. He retired in 1973.

HAROLD ROSENTHAL/R

Ahlgrimm, Isolde (*b* Vienna, 31 July 1914; *d* Vienna, 11 Oct 1995). Austrian harpsichordist. She played the piano in public while still a child. After completing her education at the Music Academy (now the Hochschule für Musik) in Vienna, where she was a pupil of Viktor Ebenstein, Franz Schmidt and Emil von Sauer, she changed to the harpsichord and early piano in 1935, teaching herself technique and style from 17th- and 18th-century treatises. Ahlgrimm made numerous concert tours of Europe and the USA. Her large repertory included the complete keyboard music of Bach, which she often performed as a cycle of 12 recitals and recorded. She was also a noted exponent of Austrian harpsichord music, especially the works of Johann Fux. Richard Strauss wrote a suite from his opera *Capriccio* for her (1944). Ahlgrimm joined the teaching staff of the Vienna Hochschule in 1945, where she was appointed reader in 1969 and professor in 1975. She taught there continuously, except during 1958–62 when she was professor at the Salzburg Mozarteum. In 1975 she was awarded the Austrian Gold Medal.

HOWARD SCHOTT

Ahlstrom, David C. (*b* Lancaster, NY, 22 Feb 1927; *d* San Francisco, 23 Aug 1992). American composer. He studied at the Cincinnati Conservatory of Music, the Eastman School and the California Institute of Asian Studies. His principal teachers were Hovhaness, Cowell and Bernard Rogers. He taught at Northwestern University (1961–2), Southern Methodist University (1962–7) and Eastern Illinois University (1967–76) before moving to San Francisco as a freelance composer and writer. In 1982 he founded VOICES/SF, Bay Area Youth Opera, an ensemble specializing in new American musical theatre. Ahlstrom's one-act chamber opera *Three Sisters who are not Sisters*, to a libretto by Gertrude Stein, was first performed on 1 March 1953 at the Cincinnati Conservatory. Two years later he set another Stein text, *Doctor Faustus Lights the Lights*; it was first performed by VOICES/SF on 29 October 1982. Both works recall the Thomson-Stein operas in their mixture of straightforward tonality and sophisticated prosody. His musical comedy *America, I love, You*, to poems by e.e. cummings, was first heard in New Orleans on 6 January 1981. Ahlstrom also wrote numerous children's operas and 'mini-operas' intended for both children and adults; some of his several symphonies and his chamber works incorporate electronic sound.

HARRY HASKELL

Ahlström, Jacob Niclas (*b* Visby, 5 June 1805; *d* Stockholm, 4 May 1857). Swedish composer, conductor and organist. He studied music at the University of Uppsala and became the musical director of E.V. Djurstrms theatre company in 1828. From 1832 to 1842 he was a teacher at the Gymnasium in Vsterå and the city's cathedral organist. He then moved to Stockholm, where he was a conductor of various theatre orchestras, for which he composed the music for about 100 productions, often in collaboration with August Blanche. His only full-length opera, *Alfred den store* (Alfred the Great), based on a text of Theodor Krner, was written in 1848 but never performed; another opera, *Abu Hassan*, was not finished. His other compositions include about 300 entractes, a vocal symphony, some orchestral works, a piano concerto and solo piano pieces. He also edited collections of Swedish and Nordic folksongs and folkdances and compiled a pocket dictionary of music (*Musikalisk fickordbok*, Göteborg, 1843).

AXEL HELMER

Åhlström, Olof (*b* Åletorp, Värdinge, 14 Aug 1756; *d* Stockholm, 11 Aug 1835). Swedish composer. After early musical education with a local organist, he moved in 1772 to Stockholm, where he was instructed in composition by Ferdinand Zellbell the younger. In 1777 he was appointed organist at the Mariakyrka and in 1786 at the Jakobskyrka. Though he made his livelihood mainly in government posts, he was active as a music publisher from 1787 to 1823, under royal privilege; in the journals he founded, *Musikaliskt tidsfördrif* ('Musical Pastimes', 1789–1834) and *Skaldestycken satte i musik* ('Poetry Set

to Music', 1790–1823) he often published his own piano reductions of portions of the most popular operas in Stockholm during the period. His own operatic works, beginning with the nationalist comedy *Frigga* (1787), demonstrate a good sense of lyrical line coupled with influences from the *opéras comiques* of Grétry and Dalayrac. His orchestration is often fairly dense, and sometimes rich in texture. He was highly esteemed as a pianist and composer of songs, most of which were published in his own journals. He also wrote numerous pedagogical keyboard pieces for the Royal Academy of Music in Stockholm.

WORKS

all first performed and published in Stockholm

STAGE

Frigga (Spl, 1, C.G. Leopold), Royal Opera, 31 May 1787, *SF-A*

BERTIL VAN BOER

Ahmed, Fadzil (*b* Muar, Johor, Malaysia, 12 June 1941). Malaysian *ghazal* singer and *gambus* lute player. He became interested in music at an early age, as a result of watching *bangsawan* (Malay opera) performances; his father, a musician, was important in nurturing this interest. At the age of 18 he joined the Setia Ghazal Party in his home town (the principal centre of the syncretic vocal genre *ghazal* in Malaysia) as a singer and musician; he later joined the well-known Seri Maharani Ghazal, becoming famous as a *gambus* (short-necked lute) player (the lead instrument in *ghazal* ensembles) and featuring on Seri Maharani Ghazal's many recordings.

He has visited around 40 countries, often giving solo performances, but principally as a member of exchange troupes through the Malaysian Ministry of Culture, Arts and Tourism, which he joined in 1976. Shortly after joining this organization, he worked as a *gambus* teacher at Kompleks Budaya Negara (National Cultural Complex), where he continued until his retirement. He continues to work part-time at the Akademi Seni Kebangsaan (National Arts Academy). In addition to being a highly successful *gambus* player, he has also acted and directed.

See also MALAYSIA, §I,1(v).

GHULAM-SARWAR YOUSOF

Ahmed, Zakariyya (*b* Cairo, 6 Jan 1896; *d* Cairo, 16 Feb 1961). Egyptian composer. He studied the vocal repertory (*mūwashshaḥ* and *adwār*) with Darwish Al-Hariry, learnt to recite the Qur'an with Ismail Succar and also studied the *'ūd*. He started his career as a member of the chorus of the singer Aly Mahmud, and shortly afterwards started to compose religious chants, scoring his first success with some *taqtuqa*s (light songs), which were later recorded by several leading singers.

From 1924 Ahmed composed operettas; of the 56 that he wrote, the two best known are *Youm el qiyamah* ('Doomsday', 1940) and *Aziza wa Younes* ('Aziza and Younes', performed 1941), both of which were written for the National Theatre and both of which are still sometimes performed. His 1075 songs embrace the *taqtuqa*, *mūwashshaḥ* and *adwār* and include long narrative songs in the sentimental modern manner and songs for films. There is a shift in output from *taqtuqa*s to more serious lyrics. Among his greatest songs are the 60-odd he wrote for Um Kalthum, for example *Huwwa sahih el hawa ghallab* ('Is love really overpowering?').

Although Ahmad was considered a conservative, his output includes some innovative elements within the traditional framework, with a wider and more varied choice of modes compared with his contemporaries. He revived neglected modes and rhythmic patterns and was the first to write through-composed *taqtuqa*s. He also introduced the novelty of several rhythmic patterns in one song. In the film *Sallama* (starring Um Kalthum) he introduced recitative and Bedouin-style songs. Ahmad was also a screen actor and was awarded the Order of the Arts (1960) and nominated for the State Prize for Cultural Achievement.

SAMHA EL KHOLY

Aho, Kalevi (*b* Forssa, 9 March 1949). Finnish composer. He studied composition with Rautavaara at the Sibelius Academy (diploma, 1971) and in Berlin with Blacher (1971–2). From 1974 to 1988 he taught music theory at the Helsinki University and, as acting professor, composition at the Sibelius Academy (1988–93). Since 1993 he has been a freelance composer supported by a state scholarship. His many activities include membership of the board of the Society of Finnish Composers (1974–8, 1982–9 and from 1997) and the Finnish Cultural Foundation (from 1996), the Programme Committees of the Helsinki PO (1979–89) and the Helsinki Festival (1982–94) as well as of the State Music Committee (from 1995). He also co-founded in 1975 the Society for the Publication of Finnish Music (Edition Pan), later taken over by Edition Fazer. Since 1992 he has been composer-in-residence of the Lahti SO, which has recorded many of his orchestral works under Osmo Vänskä. In 1974 Aho was awarded the Leonie Sonning Prize in Denmark, in

1990 the Henrik Steffens Prize in Germany and in 1996 the Flisaka Prize in Poland.

Aho is essentially a composer of large-scale works, which show the influence and spirit of Mahler and Shostakovich. In his music an abstract drama of destiny with a psychological development of characters takes place. His musical works of art aim to upset the listener's sense of security by failing to fulfil the expectations created by the musical events. The listener is therefore compelled to look for a solution by personal engagement, and in this way music may help solve the crises and conflicts of the listener's own life as well. Aho has described his artistic programme as 'aesthetics of resistance', to give the postmodern person new horizons in a society governed by material values. In his operas Aho deals with social and human problems more concretely and uses musical means recalling the eclecticism of Schnittke. All kinds of musical material, from traditional forms and techniques (waltz, fugue, passacaglia, etc.) to modern and postmodern idioms (dense pitch fields, quotations, etc.), are of equal value in his music which is decisively opposed to the aesthetics of purism. Aho's sovereign command of various compositional techniques is equally apparent in his many arrangements and orchestrations, often characterized by a virtuoso handling of instruments and orchestral sections.

ILKKA ORAMO

Ahrend, Jürgen (*b* Göttingen, 28 April 1930). German organ builder. Ahrend studied in Göttingen with Paul Ott from 1946 until 1954, before opening a workshop in Leer, East Friesland, with his partner GERHARD BRUNZEMA. After intensive study of surviving historical organs, Ahrend and Brunzema developed a special interest in the north German mechanical-action tradition and adopted its methods. From the beginning they divided their activities between the careful restoration of historical instruments and the construction of exemplary new organs. They often collaborated with leading performers of early music, and their groundbreaking work gained an international reputation. 67 organs were built and restored between 1954 and 1971, largely in northern Europe. In 1962 both partners received the State Prize for craftsmanship in Lower Saxony. In January 1972 Brunzema left the firm to pursue his own career in Canada; Ahrend continued his work in Germany.

Important restorations include instruments at Rysum (1961); Marienhafe (1713/1969); the Churburg, Schluderns (now Sluderno; 1559/1969); The Hofkirche, Innsbruck (1551–61/1970); the St Cosmae et Damiani, Stade (1668–73/1974); the Martinikerk, Groningen (1977);

Lüdingworth (1982); Michaelerkirche, Vienna (1714/1987) and Jacobikirche, Hamburg (1693/1993). The newly built organs display traditional features in their construction: the massive wood casing, the windchests and in the sensitive trackers and bellows; in their layout, choice of materials, scaling and voicing they tend to adhere to north German models of the 17th and 18th centuries. Significant instruments include those at Zorgvlietkert, Scheveningen (1959); Martinikirche, Bremen (1962); Johanneskirche, Castrop-Rauxel (1967); Cantate Domino, Frankfurt (1970); University of Oregon, Eugene (1972); the Church of Reconciliation, Taizé (1974); Augustinerkirche, Toulouse (1981); Untere Stadtkirche, Wetzlar (1900) and Deutsches Museum, Munich (1995).

HERMANN FISCHER

Ahrens, Joseph (Johannes Clemens) (*b* Sommersell [now Nieheim], Westphalia, 17 April 1904; *d* Berlin, 21 Dec 1997). German composer and organist. After studying with Wilhelm Schnippering at the Lehrerseminar (Büren), he studied church music in Münster with Werner Göhr and Fritz Volbach (1924–5). In 1925 he went to Berlin where he pursued further study with Alfred Sittard and Max Seiffert at the Akademie für Kirchen- und Schulmusik and attended Wilhelm Middelschulte's organ masterclasses. He also studied Gregorian chant at the Benedictine abbeys of Gerleve and Beuron. In 1928 he became a lecturer at the Berlin Akademie, where in 1936 he was promoted to professor. After the war he was appointed to the post of ordinarius for Catholic church music at the Berlin Hochschule für Musik, where, for a time, he was also deputy director. He served as the organist at St Hedwig's cathedral in Berlin from 1934 until its destruction in 1943, was choirmaster and organist at the Salvatorkirche in Berlin-Schmargendorf from 1945 to 1957, and was nominated Orgelsachverständiger des Bistums Berlin. His numerous honours include the Arts Prize of the City of Berlin (1955), knighthood in the Gregorian Order (1965) and the silver pontifical medal (1968). He was elected to the Berlin Akademie der Künste in 1963. His daughter is the organist and composer Sieglinde Ahrens (*b* 1936).

Ahrens's compositional style is characterized by a focus on linear relationships. Inspired by plainsong and intervallic contours derived from the church modes, his compositions also feature an extended major–minor tonality. Later works extend these compositional materials to an intervallic–motivic dodecaphony.

KLEMENS SCHNORR

Ahronovich, Yury [Georgy] (*b* Leningrad [now St Petersburg], 13 May 1932). Israeli conductor of Soviet birth. He studied at the Leningrad Central School of Music and the Leningrad Conservatory, and also with Natan Rakhlin and Kurt Sanderling. In 1956 he was appointed conductor of the Saratov PO; he also taught at the conservatory there and conducted his first operas. The next year he became conductor at Yaroslav, remaining there until his appointment as chief conductor of the Moscow RSO in 1964; his guest engagements included appearances with the Bol'shoy Ballet. Ahronovich left the USSR in 1972 and became an Israeli citizen. After concerts with the Israel PO he began touring, appearing in London with the RPO and with the New York PO in the USA. He made his operatic dêbut in the West with *Otello* at Cologne, where he was conductor of the Gürzenich Concerts from 1975 to 1986. He first appeared at Covent Garden in 1974, conducting Musorgsky's *Boris Godunov*, when he was warmly praised for a combination of exhilarating spirit with clarity of musical purpose. From 1982 to 1987 he was principal conductor of the Stockholm PO.

NOËL GOODWIN

Aibl. German firm of music publishers. The lithographer Joseph Aibl (*b* Munich, 1802; *d* Munich, 1834), a pupil of Theobald Boehm, worked from 1819 to 1825 in Berne as a musician and later as a lithographer with a music dealer. In 1825 he founded a business that published music and dealt in instruments in Munich; after his death it was continued by his widow and from 1837 by Eduard Spitzweg (*b* Munich, 1811; *d* Munich, 1884), a brother of the painter Carl Spitzweg. Under the directorship of Eduard's sons Eugen Spitzweg (*b* Munich, 1840; *d* Munich, 1914) and Otto Spitzweg (*b* Munich, 1843; *d* Munich, 1920), the firm acquired the publishing rights of Falter & Sohn in 1888, and those of Alfred Läuterer of Munich in 1892. The publishing house was sold in 1904 to Universal Edition. Composers represented by the firm included Peter Cornelius (i), Rheinberger, Alexander

Ritter, Theobald Boehm, Bülow, Reger and Richard Strauss. Publisher's catalogues exist from 1847, 1860 and 1876 (in *D-Mbs*).

KARL VENTZKE

Aiblinger, Johann Caspar (*b* Wasserburg am Inn, 23 Feb 1779; *d* Munich, 6 May 1867). German composer. Although his first contact with music may well have been through the choirmaster of St Jakob in Wasserburg, Johann Sebastian Dietz (1711—93), Aiblinger received his first musical training at the Benedictine Abbey at Tegernsee. In 1795 he moved to the Jesuit Gymnasium in Munich, run by Benedictines since 1794, at the same time having lessons in composition with Joseph Schlett. From 1801 he studied theology at the university of Landshut. He then went to Italy: to Vicenza (1803), Venice (1810) and briefly to Milan (1811). During this time Simon Mayr, who lived in Bergamo, was his adviser and friend. In 1819 he returned to Munich, where he became Kapellmeister at the Italian Opera (he failed to obtain the job of vice-Kapellmeister at the royal court). In 1826 he became court Kapellmeister for church music and, after leaving the Italian Opera, worked at the Allerheiligenkirche, the court church in Munich. In 1833 he was sent by the Crown Prince Maximilian to Italy to collect old church music. Together with Michael Hauber, the prebend of St Kajetan, and Caspar Ett, he was influential in the revival of church music. He retired in 1864.

In his two-act opera *Rodrigo und Ximene* (1821), Aiblinger adopted the *opera seria* style developed by Cherubini, Spontini and Mayr, with through-composed recitatives, emotional chorus scenes, rich instrumentation and virtuoso passages for the solo singers. With its mixture of Italian and French conventions, the work is not a true example of German national opera.

Aiblinger's early, large-scale masses with instrumental accompaniment show the influence of Italian opera. From 1825 to 1833 he developed a transitional style with frequent *a cappella* sections and more *colla parte* instrumentation. From 1830 he composed more smaller-scale works and the orchestral masses were replaced by *Landmessen* (i.e. 'rural masses' for limited forces). The *Marienlieder* are particularly notable for their folklike character. Aiblinger's numerous compositions for women's voices and organ were intended especially for the Munich convents. At the same time, he was able to pursue the ideal of the *a cappella* style at the Allerheiligenkirche.

SIEGFRIED GMEINWIESER

Aich, Arnt von (*b* ?Aachen; *d* Cologne, *c*1528–30). German printer. He came into possession of the Lupus Press in Cologne through marriage to its owner, Ida Grutter, and began publishing in 1512 or 1513. He brought out some 35 works on a variety of subjects before his death. The business was continued by his widow and son-in-law, Laurenz von der Mülen, until his son Johann von Aich was old enough to take it over. Under the latter's direction some 35 more books were issued from the Lupus Press, the last of them dated 1557.

Arnt von Aich's main output consists of religious writings, a few of which exhibit Protestant sympathies and may have been printed illegally. In music his fame rests on a single collection, *LXXV hubscher Lieder*, printed by means of woodblocks. Although like many of Arnt von Aich's publications it is not dated, the repertory indicates an early date (probably between 1512 and 1520). No composers are named in the collection; some of the songs have been identified as the work of Hofhaimer, Isaac, Rener and Grefinger – all of whom were active in southern Germany and Austria. Since they had no connection with Cologne, Moser suggested that the collection may represent a reprint of an earlier Augsburg edition now lost. The repertory itself can most readily be linked to the court of the Augsburg Bishop, Friedrich II of Zollern (*d* 1505), whose setting of *Fried gib mir Herr* concludes the collection. Many of the composers and even some of these works are also found in the song collections published by Oeglin and Schoeffer.

MARIE LOUISE GÖLLNER

Aichinger, Gregor (*b* Regensburg, 1564–5; *d* Augsburg, 20–21 Jan 1628). German composer and organist. He ranks with Hans Leo Hassler among the most important and prolific composers in southern Germany in the late 16th and early 17th centuries.

1. LIFE. Aichinger's birthdate is derived from the inscription on his tombstone in the cloister of Augsburg Cathedral; his age at his death is given as 63. He was still at Regensburg in 1576, and in 1577 he presented a composition to the Bavarian court at Munich and was paid for it. Although the Munich court chapel under Lassus often recruited choirboys from Regensburg, there is no conclusive evidence that Aichinger was a member. On 2 November 1578 he enrolled at the University of Ingolstadt, which had become a stronghold of Jesuit influence. Among his fellow students was Jakob Fugger (ii), a member of one of the most prominent families in southern Germany (*see* FUGGER), and he formed a lifelong friendship with him. He probably continued his musical training at Ingolstadt (perhaps under the organist Hans Pruckhman). In 1584 he was appointed official organist to Jakob Fugger (i), uncle of his student friend. In this position he provided music for the Fugger household, presided over the organ that his employer had donated to St Ulrich, Augsburg, and also became known locally as an organ consultant. He evidently held the organist's position until his death, since his successor, Elias Fabricius, is first mentioned in the church records in 1628.

Some time between 1584 and 1588 Aichinger travelled to Venice, where, sponsored by Jakob Fugger (i), he became one of the first German pupils of Giovanni Gabrieli; the first fruits of his study are contained in his *Sacrae cantiones* (1590), dedicated to his patron. Matriculation records at the University of Siena show that he enrolled there on 15 November 1586. Having visited Rome, he returned to Germany, and on 21 July 1588 he again enrolled at the University of Ingolstadt. His published music from this period includes several individual pieces written for special occasions in the Fugger family; the *Sacrae cantiones* of 1595, for example, contains an eight-part Latin choral dialogue composed for the younger Jakob's ordination at Augsburg in 1592. In 1598 the elder Jakob Fugger died; Heinrich von Knöringen, who later may have been primarily responsible for Aichinger's decision to enter the priesthood, was consecrated prince-bishop in Augsburg Cathedral; and Aichinger made a second journey to Italy, arriving in Rome before December. He enrolled at the University of Perugia in 1599, returned to Rome in 1600 and was in Venice by December. In Rome he gained the favour of Marquard von Schwenden (canon at Salzburg, Augsburg and Passau), to whom he later dedicated his *Virginalia* (1607). According to the foreword to this work, the Roman publisher Simone Verovio provided him with the texts; it was probably through Verovio and his publications that he became acquainted with the Roman spiritual canzonetta, the style of which influenced many of his works after 1600.

From the time of his return to Augsburg – probably early in 1601 – until his death, Aichinger lived under the aegis of the church. He discussed a benefice with Augsburg Cathedral chapter in January 1600, while still in Italy, and he was awarded the benefice of S Maria Magdalena, which included the position of *vicarius chori*. He probably took holy orders in Italy, though he may have been ordained only after receiving the benefice, for not until 1603 did he begin to prefix his name in his publications with the words 'Reverendus Dominus'. By then he had already renounced secular music, a fact noted in the foreword to his *Odaria lectissima* (1601), and in the preface to the *Divinae laudes* (1602) he had referred to the dedication of his life to God. He later held additional benefices, including a canonry of the college of St Gertraud, Augsburg. The seriousness with which he took his ecclesiastical calling is shown by his publication of a book of pious meditations, *Thymiama sacerdotale* (1618). He continued to compose prolifically, and he still maintained a close association with members of the Fugger family: he dedicated his *Solennia augustissimi corporis Christi* (1606) to the Sodalitas Corporis Christi, a Catholic organization of which he was a member and whose founder was Marcus Fugger (ii); and he composed his *Teutsche Gesenglein* (1609) while staying at Johann Fugger's castle at Babenhausen. The funeral of Emperor Rudolf II in Augsburg Cathedral in March 1612 probably occasioned the writing of Aichinger's *Officium pro defunctis*; copied into a large choirbook in about 1613, this work later appeared in print with an added continuo part. About 50 books from his personal library are known to exist: volumes of Italian music and works on religion, philosophy, history, geography and medicine indicate the wide range of his interests. The epitaph on his tombstone praises him as 'a man wonderfully pleasing beyond his piety, his expert knowledge of music and the elegance and ease of his manners'.

2. WORKS. The differing styles apparent in Aichinger's music reflect his background and training. Although he used modern idioms derived from Italian models, he nevertheless remained true to his German heritage in tempering his music with conservatism; indeed, much of his output consists of works for three, four and five voices in the traditional polyphonic style of earlier composers such as Lassus. The influence of Giovanni Gabrieli is evident not only in his early polychoral works for large ensembles but also in his later vocal concertos; these contain numerous sections that appear to be reductions of polychoral textures to their essential outer voices, the rest being supplied by the organ.

The contents of Aichinger's *Sacrae cantiones* (1590) are consistent with those of the publications of some of Gabrieli's other pupils, including Latin polychoral motets and Italian madrigals; the second and third books of *Sacrae cantiones* (1595 and 1597) also include some polychoral music. His *Cantiones ecclesiasticae* (1607),

containing mostly Latin motets and *Magnificat* settings for three voices and basso continuo, clearly shows the influence of Viadana. This collection was not only the first significant German publication of music with thoroughbass, but also included the first treatise printed in Germany on thoroughbass notation and performance. After 1607 Aichinger included a continuo part in most of his published collections; vocal concertos featuring an essentially independent continuo part are printed in his *Cantiones* (1609), *Encomium verbo incarnato* (1617), *Quercus dodonaea* (1619), *Corolla eucharistica* (1621) and *Flores musici* (1626). Although Aichinger was one of the first to introduce Viadana's concerto style into Germany, he wrote no solo vocal concertos. A significant number of his works use light textures and dance-like rhythms typical of the Roman canzonetta; most of these are settings of metrical texts, both with and without basso continuo.

WILLIAM E. HETTRICK

Aiguino da Brescia, Illuminato (*b* ?Orzivecchi or Orzinuovi, nr Brescia, *c*1520; *fl* 1562–81). Italian theorist and Franciscan friar. He was influenced by Pietro Aaron, to whom he referred as 'my indisputable teacher', by Spataro and by Marchetto da Padova. His *Illuminata de tutti i tuoni di canto fermo* (Venice, 1562) expounds a modal theory applicable to plainchant: a mode is a form of diatonic octave divided into segments of 5th and 4th; corresponding authentic and plagal modes comprise the same segments but in reverse order, and the order of steps within the segments is also reversed, ascending in the authentic and descending in the plagal modes. There are eight regular modes (authentic and plagal) with finals on *d*, *e*, *f* and *g*, and six irregular modes with finals on *a*, *b* and *c′*. The treatise is largely devoted to modal identification of chants with an ambitus smaller or greater than an octave, or which use more than one mode. Identification is based primarily on the predominance of the segments of a single mode, especially those of the 5th, within a chant, and only secondarily on the final and ambitus. Aiguino's *Tesoro illuminato di tutti i tuoni di canto figurato* (Venice, 1581) expands this modal theory to accommodate polyphony. A specific affective character is ascribed to each mode, and composers are urged to choose the principal and secondary modes of a composition according to the sentiments expressed in the text. One voice should observe the principal mode more strictly

than the others in order to indicate the mode of the composition. Cadences are constructed on the final and fifth degree of the principal mode, although intermediate cadences on the final and fifth of secondary modes are admissible. Aiguino's modal theory represents a defence of the traditional eight-mode system and is directed against Glarean's 12-mode system. Nevertheless, like Glarean he makes the diatonic species of 5th and 4th into the single most important element defining the modes and plays down the significance of the space between the final and the reciting tone.

KAROL BERGER

Aikin, Jesse B(owman) (*b* Chester Co., PA, 5 March 1808; *d* Montgomery Co., PA, 1900). American tune book compiler. He introduced a system of seven-shape notation in *The Christian Minstrel* (Philadelphia, 1846; for illustration *see* SHAPE-NOTE HYMNODY, ex.2), a tune book containing many pieces found in the publications of Lowell Mason. The book underwent one revision and at least 171 reprintings by 1873 and reportedly sold more than 180,000 copies. Aikin's notation found widespread acceptance, particularly in the South, and eventually supplanted all other forms of shape-notation. It continues to be used in denominational hymnals and books of the southern gospel-music tradition. His other publications include *The Juvenile Minstrel* (Philadelphia, 1847), *Harmonia ecclesiae, or Companion to the Christian Minstrel* (Philadelphia, 1853), *The Sabbath-School Minstrel* (Philadelphia, 1859), *The Imperial Harmony* (with Chester G. Allen and Hubert P. Main, New York, 1876), and *The True Principles of the Science of Music* (Philadelphia, 1891, rev. 2/1893; round notation). Aikin was a singing-school teacher; he also sold organs in association with his son-in-law, Isaac R. Hunsberger, in Hatfield, Pennsylvania.

PAUL G. HAMMOND

Ailred. *See* AELRED OF RIEVAULX.

Aimeric de Peguilhan (*b c*1175; *d c*1230). Provençal troubadour. According to his *vida*, he was the son of a Toulouse cloth merchant (Peguilhan is a village in the Haute Garonne, near Saint Gaudens). He was apparently a wanderer who was received at many courts in southern France, Spain and northern Italy. Raimon V of Toulouse may have been his first patron, while others may have included Guilhem de Bergadan, Gaston VI of Béarn, Bernard IV of Comminges, Pedro II of Aragon, Alfonso VIII of Castile, Guillaume IV of Montferrat, Marquis Guilhem of Malaspina and Azzo VI and Beatrice d'Este. Aimeric's poetry, which includes chansons, sirventes, *chansons de croisade*, *tensos*, planhs and partimens, was admired and cited by such writers as Matfre Ermengaut, Jaufré de Foixa, Berenguier de Noia, and by Dante (in *De vulgari eloquentia*). Modern evaluations vary widely, some considering the poet to be of great distinction, while others view him as technically competent though neither profound nor original.

Among approximately 50 surviving poems attributable to Aimeric, only six survive with music. Four of these have isometric, decasyllabic strophes. Only one melody, *En Amor*, is cast in bar form. This is a setting, curiously, of a strophe whose first four lines have the same masculine rhyme while the last four have a related feminine rhyme. Literal repetition of phrases is not present in other works, although *Per solatz* does embody a varied repeat of the fifth phrase. However, Aimeric occasionally presented a melodic outline in multiple guises by regrouping various notes and adding or omitting embellishments; motivic play is also a factor in formal design. All melodies except the two settings of *Qui la vi* use authentic modes, *Atressi·m pren* and *En greu pantais* employing the seldom-used finals *e* and *B* respectively. The melodies tend to begin in the upper register (*En greu pantais* opening a 9th above the final) and to introduce the final cadentially only in the latter half of the strophe. Most are relatively florid, and only one displays clear elements of rhythmic symmetry. *Qui la vi*, considered a descort by some and a chanson by others, is built of extremely lengthy, tripartite strophes. The setting in *F-Pn* fr.22543 has the repetition structure characteristic of the lai, but gives music for the first strophe only, while that in the Manuscrit du Roi (*F-Pn* fr.844) is a late addition in mensural notation, which presents new textual material and treats the four strophes in through-composed fashion.

THEODORE KARP

Aimon, (Pamphile) Léopold (François) (*b* L'Isle, nr Avignon, 4 Oct 1779; *d* Paris, 2 Feb 1866). French conductor and composer. He became conductor at the theatre at

Marseilles when he was 17. He moved to Paris in 1817, where his opera *Les jeux floraux* was performed, with little success, in 1818. He was conductor at the Théâtre du Gymnase from 1820 to 1821 and at the Théâtre Français from 1822 to 1832. He composed various songs, of which *Michel et Christine* (1821) was particularly popular. Aimon later turned to teaching: his *Abécédaire musical* appeared in 11 editions by 1866. (*DBF*; G. d'Orgeval)

BRUCE CARR/GEORGE BIDDLECOMBE

Ainsley, John Mark (*b* Crewe, 9 July 1963). English tenor. He studied music at Oxford University and with Diane Forlano. After early engagements with Gothic Voices and other groups he made his first operatic appearance in Scarlatti's *Gli equivoci nel sembiante* at Innsbruck's Early Music Festival (1988). He made his American début in 1990 with concerts in Boston and New York, and has sung with the ENO (début in *Il ritorno d'Ulisse in patria*, 1989), the WNO (Idamantes), Scottish Opera (Fenton), and at the Aix-en-Provence and Glyndebourne festivals (Don Ottavio). He made his San Francisco début in 1995 as Don Ottavio (a role he has recorded with Norrington) and his Netherlands Opera début as Monteverdi's Orfeo in 1996. More recent roles have included Lensky and David in Nielsen's *Saul og David*. A supple lyric tenor in the English tradition, Ainsley has an extensive discography ranging from Monteverdi to Britten. Among his recordings are Britten's *Serenade* for tenor, horn and strings, lieder by Mozart and Schubert, songs by Quilter, Warlock and Howells, several Handel oratorios and the title role in *Orfeo*. In 1992 he created the tenor part in John Tavener's *We shall see Him as He is*.

JAMES JOLLY

Ainsworth, Henry (*b* Swanton Morley, Norfolk, bap. 15 Jan 1571; *d* Amsterdam, ?1622–3). English minister and psalmodist. He was expatriated as a 'Brownist' in 1593 and settled in Amsterdam, where he became 'teacher' of a church in 1596; together with its pastor, he founded an Independent church, eventually becoming minister of it himself. He was the author of a number of religious tracts, annotations and translations of scripture. His *Book of Psalmes: Englished both in Prose and Metre, with Annotations* (Amsterdam, 1612, 4/1644; music ed. in *ISAMm*, xv, Brooklyn, NY, 1981) contains all 150 psalms in a new metrical version, together with prose translations and annotations. 48 are provided with monophonic tunes (nine melodies are used twice). 10 of these are drawn from the French and Dutch tradition, and 16 are from English sources (including three of the newer, short variety such as *Windsor*). Three of the tunes (Psalms xlv, lxvi and cxi) are original. Ainsworth frequently adapted existing tunes to his chosen verse metres. His psalter was used by the Pilgrim settlers of the Plymouth Colony from 1620, thereby beginning the history of psalmody in New England. By the late 17th century, however, it was no longer in use there, having been replaced by the Bay Psalm Book and other psalters.

See PSALMS, METRICAL, §V, 1(ii).

Air (Eng., Fr.). A term used in England and France from the 16th century onwards, frequently and rather loosely as synonymous with 'melody', 'tune' or 'song'.

1. The term. 2. The English 'ayre', 1597–1650. 3. The French operatic *air*, 1650–1800.

1. THE TERM. When Thomas Morley (*A Plaine and Easie Introduction to Practicall Musicke*, 1597) applied the term to all the secular vocal forms of his day except the madrigal, the most serious of them, he was following his Italian predecessors and contemporaries in using it to refer to light pieces in a simple, canzonetta-derived style (*see* ARIA, §1). The term was also consistently used in England from the same year for published volumes of lute-songs, several of which, however, are serious. Here the spelling 'ayre' was often preferred. After the decline of the lute 'ayre', towards the mid-17th century, the form 'air' was often used again in its more general sense. By the 18th century it clearly denoted a simple, unpretentious song, quite different from the Italian or italianate aria, which in both operas and cantatas was often a complex, highly developed form.

English writers, again following the Italians, sometimes used the word 'air' in another, somewhat different way, denoting not a tune itself but the aesthetic quality of a piece of music that might be summed up as inevitable rightness – perfection, even – in which the various elements, especially melody and harmony, complement and enhance one another. This usage is doubtless not unconnected with two of the many everyday meanings of an unusually versatile word: general bearing, manner or outward appearance; and atmosphere or aura investing a person or object. Roger North wrote much about this aspect of air, notably in *An Essay of Musicall Ayre* (*c*1715; annotated excerpts in Wilson, 1959), whose title-page shows that it is concerned 'chiefly to shew the foundations of Melody joyned with Harmony, whereby may be discovered the Native genius of good Musick'. In the 12th edition (1694) of John Playford's *An Introduction to the Skill of Musick*, Purcell wrote of a music example

that he had improved from earlier editions that it 'carries more Air and Form' in it.

The English use of 'ayre' to mean a particular kind of song was matched in France by the term *air*, with or without qualification. For some 80 years from 1571 the term AIR DE COUR was regularly used for solo lute-songs and ensemble songs, again comprising light and serious pieces. Another specific term, AIR À BOIRE, subsequently came into being to denote lighter songs. By this time, the 1670s, the more serious type was generally called simply *air*. From now on, well into the 18th century and even beyond, the *air* held an important place in French stage works and cantatas.

From at least the early 17th century the word 'air' was also widely applied to instrumental pieces. Like many of their vocal counterparts, such pieces tend to be of the lighter type, and some are dance-like – witness the *Courtly Masquing Ayres* (1621) of John Adson. But the term is generally used for simple pieces which, like vocal airs, are of a predominantly melodic cast and can indeed be seen as instrumental songs rather than dances. The inclusion of such a piece in a suite may have been prompted by a desire on the composer's part to offer contrast to the surrounding pieces in specific dance rhythms. Locke's *Little Consort of Three Parts* can plausibly be seen to consist of ten suites all with the sequence pavan–air–courante–saraband, and airs figure prominently in comparable ways in all his other consort sets except the duos for bass viols. There are several instrumental airs by Purcell, notably in the stage works, and there are keyboard transcriptions of a few of them. The many melodic airs in suites by later Baroque composers include one of the most celebrated movements by Bach – the air in the Suite no.3 in D BWV1068 – and one of Handel's too (the 'Harmonious Blacksmith' in Suite no.5 in E). Some airs at this period are faster and generally in bourrée rhythm.

Finally, the word 'air' is used of a signal, or more often a march, of clairons, and fifes or oboes, to which a drum batterie is usually attached; *see* SONNERIE (i), (1).

2. THE ENGLISH 'AYRE', 1597–1650. The vogue of the English lute ayre began in 1597 when Dowland published his *First Booke of Songes or Ayres*. This collection was highly successful and went through four more editions between 1600 and 1613 (more than any other English printed volume of that time). Dowland went on to publish three more collections of lute ayres, and other composers followed suit, notably Campion, Rosseter, Danyel, Robert Jones (ii), Pilkington and Alfonso Ferrabosco (ii). Dowland's *First Booke* established the format for these songbooks: they were of large folio size, and composers tended to favour publishing multiples of seven songs, 21 being a common number. As well as the parts for solo voice and lute (the latter in tablature notation), composers generally provided an optional part for bass viol, and often extra vocal parts as well, for alto, tenor and bass. Thus the ayres could be performed as solo songs with instrumental accompaniment, or as partsongs for several voices; or, if desired, the extra vocal parts could be performed on instruments. Such flexibility in performance was characteristic of the time; moreover, at a time when music publishing in England was still in its infancy, and rather uncertain financially, it was an obvious advantage to provide music that could be adapted to suit the differing tastes and musical resources of amateur musicians. When extra parts were provided they were printed facing in different directions so that several performers seated round a table could read from a single copy.

The immediate English antecedents of the lute ayre were the partsong and the consort song. Although the surviving repertory of partsongs is not large there is sufficient evidence to show that before the vogue of the madrigal and lute ayre in England there was a strong partsong tradition, examples of which can be seen in keyboard arrangements of mid-century partsongs in the Mulliner Book (*GB-Lbl* Add.30513; MB, i, 1951, 2/1954) and in Whythorne's *Songs for Three, Fower, and Five Voyces* of 1571. Like the lute ayres these are generally strophic (i.e. the same music is repeated for every stanza), and the musical style covers a wide spectrum from simple harmonized tunes to quite elaborate contrapuntal compositions. The simpler partsongs in particular, like the anonymous *I smile to see how you devise* or Richard Edwards's *When griping griefs* (both in the Mulliner Book), are the forerunners of many 'light ayres' by Campion, Rosseter and Ford. In such pieces as these, with their straightforward melodies and chordal texture, the accompaniment can be provided equally well by voices or by a chord-playing instrument, and so it is not surprising that there are arrangements of some of these partsongs for voice and lute.

The other important forerunner of the lute ayre, the consort song, was normally composed for solo voice accompanied by four viols. A substantial repertory of consort songs survives from the mid-16th century onwards by composers such as Richard Farrant, Robert Parsons and Byrd, and these provided a model for the more extended and contrapuntal lute ayres composed by Dowland, Cavendish and Danyel. Consort songs were also sometimes arranged for voice and lute, thus providing a direct link between the two media.

In addition to these English antecedents it seems clear that the French chanson, or *air de cour* as the lighter type came to be known, influenced the development of the English ayre. French chansons appear in two of the very few music books printed in England before 1588: the *Recueil du mellange d'Orlande de Lassus* (1570) and Adrian Le Roy's *Briefe and Plaine Instruction* (1574). Moreover, Dowland had ample opportunity to become acquainted with this music during his sojourn in France in the early 1580s: an interesting sidelight on this is the fact that the music of the song ascribed to 'Tesseir' in the anthology *A Musicall Banquet* (1610), compiled by Dowland's son Robert, first appeared in Guillaume Tessier's *Premier livre d'airs* in 1582, while John Dowland was in France. The Tessiers seem to have had other English connections, for in 1597 – the same year as Dowland's *First Booke* – Charles Tessier's *Premier livre de chansons et airs de cour* was published in London by East. Several general parallels can be drawn between the French *air de cour* and the English ayre – strophic setting, a predilection for light homophonic textures, and the provision of alternative arrangements for solo voice and lute or vocal ensemble (though, in the French case, not within the same volume) – and it seems likely that some of the impetus for the English movement, and indeed for the term 'ayre', came from its French counterpart.

Finally, in considering the various factors that fused to give rise to the English lute ayre it should not be forgotten that the songbooks were important sources of lyric verse and were evidently valued as such, judging by the number

of lutenist lyrics which found their way into printed and manuscript collections of poetry. From a literary point of view the songbooks of Dowland and his circle can be seen as a continuation of the sequence of Tudor poetical miscellanies that began with *The Court of Venus* (*c*1537) and included Tottel's *Songes and Sonettes* (1557), *A Handefull of Pleasant Delites* (1566), *The Paradyse of Daynty Devices* (1576) and *A Gorgious Gallery of Gallant Inventions* (1578). All these contain at least a proportion of poems that were evidently 'verse for song' and for which in some instances musical settings survive. Just as these volumes have been described as 'songbooks without music', so the lutenist's folios may be considered as 'poetical miscellanies with music'. The title of Jones's last songbook, *The Muses Gardin for Delights* (1610), recalls the flowery titles of some of the earlier miscellanies.

The ayres of the lutenists cover a wide stylistic spectrum from extended contrapuntal compositions to short harmonized tunes. The former extreme is represented at its best by some of Dowland's ayres, such as the three magnificent songs with obbligato viol parts in his *Pilgrimes Solace* (1612). In these the influence of the consort song is particularly evident, the expressive phrases of the vocal line, punctuated by rests, being supported by a continuous polyphonic accompanying texture. Other composers who wrote in this vein were Cavendish, Morley and Danyel. Dowland frequently used touches of chromaticism to heighten the expression, but the most extreme of the lutenists in this respect was Danyel, notably in *Can doleful notes*. In ayres like these, especially where strophic form is abandoned in favour of new music for each stanza (or where just one stanza is set), the composer often paid close attention to details in the text, and the result is reminiscent of the work of the madrigalists; but more generally, the lutenists were content to express the general mood of the lyric rather than to depict the details.

At the other extreme is the 'light ayre' advocated by Campion. Campion is notable among the lutenists as having been a poet as well as a composer, and the lyrics he set to music are all generally taken to be his own work. He was the only songwriter to express in print any views on the subject of word-setting in songs, and the prefaces to his own songbooks and the one that he shared with Rosseter are also interesting. As a poet he was naturally concerned that the music should not obscure the words, and for this reason he insisted that complicated polyphony had no place in the ayre, which should be short, simple and 'well seasoned' like an epigram (he himself wrote Latin epigrams). He also ridiculed madrigalian word-painting. In ayres like *Shall I come, sweet love, to thee* and *When to her lute Corinna sings* he achieved a refined and eloquent simplicity, as did his friend (and possibly teacher) Rosseter in ayres like *What then is love but mourning*. One of Campion's ayres, *Come let us sound with melody*, reflects his interest in reviving classical prosody. The poem is written in Sapphic metre, and the melody matches the long and short syllables with minims and crotchets respectively, like the *musique mesurée* of some French chanson composers.

In between the two extremes represented by the contrapuntal ayres of Dowland and Danyel and the light ayres of Campion there is a great variety of styles. One genre specially cultivated by Dowland was the dance ayre, a song written in the form and style of a dance such as the pavan or galliard. The most famous of all his ayres, *Flow, my tears*, is a vocal pavan. Many instrumental versions of it survive entitled *Lachrimae*, and it seems certain that in this and some other instances the work was first composed as an instrumental piece and words added later. Some ayres by Jones and Cavendish reflect the influence of the canzonet and ballett. Cavendish's single volume, like that of Greaves, contains madrigals as well as ayres, and some of the items printed as ayres (e.g. *Say, shepherds, say*) are really canzonets or madrigals with the lower vocal parts intabulated for lute.

The most important stylistic development during the vogue of the lute ayre was the rise of the declamatory style. Once again Dowland led the way; he had visited Italy in 1595 and was almost certainly acquainted with the work of Caccini and other Italian monodists. In *Come, heavy sleep* (1597) and *Sorrow, stay* (1600) he used declamation momentarily for special expressive effect, but in later songs, such as *Tell me, true love* and *Welcome, black night* (1612), it is much more pervasive. Some of these later declamatory songs were written for masques, and it seems that in England as in Italy the new style was associated with theatrical entertainment. Another composer whose airs show this tendency was Alfonso Ferrabosco (ii), who collaborated with Ben Jonson in a number of masques; others are Coprario, Mason and Earsden.

The last lutenist to publish a printed songbook was John Attey in 1622, only 25 years after Dowland had inaugurated the movement. But in addition to the printed songbooks there are a number of manuscript collections, such as *GB-Lbl* Add.15117, 15118, 24665 and 29481 and manuscripts at *Ob*, *Och*, *Ckc* and *US-NYp*. Some of the ayres in these sources are elaborately embellished, sometimes apparently just for embellishment's sake, but sometimes to heighten the expression, after the fashion of the Italian monodists. In many cases they are provided only with an unfigured bass accompaniment, but they are essentially the same as the lute ayres, and in fact many printed lute ayres reappear in manuscripts with only a bass accompaniment. Nevertheless the provision of a simple bass accompaniment which could be realized on any chord-playing instrument was a sign of a decline in the prestige of the lute itself. In the manuscripts one finds the work of a younger generation of songwriters – men like Nicholas Lanier (ii), Robert Johnson (ii), John Wilson and William and Henry Lawes; in fact, these manuscripts afford the clearest evidence that the ayre did not die with Attey's songbook of 1622 but continued to evolve with undiminished vitality.

For editions of English ayres see EL (1959–); MB, vi (2000) and liii–liv (1987–9).

3. THE FRENCH OPERATIC 'AIR', 1650–1800. The French operatic *air* originated in the mid-17th-century *ballet de cour*. Lully's *Ballet d'Alcidiane* (1658), for example, contains *airs* by Lully and Antoine Boësset in the style of the popular AIR DE COUR. During the following decade, Lully developed the form, first in subsequent court ballets and then in the *comédies-ballets* on which he collaborated with Molière. With his first *tragédie en musique*, *Cadmus et Hermione* (1673), the three categories of French operatic *air* became established as the *air à chanter* or sung *air*; the *air de mouvement* or dance *air*, which sometimes used a singer; and the *air à jouer* or instrumental *air*. The distinctions between the categories are based less on stylistic criteria than on performing forces, the

presence of dance styles, and, most important, location within the act. *Airs à chanter* appeared in scenes devoted to dramatic action, whereas *airs de mouvement* and *airs à jouer* appeared in divertissements.

'La chaine de l'hymen m'étonne' from Act 1 scene ii of *Armide* (1686) is a good example of the basic Lullian *air*. From the *air de cour* Lully drew a modest, largely unadorned form of text-setting. It supports the anapestic scansion typical of French poetry at this time, and apart from a short, illustrative melisma on 'chaine' is syllabic. From his own Italian background he drew a preference for straightforward variants of binary form, as found in the operas and cantatas of such composers as Luigi Rossi. The first part is repeated literally, ending on a half-cadence; the second repeats the texts of its two verses, but uses two different musical phrases. Other favoured forms include the rondeau and variants of ternary form. Lully could also create more complex musical structures reflecting dramatic content. In one famous example, 'Atys est trop heureux', from Act 1 scene ii of *Atys* (1676), an *air*-like refrain with ground bass for Sangaride is interspersed with recitative for her confidante Doris.

These kinds of *air* remained a staple of French opera for the life of the *tragédie en musique*, and were readily taken up by composers of newer French genres such as the *opéra-ballet*. Such stylistic changes as occurred were a matter of degree rather than kind, designed to accommodate changing tastes. The most extreme example of this shift is seen in the operas of Rameau. His *airs à chanter*, while more complex than those of his predecessors, are still recognizable in terms of the Lullian tradition. Some of his *airs de mouvement* and *airs à jouer* challenged the traditional forms, however; examples include the metrically complex use of gavotte rhythms in the first instrumental *air* in Act 1 scene iii of *Hippolyte et Aricie* (1733), and the virtuoso ornamentation in the sung version of the first dance *air* from Act 4 scene iii.

Embedded in entire scenes devoted to recitative, the *air à chanter* often resembled the surrounding music to an extent that makes it difficult to identify. The Italian playwright Carlo Goldoni complained in his *Mémoires* (1787) that on his first visit to the Académie Royale de Musique he was unable to detect the presence of *airs*. This was further aggravated by the variety of features that could constitute an *air*. Musically, it might or might not use regular metre (in contrast to the shifting metres of French recitative), instrumental accompaniment, literal or allusive repetition and authentic tonal closure. Dramatically, it could be determined by such diverse elements as plot, conventional speeches, narrations (*récits*) and maxims. In staging, it could support individual characters in dialogue, two characters in dialogue or single characters in monologue. The terminology used in writings of the time also varied considerably, and the notational specification of *airs* was inconsistent, as were later indexes of performable pieces included in published scores. From a historical standpoint, then, there is value in thinking of the *air à chanter* as a form of musical inflection within an ongoing pattern of recitative. This is supported by the fact that anthologies and excerpts printed passages of pure recitative as easily as *airs*.

As quarrels over the relative merits of French and Italian opera became more common during the 18th century, opponents fixed on such ambiguities. Proponents of French opera praised this music for its emphasis on poetic text, while critics attacked its lack of variety compared with the Italian numbers format (clearly, understanding the position of the writer is important when reading sources from this time). Terms that were intended to describe Italian opera, such as Jean-Jacques Rousseau's expression *récitatif mesuré*, have crept into modern discussion of the French *air*, further confusing the distinction between it and recitative.

With the increased performance of ballet, comic opera and Italian opera during the second half of the 17th century and the related decline in the importance of the French tragedy, the significance of the *air* dwindled. Vestiges are detectable, however, in the flexible scene structure of Gluck's reform tragedies. In *Orphée et Euridice* (performed in Paris in 1774), for example, the composer interspersed declamatory passages between recurring musical strophes ('Objet de mon amour') and between refrains ('J'ai perdu mon Euridice'). In post-revolutionary opera, spoken dialogue, adopted from older forms of *opéra comique*, replaced both recitative and *air*.

NIGEL FORTUNE/R (1), DAVID GREER (2), CHARLES DILL (3)

Air à boire (Fr.). A French drinking-song. The term was used principally between the second half of the 17th century and the mid-18th century for strophic, syllabic songs whose texts are of a light, frivolous nature in contradistinction to *airs sérieux*, whose texts deal with love, pastoral scenes or political satire. The CHANSON POUR BOIRE was its predecessor; there is no appreciable difference between the two types.

Most *airs à boire* appeared in Paris in prints and manuscripts for from one to three voices, with accompaniment for lute or continuo. Between 1674 and 1745 over 250 collections, containing several thousand songs, were entitled *Airs sérieux et à boire*. In at least two collections ritornellos are added. In addition, some collections, both printed and manuscript, contain either only *airs à boire* – volumes by Cambert, Sicard and Denis Lefebvre are good examples – or only a few such *airs* among numerous other types of song (Lefebvre's volume is unusual in being for four voices). Prolific composers of *airs à boire* include Bousset, Brossard, one of the Du Buisson family, Louis Lemaire, Renier and Sicard. The main publishers were Christophe Ballard (who published several huge series of anthologies) and Boivin in Paris and Estienne Roger in Amsterdam. *Airs à boire* were so fashionable in the 1690s that a new collection was published every three months. For a representative selection, see Le pupitre, vi (Paris, 1968).

JOHN H. BARON

Airardus Viciliacensis. An obscure figure, Magister Airard of Vézelay (a major pilgrimage station along the route to the shrine of St James at Santiago de Compostela) appears as author of a two-part conductus, *Annua gaudia*, in the 12th-century Calixtine manuscript (*E-SC*). Whether he was actually a musician or poet is unknown, since the Calixtine attribution has no independent confirmation and Airardus is otherwise unknown.

SARAH FULLER

Air column. The body of air inside a tubular wind instrument. When a note is sounded the air column is in a state of longitudinal vibration, i.e. subject to a cyclic succession of local compressions and rarefactions (*see* ACOUSTICS, §IV, 2). The frequency of these disturbances determines the pitch of the sound heard; it is governed mainly by the form and dimensions of the air column (*see* BORE), but also to an extent by the way in which the disturbances are engendered. Frequency is affected by such factors as the temperature and moisture content of the air, frictional effects at the surface of the confining tube or vessel and the transfer of viscous energy among its particles. When the column is in vibration the periodic disturbances do not terminate abruptly at the ends of the confining tube but extend a short distance into the surrounding air. Thus it is necessary to apply a correction factor when determining its effective or SPEAKING LENGTH.

PHILIP BATE/MURRAY CAMPBELL

Air de cour (Fr.). A term used by French composers and publishers from 1571 to the 1650s to designate many secular, strophic songs sung at court. From 1608 until approximately 1632 these were the most important and numerous vocal compositions in France.

Airs de cour were composed either for four or five unaccompanied voices (a few examples are for six and eight voices) or for one voice usually with lute accompaniment. They were written for the entertainment of the king and his courtiers by the finest composers at court, all of whom were excellent singers. Nearly all *airs* were published first by the royal printers Le Roy & Ballard, later by Ballard alone, often in series of collections appearing over a number of years. From 1608 a number of *airs* in these collections were taken from the year's most successful *ballets de cour*.

In the preface to the first collection of *airs de cour*, *Livre d'air de cours miz sur le luth par Adrian Le Roy* (1571), Le Roy stated that he was presenting a light, simple type of song known previously as VAUDEVILLE (or *voix de ville*). The collection contains 22 solo *airs* with lute accompaniment. Most of the texts are by Ronsard,

but Sillac, Pasquier, Desportes and Baïf are also represented. 13 *airs* are arrangements of four-part vaudevilles from *Chansons de P. de Ronsard, Ph. Desportes et autres mises en musique par N. de la Grotte* (Paris, 1570). Le Roy took over intact the original superius voice, which predominates, and adapted the lute part from the other voices. The lute part of three *airs de cour* appears in two versions, one simple, the other ornamented. As in La Grotte's vaudevilles, the *airs* mix metres; there is a steady tactus, but the accents do not occur in a regular musical metre. The influence of *musique mesurée* is often clear. A few *airs* are in the form *AAB*, but most do not fall readily into sections, though motifs recur.

All the *airs de cour* that appeared during the rest of the 16th century were not solo but polyphonic. Collections of *airs* by Didier Le Blanc and Jehan Planson (1582 and 1587 respectively), though not specifically labelled *de cour*, fit into the tradition of such pieces on the basis of their similarity to the *airs de cour* of the next decade. Le Blanc collected 43 short, simple, strophic, mostly homophonic ametrical *airs* for four voices by several composers, and Planson's 38 *airs* are similar. The only difference lies in the strophe form: in Le Blanc's collection it is non-repetitive, in Planson's it is nearly always *ABB*. Another anthology of such pieces appeared in 1595 (*Airs mis en musique à quatre, et cinq, parties: de plusieurs autheurs*), and was followed in 1597 by two collections specifically entitled *airs de cour* by Denis Caignet and Charles Tessier respectively.

The major production of *airs de cour* occurred in the 17th century, mostly during the reign of Louis XIII (1610–43). Although that is when the greatest number of solo *airs de cour* appeared, polyphonic *airs* for four or five voices also abound, primarily in the four volumes edited by Pierre Guédron between 1608 and 1618 and the nine volumes edited by Antoine Boësset between 1617 and 1642. In addition, two collections were printed in 1610 and 1613, and others were composed by Macé (1634), Chancy (1635–44), François Richard (1637), Etienne Moulinié (5 vols., 1625–39) and Cambefort (1651–5). Sercy's *Airs et vaudevilles de cour* (1665–6) seem to be isolated late examples.

Between 1608 and 1632 Ballard brought out 15 volumes of *Airs de différents autheurs avec la tablature de luth*, anthologies of solo *airs de cour* accompanied by lute (facs. in *Airs de différents autheurs mis en tablature de luth*, Geneva, 1980–85); a number were sufficiently in demand to require second editions. In 1643, the last year of Louis XIII's reign, Ballard published the last book of solo *airs de cour*; here the editor and chief composer, Boësset, stated that all his publications of *airs* had been to amuse and satisfy the king, who had received them with love, the highest recompense. All the lute *airs* are simple, essentially syllabic, strophic and mostly ametrical songs. The vocal range rarely exceeds an octave. The harmony is tonal and simple. A number are arrangements of polyphonic *airs* from the collections listed above.

The texts, deriving from Italian pastorals, by authors such as Tasso and Guarini, translated by d'Urfé and others, are strictly symmetrical, with rhyming lines of six to 13 syllables and strophes of four to eight lines. Malherbe's concise modern diction and careful rhyme and verse patterns prevail. Despite the Italian sources of the texts, in no case does the music suggest the influence of contemporary Italian madrigals and monody. The composers include, besides Antoine Boësset and Guédron, the court musicians Moulinié, Jean Boyer, Bataille, Jean-Baptiste Boësset, François Richard, Auget, Rigaud, Vincent, Grand-Rue, Le Fegueux and Sauvage, most of whom published their own separate collections of *airs*.

Between 1615 and 1628 Ballard published eight volumes of monophonic *airs de cour* without any accompaniment. All appear unaltered but with accompaniment in the collections of *Airs de différents autheurs avec la tablature de luth*.

Airs drawn from *ballets de cour* seldom differ from the other *airs*. They were usually composed for a soloist accompanied by lute, but in a few cases there are polyphonic ballet *airs* which appear in alternative versions in polyphonic, voice-and-lute and monophonic collections. In many ballets the song served as an introduction to an act or as part of an entrée; in such cases it was sometimes limited to one strophe.

The *airs* were not always performed as written. The alternative versions of the accompaniment of three songs in the 1571 collection attest an improvisatory ornamentation of the lute part. The voice in solo *airs* can also be ornamented in ways often similar to Italian practice, as discussed by Mersenne: 'Seconde partie de l'art d'embellir la voix' in 'Traitez des consonances', *Harmonie universelle*, ii (Paris, 1636–7/*R*), 355ff; Bacilly: *Remarques curieuses sur l'art de bien chanter* (1668/*R*, 4/1681; Eng. trans., 1968, 135ff); and J. Millet: *La belle méthode, ou L'art de bien chanter* (Besançon, 1666/*R*). Bataille stated in the 1608 collection of lute *airs* that he was putting down only the simplest form of the song, no doubt so that less gifted amateurs could enjoy them, the professionals knowing how to apply ornaments.

The popularity of the *air de cour* spread well beyond the borders of Paris and France. Besides the *airs* published by Jean Mangeant in Caen (1608 and 1615), a number appeared in French in Germany in J.-B. Besard's *Thesaurus harmonicus* (1603) and in England in Tessier's *Airs de cour* (1597). Translations of French *airs* into English appear in Robert Dowland's *A Musicall Banquet* (1610) and Edward Filmer's *French Court-Aires, with their Ditties Englished* (1629). The tunes were frequently copied with totally new, vernacular texts in Holland. In France the *airs* were also borrowed with new, sacred texts in several multi-volume sacred collections: *La pieuse alouette*, *La philomèle séraphique* and François Berthod's *Livre d'airs de dévotion*.

After about 1650 the term *air* by itself was frequently used, most notably in 33 volumes of *Airs de différents autheurs à deux parties* (Paris, 1658–88). At the end of that century and in the next, *air* alone became synonymous with an aria in a French opera, while *air sérieux* designated a song similar to the earlier *air de cour* in text and musical structure. There are also *airs à boire* (*see* AIR À BOIRE). The vogue for *airs de cour* was succeeded in the 1630s by that for the CHANSON POUR BOIRE and the *chanson pour danser*.

Aist, Dietmar von. *See* DIETMAR VON AIST.

Aitken, John (*b* Dalkeith, *c*1746; *d* Philadelphia, 8 Sept 1831). American music engraver, publisher and dealer of Scottish birth. He also worked as a metalsmith for much of his life. Arriving in Philadelphia by 1785, he began his career as a music publisher in 1787 with three large works: Alexander Reinagle's *A Selection of the most Favorite Scots Tunes*, William Brown's *Three Rondos for the Piano Forte or Harpsichord*, and his own *A Compilation of the Litanies and Vespers Hymns and Anthems* (2/1791), the only 18th-century American collection of music for the Roman Catholic Church. In 1788 he issued another anthology by Reinagle and also probably Francis Hopkinson's *Seven Songs*; a few pieces of sheet music and more of Reinagle's song collections followed in 1789. By 1793 he had brought out at least 20 titles, but between then and 1806 he published only the compendious *Scots Musical Museum* (1797) and one of his own songs, *The Goldsmith's Rant* (1802). From 1806 to 1811, however, Aitken was one of Philadelphia's busiest music publishers, bringing out many secular songs and several secular collections as well as more sacred music – a total of perhaps 200 titles. His musical activity seems to have ceased after 1811, though he continued in the metalworking and printing trades in Philadelphia until at least 1825.

Aitken has been identified by Wolfe as the first professional publisher of secular music in the USA. His publications of the 1780s mark the earliest sustained commitment to the printing and sale of music of this type.

RICHARD CRAWFORD/NYM COOKE

Aitken, Robert (Morris) (*b* Kentville, NS, 28 Aug 1939). Canadian flautist, conductor and composer. He studied with Nicholas Fiore (in Toronto) and Marcel Moyse; later with Rampal and Gazzelloni. He was principal flautist of the Vancouver SO (1958–9) and of the Toronto SO (1965–70). In 1971 he was a prizewinner of the Concours International de Flûte de Paris. In 1964 he formed the Lyric Arts Trio with his wife, the pianist Marion Ross, and the soprano Mary Morrison. He is musical director of New Music Concerts (Toronto) and Music Today (Shaw Festival, Ontario), as well as a soloist whose engagements take him to Europe, North America, Japan and Iceland. In 1977 he was one of 12 instrumentalists invited by Boulez to give a solo recital at IRCAM in Paris. Some 50 works have been wrtten for him by composers including Carter, Crumb, R. Murray Schafer and Takemitsu. Technically adept, he has a pure, intense tone and a finished sense of phrasing. In 1971 he became an associate professor at Toronto University (where he had earlier taken the MM degree). From 1985 to 1989 he was director of the advanced studies in music programme at Banff School of Fine Arts, Alberta, and in 1988 became a professor at the Staatliche Hochschule für Musik in Freiburg. Aitken has been artistic director of New Music Concerts (NMC), Toronto, since the organization's inception in 1971. He has conducted the NMC ensemble in several premières, and has worked as conductor with orchestras in Canada and Japan. In 1987 he conducted the première of Schafer's *Patria 1* for the Canadian Opera Company.

BRUCE MATHER

Aius (Lat., from Gk. *hagios*: 'holy'). A term used in the Gallican rite for the Trisagion. *See* GALLICAN CHANT, §7(iii).

Aix-en-Provence. City in southern France. Strophic songs, 'planchs de St Estève', were chanted from the 9th century for the feast of St Stephen in the former cathedral, Notre Dame de la Seds, but the city suffered for a long time from Saracen invasions and was able to resume any artistic activity of note only from the 11th century. The first known *maître de musique* was Pons (Pontius Grammaticus) who 'for 40 years taught the tuneful singing of the Psalms of David' to about 20 churchmen in the second half of the century. The first stone of the cathedral, St Sauveur, was laid in 1060; the building was consecrated in 1103 and in 1115 there were 40 canons and churchmen to sing the Office. No troubadours are known, probably because the princes who owned the town then resided in Barcelona, Toulouse or Aragon rather than in Aix; a palace was built there only in the second half of the 12th century. In the second half of the 13th century the first choir school was established at St Sauveur, with between eight and ten boys. The marriage of Béatrix de Provence and Charles I d'Anjou, who took Adam de la Halle into his service, is the main reason for the Bibliothèque Méjanes in Aix now possessing a fine manuscript of the *Jeu de Robin et de Marion*, with stage directions. The manuscript dates from the 15th century, proof that the work had stayed in the court repertory.

Music flourished during the 15th century: in 1400, 1401 and 1408 Vincent Ferrier, a Spanish Dominican

preacher, sang High Mass at St Sauveur using portative organs and the regular singers. The university was founded at the beginning of the century by Louis II, the pope giving his approval in 1409. In 1437 King René had himself installed as canon of the metropolitan church, which probably prompted the inauguration of the first fixed organ in 1470, the completion of the building from 1471 and the organization of plays for Corpus Christi, with processions, interludes, masquerades and cavalcades to the sound of the flageolet and tabor. The king may have composed the tune for the dance of the Queen of Sheba, an episode in the procession. At his court the king retained minstrels, musicians and composers of all nationalities. His chapel contained 'the best singers anyone could find', according to Louis XI who, in 1481, was there recruiting them for the Ste Chapelle in Paris. In the same year Provence had been attached to France, and in 1539 François I imposed French as the language of royal administration. Henceforth cultivated circles wrote in French but for long after still spoke Provençal, retaining tunes and even composing songs which then became 'traditional'. But the court's style of life was adopted: intense, artistic, festive and amorous. Elsewhere mystery and morality plays and *soties* were still performed. In St Sauveur from 1517 Mass was sung daily, and the choir school of 53 members sang the polyphonic repertory. In 1543 the 'Feast of Fools' was abolished; the religious elements in this carnival masquerade had gradually been eclipsed by profane comic elements, which had moreover taken a political and anti-papal turn. In 1557 the priest Claude Boissier founded the Eglise Réformée d'Aix-en-Provence. In 1588 a new Psalter took into account the instructions of the Council of Trent, though they were not definitively applied in Aix until the 17th century; in 1620 there was a solemn ceremony for the inauguration of the Roman Office according to the Tridentine reforms. The establishment of a Jesuit college in 1621 brought comedy, tragedy, ballet and modern music within the scope of education and stimulated renewed cultural activity on the part of leading citizens. In 1660 a *Te Deum* was performed on the entry of Louis XIV with double choir, violins, oboes, trumpets, fifes and drums, and even cannon shots in the square, and bell peals with the organ playing the same notes as the bells. 17th-century *maîtres de musique* included Sauveur Intermet (*c*1629), Annibal Gantez (April 1636 to June 1638), François Gal, succeeded by Guillaume Poitevin (1667–93), Jean Gilles (1693–5), Cabassol (1695–8) and Poitevin again (from 1698 until his death in 1706). An early 17th-century manuscript in the Bibliothèque Méjanes, the *Livre des vers du luth* (ed. A. Verchaly, Aix-en-Provence, 1958), reveals a fashionable society fond of courtly airs.

The town was too small to support an opera company and was dependent on Marseilles, Avignon and even Nice. It had visits from travelling Italian and French troupes, and in particular from Gautier's Marseilles troupe in 1695 and 1696. In their college the Jesuits staged tragedies and special ballets, both mythological and didactic. For the performance of orchestral music a group existed in 1701 of 14 musicians including violins, oboes, kettledrums and bass. There were two bands of violins in 1718, and in 1740 a *concert* playing in what is roughly the present Salle Méjanes. From 1756 there was an Académie de Musique. In the same year it was decided to build a new theatre on the site of an old Jeu de Paume (built 1660), which had served as a stage venue. The new theatre was thereafter variously designated as 'Théâtre' or 'Opéra', 'd'Aix' or 'Municipal'; its repertory was mainly *opéra comique*.

Traditional instruments were not abandoned: an advertisement in 1777 announced that 'Monsieur Chateauminois has brought the playing of the flutet or gaboulet (three-holed flageolet) to a peak of perfection that no-one would have thought possible'. But the centralizing influence of Versailles and Paris reduced the musical material available in the town, and the choir school at St Sauveur remained the most lively centre. As early as 1631 Louis XIII had taken one of the choirboys for the royal chapel. Most 17th-century *maîtres de musique* left Aix, as did André and Joseph Campra, who had been trained in the choir school. Claude Mathieu Pellegrin, *maître de musique* from 1706, left in 1724, though he took up his post again (1731–48) apparently after a lawsuit brought against him by the chapter. After 1758 E.J. Floquet, also trained in the choir school, left for Paris despite the great success he had in Aix as a child prodigy. Nevertheless, because of the number and quality of its singers and instrumentalists, the school was able to devise and perform motets for large chorus and orchestra in the Versailles style. In 1786 the Marquis de Méjanes bequeathed his collection of works, manuscripts and prints to the town. In 1794 the choir school was disbanded, each boy receiving an indemnity, and St Sauveur became the Temple of Reason; Roman Catholic worship was re-established in 1803.

Despite the efforts of many individuals, musical life in 19th-century Aix was much reduced through financial difficulties and problems of taste. In 1807 the St Sauveur choir school was re-opened, with three boys. Félicien David, who began as choirboy, became *maître de musique* in 1828–9. The municipal theatre continued to present *opéra comique*; financial difficulties were often solved by staging David's *Le désert*. In 1835 the choir school was annexed by the Petit Séminaire. The organ, built in 1743, was entirely reconstructed, apart from the case, by Ducroquet in 1854–5; in 1880 Cavaillé-Coll renewed part of the mechanism and altered some of the stops. At the end of the century Abbé Marbot applied himself to restoring the choir school, but this was destroyed in World War I. In 1849 Marius Lapierre, composer and orchestral conductor, organized a solfège course, and in 1856 classes for wind instruments, the violin and the cello were added. This led to the formation of the L. Bruguier-A. Giraud-S. Gautier-L. Pourcel Quartet, the first and last being respectively the violin and the cello professors. In 1884 this school became a national one. Milhaud, who grew up in Aix, studied with Bruguier from 1899 until he entered the Paris Conservatoire (1909); he returned to Aix during World War II. From 1896 to 1914, on the initiative of Jean de Villeneuve, an Association Musicale organized chamber and choral concerts, mostly using forces from outside Aix.

In 1972 Charles Nugue started a free street festival (Musique dans la Rue), also promoting contemporary music, with performances and improvisation workshops. Concerts were also given by the Association des Concerts du Conservatoire, directed by Pierre Villette (1966–90) and from 1991 by Michael Camatte, the university music club and Jeunesses Musicales, and the Théâtre Municipal (since 1994 called the Nouveau Théâtre du Jeu de Paume) presents a season of stage works. A new auditorium

suitable for small groups and an eclectic repertory was inaugurated in 1994 at the Cité du Livre complex, to which the Bibliothèque Méjanes has been transferred.

The annual festival, now the most famous in France, was founded in 1948 by André Bigonnet and Gabriel Dussurget and takes place in July and early August. Dussurget was artistic director for over 20 years and Hans Rosbaud was chief conductor for the first ten. Most performances take place in the theatre specially constructed each year in the courtyard of the archbishop's palace, designed by Casandre in 1949 and later enlarged to a capacity of 1640. Some performances have been given other locations: at Place des Quatres Dauphins and the courtyard of the Gendarmerie, as well as outside the town.

From the beginning, when the festival was inaugurated with *Così fan tutte*, that opera, *Figaro* and *Don Giovanni* have been the pillars of the repertory, which was extended to include Haydn (the first performance in France of *Il mondo della luna* in 1959), Monteverdi, Gluck, Cimarosa, Grétry, Rossini (both comic and serious operas), Handel, Campra (born in Aix), Rameau (with the first-ever stage performance of *Les Boréades*, 1982), Purcell and even Strauss and Verdi. Works by Menotti, Britten, Sauguet, Poulenc, Milhaud and Stravinsky have been performed, and there have also been commissions – Barraud's *Lavinia* (1961), Jacques Charpentier's *Beatris* (1971) and Prey's *Le rouge et le noir* (1989). Many distinguished singers appeared at Aix at the earliest stages of their careers. Later, Bernard Lefort, succeeding to the artistic direction (1973–80), called on established stars and imaginative new directors and added a massive stiffening of British artists, raising the level of the festival. From 1981 it was under the direction of Louis Erlo, who encouraged a movement towards performance on period instruments. Stéphane Lissner became the director in 1997. The festival also includes vocal recitals and performances at St Sauveur.

MARCEL FRÉMIOT (with CHARLES PITT)

Aix-la-Chapelle (Fr.). *See* AACHEN.

Ajaeng. Bowed long zither of Korea. Two main versions are in current use: the *ajaeng*, which has been a member of court music ensembles for many centuries, and the smaller *sanjo ajaeng*, invented in the 1940s and used for folk music and accompaniments.

The older version is about 160 cm long and 24 cm wide, has seven strings of twisted silk and is bowed with a long (65 cm) resined stick of forsythia wood (see illustration). The instrument itself is made of paulownia wood and is played propped up at the bowing end (performer's right) on a small four-legged stand. The strings run from a gently curved bridge on the right across seven small movable wooden bridges ('wild-goose feet') to another curved bridge on the left; the sounding length, from the right bridge to the movable bridge, is different for each string and readily adjustable for tuning purposes. The *ajaeng* has the narrowest range of the Korean string instruments: in court music it normally operates within a 9th or 10th, a typical tuning being *A♭–B♭–c–e♭–f–a♭–b♭* for *hyangak* ('native music'); *tangak* ('Chinese music') is a 3rd higher. Recently a nine-string instrument with wider range (adding *c'* and *e♭'*) has been in use at the National Center for Korean Traditional Performing Arts.

The *sanjo ajaeng* is similar in most ways to the older court instrument, but it is shorter (about 120 cm) and has eight strings. A typical tuning for the virtuoso solo genre *sanjo* is *G–C–d–g–c'–d'–g'–c''*, and the large tuning gaps compared to the court instrument make its top notes about an octave higher. Instead of a separate wooden stand, a flap of wood hinged to the bottom of the instrument unfolds to form a prop. Frequently a Western-style horse-hair bow is substituted for the bow-stick.

The performer sits cross-legged next to the instrument, but not actually supporting it as he would the *kŏmun'go* or *kayagŭm*; he bows with the right hand and presses the strings with the left hand (a few centimetres left of the movable bridges) to obtain intermediate pitches and vibrato. The sound of the *ajaeng* is rasping and rough, but also full, rich and highly expressive.

The *ajaeng* came to Korea from China (where it is called *yazheng*) together with the larger 15-string zither *taejaeng* during the Koryŏ dynasty (918–1392), and it was used only in *tangak*; later it was also adopted for use in *hyangak*. The treatise *Akhak kwebŏm* (1493) gives several tunings and modes for the instrument and describes its role in various court ensembles.

At present the *ajaeng* appears in both court and folk instrumental ensembles, usually paired with the higher-pitched HAEGŬM, the only other bowed string instrument

Ajaeng (bowed zither) of Korea

of Korea, both instruments playing essentially the same melodic line in court music. Because of their ability to sustain notes, the instruments often appear in so-called 'wind' ensembles. Important pieces in the court repertory include *Sujech'ŏn* and *Yŏmillak* (both *hyangak*), *Pohŏja* and *Nagyangch'un* (*tangak*) and ceremonial music such as the suites played in the annual sacrificial rite at the Royal Ancestral Shrine (*Chongmyo*). The *sanjo ajaeng* often appears in folk ensembles for folksong or shaman dance accompaniment, and it is particularly effective in the virtuoso solo genre *sanjo*.

ROBERT C. PROVINE

Akademie (Ger.). *See* ACADEMY.

Akathistos (Gk.: 'not seated'). In the Byzantine rite, an anonymous KONTAKION chanted in honour of the Virgin and performed while the congregation stands. The Akathistos possibly dates from the 6th century and continued in use despite the liturgical changes of the 8th century when the performance of entire *kontakia* was suppressed. It was originally a chant for the feast of the Annunciation (25 March) but is now sung in the Greek Orthodox Church at the vigil of the fifth Saturday in Great Lent.

The Akathistos consists of two *prooimia* (*see* PROOIMION) and 24 *oikoi* (stanzas) linked by an alphabetic acrostic; each *oikos* is seven lines long and has the same metrical pattern. The even-numbered stanzas simply have an 'allēlouïa' refrain, whereas the odd-numbered *oikoi* include a set of Salutations to the Virgin – 12 lines in metrically-matching pairs, with each line beginning 'Hail!'. Each *oikos* ends with the refrain 'Hail, bride unwedded!'. The texts of the first 12 *oikoi* elaborate on the Incarnation and the infancy of Christ, whereas the last 12 alternate praise of God with praises to the mother of God. The whole poem coalesces to create a subtly interwoven embroidery of images that is one of the high points of Byzantine poetry.

The earliest completely notated melodies for the Akathistos date from the 13th century, but it is unlikely that these melodies were the original settings for the chant. The music, in centonate style and highly melismatic, was most likely sung by a soloist; the original chant, however, was probably simple and syllabic.

DIMITRI CONOMOS

Akbarov, Ikram (*b* Tashkent, 1 March 1921). Uzbek composer. After graduating from the Tashkent Conservatory (1945) where he was a pupil of Vasilenko Revutsky and A. Koslovsky, he took a postgraduate course under Steinberg and Voloshinov at the Leningrad Conservatory (1945–54). His lyrical and dramatic style is rooted in Uzbek traditional music; a number of his works reflect his interest in history, philosophy and poetry.

RAZIA SULTANOVA

A Kempis. Flemish family of musicians.

(1) Nicolaes a Kempis (*b c*1600; *d* Brussels, bur. 11 Aug 1676). Composer and organist. From 1626 he replaced Anthoen van den Kerckhoven as organist of Ste Gudule, Brussels, and he was named his successor on 25 November 1627. He was succeeded by his son (3) Joannes Florentius a Kempis between 1670 and 1672. The contents of his four books of *Symphoniae* are among the earliest known sonatas written in the Low Countries. They range from solo sonatas with continuo to pieces in six parts; they are scored basically for strings, but the bassoon, cornett and trombone are sometimes called for. They are for the most part unpretentious pieces intended for domestic performance; a few are based on popular melodies.

WORKS
(*published in Antwerp*)

[45] Symphoniae, 1–3 vn (1644)
[26] Symphoniae, 1–5 insts, adjunctae quatuor, 2vv, 3 insts, liber primus, op.2 (1647)
[27] Symphoniae, 1–5 insts, 4 motets, 2vv, op.3 (1649)
Symphoniae, 1–6 insts, op.4 (1642[sic]) (inc.)
Missae et motetta, 8vv, bc (org) (1650); lost, sometimes attrib. (3) J.F. a Kempis, but probably by Nicolaes on grounds of age

(2) Thomas [Petrus] **a Kempis** (*b* Brussels, bap. 2 April 1628; *d* 21 Sept 1688). Organist, second son of (1) Nicolaes a Kempis. He joined the Premonstratensian order and took the name Thomas in place of his baptismal name, Petrus. He contributed to the *Antiphonarium, graduale et processionale Praemonstratense* (Antwerp, 1688).

(3) Joannes Florentius [Jean-Florent] **a Kempis** (*b* Brussels, bap. 1 Aug 1635; *d* after 1711). Organist and composer, fifth son of (1) Nicolaes a Kempis. He was organist of Notre Dame de la Chapelle, Brussels, in 1657 and succeeded his father (with whom he has sometimes been confused) as organist of Ste Gudule between 1670 and 1672. He retired on 5 August 1690, leaving the post to his son Guillaum.

WORKS

Cantiones natalitiae, 5vv (Antwerp, 1657) (inc.)
Victimae paschalis, sequence, 1691, *B-Br*
Benedictus, double choir, *c*1695, *Bc* (inc.) [? by Guillaum a Kempis]
Messe pro drfunctis, 8vv, mentioned in inventory of royal chapel, Brussels, 21 Aug 1666
12 sonatas, vn, b viol, b, owned by Thomas Britton according to *HawkinsH*

JEAN FERRARD/LEWIS REECE BARATZ

Åkerberg, (Carl) Erik (Emanuel) (*b* Stockholm, 19 Jan 1860; *d* Stockholm, 20 Jan 1938). Swedish composer, organist and conductor. He attended the Swedish Royal Academy of Music (1882–6), studying counterpoint and composition with J. Dente, and was a pupil of Franck in Paris (1887–8). In Stockholm he was coach at the Royal Opera (1888–90), organist at the synagogue (1890–1928), music teacher at Norrmalm's grammar school (1895–1923) and teacher at Richard Anderssons Musikskola (1897–1909). From 1886 he conducted several choirs, including the Bellman Choir (1895–1926), which he also founded, and the Philharmonic Society (1900–03). Åkerberg's compositions often approach the style of Swedish folk music, especially the ballads *Kung Svegder* and *Prinsessan och Svennen*. They are technically sound but conventional.

KATHLEEN DALE/AXEL HELMER

Akeroyde [Ackroyd, Ackroyde, Acroyd], **Samuel** (*fl* 1684–1706). English violinist and composer. Someone of this name was living in the parish of St Giles-in-the-Fields, London, in 1686. He is listed among the king's musicians between 1687 and 1691, in which year he was in the party that accompanied King William to Holland. Thereafter he does not appear in the Lord Chamberlain's records, but he was admitted a wait of the City of London in 1695. The following year John Blow wrote to Sir Joseph Williamson recommending him as one of his entourage for the Treaty of Ryswick (1697): he was described as 'a fit person on several accounts, for his understanding French and Italian, and a good scholar'. Blow mentions that he had been one of the Stewards of the Festival of the Sons of the Clergy the year after Williamson, though in fact it was the year before, in 1687. Apparently in 1697 a company of musicians that he was leading (presumably London waits) came into conflict with another band over their right to perform in Tunbridge Wells; this was eventually settled in favour of the local musicians. In 1700 Akeroyde contributed a commendatory poem 'To my true Friend, Dr Blow, On His Amphion Anglicus' in which he speaks of 'the favours you have done me' and strongly implies some personal obligation to Blow.

Akeroyde was a prolific and presumably popular composer; his songs, over 100 in number, are competent enough but colourless (fully listed in *MGG1*). They are to be found principally in collections from 1684 onwards: *The Theater of Music* (RISM 1685[5]–1687[5]), *Vinculum societatis* (1687[6]–1691[7]), *The Banquet of Musick* (1688[6]–1690[5], 1692[8]), *Thesaurus musicus* (1693[8]) and *Wit and Mirth* (1699–1720). He contributed songs to the following plays (among others): D'Urfey's *Commonwealth of Women* (1685), John Crowne's *Sir Courtly Nice* (1685), D'Urfey's *The Banditti* (1686), Thomas Southerne's *The Maid's Last Prayer* (1693), D'Urfey's *Don Quixote*, III (1695), Motteux's *Love's a Jest* (1696), D'Urfey's *Massaniello* (1699), Joseph Harris's *Love's a Lottery* (1699), D'Urfey's *The Bath* (1701) and *Wonders in the Sun* (1706). A few incomplete instrumental pieces by him are in the manuscripts *GB-Lbl* Add.35043 and *Ob* Mus. Sch.C.95.

IAN SPINK

Akhmatova (Gorenko), Anna Andreyevna (*b* Bol'shoy Fontan, nr Odessa, 11/23 June 1889; *d* Domodedovo, nr Moscow, 5 March 1966). Russian poet. Her first collection appeared in 1912 and it was around this time that she attended the *Brodyachyaya sobaka* ('Stray Dog') cabaret where became acquainted with Velemir Khlebnikov, Mikhail Kuzmin (a poet and composer), Mayakovsky and Artur Lourié. The latter became the first composer to use her verses: in 1914 he set verses from her second collection *Chyotki* ('Rosaire'). Akhmatova and Lourié had a brief liaison around this time. On 18 April 1915, Akhmatova appeared in an event in honour of the recently deceased Skryabin. Later that year, Lourié wrote music to her drama *Rebyonok Allakha* ('The Child of Allah'); although the war prevented the play's staging, the work was published in the journal Apollon. In 1920 she went to live with Lourié, who started to compose the music to Akhmatova's stage version of Blok's *Snezhnaya maska*; although his emigration later that year curtailed the project they corresponded for years to come. During World War II she lived in Tashkent where she developed a close friendship with the composer Aleksandr Kozlovsky, who wrote music for her drama *Prolog* and set parts of her *Poèma bez geroya* ('Poem Without a Hero'). In 1958 she dedicated her poem *Muzïka* to Shostakovich whom she had met some 40 years previously; they never became close and Shostakovich actually considered himself artistically unworthy to set her poetry. Other composers who have set her words to music include Gnesin, Knayfel', Mosolov, Prokofiev and Tavener.

JONATHAN POWELL

Akhtar, Begum [Faizabadi, Akhtari Bai] (*b* Faizabad, Uttar Pradesh, 1911–14; *d* Lucknow, 1974/5). North Indian vocalist. She was hailed as a child prodigy by Gauhar Jan, who heard her sing at her school in about 1919. Akhtari's mother then took her to study classical vocal music with Ustad Zamir Khan of Gaya, Bihar. Akhtari made her début as a vocalist at a charity concert in Patna. Subsequently she moved to Calcutta and underwent arduous classical vocal training as a disciple of Ustad Ata Hussein Khan of the Patiala *gharānā*. She made her first commercial recording in 1933, the *ghazal Dīvāna banāna hāi to*, in which she sang to the accompaniment of *sāraṅgī*, *tablā* and harmonium. She also acted in a few musical films, notably *Roṭi*, and spent some time at the court of the Nawab of Rampur. Later she settled in Lucknow, regularly performing both publicly and in private soirées and often travelling to Calcutta to perform at music conferences.

In 1942 Akhtari married a Lucknow barrister, Istiaq Ahmed Abbasi, who required her to give up singing. She did so, for five years, but she sank into a deep depression. Eventually Abbasi allowed her to return to music, first as an instructor in her home. She re-emerged into public view as Begum Akhtar, initially making studio recordings at All-India Radio in Lucknow. The first of these recordings, released by HMV, consisted of two *dādrā*, *Koyalīyā mat karo pūkār* and *Sāimyā, chor de nakhriyā*. The former *dādrā*, which is included in the 1990 compilation *The Best of Begum Akhtar*, features a *tanbūrā* and *svaramandal* added to the instrumental ensemble, and the tempo is slower than that of previous recordings. In 1958 Akhtari performed a *dādrā* in Satyajit Ray's film about the decline of feudal patronage of music, *Jalsā ghar* ('The Music Room').

Subsequently she set a stylistic precedent as a definitive exponent of the ornate, highly refined Lucknow style of semi-classical singing (*see* INDIA, §IV). She was hailed as 'the Queen of *ghazal*' because of her impeccable Urdu diction and her subtly emotive expression in both music and text, exemplified in the two-volume recording *Jamal-e-ghazal* [The beauty of *ghazal*]. She was awarded the Padma Shri by the Government of India in 1968 and the Padma Bhushan posthumously in 1976.

AMELIA MACISZEWSKI

Akimenko [Yakymenko], **Fedir Stepanovych** (*b* Pisky, near Khar'kiv, 8/20 Sept 1876; *d* Paris, 8 Jan 1945). Ukrainian composer and pianist. Aged ten he was sent, along with his brother Yakiv (later known as the composer Stepovy), to sing in the choir of the Imperial Chapel in St Petersburg. It was during his time there (1886–95) that he began to compose under the influence of his teachers Balakirev and Lyapunov. He finished studies with Rimsky-Korsakov and Lyadov at the St Petersburg Conservatory in 1901, the year in which the latter conducted the first performance of the *Lyric Poem*, op.20. Akimenko then became the director of a music school in Tbilisi (1901–03). He performed widely as a pianist, particularly in France and Switzerland, and lived for a while in Paris (1903–06) before returning to Khar'kiv. In 1914 he was invited to teach composition and theory at the St Petersburg Conservatory, a post he held until 1923; it was there he became Stravinsky's first composition teacher. Akimenko emigrated to Prague in 1924 and headed the music section of the Drahomanov Ukrainian Institute of Higher Education as well as performing as pianist and as conductor with various choirs in tours through western Europe. He wrote his *Praktychnyi kurs harmonii* ('A Practical Course in Harmony') in 1926 and from 1928 lived in France, at first in Nice and later in Paris, where he died.

Akimenko was essentially an instrumental composer and although he is often considered a miniaturist he wrote extended chamber works, symphonic poems and two operas. His fundamentally Romantic style was not unaffected by impressionism which lent the tonal frameworks a harmonic ambivalence similar to that present in many works by his compatriot Leontovych. The works belonging to the final French period are marked by a strong interest in Ukrainian themes and subjects.

VIRKO BALEY

Akiyoshi, Toshiko (*b* Dairen, China, 12 Dec 1929). Japanese jazz composer, pianist and bandleader. She

studied classical music and turned to jazz only in 1947 after moving to Japan. There she was discovered by Oscar Peterson, who urged her to take up a career in the USA. After studying at Berklee College of Music (1956–9) she became a highly regarded bop pianist, especially in groups with the alto saxophonist Charlie Mariano (who was at that time her husband). She worked in Japan (1961), joined Charles Mingus in the USA (1962–3), then returned to Japan until 1965. In 1973 she founded a large rehearsal band in Los Angeles with the tenor saxophonist and flautist Lew Tabackin, whom she had married in 1969. Its first album, *Kogun* (1974, RCA), was commercially successful in Japan, and the group attracted increasing popularity and critical acclaim until, by 1980, it was generally regarded as the leading big band in jazz. The band allowed Akiyoshi to write a number of rich, subtle scores in the modern big-band tradition of Gil Evans, Thad Jones and Mel Lewis, though they were often enriched by elements from Japanese music: *shakuhachi*-style flute solos; *tsuzumi* drums and *biwa*; and *nōh* vocal recitations. This can be heard to advantage on the album *Road Time* (1976, RCA) which was recorded during a concert tour of Japan and includes a second version of *Kogun*. She has continued to play the piano in a delicate, accurate bop style. In 1984 she was the subject of a documentary film, *Toshiko Akiyoshi: Jazz is my Native Language*. The same year she and Tabackin disbanded their group and in 1985 Akiyoshi formed a new big band in New York. The 35th anniversary of her arrival in the USA was celebrated with a big-band concert at Carnegie Hall in 1991.

Akolouthiai (Gk.: 'orders of service'). Handbooks transmitting the 14th- and 15th-century chant melodies of the Byzantine rite. Alternative names are anthologion anoixantarion, anthologia, psaltikē and mousikon. Akolouthiai manuscripts contain within a single volume a collection of monophonic chants, both Ordinary and Proper, for the psalmody of HESPERINOS and ORTHROS, and settings for the three Divine Liturgies (*see* DIVINE LITURGY (BYZANTINE)). Although relatively short, simple melodies for the Greek liturgical texts are transmitted, the greater portion of a manuscript consists of elaborate kalophonic settings of these same texts (*see* KALOPHONIC CHANT). Most akolouthiai also include a preliminary PAPADIKĒ and other didactic texts on Byzantine music and notation.

Akolouthiai were probably assembled for the first time in about 1300 by the singer and composer JOANNES KOUKOUZELES. Their immediate antecedents were the so-called Asma collection of the 13th century, preserved exclusively in manuscripts of South Italian origin, and the asmatikon and the psaltikon, which apparently preserved the chanted repertories of the urban rites of Hagia Sophia in Constantinople between the 11th and 13th centuries. Although certain chants from the asmatikon and psaltikon were copied into some of the early akolouthiai, most of this older repertory had disappeared by the 15th century. This change reflected the gradual replacement of the imperial liturgy at Hagia Sophia by the less elaborate practices followed in Byzantine monasteries, a process that was complete by the end of the 13th century.

Although akolouthiai include chants with rubrics such as 'palaion' ('old') or 'archaion' ('ancient'), indicating that they belong to an older and anonymous layer of the repertory, the manuscripts mostly contain newly composed liturgical music by Koukouzeles, his immediate predecessors, contemporaries and successors. The attribution of chants to specific composers is one feature that distinguishes the akolouthiai from older collections. The akolouthiai are generally similar in content, but each copy may also reflect the musical predilections of a particular monastery and even the tastes of an individual compiler. Although akolouthiai transmit the early strata of the new musical corpus, scribes were constantly modernizing repertories by deleting older chants and substituting new melodies as they were composed. It is therefore possible to determine the approximate dates of activity of many 14th- and 15th-century Byzantine composers. The melodies of over 100 composers are preserved in akolouthiai of this period; among those who contributed the greatest number of works are JOANNES GLYKYS, NIKEPHOROS ETHIKOS, Joannes Koukouzeles (*maïstōr*), XENOS KORONES, Georgios Kontopetres, Demetrios Dokeianos, JOANNES KLADAS (*lampadarios*) and MANUEL CHRYSAPHES. Some chants bear rubrics indicating usage in certain localities, for example, 'Hagiosophitikos' ('of Hagia Sophia'), 'Thessalonikos' ('of Thessaloniki') or 'Hagioreitikos' ('of Mount Athos').

About 20 akolouthiai manuscripts from the 14th century and over 40 from the 15th have so far been discovered; considerably more date from after the fall of Constantinople in the mid-15th century (and such manuscripts continued to be produced until the early 19th century). The oldest dated akolouthiai manuscript, *GR-An* 2458, was copied in 1336, probably during the lifetime of Koukouzeles. Two 15th-century manuscripts, *An* 2401 and 2406, the latter bearing the date 1453 (the year the

empire fell), are unusually large and rich anthologies containing chants by various composers from different regions of Greece as well as music sung in the city of Thessaloniki and some monasteries on Mount Athos.

Akses, Necil Kâzım (*b* Istanbul, 6 May 1908; *d* Ankara, 16 Feb 1999). Turkish composer. He was a member of the Turkish Five, a group of outstanding composers who, from the 1930s, promoted a Western musical style. Akses first played the violin and then took up the cello at the age of 14. He studied harmony with Cemal Reşit Rey at the Istanbul Municipal Conservatory. In 1926 he left for Vienna where he attended Joseph Marx's harmony, counterpoint and composition classes for advanced students at the Academy. After receiving his diploma in 1931, he went to Prague and studied with Josef Suk and Alois Hába at the Prague Conservatory. He returned to Turkey in 1934 and was appointed a teacher of composition at the Music Teachers School, becoming its director in 1948. He then took a number of official positions: in 1949 he was director general of the Fine Arts Section of the Ministry of Education, then cultural attaché in Berne (1954) and in Bonn (1955–7), and in 1958–60 he was director of the State Opera in Ankara. He subsequently taught at the Ankara State Conservatory and held the post of director general at the Ankara State Opera (1971–2). Akses's works are few in number, but lengthy and important in reflecting the influence of modern musical movements of central Europe; at the same time he skilfully incorporated into them melodies adapted from ancient Turkish art music and folk rhythms.

The composer's earliest works are for piano (1930). The most important orchestral work is his symphonic poem, *Ankara kalesi* ('The Ankara Fortress') which was completed in 1942 and performed in Ankara and in Berlin the same year; it was also recorded in Germany. Other noteworthy works are his *Poème* and his Violin Concerto, completed at the beginning of 1972 and performed in Ankara. Akses wrote two short operas and music for several plays. (*KdG*, M. Greve)

FARUK YENER/MÜNİR NURETTİN BEKEN

Aksyonov, Semyon Nikolayevich (*b* 1784; *d* Loshaki, Ryazan′ region, 1853). Russian guitarist and composer. He was a nobleman, and combined a military and administrative career with music. He was one of the first, and most successful, pupils of Andrey Sychra, with whom he studied in Moscow. In 1808 he was transferred to Siberia, and from 1810 lived in St Petersburg. In the 1830s he moved to his estate in Ryazan′ region, where he remained until his death. In contrast to Sychra and Vïsotsky, Aksyonov published only a limited number of guitar pieces, but most of them are of excellent quality. Unlike the majority of Russian guitarists, Aksyonov did not limit himself to the guitar: his skilfully written *romansï* for voice and piano appeared in various musical periodicals. His guitar adaptations of piano pieces (Field's *Kamarinskaya* and Dussek's *La chasse*) illustrate his striking sensitivity to the technical potential of the seven-string guitar. He was apparently the first guitarist for whom variations on Russian folk themes became a significant genre. His guitar compositions use innovative techniques that require perfection of left-hand effects, lengthy legatos and portamento. He also invented the technique of performing artificial harmonics on the guitar, a discovery first published in the 1819 revised edition of von Held's guitar method.

Akutagawa, Yasushi (*b* Tokyo, 12 July 1925; *d* Tokyo, 31 Jan 1989). Japanese composer. The third son of the novelist Ryūnosuke Akutagawa, he studied at the Tokyo Music School with Hashimoto, Shimofusa and Ifukube for composition and with Kaneko for conducting. In 1949, the year of his graduation, he won first prize in the Japanese radio competition, and the next year his Music for Symphonic Orchestra attracted the attention of Thor Johnson, who conducted it more than 200 times in the USA alone. He formed with Dan and Mayuzumi the Sannin no Kai (Group of Three) in 1953, and visited Moscow for the first time in 1954, after which date he returned frequently to the USSR, sometimes appearing as a conductor; he was thus able to develop relationships with Shostakovich, Khachaturian, Kabalevsky and other Soviet composers. His work shows a strong kinship with

Soviet music, particularly that of Prokofiev, whose scherzo style he skilfully emulated. He was also a master of modern orchestration, with a special fondness for strings. Other characteristic features of his music include an abundance of ostinatos and an individual kind of orientalism. His opera *Kurai kagami*, in which he aired his opposition to the atom bomb, successfully combined realism with fantasy, utilizing a parlando style; its revised version for TV, *Hiroshima no Orfe*, won the Anerkennungspreis when it was staged at the Salzburg Opera Festival in 1986. Note clusters are used in his *Orugan to ōkesutora no tame no hibiki*, written for the opening of the Suntory Hall, Tokyo, in 1968. Concerned with problems of music copyright, Akutagawa was assistant chairman (1969–80) and later chairman (1980–89) of the Japan Federation of Composers, and president of the Japanese Society of Rights of Authors and Composers (1981–9). He was also executive director of the Yamaha Foundation for Music Education (1972) and jury member of the annual competition organized by the Mainichi Press and Japanese radio.

MASAKATA KANAZAWA

Ala, Giovanni Battista (*b* Monza, nr Milan, *c*1598; *d* Milan, *c*1630). Italian composer and organist. All that is known of his life derives from the title-pages of his publications and from Picinelli. In 1618 he was organist of the collegiate church in Desio and in 1621 of S Maria dei Servi, Milan. He died at the age of 32. Picinelli praised him as an excellent organist and a wonderful ('stupendo') composer. He was an adherent of the monodic and concertato style of, among others, Monteverdi, whose duet *Sancta Maria* he published for the first time in his *Primo libro di concerti ecclesiastici*.

WORKS

Canzonette e madrigali, 2vv, hpd, chit, other insts, libro I (Milan, 1617); lost, cited in Picinelli

MARIANGELA DONÀ

Alabado [alabanza] (Sp.-American: 'praise'). A hymn of praise for the Eucharist, the Blessed Virgin Mary or other saints. It was brought to the New World at least as early as 1716 by the Franciscans, who continued the Spanish custom of chanting the *alabado*, or *alabanza*, as it is called in Spain, in their missions to Texas and California, as they had done in their monasteries. One of the earliest *alabados* taught to Indian converts is shown in ex.1; this

Ex.1

A - la - ba - do y en sal - za - do Se - a el Di - vi - no

was probably the melody used at all the missionary establishments. The form still survives in some parts of Argentina, Mexico and New Mexico, notably in the rites of the Penitential Brotherhood.

Aladaw [Aladov], **Mikalay** [Nikolay] **Il'ich** (*b* St Petersburg, 9/21 Dec 1890; *d* Minsk, 4 Dec 1972). Belarusian composer and teacher. He received composition lessons from Yakov Prokhorov and in 1910 graduated from the St Petersburg Conservatory as an external student. During the early 1920s he worked at the Kazan' Conservatory and at the State Institute for Music Research in Moscow; from 1924 he worked in Minsk. He was one of the organisers of the Belorussian Technical Secondary School for Music (1924), the Conservatory of Belorussia (now the Belorussian Academy of Music), and the Belorussian Composers' Organisation (1932). He taught at the conservatories at Moscow and Saratov (1941–4), and in 1946 he was appointed professor of the Conservatory of Belorussia (from 1944 to 1948 he was rector). From 1948

to 1949 he was the chairman of the BSSR Union of Composers, and in 1955 received the title of People's Artist of the BSSR.

Aladaw is one of the founders of the Belorussia School of Composition. In his early works of the 1920s and 30s, such as the Piano Quintet, the opera *Taras na Parnase* ('Taras on Mount Parnassus'), and the First and Second symphonies, he established a precedent for these genres in professional Belorussian music. All these works are notable for the varied use of folk idioms. The Second Symphony occupies a major place in the composer's work, and represents the two types characteristic of his style, namely the dramatic epic, and the lyrical Aladaw, who is drawn towards classical forms as well as programmatic and theatrical elements in his symphonic works, makes use of the principle of through-composed thematic development in order to ensure cyclical unity. Aladaw's important contribution to Belorussian chamber and instrumental music includes the popular First String Quartet, his Sonata for Piano Quartet, and his sonatas for various woodwind instruments. An adherent of clarity in his musical thinking and of classical and traditional forms, the composer created a musical style which occupies a unique place in Belorussian music.

OL'GA DADIOMOVA

Alagna, Roberto (*b* Clichy-sous-Bois, 7 June 1963). French tenor. Born of Sicilian parents, Alagna began his career as a cabaret singer in Paris, accompanying himself on the guitar while studying with Raphael Ruiz, a Cuban émigré in Paris. After winning the Pavarotti International Voice Competition in Philadelphia in 1988 and receiving encouragement from Pavarotti himself, he began his career singing Alfredo Germont with Glyndebourne

Roberto Alagna

Touring Opera the same year. He repeated this role, and sang Rodolfo in *La bohème*, at the Monte Carlo Opera the following season, when he also appeared as Nemorino at Toulouse. Alagna made his début at La Scala as Alfredo, with Muti conducting, in 1990, a performance issued on video and CD; he has subsequently sung the Duke of Mantua and Macduff at La Scala. In 1992 he sang the title role in *Roberto Devereux* at Monte Carlo, Rodolfo and Alfredo in Barcelona, and made his much lauded Covent Garden début as Rodolfo, following it with an equally admired Romeo in Gounod's opera (1994) and, in 1996, Don Carlos and Alfredo. He appeared in Paris as Edgardo (*Lucia di Lammermoor*) at the Opéra Bastille in 1995 and Don Carlos at the Châtelet the following year. He made his Metropolitan début in 1996 as Rodolfo, which he followed with Nemorino (*L'elisir d'amore*), a role he recorded on video at the Lyons Opéra with his wife Angela Gheorghiu as Adina. The pair appeared at Monte Carlo in Mascagni's *L'amico Fritz* in 1999. He has recorded discs of solos and duets (the latter with Gheorghiu). These and his recordings of Gounod's *Roméo et Juliette* and Puccini's *La rondine* (both with Gheorghiu) capture the plangent lyricism of Alagna's tone and the appealing ardour and inner fire of his style.

ALAN BLYTH

Alaigrement (Fr.). *See* ALLEGRO.

Alaimo, Simone (*b* Villabate, 3 Feb 1950). Italian bass-baritone. He studied in Palermo and Milan making his début in 1977 at Pavia as Don Pasquale, then taking part in Soliva's *La testa di bronzo* at the Piccola Scala (1980). A Rossini specialist, he sings a wide range of comic and

serious roles, among them Selim, Dandini, Alidoro, Polidoro (*Zelmira*), Mustafà (on his US and British débuts at Chicago in 1987 and Covent Garden in 1988) and Mahomet. Alaimo's other roles include Count Robinson (*Il matrimonio segreto*), Dulcamara, Belcore, Henry VIII (*Anna Bolena*), Nottingham (*Roberto Devereux*) and Rodolfo (*Sonnambula*). He returned to the Covent Garden company as Don Basilio, Pharoah (*Mosè in Egitto*) and Don Magnifico. His many recordings include Apolloni's *L'ebreo*. The exceptional range of his keenly focussed, flexible voice enables him to sing Verdi baritone roles in addition to the *basso buffo* characters at which he excels.

ELIZABETH FORBES

Alain. French family of musicians.

(1) Albert Alain (*b* 1 March 1880; *d* Saint Germain-en-Laye, 15 Oct 1971). Organist, composer and organ builder. From a family of craftsmen, amateur musicians and devout Catholics, Alain studied at the Paris Conservatoire (1896–1907) with Caussade, Vierne and Guilmant, winning a *premier prix* for harmony in 1904. He was organist of St Nicolas, Maisons-Laffitte (1900–18), of the Franciscan Chapel (1903–71) and of the parish of Saint Germain-en-Laye (1924–71).

With abbé Claude Besse and the painter Maurice Denis, Alain formed a musical circle in Saint Germain. He participated in the revival of French church music along the lines prescribed in the Vatican's *Motu proprio* of 1903. He composed new settings of canticles in which the sobriety of the melody did not preclude refined harmonies, with the frequent use of modality and chromaticism.

92 Latin motets, nine mass settings and three oratorios complete his prolific output of religious music, mostly written for use in churches at Saint Germain-en-Laye, Versailles and Paris between 1905 and 1960. His organ works are in the symphonic tradition of his teachers, but his short liturgical pieces for organ or harmonium use a highly individual musical language.

A self-taught organ builder, he built a large salon organ with mechanical action, 42 ranks, four manuals and pedals. The conception of this instrument was extremely original and it was one of the first organs after 1914 to include a large number of mutation stops. Its influence on organ building between the wars was considerable. A friend of André Marchal, and a founder-member of the Amis de l'Orgue, Alain was appointed an inspector for historical monuments in 1946.

(2) Jehan (Ariste) Alain (*b* Saint Germain-en-Laye, 3 Feb 1911; *d* Petit-Puy, nr Saumur, 20 June 1940). Composer and organist, son of (1) Albert Alain. He was taught first by his father, then studied the piano with Augustin Pierson. He attended the Paris Conservatoire (1828–39), winning *premiers prix* in harmony with André Bloch (1933), fugue with Georges Caussade (1933) and organ in Marcel Dupré's class (1939). His composition teachers were Dukas and Roger-Ducasse. His studies were interrupted by illness, a break for military service at Nancy (1933–4), his marriage in 1935 to Madeleine Payan (with whom he had three children) and the consequent need to start earning his living: he was organist in 1935–9 at St Nicolas, Maisons-Laffitte, and the synagogue in rue Notre-Dame de Nazareth, Paris. Alain was profoundly influenced by the tragic death of his sister Odile while she was mountaineering in the Alps in September 1937. Mobilized in 1939 as a motorcycle dispatch rider, he was evacuated from Belgium to England in May 1940; he returned to France in the following month and died heroically near Saumur, for which he was awarded the Croix de Guerre posthumously.

His compositions received early recognition, including a prize from the Amis de l'Orgue in 1936 for the *Suite*. During his lifetime several important pieces were published, including the *Suite monodique* (Hérelle, 1935), the *Choral dorien* and *Choral phrygien* (as 'Deux chorals', Hérelle, 1938), and the *Variations sur un thème de Clément Jannequin*, *Le jardin suspendu* and *Litanies* (as 'Toris pièces', Leduc, 1939). In 1943 Leduc issued the organ works in three volumes, following this the next year with the music for piano.

His delightfully versatile personality is revealed not only in his music but also in his correspondence, his many drawings and his *carnet de notes*, a document of rare insight which his widow described as 'revealing his soul as a musician, poet and artist' (Schauerte, 1985). A man with an irresistible sense of humour, Alain was also mercurial, liable to veer from wild gaiety to bitter sadness.

Alain wrote his 120 compositions between the ages of 18 and 28 which makes their originality and maturity all the more remarkable. They reveal a number of influences, yet these, paradoxically, are a long way from the Conservatoire. In Gregorian chant it was the rhythmic freedom and the suppleness of the melisma that appealed to Alain. Similarly, it was rhythmic ambiguity which drew

him to jazz. The Colonial Exhibition of 1932 introduced him to the music of Morocco and India, where he discovered obsessional dance rhythms and unexpected melodic outlines with augmented and diminished intervals, modal scales and unfamiliar timbres. Alain was an enthusiast for early music and old instruments; it was a visit to the organ of Petit-Andelys that inspired him to write the *Variations sur un thème de Clément Jannequin*.

It was his music for organ, amounting to about a quarter of his total output, that first made Alain's name. A virtuoso with a deep knowledge of the instrument, his conception of organ sound was shaped in part by the remarkable salon organ constructed by his father, and in part by a vision of a modern instrument possessing the classical virtues (mechanical action, and registration that sparkled, with lucid and cleancut timbres). Some of the pieces demand great virtuosity (*Trois danses*), others take only a few bars to establish a meditative or intimate atmosphere (*Postlude*), but all, frescoes and miniatures alike, attest his mastery of the instrument. The *Trois danses* and *Litanies* are among the greatest works in the 20th-century organ repertory.

The piano works generally preceded those for organ. Above all, they reflect the temperament of a brilliant improviser. Their brevity suggests that they were composed quickly, but the stylistic rigour points more to economy than to haste. Alain spoke of his piano pieces as a 'series of impressions' and as 'transient visions'. These highly characterized pieces encompass lightning sketches, improvisations, exotic landscapes and dreamy meditation. Alain's piano writing has something in it of Satie, of Debussy and of Poulenc, yet the voice is completely individual. Alain had a predilection for the flute (*Trois mouvements*), and his writing for strings (particularly in the quintet with two violas) makes the loss of the orchestral version of the *Trois danses* all the more regrettable.

The vocal music is a blend of Debussyan harmony and the freshness of popular song. The *Messe modale* ingeniously balances voices and instruments. The *Messe de Requiem* and *Prière pour nous autres charnels* are marked by a mood of tragedy and austerity, while the *Ave Maria* shows Alain's melodic gift at its most tender.

Alain's musical language is a faithful reflection of his original personality. An instinctive musician, but one trained in the disciplines of counterpoint, he wrote music that has a natural fluidity, infused with the spirit of dance. It requires from the performer what Olivier Alain has called an 'active rubato'. Alain's preferred forms are the fantasy and the variation, but with an acute sense of proportion, an avoidance of exaggeration, and the absolute sincerity of a generous, passionate nature. Harmonies are immensely rich, polymodal or chromatic; the composer loved sequences of 6th chords and the polytonality of superimposed triads.

(3) Olivier Alain (*b* St Germain-en-Laye, 3 Aug 1918; *d* 28 Feb 1994, Elancourt, Ile de France). Composer, pianist and musicologist, brother of (2) Jehan Alain. He learnt to play the organ and piano as a child. Equally drawn to the study of literature, he did not enter the Paris Conservatoire until after graduating from the Sorbonne; at the Conservatoire (1948–51) he was a pupil of Aubin and Messiaen. In addition to his activities as a composer and concert pianist, he worked as music critic for *Le Figaro* (1957–70) and for *Les nouvelles Littéraires* (1965–8); he also taught sight-reading, analysis and composition. He directed the St Germain-en-Laye Conservatory (1950–64) and the Ecole César Franck, Paris (from 1961), and acted as an inspector of music with special responsibility for conservatories (from 1970). In 1974 he identified Bach's *14 Canons* (BWV1087), on the aria ground from the Goldberg Variations (autograph now in *F-Pn*). His compositions, of notable clarity and harmonic refinement, include many motets, organ works and piano pieces, and also an oratorio, *Chant funèbre sur les morts en montagne* (1950).

(4) Marie-Claire Alain (*b* St Germain-en-Laye, 10 Aug 1926). Organist, daughter of (1) Albert Alain and sister of (2) Jehan Alain. She studied at the Paris Conservatoire with Duruflé for harmony, Plé-Caussade

for counterpoint and fugue, Dupré for organ and Beaufils for aesthetics, gaining four *premiers prix*. In 1950 she won the organ prize at the Geneva International Competition, and after further studies with Marchal and Litaize began a career as a concert organist. She has given more than 2000 concerts throughout the world, participated in several television productions and made more than 200 recordings; these include the complete works of Bach, which she has recorded three times, French Baroque repertory and Romantic music. She helped to introduce the works of her brother Jehan Alain to the repertory, accompanying her recording of his music with her own essays, and making an edition of his complete works from sketches and manuscript sources.

Alain has specialized in French and German Baroque works, and her playing of this music is distinguished by a lively musicality, clarity of articulation and colourful registration. She has carried out extensive research into the interpretation of early music, and uses historically appropriate mechanical organs for French and German repertory. From 1965 to 1987 she was a member of the Commission des Orgues des Monuments Historiques. She has published numerous articles and written brochures to accompany her own recordings, including *L'oeuvre d'orgue de Jean-Sébastien Bach*, with her brother (3) Olivier and Hans Schack, issued with the first of her complete recordings of Bach. She taught at the Rueil-Malmaison Conservatoire, and is director of organ studies at the Conservatoire National de Région in Paris; she has also given masterclasses and lectures. She is an Officer of the Légion d'Honneur and a Commander of the Ordre National du Mérite.

AURÉLIE DECOURT-GOMMIER (1), GEORGES GUILLARD, (2), BRIGITTE MASSIN (3), GILLES CANTAGREL (4)

Alain de Lille [de L'isle; Alanus de (ab) Insulis] (*b* Lille, 1114–28; *d* Cîteaux, ? 12 July 1202 or 1203). French philosopher, theologian and poet. He was a scholar of such encyclopedic learning that he became known as *Doctor universalis*. He probably taught at the schools of Paris from about 1157 to 1170, at Montpellier from about 1171 to 1185, and then possibly again at Paris. He retired as a simple lay brother to Cîteaux, where he died.

Alain was particularly famed in his day for two of his Latin poems, *De planctu naturae* (1160–75) – a satire on human vices – and *Anticlaudianus* (1182–3), a long and elaborate moral allegory on the liberal arts which serves as the basis for his musical importance. In the *Anticlaudianus* the Seven Liberal Arts, daughters of Prudence, are introduced, and each discusses the particular art she represents. Music is the fifth sister, and Alain, following the philosophical emphasis of his time, has her expound the moral worth of music rather than its practical application. Boethius's threefold classification is combined with contemporary neo-Platonic thought: *musica mundana* controls the changes of the seasons and the times, conjoins the elements, and produces the motions and melodies of the heavenly bodies. *Musica humana* builds the members of the human body, unites the rational and irrational parts of the soul, and exercises control in blending soul and body. *Musica instrumentalis* is not divided in the Boethian manner (string, wind, percussion) but illustrates the combining of voices in harmony, gives sound its quality (enharmonic, diatonic, chromatic), and it makes clear the nature of consonance (diapason, diapente, diatesseron).

Exceptivam actionem, a lyric dialogue for each of the Seven Liberal Arts, has been attributed to Alain in three different sources and appears in a musical setting in the main Notre Dame manuscript *I-Fl 29.1*, f.444*r*(ed. in Anderson). It is set strophically, opening with a modest melisma and concluding with a short refrain; these features suggest a time of composition close to that of the *Anticlaudianus*. Alain's musical importance does not end with these works, for in about 1280 Adam de la Bassée wrote an important *Ludus super Anticlaudianum* with many musical interpolations.

GORDON A. ANDERSON/THOMAS B. PAYNE

Alaire [Allaire, Alere] (*fl* 1534–49). French composer. According to Fétis, there was a singer called Allaire at Notre Dame in Paris in April 1547, but the name is not mentioned in Chartier's study of the *maîtrise* or in Wright. All the surviving music ascribed to Alaire, one mass and eight chansons, was published in Paris by Attaingnant; none of it was reprinted in any form, although two of the chansons were copied into a manuscript owned by a

Bruges merchant. It is unlikely that Alaire can be identified with either of the contemporary Flemish musicians Simon Alard or Jacques Alardy, or with the 'Alardino' whose six-voice madrigal *Passa la nava mia* was printed in Venice (RISM 1561[16]). Despite the limited dissemination of Alaire's works, evidence of his influence can be seen in later settings of Marot's poem *Quant je vous ayme ardentement* by Arcadelt (1547) and Certon (1570), which borrow melodic motifs from Alaire's hauntingly beautiful setting.

Bien mauldit, in which two of the five voices proceed in strict canon, is fairly typical of the contrapuntal style of the post-Josquin generation. The remaining chansons resemble those of Sermisy in their use of duple rhythm, concise minor-mode melodies, their alternation of imitative and homophonic passages and clear reflection of poetic structure. The mass makes extensive use of material from a motet for equal voices by Hesdin (also published in Paris in 1534), expanding its basic motifs and adding others with broader-arching phrases within a wider vocal range. Alaire seems to have favoured the Aeolian mode (whose *finalis* A was represented in contemporary solmization theory by the vowels in his name: A = *la mi re*), using it in the mass and in four chansons.

FRANK DOBBINS

Ala-Könni, (Martti) Erkki [Erik] (*b* Ilmajoki, 2 Feb 1911; *d* Tampere, 2 Sept 1996). Finnish musicologist and folklorist. He studied at Helsinki Conservatory (1929–36) and under A.O. Väisänen at Helsinki University (MA 1942), where he took the doctorate in 1956 with a dissertation on the polska in Finland. His extended fieldwork on folk music and instruments in Finland and Sweden resulted in a collection of over 10,000 melodies (now in Tampere University library). After teaching music at Helsinki Conservatory (1951–7) and lecturing at Helsinki University (1957–62) he held a research grant from the State Humanities Committee (1962–75). He was professor of folk research at Tampere University (1975–7) and director of the university folk research institute (1977–81). He was active in many folk music research organizations. A list of his writings is included in the Festschrift *Kentältä kentälle: juhlakirja Erkki Ala-Könnin 70 - vuotispäiväksi 2.2.1981*, ed. P. Virtaranta and others (Tampere, 1983) which was published to mark his 70th birthday.

Alalá (Sp.). Genre of Galician (Spanish) song, characterized by the refrain sung at the end of each verse to the vocables 'ay-la-la'. *See* SPAIN, §II, 3.

Alaleona, Domenico [Ottavio Felice Gaspare Maria] (*b* Montegiorgio, Ascoli Piceno, 16 Nov 1881; *d* Montegiorgio, 28 Dec 1928). Italian musicologist, conductor and composer. He studied the piano, organ and composition at the Liceo Musicale di S Cecilia, Rome, where he gained his diploma in 1906 and was from 1912 professor of aesthetics and music history. He also graduated in 1907 from Rome University with a thesis on the Italian oratorio, subsequently expanded into an important book. His scholarly writings – notably those on Italian *laudi spirituali* and on Carissimi – in general helped to lay the foundations of modern Italian musicology. As a conductor he specialized in choral music, and in 1926 he founded the Madrigalisti Romani. He also fought hard for the improvement of Italian music education. His most ambitious composition, the opera *Mirra*, is eclectic and uneven, but shows technical enterprise – not least in the brief use of a specially constructed 'pentaphonic harmonium', in which the octave was divided into five equal parts (cf Indonesian *slendro*). Various kinds of equal divisions of the octave, and even entire 12-note chords are among the possibilities discussed in two much cited theoretical articles he published in the *Rivista musicale italiana* in 1911. Only rarely, it seems, did such speculations lead him to write wholly satisfactory music, but his harmonic novelties are sometimes poetic and his musicological researches helped to give a pleasantly archaic tinge to some of his vocal works.

JOHN C.G. WATERHOUSE

Alamani, Jo. [?Johannes] (*fl* 14th century). Composer. He is possibly to be identified with the 'Johan d'Alamanya, juglar del duch Aendrich de Gascunya' mentioned as one of the minstrels of King Peter IV of Aragon in 1351. His only known work is an incomplete three-voice Credo (ed. in PMFC, xxiii, 1989, no.121), which is clearly based on the popular discant-style 'Sortes' Credo (both works ed. in CMM, xxix, 1962). Possible corroboration of his identity with the minstrel comes from the fact that the Credo survives in a manuscript of which fragments exist in *E-Bbc* 971 and *E-G*.

GILBERT REANEY

A la mi re. The pitches *a* and *a′* in the HEXACHORD system.

Alamire, Pierre [Petrus; Imhove, Peter; van den Hove, Peter] (*b* Nuremberg, *c*1470; *d* ? Mechelen, 26 June 1536). South Netherlandish music scribe of German birth. He was a member of the Nuremberg merchant family Imhof, but settled in the Netherlands in the early 1490s. He was active principally at the courts of Margaret of Austria, regent of the Netherlands, her successor Mary of Hungary and Emperor Charles V, in Mechelen and Brussels. He was one of several copyists – the others are anonymous – of a complex of more than 60 manuscripts of polyphonic music produced there between about 1495 and 1535. The earliest references to Alamire appear in the accounts for 1496/7 of the Confraternity of Our Lady in 's-Hertogenbosch. He is listed once as a new member, and was paid for having copied one book of masses and portions of a second book, as well as a book of motets. In 1499 the Confraternity of Our Lady in Antwerp paid him for having copied a book of motets and *Magnificat* settings. By 1503 he was living in Antwerp, and in that year Philip the Fair, Duke of Burgundy, bought from him 'a large book of music, made up of 26 *cahiers* of parchment, containing several masses and other pieces used in the divine service which is celebrated daily in the domestic chapel of the household of this lord'. Alamire was still living in Antwerp in 1505, but by 1516 had moved to Mechelen.

In 1509 Alamire was attached to the chapel of the Archduke Charles (later Charles V) as 'scribe and keeper of the books'. He retained this position, apparently continuously, for 25 years, probably supervising the copyists who worked with him in producing music manuscripts. He may well have edited or designed many of the books and engaged book-painters and binderies to complete them. He actually signed only a few pages, all in informal script, so his hand cannot be identified with certainty in the more usual formal style of writing. 47 choirbooks and sets of partbooks, as well as 14 sets of detached leaves and fragments, copied in whole or in part or supervised by Alamire, have survived, among them some of the largest and most handsomely penned and decorated choirbooks of the time, as well as smaller, more modest sets of partbooks. Together these contain a significant portion of the contemporary repertory of Franco-Flemish polyphony, including almost all the works of Pierre de La Rue, and many works by Josquin, Mouton, Févin, Obrecht, Isaac and lesser composers. Some of the books were made for the chapels of Charles, Margaret, Emperor Maximilian and other members of the Habsburg dynasty, and for highly placed courtiers; others were prepared for presentation by the court to such patrons of music as Frederick the Wise of Saxony (see illustration), Pope Leo X, Henry VIII and the Fugger family of Augsburg. While serving the Netherlands court Alamire continued to fulfil private manuscript commissions, notably for the Confraternities of Our Lady in Antwerp (1512–20) and 's-Hertogenbosch (1530–31), and for important individuals. He also sold instruments and paintings. Documents calling him a singer, and a four-voice *Tandernack* ascribed to him (in *A-Wn* 18810), suggest that he was a practising musician.

Four autograph letters in Latin from Alamire to Henry VIII and Cardinal Wolsey, and a series of letters to them from the English ambassadors at the Netherlands court, show that between 1515 and 1518 Alamire not only supplied music manuscripts and instruments to Henry, but also served the king, whom he visited in 1516, as a spy against Richard de la Pole, exiled pretender to the English throne. Alamire gathered political information in Metz, where de la Pole lived, Wittenberg, Frankfurt and France, doubtless acquiring new music during his travels. His service for the king ceased when it was found that he was also a counterspy for de la Pole. Alamire also travelled as a diplomatic and private courier. In 1519 he was sent by Margaret of Austria to Augsburg and Wittenberg in connection with the election of Emperor Charles V, and between 1517 and 1520 he carried a number of messages and letters from Frederick of Saxony to Margaret of Austria, and from Frederick's secretary, Georg Spalatin, and the Nuremberg humanist Willibald Pirkheimer to Erasmus. The last, humorously describing how Alamire had delivered six old letters to him in August 1519, calls the scribe 'a not unwitty man', a portrait corroborated by Alamire's letters, as well as epigrams and insults directed at the singers in his manuscripts. That he had other, surprising areas of expertise can be seen from a payment

Part of the Kyrie (A and B) of Pierre de La Rue's 'Missa "Ave sanctissima Maria"', copied in the Alamire workshop for Frederick the Wise of Saxony (D-Ju 4, f.8)

to Alamire by Pompeius Occo of Amsterdam, a wealthy financial agent for whom he produced a book of sacred music, for giving lessons in 'the craft of mining' to Occo's guest, King Christian IV of Denmark. By order of Mary of Hungary (Margaret's successor), acting for the emperor, Alamire was pensioned off on 1 January 1534, but he continued to be paid for books of music for Mary's chapel, and for other services, until June 1535.

Four of the other scribes involved in copying the corpus of manuscripts produced at the Netherlands court have been designated Netherlands court scribes B, B1, C and C1. It is possible that B, the main copyist of five manuscripts dating between about 1495 and about 1508, was Martin Bourgeois, a chaplain in the service of Margaret, Philip the Fair and Charles V from 1498 to 1514, and Alamire's predecessor as principal music scribe. Scribe B1 was a different copyist, though contemporary with B; he executed two manuscripts. The workshop of Scribe B is thus represented by seven manuscripts, the earliest layer of the Netherlands court sources. Scribes C and C1 were active at the same time as Alamire and collaborated with him on occasion. Eight manuscripts, dating from about 1508 to 1523, can be wholly or partly attributed to them and are considered part of the production of Alamire's workshop. These scribal identifications may have to be modified in the light of ongoing analysis of scripts. In a recent study, Flynn Warmington has distinguished the hands of seven main scribes of both music and text, as well as three further copyists of music alone and six of text alone (see Kiel and Warmington in *Levven 1999*).

HERBERT KELLMAN

Alamo, Lázaro del (*b* El Espinar, nr Segovia, *c*1530; *d* Mexico City, between 17 March and 19 May 1570). Spanish composer, active in Mexico. He served as a choirboy at Segovia Cathedral from 1542 to 1549, where he was taught by Gerónimo de Espinar (who later taught Victoria at Avila) and from 1544 by the *maestro de capilla* there, Bartolomé de Olaso (*d* 1567). He was employed at Salamanca University by Matheo Arévalo Sedeño, a rich nobleman, who later acted as his sponsor at Mexico City; he became a cathedral singer there on 16 October 1554 and, after being ordained, was appointed *maestro de capilla* on 2 January 1556. For the commemoration services for Charles V held in Mexico City on 29 November 1559 he composed an *alternatim* psalm setting in four parts. His several 'motetes, villancicos y chanzonetas' composed for Corpus Christi and Christmas (many to texts by Juan Bautista Corvera) earned the approval of the Archbishop Alonso de Montúfar, who had him promoted from prebendary to canon on 25 June 1568. Alamo's services to the cathedral include the establishment of a fine library of choral music, the recruitment of Manuel Rodríguez, an outstanding Portuguese organist, and the training of choirboys and adult singers there.

ROBERT STEVENSON

Alandia (Cañipa), Edgar (*b* Oruro, 12 Aug 1950). Bolivian composer. He left Bolivia for Rome at the age of 19 to study composition with Ravinale at the Conservatorio di S Cecilia (1969–77) and with Donatoni at the Academia di S Cecilia Academy (1979–80). He also trained in conducting at the Conservatory (1979–81). Apart from a brief sojourn in Belgium, where he worked as a pianist for the choreographer Maurice Béjart (1977–8), he has remained in Italy, holding teaching posts (from 1980) at the Conservatories of Pesaro, S Cecilia (Rome), Pescara and (from 1995) Perugia. He has also lectured in various Latin American countries, including Bolivia and (regularly since 1994) Cuba. In 1983 he became director of the ensemble Nuove Forme Sonore, based in Rome.

Alandia has retained an aesthetic allegiance to his Bolivian roots: the orchestral work *Sajsayhuaman* (1980), for instance, is made up of discrete blocks of tightly organized material, in seeming analogy to the drystone construction of the eponymous Inca fortress. His music bears the audible marks of the Italian avant garde, with traceable links to Nono, Maderna and Dallapiccola. His use of politically committed texts by Neruda and Che Guevara sits well with both traditions. Often, as in *se me ha perdido ayer . . . el canto de las estrellas* (1993), a slow pace of structural development contrasts with a glittering hyperactivity on the surface, evoking the contrast between the starkness of the Andean high plateau and the twinkling luminescence of its unusually clear night-sky.

WORKS
(*selective list*)

Music theatre: Tu avrai delle stelle come nessuno ha (mime), S, str qt, ww qt, Rome, CID, 4 Nov 1983; PERLA . . . fabula triste (P. Santoli, after A. AGUSTÍN FERNÁNDEZ

Alanus, Johannes (*fl* late 14th century or early 15th). English composer. He composed the motet *Sub Arturo plebs/Fons citharizancium/In omnem terram* and perhaps four songs; for the composer of one or possibly two pieces in the Old Hall Manuscript (*GB-Lbl* Add.57950) *see* ALEYN. The composer of the motet (ascribed 'Jo.Alani' and containing a reference to 'J. Alani minimus') is sometimes identified with the Dominus Johannes Aleyn who was chaplain in Edward III's Chapel Royal and canon of St George's Chapel, Windsor, from 1362 until his death in 1373 (full documentation in Wathey, pp.167–8); 'unus rotulus de cantu musicali' was bequeathed by him to the chapel. Many other prebends and favours appear to indicate royal patronage, particularly from Queen Philippa.

The motetus text of *Sub Arturo plebs* refers to earlier theorists whose work had led Alanus to compose a piece of such novel complexity. But the work's main historical fascination lies in its triplum text, which names 14 musicians, most of them first identified by Brian Trowell among the royal households. Trowell originally associated the motet with two events at St George's Chapel, Windsor: the foundation of the Order of the Garter in 1349 or the 1358 celebrations of the victory at Poitiers (1356). Roger Bowers established, with further research and identifications, that the musicians named cannot all have been active at the same time and that the list must be to some extent retrospective. Ursula Günther pointed to the advanced musical style and suggested a date of 1367. Margaret Bent held that, but for the composer datings, the musical style would suggest composition after 1400. As an uneasy compromise she opted for the early 1370s (Bent, 1973, 1977; Bent and Howlett, 1990), a dating proposed on other grounds by Bowers and (independently) Wathey; but an even later date becomes possible once it is accepted that the composer may not have been the man who died in 1373 and that some of the musicians were already dead when the work was written.

The motet appears in *F-CH* 568, *I-Bc* Q15 and the English 'Yoxford' fragment; its tenor alone is cited in an Italian-language treatise (in *I-Fl* Redi 71; ed. in CSM, v, 1957, p.57). It is not transmitted in any source likely to date from much before 1400; and the musical style strongly indicates composition later than the 1370s. Bent (1973) drew attention to its 'classical 15th-century structure, . . . three levels of diminution, and rhythmic overlapping between upper voices and tenor in the final section'. One could add that contrapuntal process, the manner in which the pan-isorhythm is treated and the pitch juxtaposition of the rhythmic repetition in the triplum all fall very much into line with the early 15th-century motet tradition. *Sub Arturo plebs* remains a key problem since a date in the 1370s would call for a heavy adjustment to received notions of mid-14th-century style or styles.

Four songs ascribed 'Alanus' in the lost Strasbourg manuscript (*F-Sm* 222, probably of Swiss origin) are inevitably hard to compare with the motet. The virelai *S'en vous pour moy* (also in *F-Pn* n.a.fr.6771, ed. in CMM, liii/1, 1970) and *Min herze wil all zit* (also with the contrafactum text *O quam pulchra*, ed. in Cw, xlv, 1937, pp.9–10) could just be aligned stylistically with the English song repertory of the years around 1400; but *Min frow, min frow es tut mir we* (ed. in Rosenberg) seems thoroughly German in style and its text fits the music well. Of the fourth song only an untexted incipit survives.

DAVID FALLOWS

Alanus de [ab] **Insulis.** *See* ALAIN DE LILLE.

Ālāpa (Sanskrit: 'conversation'; Hindi *ālāp*; Urdu *ālāp*; Tamil *ālāpanam*). In South Asian music an unmetred introduction to the performance of a metrical composition, comprising an exposition of the mode or *rāga* of the composition. *Ālāpa* is normally improvised according to traditional principles (*see* INDIA, §III, 3(ii)(a–d); MODE, §V, 3), and is variable in length from a few minutes to an hour or more. The most extended examples are performed by Hindustani *dhrupad* singers and players of *sitār*, *sarod*, *bīṇ* and other melodic instruments, and by Karnatak musicians in the genre *rāgam-tānam-pallavi* (*see* INDIA, §III, 5(xiii–iv and ex.1). Notated examples are found in the 13th-century *Saṅgīta-ratnākara* of Śārṅgadeva, the *Rāga-vibodha* of Somanātha (17th century) and more recent didactic works. A short *ālāpa* may precede a devotional song in many of the religious music traditions of South Asia (*see* NEPAL, §I, 2(ii)).

RICHARD WIDDESS

Alard, (Jean-)Delphin (*b* Bayonne, 8 March 1815; *d* Paris, 22 Feb 1888). French violinist and composer. At the age of ten, he performed Viotti's Concerto no.12 so well that the citizens of Bayonne decided to send him to Paris. There he entered Habeneck's class at the Conservatoire in 1827 and won first prize in 1830. He continued to study composition with Fétis (1831–3) while serving as a violinist in the Opéra orchestra. In 1831 he made his début as a soloist with the Société des Concerts du Conservatoire, earning the praise of Paganini, present in the audience, who subsequently dedicated to Alard his 6 Sonatas op.2. Soon Alard became known as an excellent

performer. At the memorial concert for Mendelssohn in 1848, he was chosen to perform the composer's recent Violin Concerto. He also became known as a superb chamber music player, particularly with his own string quartet, which he had formed in 1835 with the cellist Pierre-Alexandre Chevillard. Alternately with the quartets of Armingaud and Maurin, Alard's ensemble performed at the weekly concerts of the Cercle de l'Union Artistique, or Cercle des Mirlitons, founded in 1860 by Prince Poniatowski. In 1840 he was appointed a member of the royal orchestra and became solo violinist on Baillot's death in 1842; he assumed a similar post in 1853 with the imperial orchestra.

Alard's most enduring achievement was his long period (1843–75) as professor at the Paris Conservatoire. Appointed as successor to Baillot, he transmitted the great Italian-French tradition of Viotti to a generation of violinists. His most famous student was Sarasate, a *premier prix* winner in 1857. Alard's teaching skill is evident in his excellent *Ecole du violon: méthode complète et progressive* (Paris, 1844), which was translated into several languages, and his numerous studies (among which is a set of caprices in all keys, op.41). His other compositions, including two violin concertos, two *symphonies concertantes* and many opera fantasias, have disappeared from the repertory. His collection *Maîtres classiques du violon* (Mainz, 1863), valuable for rescuing many older pieces from oblivion, consists of 56 compositions by 18th- and early 19th-century composers; unlike many contemporary editors, Alard was faithful to the originals, merely adding an unpretentious realization of the figured bass. He played until late in life and was last heard at a benefit concert in 1884. Through his father-in-law, the famous luthier Vuillaume, he owned some of the most beautiful violins, including the 'Alard' Stradivari and the incomparable 'Messiah' Stradivari.

BORIS SCHWARZ/CORMAC NEWARK

Alard, Lampert (*b* Krempe, 27 Jan 1602; *d* Brunsbüttel, 29 May 1672). German theologian, historian, poet and music theorist. After studying in Krempe and Hamburg he completed his studies at Leipzig University in 1624 and in the same year became Poet Laureate. Meanwhile in 1621 he had become tutor to the children of a wealthy Leipzig bookseller, Henning Gross. Disappointed at not being made a professor at the university, he became a pastor and from 1630 practised his vocation at Brunsbüttel; he was also assessor to the consistory at nearby Meldorf. He was in contact with the Dutch humanists Johannes Meursius and Daniel Heinsius. He devoted only one work to music, *De veterum musica* (Schleusingen, 1636). Its point of view is that of a moralist and erudite humanist, and it contains many references to Greek and Latin texts; it is divided into 29 short chapters. After studying the relationship of music to other sciences, Alard presented some rudiments of Greek theory. There follow ten chapters on the effects of music: when well employed it exorcises evil, demons and madness and inspires virtue and piety. Alard then denounced the corrupt music of his time and censured the intrusion of virtuosity and ornaments into religious music. He devoted the last chapter to the mythological or legendary inventors of musical instruments. In an appendix he included the Greek text of a treatise of MICHAEL PSELLUS with a Latin translation.

MONIQUE ESCUDIER

Alard, Simon (*b* Péronne; *d* St Quentin, *c*1530–40). Franco-Flemish singer. He is possibly identifiable with the composer ALART.

Alardino. *See* ALART.

Alardy [Alard, Alardi], **Jacques** [Jacobus] (*b* Nivelles, *c*1515; *d* ?Madrid, after 1592). Flemish singer. He is possibly identifiable with the composer ALART.

Alarie, Pierrette (Marguerite) (*b* Montreal, 9 Nov 1921). Canadian soprano. She studied in Montreal with Salvator Issaurel and Jeanne Maubourg and in Philadelphia with Elisabeth Schumann. She made her début in 1938 in Montreal with the Variétés Lyriques, later singing in *La fille du régiment*, *Il barbiere di Siviglia*, *La traviata* and *Mireille*. In 1943 she sang Mozart's Barbarina under Beecham. She made her Metropolitan Opera début in 1945 in *Un ballo in maschera* under Bruno Walter after winning the Auditions of the Air. In 1949 she made her début at the Paris Opéra-Comique as Olympia in *Les contes d'Hoffmann*; remaining in Paris for several seasons, she appeared frequently with the tenor Léopold Simoneau, whom she had married in 1946. At the 1953 Aix-en-Provence Festival she sang for the first time *Chanson* and *Romance du comte Olinos*, two concert arias written for her by Egk. She appeared at the 1959 Salzburg Festival in *Die schweigsame Frau*. For some years she taught in Montreal before moving to San Francisco in 1972, and to Victoria, British Columbia, in 1982, where she founded and directed Canada Opera Piccola with her husband. She was made an Officer of the Order of Canada in 1967 and received the honorary doctorate at McGill University in 1994.

GILLES POTVIN

Alart [Alardino] (*fl c*1535–60). Franco-Flemish composer. The name appears in the ascriptions of two works published over 20 years apart. The four-voice motet *Dum transisset Sabbatum* was rather widely distributed, ascribed consistently to 'Alart' without first name or initial (RISM 1539[13], 1549[10], 1549[10a], 1554[10], 1562[2], *H-Bn* Bártfa 22 (anon.), *I-TV* 7, Breslau, Stadtbibliothek, MSS 2, 5, lost; ed. in SCM, xiii, 1993). It is a conventionally imitative work on the whole, but the bass frequently repeats the opening of a point of imitation in ostinato fashion. In many details of style it resembles the kind of motets being written for the French royal chapel in the second quarter of the 16th century, especially by Claudin de Sermisy. The six-voice madrigal *Passa la nave mia* is ascribed to 'Alardino' (RISM 1561[16]).

Surnames similar to 'Alart' or 'Alardino' were not uncommon among musicians: Vander Straeten (iv) records a Joos Alaert, wind-player of Ghent in 1568, and a Petrus Alardi [Anardi] of Savoy had been a ducal singer

in Milan from 1473 to 1499, though neither is at all likely to have written the works in question. The best-documented candidate for identification with the composer (and the only one who could have written both works) is the Flemish singer Jacques Alardy [Alard, Alardi] (*b* Nivelles, *c*1515; *d* ?Madrid, after 1592). He is first recorded in Bruges on 1 June 1524 as a chorister in the chapel of Charles V; during the next 12 months he was in Toledo with the emperor. On 1 March 1530, his voice having broken, he was sent back to the Low Countries for his studies, matriculating at the University of Leuven on 12 November 1532. By 1540 he was a chaplain of the *missas rezadas* or plainchant chapel at the Spanish court, in which capacity he is last recorded in 1559. He returned as a chaplain of the *missas cantadas* or polyphonic chapel on 3 March 1570, having been in the Low Countries as a chaplain of the Duke of Alba. He is last listed among the officers of the Spanish royal chapel in 1593.

Because Jacques Alardy would have been only in his mid-twenties when *Dum transisset Sabbatum* was printed in 1539, because the motet is not transmitted with music from the courts of Charles V or Philip II, and because of its distinctively French style, its composer may be better identified with Simon Alard (*b* Péronne), canon and precentor of the French royal church of St Quentin, who was buried there apparently in the 1530s. Most scholars have followed Gomart in assuming him to be the 'Allard' listed among the singers at the funeral of Louis XII of France in 1515, but Brobeck has shown that this was Michel Hallart of the diocese of Paris, who had been a member of the French royal chapel since at least 1 September 1511 and remained at least until 30 September 1518. Either might have composed *Dum transisset Sabbatum*, but Simon Alard is probably the likelier candidate because his known dates are closer to that of the motet's publication. Date and genre make it next to impossible that either wrote *Passa la nave*.

Conversely, ALARD DU GAUCQUIER, who was born about 1534, cannot have composed the motet but may well have written the madrigal, though no other secular music of his is known. He was, however, almost certainly the composer of the untitled four-voice mass ascribed to 'Allardo musico caesareo' (dated 1580 in *D-As* 19; ed. in Musica divina, xvi, Regensburg, 1962); it is in his style, and at the time of copying he had recently left the imperial chapel after many years of service, whereas Alardy had not been an 'imperial musician' since the abdication of Charles V in 1556.

Alba (Provençal: 'dawn'). A minor genre of troubadour lyric, of which 19 examples survive. Several are anonymous or of uncertain attribution; of those whose authorship is reasonably secure, only *Reis glorios*, by Giraut de Bornelh (PC 242.64), is the work of a poet of the first rank. Few can be dated with any precision, but the period of composition appears to extend from the last quarter of the 12th century to the end of the 13th. Most have a refrain – a rare feature in the troubadour lyric – and this normally includes the word 'alba'.

The dawn plays a number of different roles in these pieces. Six of the poems are religious, and use the dawn as a symbol of redemption or awakening from sin. The remainder are amorous, and most of these are concerned with the parting of lovers at daybreak, though in two cases the lover is looking forward to the dawn. The surviving poems include the unique *serena* (evening song) by Guiraut Riquier (PC 248.4), which can reasonably be counted as a variant of the alba; here it is an evening assignation that is eagerly anticipated. Modern commentators have tended to assume that the dawn-parting scenario represents the original form of the alba, and that the other varieties arose later, but there is little evidence for this.

Most of the poems have what may loosely be called a dramatic element, in that the words are placed in the mouth of one of the protagonists: the lover himself, the castle watchman or occasionally the lady. Sometimes more than one character speaks, each delivering a separate monologue; true dialogue, in which the speakers actually answer one another, is not a feature of the genre. The watchman is a particularly important figure, and it is his presence more than anything else that distinguishes the alba and its derivatives from the dawn-parting songs that are so widespread in the literature of other cultures. As well as announcing the coming of day, he often takes it upon himself to dispense practical or moral advice to the lovers; in the religious pieces he exhorts the faithful to arise from their spiritual torpor, and expounds the allegorical content of the poem.

Only two albas survive with music, both in the troubadour manuscript *R* (*F-Pn* fr.22543). These are Giraut de Bornelh's *Reis glorios* and the piece by Cadenet which begins in some sources *Eu sui tant cortesa gaita* and in others *S'anc fuy bela ni prezada* (PC 106.14). Although Cadenet's tune is longer and more florid than Giraut's and the two poems are entirely unlike in metrical form, the close resemblance between the two melodies is unmistakable (ex.1). Almost every phrase in Cadenet's tune corresponds closely to one of Giraut's; lines 5 and 6, which extend the compass up to *d′*, are the only exceptions. It seems clear that one of these tunes, probably Cadenet's, is a deliberate imitation of the other. (There have been unconvincing attempts to identify a liturgical source for Giraut's tune.)

Contrafacta of both these tunes are known. In a 14th-century Provençal play of St Agnes, the saint's mother

and sister sing 'in sonu albe REI GLORIOS VERAI LUMS E CLARDAT', with close textual imitation of Giraut's poem. Cadenet's tune is used for *Virgen madre groriosa*, no.340 (also no.2 'de loor') of the *Cantigas de Santa Maria*, which uses the refrain word *alva* as an epithet for the Virgin. This may imply that the alba was better known than the small number of surviving examples may suggest.

Modern writers have coined the term 'aube' to refer to a handful of Old French lyrics whose subject matter recalls that of the secular alba, but whose overall character is usually closer to that of the Old French *chanson de femme* or CHANSON DE TOILE. The only one with extant music is *Gaite de la tor* (Linker, 265–722; *F-Pn* fn.20050), in which a watchman is exhorted to ensure that the lovers are not disturbed by intruders. The tune bears no resemblance to the two alba melodies. Music also survives, in unstaved neumes, to a rather mysterious piece from the 10th or 11th century, *Phebi claro* (*I-Rvat* Reg.lat.1462), which has become known as the 'aube de Fleury'. This consists of three three-line stanzas in Latin, with a refrain that appears to be Provençal but whose meaning is somewhat obscure. The poem features a watchman or herald exhorting slothful people to rise up against an enemy at daybreak, and the refrain resembles that of Raimon de las Salas' 13th-century alba *Dieus, aydatz* (PC 409.2), but its relationship to the later repertory is highly controversial. The German TAGELIED is a related form.

STEPHEN HAYNES

Alba [Alva, Alua], **Alonso (Pérez) de** (*fl* late 15th century or early 16th). Spanish composer. A number of sacred works and at least one song are attributed to this composer in Iberian sources; one work, a four-voice Agnus Dei, bears the ascription 'Alonso Perez de Alba'. There are two possible candidates who may be identified with this composer.

In 1503 an 'Alonso de Alva' was appointed *maestro de capilla* in charge of the choristers at Seville Cathedral. He died before 4 September 1504, and after his death some books of polyphony in his possession were purchased by the cathedral chapter. He may well have been a composer, and the fact that Alba's works are preserved among pieces by Peñalosa and Escobar, both of whom were closely connected with Seville, may be significant, even though he died considerably earlier than these composers.

The music attributed to Alba is also included in manuscripts associated with the royal chapels, and another Alonso de Alba can be found in the registers of the Castilian royal household. This man is first recorded as a chaplain in Queen Isabella's chapel on 10 September 1497; he quickly became sacristan, and held this position until the queen's death in 1504, when he retained the same post in the household of her daughter, Juana 'the Mad'. He was awarded several benefices: from 1501 he is referred to as Archdeacon of Jaén, and in 1505 as a canon of Segovia Cathedral. In 1504 he accompanied Isabella's catafalque to Granada Cathedral, and he served in Juana's chapel in the period after Philip the Fair's death when she retained his Flemish choir in Spain; Alba thus served alongside such composers as La Rue and Anchieta. He was paid in his role as sacristan until his death on 14 August 1522, but is nowhere referred to as a singer (Barbieri's reference to his appointment as a singer in the Castilian royal chapel in April 1491 has not been verified);

however, it is likely that as a royal chaplain he was musically trained.

The surviving works attributed to Alonso de Alba are stylistically homogeneous and share the musical idiom developed among royal chapel composers such as Escobar and Anchieta, embracing some of the compositional techniques cultivated by the Franco-Flemish composers of the late 15th century and the early 16th (for example in the strict canonic writing in the Gloria of Alba's complete mass setting), but he rarely used imitation in an extended manner. Rather, the texture of his works is largely homophonic, and his liturgical pieces are essentially harmonic elaborations of the plainchant, which is sometimes employed (as in the alleluias) as an even-note cantus firmus in the middle of the texture, or lightly ornamented in the superius (notably in the hymn *Veni creator spiritus*). His motets are more varied, and more experimental, in the manner of works by Peñalosa: freely composed, following the structure of the text and contrasting passages of more imitative writing with homophonic declamation. One villancico is definitely attributed to Alba in the Cancionero Musical de Palacio (*E-Mp* 1335); other songs are ascribed simply to 'Alonso' and may or may not be by him.

WORKS

all sacred works in E-TZ 2–3

† – attributed to Alba on stylistic grounds

Misa, 3vv, ed. in MME, i (1941, 2/1960), 156; Agnus Dei of Misa 'Rex virginum', 4vv (other movts by Escobar, Peñalosa, Hernandes)

TESS KNIGHTON

Alban Berg Quartet. Austrian string quartet. It was founded in 1970 by Günter Pichler (*b* Kufstein, Tyrol, 9 Sept 1940), Klaus Mätzl, Hatto Beyerle and Valentin Erben (*b* Pernitz, 14 March 1945). Mätzl was replaced in 1978 by Gerhard Schulz (*b* Linz, 23 Sept 1951) and Beyerle in 1981 by Thomas Kakuska (*b* Vienna, 25 Aug 1940). In 1969 the original members heard the LaSalle Quartet play virtually all the quartet music of the Second Viennese School at the Vienna Festival; and for the 1970–71 season they studied in Cincinnati with the LaSalle. In the autumn of 1971 they made their joint début at the Konzerthaus in Vienna, becoming the first full-time string quartet in that city's history – previous ensembles had combined chamber music with orchestral playing. In 1972 Berg's widow gave them permission to use his name. From the start the Alban Berg Quartet tried to include a contemporary work in every recital: its premières have included works by Leitermeyer, Einem, Wimberger, Rihm, Schnittke and Berio, and two each by Urbanner and Haubenstock-Ramati. Its playing, combining warmth and precision in a recognizably Viennese manner, has consistently reached the highest level of accomplishment, although its style has altered slightly. A change of second violinist made little difference but the substitution of Kakuska for Beyerle caused a noticeable switch of emphasis; a fine Mozart ensemble became a fine Haydn ensemble instead. Its homogeneity of tone – partly attributable to the fact that all except the cellist studied with Franz Samohyl – has remained constant throughout. The group's recordings have won many prizes. Berg's Quartet and Lyric Suite have been documented twice, as have the mature works by Mozart and Schubert and the Beethoven cycle – the second Beethoven set was recorded live. The individual members are professors at the Vienna Hochschule für Musik und Darstellende Kunst and the Cologne Hochschule für Musik, and all have musical interests outside the quartet: Pichler is a conductor, Schulz plays in other ensembles such as the Waldstein Trio, and Kakuska and Erben are soloists. Their instruments include a 1715 Stradivari violin, a 1780 Storioni viola and a 1722 Gofriller cello. Pichler has used a variety of costly violins but now plays a modern instrument, with no loss of quality.

TULLY POTTER

Albanese [Albanèse, Albaneze], **(Egide-Joseph-Ignace-) Antoine** (*b* Albano Laziale, nr Rome, 1729; *d* Paris, 1800). French castrato and composer of Italian origin. Educated in Naples, he went to Paris in 1747 and soon found employment in the royal chapel of Louis XV. From 1752 to 1762 he was a prominent soloist in the Concert Spirituel, appearing frequently in performances of Pergolesi's *Stabat mater*. He also performed duos with a pupil, Mlle Hardy (or Hardi), at these concerts. He apparently retired from public performance about 1764–5, and thereafter taught singing and composed solo songs and duos with various combinations of instrumental accompaniment. In 1774 he received a life pension of 2000 livres annually, equivalent to the total income from his royal appointments. His published works include several collections of *airs* for one or more voices (some in collaboration with Joseph Mongenot or with J.-G. Cardon and all but one published between 1767 and 1781), as well as some chamber music. He also wrote the music for two lyric scenes performed by the Petits Comédiens du Bois de Boulogne, *Les adieux d'un soldat* (24 October 1778) and *Le soldat français* (1 June 1779; a collaboration with Stanislas Champein).

KENNETH LANGEVIN

Albanese, Licia (*b* Bari, 22 July 1913). American soprano of Italian birth. She studied with Giuseppina Baldassare-Tedeschi, and began her career at the Teatro Lirico, Milan, where in 1934 she was an emergency replacement for an indisposed Butterfly in the second half of the opera. The same opera, always closely identified with her, occasioned her formal début at Parma (1935) and her

début at the Metropolitan (1940). During her career she made more than 1000 appearances in 48 roles, in the lyric or *lirico spinto* repertory, including Mozart (Donna Anna, Zerlina, Susanna) and French opera (Micaëla, Manon, Gounod's Marguerite) as well as the obvious Italian challenges; her speciality was the Puccini heroines. A singer of extraordinary technical skill and emotional intensity, she was the Violetta and Mimì in Toscanini's recorded NBC broadcasts. She is perhaps best represented by the excerpts from her tragic Butterfly and her 1938 recording of Mimì in a complete *La bohème* from La Scala. Active in the movement to save the old Metropolitan Opera House, she never rejoined the company at Lincoln Center. In later years she taught, and sang sporadically in concert and in roles the Metropolitan had, perhaps wisely, denied her, such as Aida and Santuzza.

MARTIN BERNHEIMER/R

Albani [Albana, Albano, Albanus]. Italian makers of stringed keyboard instruments. At least four builders of this name were active during the 16th and 17th centuries, three of whom are known to have been members of the same Roman family. Documents show that from at least 1623 onwards Andrea Albani (*b* Rome, *c*1552; *d* Rome, 19 August 1639) built harpsichords at a workshop near the church of S Stefano del Cacco. He was assisted by his son Silvestro and his nephew Giovanni Battista Monti (*b* *c*1611). Although no instrument by Andrea survives, it is known from an essay by G.B. Doni (*c*1632–5) that he was persuaded by theorists to build some enharmonic harpsichords with split keys, each note divided either 'into five parts, according to the principles of Don Niccola [Vicentino], or into four, following the practice which they attribute to Aristosseno'.

Orazio (*b* Rome, *c*1588; *d* Rome, 14 Nov 1648), son of Andrea, worked as a harpsichord builder from at least 1631 in a workshop near the church of the Gesù. In 1634–5 he was commissioned by the painter Domenico Zampieri ('Il Domenichino') to build an arcicembalo based on the theories of Vicentino, with 31 keys per octave (the keyboard must have been similar to that of the harpsichord advocated by Galeazzo Sabbatini, since the enharmonic division was in the black keys). Although this instrument is lost, two harpsichords almost certainly built by Orazio survive, dated 1628 and 1643. There is also a spinet of dubious provenance bearing the inscription HORATIUS ALBANA ROMANUS 1589. His brother, Silvestro (*b* Rome, *c*1598; *d* Rome, 20 February 1628), worked permanently in his father's workshop but died at 29 of venereal disease. A trapezoidal ottavino by him, dated 1617, has survived.

Nicola Albani (*fl* 1579–90) appears not to have been related to the family of builders described above. He was of Venetian origin and active in Naples from at least 1584 to 1590 (Valdrighi, Noverino). None of his work was thought to have survived, until 1996 when L.F. Tagliavini acquired a richly decorated harpsichord with the inscription NICOLAUS ALBANA VENETUS FECIT NEAPOLI 1584 (originally an 8′ single-manual instrument with a five-octave keyboard, *C/E-c''''*).

PATRIZIO BARBIERI

Albani [Lajeunesse], Dame **Emma** (**Marie Louise Cécile**) (*b* Chambly, nr Montreal, 1 Nov 1847; *d* London, 3 April 1930). Canadian soprano. Her father was a professor of the harp, piano and organ. She was educated at the Couvent du Sacré-Coeur at Montreal. She gave concerts in some Quebec towns before her family moved to Albany, New York, in 1864; there she became a soloist at St Joseph's church and the Albany bishop and others advised Lajeunesse that his daughter should adopt a musical career. She went to Paris in 1868 where she was taught by Duprez. Later she studied with Lamperti in Milan. In 1870 she made her début at Messina as Amina in Bellini's *La sonnambula*, adopting, as suggested by her elocution teacher, the name of Albani, borrowed from an old Italian family. She then sang successfully at Malta and Florence.

On 2 April 1872 she made her London début at Covent Garden as Amina. The beautiful qualities of her voice and the charm of her appearance were at once appreciated. She sang nearly every season there until 1896, in a great variety of parts, notably as Elsa (1875; see illustration)

Emma Albani as Elsa in Wagner's 'Lohengrin'

and Elisabeth (1876) in the first London performances of *Lohengrin* and *Tannhäuser*. In 1878 she married Ernest Gye, who became lessee of Covent Garden on his father's death. Later she was very successful as Eva (*Die Meistersinger*) and Desdemona (she sang in the first Covent Garden and Metropolitan productions of *Otello*). The last and greatest triumph of her career was on 26 June 1896, as Isolde to the Tristan and King Mark of Jean and Edouard de Reszke.

Albani was for many years a great favourite at the Handel and provincial festivals and sang in many new works, notably in those of Gounod, Sullivan, Mackenzie, Cowen, Dvořák, Elgar (*The Apostles*), and in 1886 in *St Elizabeth* on the occasion of Liszt's farewell visit to England. She also sang in opera and concerts in Paris, Brussels, Germany, the USA, Mexico and Canada, and later on tour in India, Australia and South Africa. Her voice was a rich soprano of remarkably sympathetic quality. The higher registers were of exceptional beauty, and she had perfected the art of singing *mezza voce*.

On 14 October 1911 she gave a farewell concert at the Royal Albert Hall, afterwards devoting herself to teaching the Lamperti method. In June 1925 she was created DBE.

ALEXIS CHITTY/GILLES POTVIN

Albani, Mathias (*b* St Nikolaus, nr Kaltern [now Caldaro], 28 March 1621; *d* Bozen [now Bolzano], 7 Feb 1712). Tyrolean violin maker. Labels with his name are found in many violins, mostly of ordinary 18th-century German manufacture, and it is clear that his name was misused in the 19th and 20th centuries by unscrupulous dealers. The false labels are dated from 1640 onwards; genuine labels, however, appear only from about 1690, when Albani was an old man, and they continued until the year of his death. Albani, who was active in Bolzano, did not marry until 1671, and since after his death both of his sons, Michael and Joseph, made instruments, it is possible that they were partly or almost entirely responsible for much of the work supposed to be by their father. In any case, the Albani influence was strong among Tyrolean makers of the 18th century, and especially on the Jais family of Bolzano, and Mayr and his fellow members of the Salzburg school. Albani in Bolzano, Joannes Tononi in Bologna, and Kaiser and Goffriller in Venice all emerged in north-eastern Italy at the end of the 17th century, but it is not known who taught whom. Albani's work was praised by Galeazzi in his *Elementi teorico-pratici di musica* (1791).

Albani's instruments, those with genuine labels, have little if anything in common with those by Stainer, his famous Tyrolean contemporary, nor do they look like the first efforts of a man of over 70. They are quite neatly made on normal A. and H. Amati lines, with a very good orange craquelé varnish of Italian quality. Albani's violins do not quite have the tonal quality or response of a Venetian or a Bolognese instrument. Perhaps this is because the varnish is a shade more brittle, even though it has worn off easily and dissolves as quickly as any. (*LütgendorffGL*; *VannesE*)

CHARLES BEARE

Albania (Alb. Republika e Shqipërisë). Country in south-east Europe. Under Ottoman rule from 1385, Albanians proclaimed their independence in 1912. This was recognized by international conferences in 1913 and again after World War I. The country was occupied by Italy from April 1939 and during World War II by Germany. In 1946 a people's republic was proclaimed with a Soviet-type constitution. China succeeded the USSR as Albania's chief patron (1956–71); thereafter the country lived in isolated 'revolutionary self-sufficiency' until 1990, when a pluralist political system was adopted and the first non-communist government elected (1992).

I. Art music. II. Traditional music.

I. Art music

1. 1830–1944. 2. 1944–91. 3. Since 1991.

1. 1830–1944. Art music along Western lines began in Albania during the *Rilindja Kombëtare* (National Renaissance), a broad political and cultural movement for the country's independence dating from the 1830s. In the 19th century the main cultural centres were Shkodra (northern Albania) and Korça (southern Albania). The first Western instruments, the violin and the clarinet, were known in Shkodra by about 1825 and 1850 respectively. The main factors promoting art music during this period were bands, often associated with the struggle for independence; local choruses and mandolinatas, especially in the south; and Franciscan or Jesuit priests, many of whom had a broad musical culture.

The first theatre in Albania opened at the Jesuit Collegio Saveriano in Shkodra in 1879; it was followed by others, in Franciscan monasteries and the convent of the Suore Stimmatine. A music school existed in Shkodra by this time and provided clarinettists for the earliest Albanian band, which from 1880 was conducted by Palokë Kurti (?1860–1920). Kurti composed numerous polkas, quadrilles and other works for the band, and between 1901 and 1911 conducted another band drawn from students of the Shkolla e Artizanatit (Artisans' School). Kurti's son Lec (1884–1948), who studied in Pesaro, was the earliest professionally trained Albanian composer; among his compositions are an opera, a string quartet and piano music. Frano N'doja (*d* 1923) founded a band in about 1889 and, apart from a fragment of an opera (1907), composed well-known patriotic songs and some other works. Two Albanian-born composers active in Russia in the 19th century were Harallamb Kristo Koçi (*fl* after 1850) and Vladimir Gjergj Kastriot-Skënderbej (1820–79).

The earliest attempts at opera in Albania were two works by Martin Gjoka (1890–1940), a Franciscan monk and pioneer of Albanian music, active as a composer and teacher in Shkodra. Gjoka also founded a chorus and orchestra in 1917 and a wind band in 1922. Other musical organizations established in Shkodra at this time were Rozafa (1918), Vllaznia (1919–22) and Bogdani (1919); Rozafa included a mandolinata and Vllaznia had its own wind band, while Bogdani mustered an orchestra which performed symphonic works under the direction of Zef Kusti. Rozafa and Bogdani suspended their activities with the 1939 Italian invasion. In 1933 Dom

Michele Koliqi, a highly cultured polyglot who had studied in Milan, organized the Schola Cantorum choir of Shkodra Cathedral, which attained high professional standards in works by Bach, Mozart, Schubert and others. Koliqi's own compositions include motets for his choir and three so-called melodramas – virtually operas – to texts by Andrea Zadeja.

In 1916 a group of Albanian emigrants from the Korça area under the flautist, conductor and composer Thoma Nasi (1892–1964) founded the 32-strong band Vatra in Worcester, Massachusetts. The band joined in the struggle against the foreign troops occupying Albania in 1920 and settled in Korça, giving concerts whose typical programmes included an overture, excerpts from operas and transcriptions of symphonic works, together with dances and Albanian folksongs. Artet e Bukura was founded, with Nasi as president, in Korça in 1920. It included a male chorus, a group of solo singers and an orchestra consisting mainly of members of Vatra, occasionally augmented by strings. Artet e Bukura passed the torch to Lira, founded in 1928. Initially this consisted of a mixed chorus and a mandolinata, later developing into a small orchestra. After 1930 the conductor of the chorus and orchestra was the composer Kristo Kono (1907–91). Lira's activities were suspended after the Italian invasion in 1939, but were resumed after the war.

Other composers, primarily of songs, and band conductors active in Albania in the first part of the 20th century included Thanas Floqi (*d* 1945), Filip Papajani, Isuf Myzyri (1880–1956), Luigj Filaj (*d* 1969) and Neço Muko Marioti (?1899–?1934), a pioneer of Albanian light music and compiler of a discography of folksong. Several composers of this generation chose to work abroad, among them Dhimitër Mihali 'Toskani' (1888–1962), who was active in Romania, and Fan Noli (1882–1965) and Murat Shehu (1897–1978), who settled in the USA. Noli was an extraordinarily versatile figure: a politician, clergyman, poet and musicologist as well as a talented composer in a predominantly neo-classical style.

In 1920 Tirana became the new capital of Albania (*see* TIRANA (i)), and a number of Korça's musicians, notably Nasi, moved there. Information about music in Tirana before 1939 remains sporadic, but it was an active period with singers such as the baritone and chorus conductor Mihal Ciko, the tenor Kristaq Antoniu, and the sopranos Jorgjia Filçe-Truja, Tefta Tashko-Koço, Maria Paluca-Kraja and Gjuze Kosturi. After 1944 they became the pioneers of Albanian opera. But in 1938, after some experimental transmissions, Radio Tirana was officially inaugurated. The radio's early musical staff included the composer Pjetër Dungu (1908–89), the pianists Lola Aleksi-Gjoka, Tonin Guraziu and Mario Ettore, and several singers, notably Mihal Ciko and Tefta Tashko-Koço.

2. 1944–91. In July 1944, before the liberation of Albania from occupation, Gaqo Avrazi (1915–85), from Korça, founded the Ansambli i Ushtrisë Popullorë (Ensemble of the People's Army); later in the same year, in Tirana, the Kori i Rinisë Antifashistë (Antifascist Youth Chorus), under the composer Konstandin Trako, gave its first concert.

An incontestable achievement of the postwar socialist regime was the development, within 30 years, of music and musical education to a high professional level. The attainment of such standards by a small, undeveloped country, and the establishment of what gradually became a flourishing musical industry, began with the foundation of the first Albanian music school, Jordan Misja, in Tirana in 1946 and the official inauguration of the Filarmonia Shqiptare (Albanian Philharmonia) in 1950. The latter comprised the radio orchestra, a chorus, ballet and singers. It was succeeded in 1953 by the Teatri i Operës dhe i Baletit (Theatre of Opera and Ballet), which in November that year performed Dargomïzhsky's *Rusalka*, the first opera to be given with an all-Albanian cast. During the 1950s many of the most talented Albanian composers completed their studies in Moscow or Prague. These included Tish Daija, Çesk Zadeja, Pjetër Gaci, Nikolla Zoraqi, Vath Çangu, Tonin Harapi and Kozma Lara. Dhora Leka, who composed a number of well-loved partisan songs, spent many years in prison for her opposition to the regime of Enver Hoxha.

In the postwar years Albanian composers began to tackle traditional Western musical genres. The first Albanian oratorio, Trako's *Partia* ('The Party', 1953), was followed by the first operetta, Kono's *Agimi* ('Dawn'), 1954), string quartet (by Daija, 1954–5), symphony (by Zadeja, 1956), opera (Jakova's *Mrika*, 1958) and ballet (Daija's *Halile Hajria*, 1963). The development of instrumental forms, opera and large-scale choral works coincided with Albania's total breach with the USSR in 1960 and the dissolving of cultural links with Eastern European socialist states. In early 1961 all Albanian music students abroad were ordered to return. The foundation of the conservatory in Tirana in 1962 inaugurated a period of total control over musical matters by the ruling communist party. Music by native composers was performed at a vast network of festivals throughout the country commemorating historical anniversaries and celebrating political events such as party congresses. Very little non-Albanian music was heard until the fall of the communist regime in 1991. Composers such as Prokofiev and Shostakovich were banned on political grounds. French Impressionism was rejected, the music of Wagner and Richard Strauss was condemned for its perceived Nazi associations, and jazz and rock were taboo. Cut off from foreign influences, Albanian composers drew deeply on the rich native tradition of folk music. In keeping with the communist ethic, works were composed with a specific social or educational purpose. Choral cantatas, symphonic poems and rhapsodies, and light music, including film music, were particularly important. After about 1970 the artistic climate in Albania became slightly less rigid; and works like Daija's Symphonic Dance, no.1 (1971), his ballet *Bijt e peshkatarit* ('The Fisherman's Sons', 1972) and Ibrahimi's Piano Concerto, no.1 (1971) explore a relatively advanced harmonic idiom. However, this 'laxity' was temporary. The 11th song festival of the RTV (Dec 1972), echoing jazz, led to Enver Hoxha's famous report at the Fourth Plenum (June 1973) of the Labour Party's Central Committee proclaiming an intensification of Albania's cultural 'isolation'. No composer suffered any damage, yet this report, combined with previous directives, determined the course of Albanian music and culture until 1991.

From the 1960s every major city in Albania possessed its own chorus, band and symphony orchestra. Tirana, the capital, had no fewer than five symphony orchestras and a chamber orchestra. Particular attention was given to amateur ensembles in factories, cooperatives and

schools, and to folk and dance ensembles. A vast repertory was created, especially of vocal and orchestral music, with older works neglected in favour of new ones. The most prominent composers between the 1960s and the 1990s have been Abdulla Grimçi (*b* 1921); Koço Uçi (1923–82); Çesk Zadeja (1927–97); Gjon Kapidani (*b* 1933); Mark Kaftalli (*b* 1933); Gjon Simoni (*b* 1936); Zef Çoba (*b* 1951); Avni Mula (*b* 1926), also a well-known baritone; Agim Prodani (1928–89); Agim Krajka (*b* 1937); Limos Dizdari (*b* 1942); Shpëtim Kushta (*b* 1946); Thoma Gaqi (*b* 1948); Kujtim Laro (*b* 1948); Lejla Agolli (*b* 1950); Hajg Zaharjan (*b* 1951); Aleksandër Peçi (*b* 1951); Gazmend Mullahi (*b* 1951), also a double bass soloist; Iossif Minga (*b* 1953); Sokol Shupo (*b* 1954); David Tukiçi (*b* 1956); Thoma Simaku (*b* 1958); and Besa Alia (*b* 1960). Some of these composers have settled abroad. Most of the works composed in the period 1960–90 adopt a post-Romantic idiom, with thematic material either drawn directly from Albanian folksong or based on its modes and rhythms.

From 1961 musical and theatrical activities in the larger towns and cities were organized by palaces of culture and in smaller towns by houses of culture. The music sector of the Lidhja e Shkrimtarëve dhe e Artistëve (Union of Writers and Artists, founded 1946), financed by the state, played an important role in musical life and musical education, and provided financial assistance to composers and performers. It also publishes scored through Shtëpia Qendrore e Krijimta-risë Popullore (Central House of People's Creation) and, since 1977, through Shtëpia Botuese e Librit Shkollor (Educational Publishing House). There were dozens of specialist primary music schools in Albania, and a secondary music school in each of the major towns and cities.

The country's most important festivals, in chronological order, are the Festivali i Këngës në Radiotelevizion (Albanian Radio and Television Song Festival), founded in 1962 and still held annually; Festivali Kombëtar i Këngës për Fatosa dhe Pionierë (National Children's and Pioneers' Festival), founded in Shkodra in 1963 and likewise still held annually; the 10-day Koncertet e Majit (May Concerts), held between 1967 and 1990 at the Tirana Opera, and the leading festival for new Albanian art music; and the Festivali Folklorik Kombëtar i Gjirokastrës (National Folklore Festival of Gjirokastra), first given in 1968 in the ancient city of Gjirokastra, and subsequently held every five years. The festival was revived in Berat by the ethnomusicologist Ramadan Sokoli in 1995. A number of new festivals have been founded in Tirana since 1991.

3. Since 1991. The upheavals caused by the collapse of communism in 1991 had serious consequences for Albanian music. Hundreds of good musicians emigrated, mostly to Greece. The Union of Writers and Artists was deprived of funds, orchestras and choruses were reduced, and several primary and secondary music schools closed. However, private sponsors began to appear, while Albanian composers rapidly acquired modern compositional techniques and began to promote their music abroad. Catholic composers like Harapi, Simoni and Kapidani were now free to compose religious works; other composers such as Daija, Zadeja, Kushta, Laro and Lara turned to chamber music, hitherto a neglected genre, and even explored atonality. Not surprisingly, it was the younger generation of composers that took the lead in experimentation. These included Peçi, Shupo, Simaku Ermir Dergjini (*b* 1955), Fatos Qerimi (*b* 1957), Nestor Kraja (*b* 1959), Vasil S. Tole (*b* 1963), Endri Sina (*b* 1967) and Albana Fejzo (*b* 1970).

The charting of Albanian art music would be incomplete without a reference to the composers of Kosovo. Until 1991, their studies and experience in Yugoslavia contrasted dramatically with those of their culturally isolated colleagues. Their works are often performed in Albania, yet information about them remains sparse. They include Shime Deshpali (*b* 1897); Lorenc Antoni (1903–91), also active as a folksong collector and ethnomusicologist; Ismaïl Hoxha (*b* 1934); Mark Kaçinari (1935–85); Vinçenc Gjini (*b* 1935); Krist Lekaj (*b* 1935); Fahri Beqiri (*b* 1936); Akil Mark Koci (*b* 1936); Esad Rizvanolli (*b* 1936); Halit Kasapolli (1937–59); the composer and musicologist Zeqirja Ballata (*b* 1943); Rauf Dhomi (*b* 1945); Rafet Rudi (*b* 1949) and Bahri Mulliqi (*b* 1959).

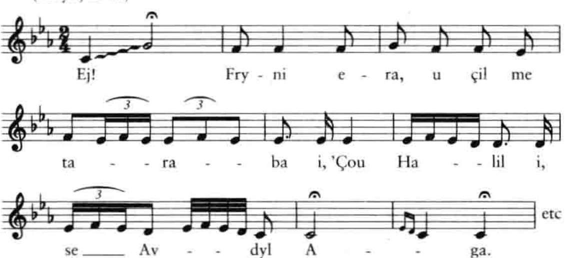
II. Traditional music

Musical forms that are today recognized as Albanian folk or national music (*muzika popullore*) descend from types of music-making that characterized Albanian-speaking communities in the early decades of the 20th century. Until 1912, when Albanians declared their independence from the Ottoman Empire, musical life in Albanian territories was much like that in other regions of Ottoman Europe. In rural areas songs and instrumental music, performed largely by community members, were based on distinctive local styles. Urban music, in contrast, had absorbed features of both Middle-Eastern and European art musics, and was performed largely by professional musicians, many from the Rom (Gypsy) ethnic group. This division in repertory characterized the music-making not only of Albanian speakers, but also of other ethnic communities living in Albanian lands, including Aromânii (Vlachs), Macedonians (*see* MACEDONIA, §II), and Greeks (*see* GREECE, §IV). In the course of the 20th century, the distinction between rural and urban musics became blurred as musical styles were disseminated through the mass media as well as government-sponsored folk ensembles. The distinction nevertheless provides a useful starting point for considering national styles of Albanian music.

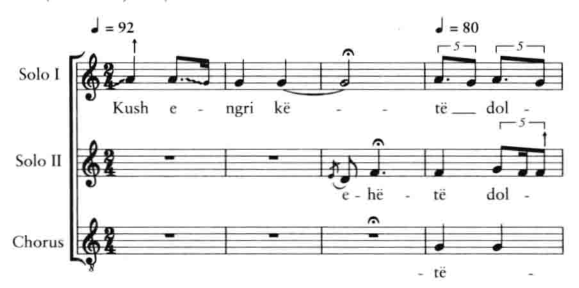
1. RURAL MUSIC. At present almost two-thirds of the population of Albania lives in rural areas. Until collective farms were established in the socialist period (1944–91), families typically lived in large patrilineal households, within which work activities were organized on the basis of gender and age. Women's lives revolved around childrearing and household maintenance, while men served as their family's spokesmen and defenders in affairs of the community and the state. When community members gathered to socialize, most activities took place among segregated groups of females or males, a practice that continues today in most regions.

Rural musical repertories have developed in line with such divisions. Each community has maintained a large corpus of songs (South Albania, *këngë*; North Albania, *kângë*) in local style. Women have sung primarily lyric songs whose themes address the concerns of family life. At life-cycle occasions celebrating a birth, a son's circumcision (in Muslim communities) or a betrothal or wedding, girls or women have been the principal vocalists, performing ritual songs suited to the particular event. At any social gathering they might also perform songs for dancing, sung in a variety of duple, triple and additive metres. Upon the death of a family member, women have performed highly emotional laments, known variously as *vaje*, *vajtim*, *kuje*, *me të qarë* ('with crying') or *të qarë me zë* ('cried with the voice'). In the past, girls and women sang to accompany work activities in the fields or the house, as well as for seasonal agricultural or pastoral rituals, but such songs are rarely performed today. Men have had their own (generally smaller) repertories of ritual and dance songs, and in many areas have sung rapturous love songs as well. The greatest number of men's songs are narratives that commemorate the deeds of legendary heroes or recount important moments in the history of the community or of the Albanian people as a whole. Men have also been the principal performers of instrumental music.



Albanians distinguish two major subgroups. North Albanians, or Gegs, live north of the Shkumbin River in Albania, as well as in adjacent areas of Macedonia and Yugoslavia (*see* YUGOSLAVIA, §III, 2). South Albanians, or Tosks, live south of the Shkumbin and in a few districts of southern Macedonia and northern Greece. The musical styles of the two subgroups are highly distinctive. While northern music is predominantly monophonic, southern musicians perform in a variety of polyphonic styles.

In the north the oldest musical genres are to be found in mountainous districts such as Malësi, which straddles the northern border with Montenegro (*see* YUGOSLAVIA, §III, 2). In these areas both men and women sing in a loud, forceful style typical of outdoor singing in many parts of the Balkan peninsula. Both also employ a variety of vocal techniques such as glottal shakes and, for women, lapses into head register. Melodies often have a small range and use narrow, non-tempered intervals. Particularly in Muslim communities, the most active female vocalists have generally been girls of less than marriageable age. Often they accompany metrical songs such as those for dancing with large frame drums, called *def* or *daire*. A more unusual type of accompaniment for women's singing is provided by a large metal tray called *tepsi*. While one woman rotates it on its edge on a level surface, other girls or women sing into it. The spinning of the *tepsi* alters the timbre of their singing and its deep rumble serves as a form of drone.



Men in mountain districts also perform a number of distinctive vocal genres. The *kângë malësorçe* ('song or the people of Malësi') of *kângë majekrahi* ('song sung over the peak of the arm') is sung by a soloist or pair of singers: each man cups his ear with his hand or places a finger in his ear, then projects his voice upward at full volume over his bent arm. *Kângë malësorçe* were used in the past by herdsmen as well as soldiers to signal from one mountain to the next and are also sung on festive occasions. A second genre is the *kângë kreshnikësh* (from Serbo-Croatian *krajišnik*, 'frontier hero') or *rapsodi* ('rhapsody'), a lengthy historical song that often includes fantastical elements. Specialists in this genre, known as *rapsodë*, have traditionally extemporised their songs in performance, basing their renditions upon verbal and musical formulas. Singers accompany their vocal line on a type of long-necked, one-string fiddle called *lahutë*, whose pegbox is decorated with patriotic or zoomorphic designs. The performer holds the instrument vertically at an angle and is expected to adopt a manly and heroic demeanour while singing. Like similar 'epic' songs sung to *gusle* accompaniment in Bosnia, Montenegro and southern Serbia, most *kângë kreshnikësh* recount military skirmishes that took place during the Ottoman period. Shorter historical songs with more fixed texts may also be sung to *lahutë* (ex.1). A third genre, known as *gjâmë*, is a type of elegy that was once commonly performed at the funerals of adult men. As with women's laments in this region, *gjâmë* might be performed by a family member or by a semi-professional lament specialist.

In low-lying districts and in settlements closer to towns, rural musicians have adopted some features of Middle-Eastern musical styles. Melodies often have larger ranges and more complex forms, and they may resemble specific Ottoman melodic modes (*makam*). In place of the *lahutë*,

Ex.1 from *Halil and Hajrije* ballad, male voice acc. by *lahutë*, north Albania (Lloyd, 1968)

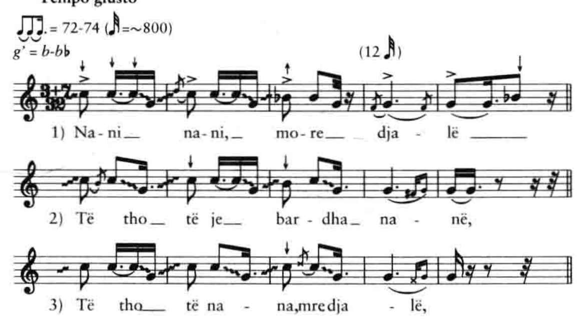
Ex.2 Polyphonic singing with choral drone from drinking song, Lab male group (Stockmann, 1960)

men generally accompany their singing on long-necked fretted lutes, of which the two-string *çifteli* (or *çiteli*) is the most popular. Unlike the *lahutë*, the *çifteli* is also used to play dance melodies as well as virtuoso solo improvisations. For large celebrations, families or whole communities may hire Rom men to perform loud, outdoor dance music. Their standard ensemble consists of one to two *surle* (*curle*, *zurlë*, *cigonë*), double-reed pipes with a conical bore; and one *lodër* (*lodërti*, *daulle*), a double-headed bass drum. This ensemble is particularly associated with the men's repertory of virtuoso dances, which often have a heroic character.

In southern regions, the prevalence of polyphonic singing indicates its importance as a communal social activity. At family celebrations, each adult has been expected to participate by singing the first solo line of a multi-part song, while others at the gathering have sung supporting lines or have joined in on a choral drone (*iso*). Most southern songs have a pentatonic tonality, although ornamentation is diatonic. Only recently have they been sung with instrumental accompaniment.

Albanian musicologist Beniamin Kruta has distinguished two main styles of southern polyphony. In the Lab style, characteristic of the region of Labëri in south-central Albania, two or three soloists declaim their text over the drone in a homophonic manner (ex.2). In the Tosk style, found in the regions of Myzeqe, Toskëri and Çaméri as well as adjacent areas of Macedonia and Greece, two soloists interweave their melodies above a drone that is sung most often to a single vowel sound (ex.3). These two types of polyphony also have parallels among neighbouring ethnic groups. The singing of Greek communities in Albania and in the district of Epirus in Greece closely resembles that of Labëri, while some Aromân and Macedonian communities sing songs in the Tosk style. The lullabies of southern Albanian women (ex.4), as well as laments and songs for seasonal rituals, have customarily been sung solo or in unison. In some communities, two-part songs without a drone are also sung.

Although southern men's and women's songs are similar in structure, they often differ in manner of execution. Younger women generally sing in a subdued,



Ex.3 Polyphonic singing with choral drone from lyrical song, Tosk male group (Stockman, 1960)

Ex.4 from lullaby, Tosk female voice (Stockmann and Fiedler, 1965)
